zargc	*zarzuela género chico*

Bibliographical Abbreviations

All bibliographical abbreviations used in this dictionary are listed below, following the typography used in the text of the dictionary. Broadly, *italic* type is used for periodicals and for reference works; roman type is used for anthologies, series etc. (titles of individual volumes are italicized).

Full bibliographical information is not normally supplied in the list below if it is available elsewhere in the dictionary. Its availability is indicated as follows: D – in the list of 'Dictionaries and encyclopedias of music'; E – in the list of 'Editions, historical'; and P – in the list of 'Periodicals'; these lists are located in vol.28. For other items, in particular national (non-musical) biographical dictionaries, basic bibliographical information is given here; and in some cases extra information is supplied to clarify the abbreviation used.

Festschriften and congress reports are not generally covered in this list. Although Festschrift titles are sometimes shortened in the dictionary, sufficient information is always given for unambiguous identification (dedicatee; occasion, if the same person is dedicatee of more than one Festschrift; place and date of publication; and name(s) of editor(s) if known). For fuller information on musical Festschriften up to 1967 see W. Gerboth: *An Index to Musical Festschriften and Similar Publications* (New York, 1969). The published titles of congress reports are generally reduced to their essentials, but sufficient information is always given for purposes of identification (society or topic; place and date of occurrence; journal issue if published in a periodical; editor(s) and publication details in unfamiliar cases). A comprehensive list of musical and music-related 'Congress reports' appears in vol.28. Further information can be found in J. Tyrrell and R. Wise: *A Guide to International Congress Reports in Music, 1900–1975* (London, 1979).

Library Sigla

The system of library sigla in this dictionary follows that used by Répertoire International des Sources Musicales, Kassel, as listed in its publication *RISM-Bibliothekssigel* (Kassel, 1999). Below are listed the sigla to be found; a few of them are additional to those published in the RISM list, but have been established in consultation with the RISM organization. Some original RISM sigla that have now been changed are retained here.

More information on individual libraries is available in the libraries list in volume 28.

In the dictionary, sigla are always printed in *italic*. In any listing of sources a national sigillum applies without repetition until it is contradicted.

Within each national list, entries are alphabetized by sigillum, first by capital letters (showing the city or town) and then by lower-case ones (showing the institution or collection).

A Note on the Use of the Dictionary

This note is intended as a short guide to the basic procedures and organization of the dictionary. A fuller account will be found in the Introduction, vol. l, pp.xix–xxix.

Abbreviations in general use in the dictionary are listed on pp.vii–xi; bibliographical ones (periodicals, reference works, editions etc.) are listed on pp.xiii–xviii and discographical abbrevations on pp.xix–xx.

Alphabetization of headings is based on the principle that words are read continuously, ignoring spaces, hyphens, accents, bracketed matter etc., up to the first comma; the same principle applies thereafter. 'Mc' and 'M'' are listed as 'Mac', 'St' as 'Saint'.

Bibliographies are arranged chronologically (within section, where divided), in order of year of first publication, and alphabetically by author within years.

Cross-references are shown in small capitals, with a large capital at the beginning of the first word of the entry referred to. Thus 'The instrument is related to the BASS TUBA' would mean that the entry referred to is not 'Bass tuba' but 'Tuba, bass'.

Signatures where the article was compiled by the editors or in the few cases where an author has wished to remain anonymous are indicated by a square box (□).

Work-lists are normally arranged chronologically (within section, where divided). Italic symbols used in them (like *D-Dl* or *GB-Lbl*) refer to the libraries holding sources, and are explained on pp.xxi–xxxvii; each national sigillum stands until contradicted.

Contents

R

[continued]

Recitative (Fr. *récitatif*; Ger. *Rezitativ*; It. *recitativo*). A type of vocal writing, normally for a single voice, with the intent of mimicking dramatic speech in song. In practice its nature has varied widely by era, nationality, origin and context.

1. Up to 1800: (i) History (ii) Performance. 2. After 1800. 3. Instrumental recitative.

1. UP TO 1800.

(i) History. *Recitativo* is properly an adjective. As a noun, short for *stile recitativo*, it occurs as early as 1626 (Domenico Mazzocchi, *La catena d'Adone*). It derives from the verb *recitare*, 'to recite', which was also used in the 16th century for vocal performance, for example in Baldassare Castiglione's *Il libro del cortegiano* (1528), where the phrase 'cantare alla viola per recitare' occurs. The liberalization of poetic forms and blank verse in late 16th-century Italy fostered approximations of the affects of dramatic speech through pitch and rhythm in many different places and circumstances. These attempts, by groups such as the Florentine Camerata, had a number of typical traits: the text was generally not repeated, the rate of harmonic change varied with the affect of the text, an overall slow harmonic rhythm unfolded over a generally static bass line (which gave the impression of declamatory freedom, though chord progressions were still clearly derived from the madrigal), the poetic accents were reinforced by harmonic change, and particularly affective passages or individual words were often supported with strong dissonance (another madrigal borrowing). These sections were not initially known as recitative, although this is implied by Agazzari (*Del sonare sopra 'l basso*, 1607) in his reference to 'lo stile moderno di cantar recitative', and by Gagliano in the preface to *Dafne* (1608), where he speaks of the 'artifiziosa maniera di recitare cantando'. More generally it was called the *stile rappresentativo*, as Monteverdi suggested in his seventh book of madrigals (1619). Peri's preface to his opera *Euridice* (1600) is perhaps the earliest attempt to describe this middle ground between speech and song, but both the extant portions of this work and his *Dafne* (1597–8) are still closely linked with general 16th-century practice. Peri's reciting style was imitated by Monteverdi in *Orfeo* (1607; 'In un fiorito prato', from Act 2, has clear parallels to 'Per quel vago berchetto' in Peri's *Euridice*), although the model is surpassed in Monteverdi's variety of rhythm and imaginative continuo progressions. Caccini later claimed precedence over Peri in establishing the style; in the preface to his *Le nuove musiche* (1601/2) he advertised a music in which one might be said to speak in music ('in armonia favellare'), employing a certain 'sprezzatura di canto'. It has also been suggested (Bettley, 1976–7) that the Italian *falsobordone* tradition, sharing many traits with the early recitative of Peri and Monteverdi, may have played a greater role in the development of Italian recitative than is generally thought. The virtues of recitative were not everywhere admired; at times it was found tedious when unenlivened by the frequent interpolation of arias, as Saint-Evremond (*Sur les opéra*, 1705) reported concerning the Parisian reception of Luigi Rossi's *Orfeo* in 1647.

A clear separation of recitative monody from more lyrical writing appeared only gradually during the 17th century, with many passages sharing qualities of both recitative and aria, perpetuating the use of strophic variation or other aria-like forms (as in the prologue to Monteverdi's *Orfeo* and in Mazzocchi's *La catena d'Adone*), or providing other textual or musical repetition to lend coherence. In the course of the 17th century the aria became the more dominant element in opera, partly through the influence of the solo cantata and partly as the result of the opening of public theatres in Venice from 1637 onwards. Still, before 1650 the moments of most intense passion were generally rendered in recitative, often in long soliloquies.

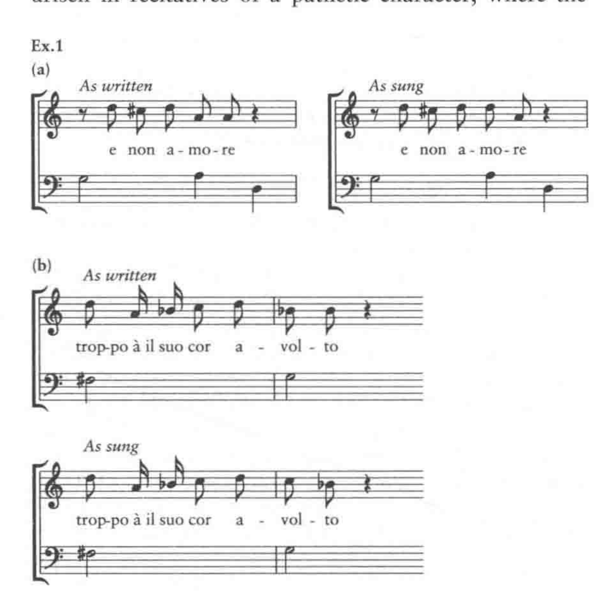
There were fundamental differences among the recitative writing of Italian, French, German and English composers in the 17th century. The French modelled recitative on the highly stylized declamation of the spoken theatre (particularly in Lully's imitation of Mlle Champmeslé) and on French traditions of metric freedom (as in the 16th-century *musique mesurée*), stressing the lyric accents of the text by marking both the rhyme and the caesura; this had only loose analogy in Italian recitative, which regularly accentuated only punctuation (through harmonic change and rests in the vocal line). French recitative also favoured a more flowing melodic style, emphasized by the frequent change of time signature. By the mid-18th century Rousseau noted a confusion of French terminology, in which *récit* (which properly referred to everything 'sung by the solo voice', including *airs*) was often confused with *récitatif* (*see* RÉCIT (i)). Schütz may well have introduced the Italian, Monteverdian style of recitative to Germany in his opera *Dafne* (1627), but this can only be a conjecture since the music is lost. Recitative in 17th-century Germany largely

developed in the *historia*, which followed conventions of chanting biblical prose texts, an adaptation first introduced to Germany in Schütz's *Psalmen Davids* (1619). In the preface to this work Schütz noted that the 'stylo recitativo' was 'almost unknown in Germany at present'. By the end of the century the *historia* type of recitative was the most effusive and unpredictable in Europe, striking bold and unexpected harmonic progressions, affective melodic intervals and other musical means to elevate textual expression. Unique approaches developed for the treatment of specific texts and situations, such as setting the Evangelist as a tenor and Christ as a bass, surrounding the Lord's texts with a 'halo' of string sound. A new wave of italianate influence entered North German sacred music in Hamburg through Keiser, Mattheson and others, where German opera struggled for ascendancy. The unusually diverse, expressive recitative of such 18th-century German composers of Italian opera as Handel and Hasse was also coloured by German traditions. It was not until the beginning of the 18th century that recitative, under the influence of Erdmann Neumeister, was introduced into the church cantata by J.P. Krieger, whose example was followed by Bach and others. Bach's recitatives, though perfectly geared to the German language, are basically an adaptation of the idioms of Italian opera; and there is no difference in style between his use of it in his sacred works and his secular ones. In England, monody had its adherents early in the 17th century, particularly in the masque; but although Ben Jonson stated that the music of his *Lovers Made Men* (1617) was 'sung after the Italian manner, *stylo recitativo*' by Nicholas Lanier, who wrote it, it is not until Lanier's *Hero and Leander* (*c*1630) that the first unequivocal use of recitative is found in English music. The style of the English compositions is, in any case, nearer to arioso than to recitative in the Italian sense, and this is true even of Purcell's music. Italian recitative was a complete novelty to most people when it arrived in England at the beginning of the 18th century, as Addison observed in the *Spectator* (no.29): 'there is nothing that has more startled our *English* Audience, than the *Italian Recitativo* at its first Entrance upon the Stage. People were wonderfully surprized to hear Generals singing the Word of Command, and Ladies delivering Messages in Musick'. There is a delicate irony in the prologue to Gay's *The Beggar's Opera* (1728), when the Beggar says: 'I hope I may be forgiven, that I have not made my Opera throughout unnatural, like those in vogue: for I have no Recitative'.

By the 18th century recitative came to be the principal vehicle for dialogue and dramatic action in opera, with the arias carrying the more lyric portions, although this traditional understanding of the separation of dramatic function is less rigorous than is sometimes supposed – in Metastasio's librettos there are clear examples of dramatically active arias (such as 'Se cerca, se dice' from *L'olimpiade*) and contemplative recitatives. Italian recitative of the 18th century was routinely separated into two distinct types (as John Brown proposed): texts 'of passion and sentiment, or such as are not so'. The more common type, for voice and continuo alone, was most widely known as *recitativo semplice*, although the term *secco* apparently gained parlance by the late 18th century (C.F. Cramer used it in an article in his *Magazin der Musik* in 1784). Moments of intense dramatic crisis (disasters, irreconcilable decisions, general stress), mental confusion (particularly madness), magic scenes and other suitable moments were clothed with an enriched, colourful background, and were variously known as *accompagnato* (in France *récitatif accompagné*), *stromentato*, *obbligato* and the like. This perpetuated an infrequent usage of the 17th century, found in scores of Cavalli, Antonio Cesti, Lully, Steffani, Purcell and others, which gradually rose in prominence after 1700, with theatre poets in the latter half of the 18th century often adding new verses to established texts to facilitate these musical diversions. Distinct from *recitativo semplice* by virtue of its rhythmic and melodic figuration in the accompanimental parts, rapidly shifting character and imitation of the passions of the text, over time it became customary to enlist the orchestra's aid. In practice, the accompanimental orchestral voices generally sustained chords or played scales and short melodic figures (particularly after about 1740). Such passages were also more likely to be treated formally, in sections. Metastasio was well aware of the dramatic function of *recitativo obbligato*. In a letter to Hasse, dated 1749 and published in his posthumous works, he set out in detail how a scene in *Attilio Regolo* was to be set – where the instruments should accompany, where they should be silent, where they should have ritornellos. In *Orfeo ed Euridice* (1762) Gluck, in accordance with his and Calzabigi's reform principles, accompanied all the recitatives with orchestra, mostly in a simple and straightforward style.

The harmonically diverse, melodically expressive recitative of Monteverdi's day gave way over time to an array of conventions, more or less routinely applied by the 1700s. This was widely lamented by Italian literati, such as Gravina, Muratori and Crescembeni, who, in seeking to defend and reform Italian poetry and drama (that is, opera) against French claims of newly won superiority and allegiance to classical models, constantly held up the ideals of the Camerata as the best model. Within these conventions, it should be stressed, composers were able to tailor their recitative closely to the expressive needs of the drama; one of the best such examples is Hasse's early *Artaserse* (1730, Venice).

The carefully notated rhythmic declamation of early recitative was replaced by a more rapid and even delivery, notated almost entirely in quavers with occasional crotchets and semiquavers. Easily identifiable melodic formulae, often of several bars in length, occur repeatedly to widely varied texts and across dozens of composers. Typical Italian recitative was organized around a simple harmonic scheme: (*a*) secondary dominant chains, (*b*) chains of interlocking I–IV–V–I progressions, in which the concluding V–I became the I–IV of the next sequence, and (*c*) the juxtaposition of relative major/minor harmonies. By the time of the operas of such composers as Vinci, Porpora and Caldara this had become the norm, and up to the end of the 18th century it is the expected background against which variation is best understood; deviation from these patterns was almost always textually motivated, and modern audiences miss expressive nuances when unfamiliar with the patterns. By this means recitatives could modulate rapidly in either direction (towards flats with secondary dominants, towards sharps with I–IV–V–I chains) to connect to the keys of both the preceding and subsequent arias. It was often German composers, or those who worked extensively outside Italy (such as Handel, Hasse and Jommelli), who experimented



most widely with expressive harmonic interpolations within this basic outline. The first recitative in Act 1 scene ii of Handel's *Serse* (1738), for instance, is only nine bars long but it begins in D major and ends in E♭ major. Similarly, towards the end of the 17th century the practice arose of beginning a recitative with a 6-3 chord, no doubt also to preserve continuity with the preceding aria or, in the case of an initial recitative, to convey the impression of a continuing narrative or dialogue. By its very nature, recitative is designed primarily for solo singing. Examples of recitative in two (rarely more) parts are not uncommon in late 17th- and 18th-century opera, but they are confined to very brief passages in which both characters sing the same words. In a similar way choral recitative is employed for turba interjections in Passion settings, a particularly famous example being the cry 'Barrabam' in Bach's *St Matthew Passion.*

(ii) Performance. In *Orfeo* Monteverdi prescribed three keyboard instruments for the continuo – harpsichord, organ and regal – in addition to plucked string instruments. With the development of opera as a public spectacle, variety of this kind was impractical and the harpsichord became the standard instrument in secular music, the organ in sacred music. The complete accompanimental ensemble for simple recitative varied, but most opera houses had, in addition to one or two harpsichords, lutes, archlutes and other chord-playing instruments, as well as sustaining instruments, such as cellos, basses and bassoons. Their manner of accompaniment is debated, as a result of differences among the clear testimonies of North German practice and scattered accounts of Italian traditions.

Accompanied recitative had a special role to play in settings of the Passion story. Thomas Selle used various combinations of instruments in an attempt at musical characterization in his *St John Passion* (1643), and both Johann Sebastiani and Johann Thiele used string accompaniment for the recitative in their settings of the *St Matthew Passion* (1672 and 1673 respectively). The convention of surrounding the words of Jesus with a 'halo' of string sound, while those of the Evangelist and the minor characters were set to *recitativo semplice*, dates at least from Schütz's *Die sieben Wortte unsers lieben Erlösers* (1645) and is observed in Passion settings by Alessandro Scarlatti (*c*1680), J.V. Meder (*c*1700), J.S. Bach (1729) and others. Bach's *St John Passion* (1724) is somewhat unusual in that the words of Jesus are accompanied only with continuo. A more elaborate kind of accompaniment, in which the orchestra has independent passages of a violent or pathetic character, is found not only in opera but also in the cantata. A particularly remarkable example is the bass recitative 'Ja! ja! die Stunden sind nunmehro nah' in Bach's secular cantata *Der zufriedengestellte Äolus* ('Zerreisset, zerspringet, zertrümmert die Gruft', BWV205), where the singer is accompanied by the full orchestra, including two horns, three trumpets and timpani, with wild excursions on the woodwind and strings.

The most widespread accompanimental style for sacred recitative in early 18th-century Germany apparently was 'short declamation', or a performance in which tied semibreves and minims in the continuo line were played as brief strokes, often transcribed in contemporary theory treatises (Heinichen, Niedt, Kellner, Telemann and others) as crotchets; according to G.J.J. Hahn (*Der … General-Bass-Schüler*, 1751) and C.P.E. Bach (*Versuch über die wahre Art*, 1753–62), in organ accompaniment the player should, after a chord is struck, raise his right hand and rest until the next chord is reached. In the scores of his Passion settings J.S. Bach notated the recitatives in the normal way, with long held notes in the bass, but in the continuo parts of the *St Matthew Passion* he wrote short notes separated by rests. Evidence for similar practices in harpsichord performance of Italian opera is ambiguous – in any case the fleeting, ephemeral sound of a harpsichord in an opera house could be sustained only through arpeggiation, recommended by J.J. Quantz (*Versuch einer Anweisung*, 1752), Niccolo Pasquali (*Thorough-Bass Made Easy*, 1757) and others. Some evidence suggests that the German practice of 'short declamation' arose directly from the influence of Italian opera on German centres at the beginning of the century, as it is clear that a short style was used in at least some Italian opera performances in foreign locations, such as in London and France; Rousseau is unambiguous in this regard. Within Italy the picture is less clear, but occasional oblique references to short declamation (such as the Verri brothers' reference to the disagreeable 'strokes of the bass' in Roman recitative) suggest it may have been widely practised. The term *secco*, in fact, may have originally referred to an accompanimental style rather than a dramaturgical deficiency (a meaning inferred by the 19th century); in French scores *sec* routinely describes short, punctuated quaver passages in *accompagnato*, and *secco* was first used in a published score in Jommelli's *L'olimpiade* (1783) for the francophile Stuttgart court.

It became customary for the singer to add expressive appoggiaturas at the final cadence and at appropriate intermediate points. In his *Anleitung zur Singekunst* (1757, an enlarged German version of P.F. Tosi's *Opinioni de' cantori antichi e moderni*), J.F. Agricola gave examples to show how this was done (ex.1). In the earliest operas and cantatas the voice and accompaniment always end together, as in the late madrigal. The practice of cutting off the voice before the cadence and leaving the accompaniment to complete the progression seems to have arisen in recitatives of a pathetic character, where the

singer was so overcome with emotion as to be unable to continue; there are examples in Michelangelo Rossi's *Erminia sul Giordano* (1633), Cavalli's *Didone* (1641) and Monteverdi's *L'incoronazione di Poppea* (1642). Confusion in later repertories has partly resulted from Tosi's complaint against the *cadenza tronca*, which has variously been interpreted as a 'foreshortened' cadence (i.e. one in which the dominant harmony in the accompaniment – with a 4–3 suspension – coincides with a tonic appoggiatura in the voice) or (more likely) merely as the repetitious and premature cadencing of the vocal part itself. By the early 18th century both the delayed and the 'foreshortened' cadence were amply borne out in Italian manuscripts and by contemporary German theorists, such as C.P.E. Bach, Telemann and Heinichen.

The speed at which recitative was sung depended entirely on expression. Tosi, writing about *opera seria*, said that singers should learn 'a certain natural Imitation, which cannot be beautiful, if not expressed with that Decorum with which Princes speak, or those who know how to speak to Princes' (*Opinioni*, Eng. trans., 2/1743). On the other hand, Grimm (*Encyclopédie*, xii, 1763, 'Poème lyrique') regarded recitative as the medium for ordinary conversation. These views are not easily reconciled, because neither takes into account the context of a recitative or the type of work in which it occurs.

2. After 1800. During the first decade of the 19th century the distinction remained intact between the conversational *recitativo secco* and the more declamatory *recitativo accompagnato*, both varieties being marked off from the set numbers by the use of 'versi sciolti' (freely alternating lines of seven- and eleven-syllable verse). Subsequently, however, under the reign of Murat in Naples, which saw the importation of early French grand opera, the fashion started of scoring the *secco* recitative for strings, exemplified by Mayr's *Medea in Corinto* (1813) and Rossini's *Elisabetta, regina d'Inghilterra* (1815). By 1820 this had become the rule for serious works, keyboard accompaniment being restricted to *opera buffa* and *semiseria*. In due course both types of recitative became subsumed into the scena. All passages intended to be delivered in the rhythm of ordinary speech continued to be marked 'recitativo', however, even for only a few bars, a practice that continued until the 1890s, as in Verdi's *Otello* (1887) and Catalani's *La Wally* (1892). In the operas of Puccini and his successors, on the other hand, the term vanishes, being replaced by the marking 'a piacere' in the voice-part and 'col canto' in that of the orchestra.

In France recitative was confined to works produced at the Opéra and, during the 1860s, at the Théâtre Lyrique, as for example in Gounod's *Faust* (1860, revised version), Berlioz's *Les Troyens à Carthage* (1863) and Bizet's *Les pêcheurs de perles* (1863) and *La jolie fille de Perth* (1867). Traditionally its text was set out in 'vers libre', consisting of lines of varying length with an alexandrine basis, to the setting of which the weak tonic accents of the French language permitted considerable flexibility. For most of the century *opéra comique* employed spoken dialogue and 'mélodrame' as a link between its set numbers, but during the 1880s it too became through-composed, as for example in Massenet's *Manon* (1884) in which mélodrame alone forms the connecting tissue. The recitatives added by Guiraud to Bizet's *Carmen* (1875), though they ensured the opera's international circulation, were never performed by the Opéra-Comique; nor were they heard in Paris before the opera's first performance at the Palais Garnier during the 1950s.

German Singspiel, in which the dialogue was spoken, admitted only accompanied recitative, as exemplified by 'Abscheulicher!' in Beethoven's *Fidelio*. The move towards continuous music began, as Meyerbeer's diaries show, in about 1816, though it yielded no work of substance until 1823 with Spohr's *Jessonda* and Weber's *Euryanthe* (Schubert's *Alfonso und Estrella*, though completed in 1822, was not performed until 1854). Here there is no fixed pattern of verse for the recitatives, some of which approximate to prose. Recitative is found in Wagner's early works up to *Der fliegende Holländer* (1843), but not in the more continuous texture of *Tannhäuser* (1845). In *Lohengrin* (1850), even passages such as the exchanges between Ortrud and Telramund at the start of Act 2, which are delivered in the rhythm of ordinary speech, are no longer qualified by the term; while in the music dramas from *Das Rheingold* onwards, where the bounds between lyrical and declamatory elements are quite differently defined, it does not apply at all.

The only English operas of the 19th century to have endured are constructed on the model of French *opéra comique*, using spoken dialogue with occasional melodrama. Balfe, however, made two through-composed settings, *Catherine Grey* (1837) and *The Daughter of St Mark* (1844), both of which revert to the 18th-century English tradition of recitative in heroic couplets (as used in Arne's *Artaxerxes*, 1762). A less clumsy, more flowing expedient based on blank verse can be found as late as 1891 in Sullivan's *Ivanhoe*.

Recitative in Russian opera is more measured and even-paced because of the nature of the language; nor is it marked off metrically from the closed numbers. Hence the development of Dargomïzhsky's 'melodic recitative' as the basis of an entire opera, examples of which are furnished by Musorgsky's uncompleted *Marriage* (composed 1868), Dargomïzhsky's *The Stone Guest* (1872) and Rimsky-Korsakov's *Mozart and Salieri* (1898).

As operas became more continuous during the course of the 19th century, recitative as such inevitably disappeared. Its legacy, however, can be found in the comparatively unvocalized delivery required in such operas as Debussy's *Pelléas et Mélisande* (1902), Vaughan Williams's *Riders to the Sea* (1937) and the Sprechgesang employed in the operas of Berg and Schoenberg. A modern variant of *recitativo secco* occurs accompanied by piano in Britten's *The Rape of Lucretia* (1946) and by harpsichord in Stravinsky's *The Rake's Progress* (1951).

3. Instrumental recitative. Recitative-like passages have often been used in instrumental music for special expressive or dramatic effect. Among the earliest examples are those in Kuhnau's *Biblischer Historien* (1700). Bonporti wrote a much-ornamented recitative for solo violin in no.5 of his *Concerti a quattro* op.11 (after 1727), but a more direct imitation is to be found in the works of later composers. Examples include the first of C.P.E. Bach's 'Prussian' Sonatas (1742), Haydn's Symphony no.7 ('Le midi', 1761) and Sinfonia concertante HI:105 (1792), Mozart's Violin Concerto no.3 K216 (1775) and Beethoven's piano sonatas op.31 no.2 (1802) and op.110 (1821–2). The passage for cellos and basses in the finale of Beethoven's Choral Symphony is marked 'selon le caractère d'un Récitatif, mais *in tempo*'. Schoenberg's

Variations on a Recitative for organ op.40 (1941) explores possibilities that other composers seem to have ignored.

Recitative, liturgical. In the medieval liturgy very little was spoken or read in the manner known today. Texts that were not set to the kind of melodies employed in antiphons and responsories were generally recited using recitation formulae of varying elaboration. Most of these formulae consisted of a single fixed pitch that carried the burden of the text, with inflections of one or more pitches occurring at key points, for example, the beginning of a phrase or period, or, more often, its end. The formulae, particularly the more simple ones, were not at first notated: presumably the monks and clergy that used them were familiar with the prevailing conventions. It may also be assumed that before they became standardized there was a degree of variety in their execution.

Among the most simple formulae were those employed for the orations and readings of Mass and Office; more elaborate tones were used by the priest for the Preface and the *Pater noster* at Mass, by the deacon for the *Exultet* at the Easter Vigil, and by the cantor for the *Benedictus es* on Ember Saturdays. The psalms were recited to sets of eight tones, one for each of the ecclesiastical modes (plus an additional *tonus peregrinus*). These, too, differed in elaboration, with simpler tones for the psalmody of the Office and more ornate ones for the *Magnificat*, the introit and communion, and the invitatory psalm.

Reciting note. The note on which most of a psalm verse is sung. *See* PLAINCHANT and PSALM; *see also* MODE.

Reckow, Fritz (*b* Bamberg, 29 March 1940; *d* Erlangen, 30 Aug 1998). German musicologist. After practical musical training he studied musicology from 1959 at the universities of Erlangen, Freiburg and Basle with Eggebrecht, Stäblein, Hammerstein and Schrade. He took the doctorate at Freiburg in 1965 with an edition and interpretative study of the principles of organum purum; this work had far-reaching consequences for the study of Notre Dame polyphony. From 1965 he represented the Mainz Academy of Sciences and Literature at Freiburg in the preparation of the *Handwörterbuch der musikalischen Terminologie*, for which he contributed many articles and

acted as editor (1973–9); in 1971 he was appointed lecturer in musicology at Freiburg. He completed the *Habilitation* in 1977 with a study on music as language. After working as guest professor at the University of Hamburg in 1979, he was appointed professor at the University of Kiel. In 1987 he succeeded Martin Ruhnke as chair in the department of music at the University of Erlangen-Nuremberg. Together with David Hiley and Karlheinz Schlager, he was editor of Monumenta Monodica Medii Aevi and he acted as an academic adviser for the Deutsche Forschungsgemeinschaft (1992–7) and the Centre Européen pour la Recherche et l'Interprétation des Musiques Médiévales (from 1995). His writings cover the early Middle Ages to the 19th century and concentrate mainly on medieval music history, French music of the 18th and 19th centuries, music aesthetics and the history of musical terminology. Reckow's enduring interest as a scholar was the relationship of words and music, and his studies on this subject were informed by his command of philological method. His high standing as a scholar was matched by his great popularity among colleagues and pupils.

Recorded sound. This article is concerned with historical and technical aspects of the means for recording, reproducing and transmitting sound. The material covered in the first section includes, first, a history of recorded sound from mechanical to electrical means; secondly, a history of the various media and technologies used in recording; and lastly, a historical overview of the recording industry. The material covered in the second section includes, first, the conversion of sound into usable electrical energy by microphones; secondly, the employment of microphones and other apparatus in recording and broadcasting studios; thirdly, the recording of sound on disc, tape and film; fourthly, the transmission of sound by radio broadcasting; and lastly, the reproduction of sound through amplifiers and loudspeakers. For the history of music in radio and the influence of radio on musical life, *see* RADIO.

I. History of recording

1. EARLY RECORDING AND NOTATING DEVICES. The earliest attempts to obtain a permanent record of extempore performance were in the form of 'notating devices', normally attached to the action of a keyboard instrument. Apparently the first such machine was proposed in England by J. Creed, who wrote a 'Demonstration of the Possibility of making a machine that shall write Extempore Voluntaries or other Pieces of Music as fast as any master shall be able to play them upon an Organ, Harpsichord, etc.', published posthumously by the Royal Society in 1747. A similar invention, called the melograph, was conceived by Leonhard Euler (1707–83) and built by Johann Hohlfeld in about 1752, consisting of two revolving cylinders with a band of paper passing over them. Note positions and duration were marked onto the paper by pencils connected to the piano action. (The concept of the MELOGRAPH was revived in the 1950s in an electronic instrument used in musicological research for the continuous graphic representation of melody.) Other similar machines, later employing electromagnetic or pneumatic actions, were developed by J.F. Unger (1716–81), J.J. Merlin (1735–1803; a harpsichord-piano fitted with his clockwork-driven device is in the Deutsches Museum, Munich), J.H. Pape (1789–1875) and Jules

Carpentier (1851–1921), though all met with limited success. The most successful method of recording and reproducing a piano performance with all its nuances of expression was developed in the REPRODUCING PIANO, introduced by Welte in 1904. (*See also* MECHANICAL INSTRUMENT).

In April 1877 the Frenchman Charles Cros (1842–88) deposited with the Académie des Sciences a paper containing proposals for the reproduction of sound, but he failed to put his theories to practical test. In the same year the American Thomas Edison (1847–1931) came quite independently to the study of sound recording and reproduction as an offshoot of his researches into high-speed telegraphy.

2. ACOUSTIC RECORDING. Although Edison's speaking voice first engraved *Mary had a little lamb* on tinfoil in December 1877, the inventor exploited the cylinder 'phonograph' only as a toy from 1878 to 1880 before turning his attention to the electric light. The invention remained dormant for the next eight years. A few tinfoil recordings are preserved at the Edison National Historic Site at Menlo Park, New Jersey.

The history of recorded sound begins in 1888, when Edison entered the market with an improved version of the phonograph. At the same time Columbia began selling its 'graphophone', using patents for a floating stylus developed by Alexander Graham Bell and associates. Recordings of celebrities were made in the USA and Europe, and by 1890 both firms were selling cylinder recordings of singers, instrumentalists and comic artists from the vaudeville stage. Columbia recorded the US Marine Band, although its director John Philip Sousa did not participate in the recordings. In 1893 the newly formed Sousa's Band began to record for Columbia, still without its director. The first cylinders were recorded in batches of ten. A few years later the pantograph was used to make duplicates from a master recording; only in 1901 was the process of moulding copies of a cylinder recording developed.

In 1894 Emile Berliner, a German émigré in the USA, began to sell a similar range of entertainment on flat-disc recordings, played on a machine that he called the 'gramophone'. The disc had an immediate commercial advantage over the cylinder in that many copies could be produced by moulding from a master. Nevertheless, the two media continued to compete for public favour for about 25 years before the disc ousted the cylinder. The first discs were made of hard rubber, which was replaced in 1897 with a shellac compound. The groove was modulated on a zinc disc coated with fatty film, and the grooves were then etched in an acid bath. Eldridge R. Johnson developed a method of cutting a groove in a solid wax disc, and in 1901 he and Berliner joined to form the Victor Talking Machine Co. William Michaelis developed the 'hill-and-dale' disc (see §II, 6, below) in England in 1904, calling it the neophone. Recordings issued up to 1901, some of them made privately, can be considered incunabula. Gianni Bettini designed an improved diaphragm for the phonograph which he used to record leading opera singers in New York, but the cylinders were duplicated in small quantities and sold at high prices; virtually all have been lost. Lionel Mapleson, the librarian of the Metropolitan Opera, recorded performances from the prompt-box and from the catwalk over the stage from 1900 to 1903.

The beginning of recorded sound as a serious medium, however, dates from 1902, when Columbia (which had begun to make discs as well as cylinders) and Victor agreed to pool their disc-recording patents. Disc recording began to eclipse the cylinder from this time. In Europe Pathé Frères, which began in 1896 to produce an extensive catalogue of cylinder recordings, adopted the disc in 1906 and abandoned the cylinder in 1910; by 1919 the firm was issuing only lateral-cut discs. Columbia stopped producing cylinders in 1912, but Edison, who began to make discs only in 1913, continued both formats until 1929, when his firm withdrew from the record market to focus on office dictation machines.

In 1897 William Barry Owen went to England to negotiate the sale of Berliner's patent rights. The Gramophone Co. was founded the following year in London, and a manufacturing branch was opened in Hanover. Fred Gaisberg, who had worked briefly for Columbia and then for Berliner, soon joined the firm, which remained closely affiliated with Berliner's by exchange of master recordings and shared use of trademarks. In December 1900 the Gramophone Co. became the Gramophone and Typewriter Co. (G & T), with the recording angel as its trademark. (It was revived in 1953 for the American market.) In 1909, however, the firm reverted to its original name and changed its trademark to the painting of a dog listening to 'his master's voice', the same trademark used by Victor. Adopting Victor's method of recording in wax, the Gramophone Co. began in 1900 to record in every part of Europe and Asia. In 1907, however, Japan was transferred from Gramophone to Victor in the division of markets between the two associated companies and in 1927 the Victor Company of Japan was incorporated. During World War I the German government seized the local branch of the Gramophone Co. as enemy property. It was not returned after the war, so His Master's Voice became the trademark of Deutsche Grammophon Gesellschaft in Germany. Their product was exported bearing a different trademark and the label name of Polydor. Only in 1926 did the Gramophone Co. of England re-enter the German market with the Electrola label, using a new trademark. Electrola recovered the classic trademark in 1949.

Columbia, too, established an English branch which began to create its own recordings only after Louis Sterling became its manager in 1909. In 1903 F.M. Prescott, who had directed the International Zonophone Company, launched a new firm, Odeon, to make machines and discs. Odeon produced the first double-faced record, playable on both sides. The Carl Lindström company subsequently acquired Odeon, as well as Beka, Favorit and Parlophon; Columbia (UK) acquired Lindström in 1925 and Pathé Frères in 1928.

3. ELECTRICAL RECORDING. The acoustic process used in all cylinder and disc recording involved collecting sound vibrations in a recording horn attached to a stylus that engraved the sound in a permanent medium. The performers were grouped as close to the mouth of the horn as possible (fig.1) to secure the maximum transfer of sound energy to the diaphragm that closed the throat of the horn; playback involved tracing the sound with a stylus and transmitting it through a similar horn. With the development in the early 1920s of the vacuum tube or valve for radio broadcast, it became possible to use electronic amplification to record sounds captured by the

1. Instrumentalists grouped closely round a collecting horn, conducted by Elgar, at the Gramophone Company, City Road studio, London, January 1914

more sensitive microphone, and to reproduce them using either an acoustic or an electric player, which might be part of any radio receiver. Since the sounds could be conveyed by wires over considerable distances, it was no longer necessary to oblige the musicians to perform unnaturally loudly or congregate round a large collecting horn. Sufficient signals could be picked up from conventional orchestral layouts, and concert hall performances by any number of artists could be captured in well-balanced recordings.

The electrical recording process was pursued experimentally for several years and perfected by Western Electric. In 1922 American Columbia sold its English branch to Louis Sterling, who subsequently acquired the parent firm and with it a licence for the recording process from Western Electric. Victor also acquired a licence and shared it with His Master's Voice (HMV). Electrical recording began in the spring of 1925, but the first issues were publicized discreetly in order not to render the back catalogues worthless. In the next four years whole new catalogues of electrical recordings were created. Both Victor and HMV re-recorded some of their records made by Enrico Caruso and others, adding orchestral accompaniment and dubbing in the recorded voice. The results were disappointing, however, and the original acoustic records remained in the catalogues. Deutsche Grammophon allied itself with a smaller American label, Brunswick, which introduced another system of electrical recording developed by General Electric, using a beam of light to modulate the electrical signal. Both firms used this system for about a year, then switched to the Western Electric system in 1926. Odeon and Parlophone adopted electrical recording only in 1927.

The stock market crash of 1929 affected the record business severely, since the radio was already becoming an alternative to records as a source of entertainment in the home. In England Columbia was merged in 1931 with the Gramophone Co. to form Electric & Musical Industries Ltd (EMI). In the USA the Victor Talking Machine Co. arranged to market its electrical playback machines in radios built by the Radio Corporation of America. RCA purchased Victor in 1929, and some years later the record label was changed to RCA Victor.

The weak market for recordings worsened during the Depression. This led Gaisberg and his assistant, Walter Legge, to solicit subscriptions for proposed recordings. After 500 subscriptions were obtained in 1931 for a set of six discs of Wolf's lieder sung by Elena Gerhardt, a long series of 'subscription societies' was established. Among the recordings that followed were Beethoven's piano sonatas played by Artur Schnabel, his violin sonatas played by Fritz Kreisler accompanied by Franz Rupp, Haydn's quartets played by the Pro Arte Quartet, five more albums of Wolf's lieder sung by various singers, Bach's *Das wohltemperirte Clavier* played by the pianist Edwin Fischer, three of Mozart's operas performed at the Glyndebourne Festival under Fritz Busch, and other music not otherwise available on records.

Early discs were designed to play at turning speeds ranging from 70 to 82 r.p.m.; 78 r.p.m. became the standard in the electrical era. In 1931 RCA Victor introduced a record that would play at 33⅓ r.p.m., more than doubling the standard playing time. In the depths of the Depression, however, the attempt to market new playback machines was doomed to failure. Moreover, most of the 'Program Transcriptions', as they were called, were dubbed from existing masters with inferior results. Only two recordings conducted by Leopold Stokowski were recorded directly in the new medium, Schoenberg's *Gurrelieder* and Beethoven's Fifth Symphony; both were withdrawn by 1935. For several years RCA Victor exclusively used Stokowski's Philadelphia Orchestra for new orchestral recordings, but in the mid-1930s the Boston Symphony Orchestra and the New York Philharmonic returned to record for the company as well. In England HMV and Columbia retained the London Philharmonic Orchestra from its inception in 1932, with its founder Sir Thomas Beecham conducting on Columbia and others conducting on HMV.

In Hollywood the motion picture industry tried three methods of recording sound for motion pictures. The Vitaphone, used for Warner Bros. first sound pictures in 1926, synchronized a disc to the film projector. This was soon replaced by sound recorded on the edge of the film outside the picture area; RCA's method modulated a variable area, while Western Electric's modulated a variable density. Both soundtracks were read by a beam of light (see §II, 10, below). RCA Victor also made a few recordings from film soundtracks, dubbing the sound to disc for the home market. The first effort to create what would later be called 'surround sound' was *Fantasia*, an animated film made by Walt Disney in 1939. The Philadelphia Orchestra under Stokowski was recorded in six channels, and selected theatres were specially equipped for exhibiting the film. In Germany BASF developed a method of magnetic recording, drawing a tape coated with iron oxide across an electromagnet modulated by an electrical signal. An experimental recording of the LPO was made in 1936, and the method was used extensively in German radio stations after 1939 (see §II, 9, below).

4. Long-playing records and tape recording. The only recording format available in the home at the end of World War II was the 78 r.p.m. disc. In anticipation of a change, Columbia began about 1940 to record its masters on 16-inch discs for greater fidelity. For a time the quality of their product, dubbed from the original masters, suffered. Then in 1945 Columbia began to develop a new approach to the long-playing record (LP). The speed of 33⅓ r.p.m. was again adopted, but a narrower groove 1 mil (a thousandth of an inch) wide replaced the 3-mil groove, and an unbreakable plastic called vinylite replaced the fragile shellac disc.

Columbia, working in secrecy, began to press a large number of vinyl discs in early 1948. The announcement bringing the LP catalogue to market in June 1948 caught the industry by surprise. Meanwhile, RCA Victor had been developing a different technology since 1939. Adopting a speed of 45 r.p.m., which it called a compromise between fidelity and duration, the company chose convenience over longer playing time with a 7-inch vinyl disc. A wide centre hole enabled the playback machine to contain a rapid changer mechanism within the centre post. RCA Victor, rejecting Columbia's LP, introduced its system in January 1949.

For the rest of that year American record companies waged what came to be known as 'the battle of the speeds'. Several firms adopted the LP for sets of records, but in September Capitol announced that it would issue its records at all three speeds. In January 1950 RCA Victor decided to issue its album sets on LP, and Columbia began to issue single discs at 45 r.p.m. The introduction of three-speed record changers required 45 r.p.m. records to be made with standard centre holes. 78 r.p.m. records gradually disappeared from the market within a few years, while 45 r.p.m. became the standard for popular songs and the 33⅓ r.p.m. LP became the only format for album sets in all categories of music.

In Europe L'Oiseau-Lyre issued the first LP records in France in April 1950, followed within a year by Decca, Discophiles Français, Le Chant du Monde and Columbia. In England Decca, which began exporting LPs to the USA in 1949 under its new label, London, entered the British market in June 1950 at the same time as L'Oiseau-Lyre.

The ease of marketing LP records brought a large number of new record labels into existence, especially in the USA. This coincided with the introduction of magnetic tape to the recording studio as well as to remote halls where recordings could be made with ease. Tape machines found in German radio stations at the end of the war were brought to the USA to be copied, and from late 1949 virtually all commercial master recordings were made on tape. The tape recorder as a recording and playback device for the home came to the American market in 1947. The Amplifier Corporation of America, using masters of the Vox label, brought the first recorded tapes on open reels to market in 1949. By 1953 the major labels were issuing their own catalogues of recorded tapes, which were regarded as superior to discs in relative freedom from noise.

5. Multi-channel recording. The capture of two distinct sound channels from one sound source, just as human ears operate, was perceived to be a method of achieving greater spatial realism in a recording. Bell Telephone Laboratories made experimental stereo recordings of the Philadelphia Orchestra under Stokowski in 1932, and in Germany, Walter Gieseking was recorded playing Beethoven's 'Emperor' Concerto in 1944. Early experiments followed two paths. One technique placed two microphones close together to produce a binaural recording that was played back through headphones. The other technique captured two channels of sound, using two or more microphones, which were played back through speakers. The latter system prevailed.

The first stereo playback device for the home consumer was developed in 1952 by Emory Cook, who attached a second cartridge to the LP playback arm, like a sidecar on a motorcycle. This enabled the listener to play discs produced by Cook that had two channels of sound on the same disc, the left channel starting at the edge and the right channel starting in the middle of the disc. RCA Victor began to make most of its new recordings in stereo in early 1954. Later the firm added recorded stereo tapes to its existing tape catalogue. In England EMI began to issue both mono and stereo tapes in 1955. By 1956 most companies were making all commercial recordings in stereo, though only a small number were issued commercially on recorded tape.

Several firms experimented with putting two channels of recorded sound in the same groove of a disc. Western Electric developed a way to combine the two signals in such a way that the sum and difference of the two groove walls yielded stereo sound, channelled to separate amplifiers and speakers. This system was perfected at the end of 1957, when the first Westrex stereo record was offered to a market that lacked any playback equipment. The ploy successfully generated demand in the marketplace, and by June 1958 the stereo disc was a marketing reality.

In the first few years of stereo discs, several labels tried to preserve their monophonic recordings in the marketplace by reissuing them in electronically enhanced stereo. The sound signal was artificially divided into two channels, giving a suggestion of stereo. After a time consumers came to accept the original mono as genuine and no further enhanced discs were issued.

The open-reel tape playback deck was not a simple device to use in the home, so attempts were made to develop a cartridge or cassette that could be played as easily as a disc. In 1959 RCA Victor marketed such a cartridge utilising two inner reels, while in 1963 Columbia produced a small reel using narrow tape that would be taken up inside the player. Several types of four- or eight-track cartridges used a continuous loop of tape flowing between two interior reels.

In 1965 Philips combined a smaller version of the first RCA cartridge with the narrow tape that Columbia had used to produce the small cassette that eventually became the favoured tape format in the consumer marketplace. Originally developed as a low-fidelity device, it was improved to the point that it became as important as the LP in the market. Cassette players were installed in automobiles and Sony developed the portable personal stereo. By 1970 the open-reel tape occupied a peripheral place in the market, although it remains the recommended mode of archival storage of recordings.

In a further refinement of stereo sound, several systems of four-channel, or quadraphonic, sound were developed and marketed. Two more channels were added to the existing channels on a high-frequency carrier, which could then be decoded by the playback amplifier. Two competing formats, SQ and QS, were more or less compatible. Another approach promoted by RCA Victor placed four discrete channels in the walls of a single groove, yielding more complete separation of the channels in playback. All of these discs could also be played using a stereo cartridge, although the quadraphonic sound would not be reproduced. Quadraphonic sound was also marketed in a tape cartridge known as the Q8 format, adapted from the eight-track tape cartridge (see §II, 9, below). These systems were marketed from late 1971, but the failure to establish a standard format made the marketing of home equipment difficult, and quadraphony soon lost its appeal. Surround sound, employing five channels and a non-directional bass channel, was a later development.

6. Digital recording. The most radical change in sound recording since the introduction of electrical recording was developed by Denon, the Columbia firm in Japan, in the early 1970s. All sound recording since the beginning had produced an analogue pattern in a physical medium. Digital recording, originally called 'pulse code modulation' (PCM), reduced the wave form to digital code. This called for more complex electronic circuitry, both to encode the signals and to decode them on replay, but produced a dramatic improvement in the quality of reproduction. The first LP transferred from a digital master was a collection of Telemann fantasies for the flute issued in 1972. Denon built up the first catalogue of digital recordings in cooperation with Eterna (DDR) and Supraphon. By 1980 most firms were using digital recorders and transferring the sound to LP; these discs were identified as digitally mastered. Even greater benefits could be obtained by keeping the music signals in digital form all the way to the listener's home. This was accomplished in 1982 when an agreed standard for a digital record led to the launch of the compact disc, developed by Sony and Philips. Sales of the new CD soon rivalled those of the vinyl record and, within only about ten years, dominated the pre-recorded music market worldwide, although the Philips cassette remained a viable competitor for recordings of wide appeal. The CD is 120 mm in diameter and 1.2 mm thick, yet it easily surpasses LP sound quality in terms of frequency coverage and dynamic range. Maximum playing time is nominally 80 minutes; it has been suggested that the initial playing time of 74 minutes was insisted on by Norio Ohga, the head of Sony, to allow Furtwängler's recording of Beethoven's Ninth Symphony to be accommodated on a single disc.

A new even smaller digital record format was launched by Sony in 1992. The MiniDisc (MD), 64 mm in diameter, offered the same playing time and other features as the CD (see §II, 9, below), although with marginally poorer sound quality. On the other hand, the MD came with a recording facility which was superior to that of the compact cassette tape system. A recordable CD followed, but it was relatively expensive and used mainly by professionals. The MD made slow progress against the dominance of the CD, particularly as the record companies showed little interest in issuing pre-recorded music on the smaller disc. Philips introduced a new digital version of the compact cassette (DCC) at about the same time (see §II, 9, below). Neither the MD nor the DCC did much to convert the buying public from the conventional analogue cassette, which continued to rival the CD. Newer versions of the CD based on a digital versatile disc (DVD) appeared in 1997; the new format was also capable of storing information that made it applicable to the video and home computer markets.

7. Repertory and marketing. In 1902, after paper labels had replaced engraved text on discs, G & T created a Red Label to identify its most important records. Victor soon copied the style, calling it the Red Seal. Offering serious repertory sung and played by renowned artists, these labels acquired the highest prestige in the marketplace. The operatic arias were accompanied on the piano until 1906, when a semblance of orchestral accompaniment was introduced. Most of the leading operatic singers began to make records, notably Caruso, who became the most celebrated recording artist of his time. In April 1902 he recorded ten arias for G & T, followed by three cylinders issued by Pathé and seven discs issued by Zonofono. In February 1904 he made his first recordings for Victor in New York, an association that continued until his death in 1921. Caruso's records were immensely successful and helped to make recordings artistically significant. A few complete operas were recorded before World War I. In the early electrical era, many popular Italian operas were recorded in Milan by both HMV and Columbia, and some French operas in Paris. To keep the

large sets affordable they were made without star singers and conductors and sold at a moderate price. From the beginning of the LP era operas recorded with the foremost singers and conductors became a feature of all the major record labels. The recorded repertory now ranges from newly composed operas to the lesser-known operas of Handel and the earliest works of the 17th century.

Unlike military bands orchestras did not prove suitable for the acoustic recording process, and only brief orchestral selections found their way to disc before 1909. In that year Herman Finck conducted Tchaikovsky's *Nutcracker Suite* on seven sides for Odeon. A year later Odeon recorded Beethoven's Fifth Symphony complete on eight sides. In 1913 the first celebrity orchestral recording featured the same work played by the Berlin Philharmonic under Arthur Nikisch, with bassoons replacing the double basses. Elgar and Holst also led valuable recordings of their own works. Before 1920, however, symphonies were generally recorded in abridged form; it was not until the end of the acoustic era that much of the standard symphonic repertory was recorded in uncut versions. Frieder Weissmann conducted all of Beethoven's symphonies (except the Seventh) for Parlophone, which also recorded seven of Richard Strauss's symphonic poems conducted by Eduard Mörike. Oskar Fried conducted Bruckner's Seventh Symphony and Mahler's Second for Deutsche Grammophon.

From the early electrical era to the advent of the LP the scope of the standard orchestral repertory on records gradually increased. The new companies that arose in the late 1940s and early 50s recorded neglected works of every era. The repertory expanded to lesser-known composers, contemporary works and music of earlier centuries. From about the centenary of his birth in 1960, Mahler's music went from the periphery to the centre of the repertory, a development that was heard on records even before it reached the concert hall. Beginning with Vivaldi, the music of the Baroque era came to records in abundance, followed by music of the medieval and Renaissance periods. From the beginning of the stereo era, historically informed performing practice became the norm. Recordings fostered the dissemination of interpretations by performers who repeatedly advanced new notions of acceptable performing practice. Even interpretations of Classical and Romantic music were subjected to historical scrutiny.

The improvisatory nature of jazz means that recordings of it, which began to appear in 1917, provide a particularly valuable documentation. The accumulated repertory has acquired a stature that was unimagined in the earliest days of jazz. While the music of the Broadway stage was recorded irregularly before the LP era, after Cole Porter's *Kiss Me, Kate* in 1949, virtually every Broadway musical was recorded by one of the four major American labels. These original-cast recordings had a parallel in soundtrack recordings, which were made from the original recordings of film scores.

From the beginning of the LP era the most significant interpretations of the past were gradually reissued, and by about 1980 the process had accelerated. RCA Victor, for example, reissued complete recordings of such leading artists as Caruso, Heifetz and Rachmaninoff. In the CD era the expiration of copyrights has permitted an increasing number of recordings to be reissued freely. Digital technology makes it possible to restore the sound of even the earliest recordings with unprecedented fidelity. Original producers have begun to cooperate with freelance firms (EMI with Testament, for example), to provide first-generation sources for use in making the transfers. In the popular field the reissue of boxed sets of the entire output of the more legendary recording artists has become commonplace. While some LP recordings are not yet available on CD, many 78 r.p.m. recordings that were never issued on LP have appeared on CD.

As records became more and more important in the marketplace, retail sales moved from speciality stores to department stores, where only the fastest-selling items were offered. Record shops offering the widest selection are found only in larger cities; music lovers who live far from such centres depend largely on the mail-order firms and record clubs that have sprung up since the early LP era. In the USA both RCA Victor and Columbia (now BMG and Sony) maintain clubs that send records to members on a regular schedule, even licensing recordings of other labels for sale. The Musical Heritage Society has been the most successful club in the USA since 1965. Concert Hall, which began in the USA in 1946, operated clubs throughout Europe and Japan for many years.

The album has been part of record marketing since 1909, when the *Nutcracker Suite* was issued in a special sleeved album. In the last days of the 78 r.p.m. era *Die Meistersinger* was recorded at the Bayreuth Festival under Karajan on 34 discs, later issued on five or six LPs. In 1971 Deutsche Grammophon offered 76 LPs of Beethoven's music, packaged in 12 albums, and in 1991 Philips issued 180 CDs of Mozart's music in a pair of carrying cases.

8. The recording industry after 1948. Each technological development in recording has resulted in increased competition in the marketplace and the enlargement of the recorded repertory. Before 1948 both the recording of masters and the manufacture of records required such skill that a few companies dominated the marketplace. In the LP era many more firms were able to make master recordings on tape and obtain pressings from factories owned by the major companies. In the digital era master recordings of the highest quality can be made with much greater ease and pressed at any commercial disc manufacturing facility.

At the end of the 78 r.p.m. era the American market was dominated by RCA Victor, followed by Columbia, Decca (a subsidiary of the English firm until 1948), Capitol and Mercury. The European market was dominated by EMI, which maintained historical alliances with RCA Victor for its HMV label and with Columbia Records for its Columbia label. Decca became a significant label in the English market in 1946, while in Germany Deutsche Grammophon and Telefunken retained a share of the market. During the first decade of the LP, Decca (UK) entered the American market with the London label and established a partnership in Germany with Telefunken. Columbia (US) entered an alliance with the emergent Philips label, while Columbia (UK) entered the American market using G & T's old Angel label. In 1956 EMI acquired Capitol to replace RCA Victor as the American outlet for its HMV catalogue. In turn RCA Victor entered a cooperative agreement with Decca (UK) that provided international distribution for the RCA label. Deutsche Grammophon was distributed by Decca (US) and then by

MGM before it established its own American marketing branch.

In the 1960s Philips acquired Mercury as its American branch, while Columbia entered the international market with the CBS label and transferred its Japanese partnership to Sony. RCA Victor separated from Decca (UK) after 11 years to enter the international market with the RCA label. Philips and Deutsche Grammophon became partners by an exchange of stock between their respective parent firms. Philips later became the senior partner and also acquired Decca (UK). Subsequently several record companies were acquired by corporate conglomerates. RCA sold its record business to Bertelsmann in 1989, and CBS sold its record business to Sony in 1988. EMI was acquired by Thorn in 1979, but the union was dissolved in 1996. Warner (later Time Warner), a firm that had its own popular record label, acquired Elektra, Atlantic, Telefunken and Erato; the last was a small French label that had earlier been acquired by RCA. Philips, DG and Decca, which had become known as the Polygram Group, were acquired by Seagram in 1998. This firm had already acquired Universal (formerly MCA), which had earlier acquired Decca (US), and Polygram was merged into Universal. At the end of the 20th century the worldwide record market was dominated by Warner, Universal, Sony, EMI and BMG.

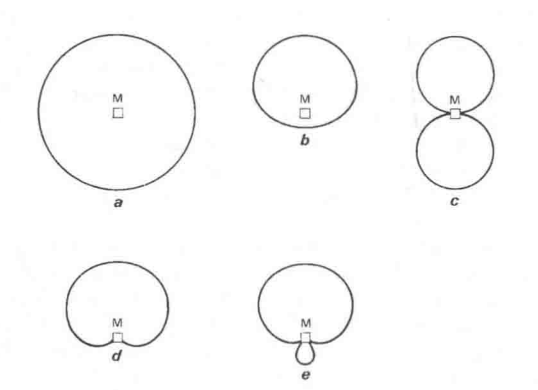
II. Techniques of recording, reproduction and transmission

1. THE SIGNAL: FREQUENCY RANGE AND AMPLIFICATION. In the studio, the minute rapid fluctuations in air pressure that constitute sound – referred to as the 'sound pressure' to distinguish them from the steady atmospheric pressure – act upon the diaphragm of a microphone, which by its movement generates an electromotive force or voltage proportional to the pressure change and causes a corresponding current to flow. The variation of air pressure with time, while complex in form, can be analysed into simple components – a fundamental plus a series of harmonics – with frequencies extending over a very wide range. Ideally, all these audio-frequency components should be represented, in their proper proportions, in the electrical signal generated by the microphone, and this signal should be preserved intact throughout the whole recording or broadcasting chain. It is not possible with present systems of radio transmission on medium and long waves to reproduce the full audio-frequency range. However, the introduction of VHF/FM broadcasting in the 1950s (see §12 below), coupled with improvements in methods of network distribution, overcame many of these difficulties and, with the later change to digital technology, the ideal can now be closely approached. Whereas a frequency range extending from 20 Hz to 20 kHz was for many years regarded as an adequate target, it is now generally agreed that future high-quality sound broadcasting should aim at preserving all components with frequencies between 40 Hz and 15 kHz; subjective tests carried out with a variety of programme material show that few individuals can detect the change in sound quality caused by the omission of components falling outside these limits. Sound recording, without the constraints imposed by the broadcasting chain, can if necessary be made to cover an even wider frequency range.



The signal generated by the microphone is too weak to actuate the rest of the apparatus in the recording or broadcasting chain, and has therefore to be electrically magnified. Originally, this process was carried out by a thermionic valve amplifier. It had been discovered that the heated filament of an electric lamp emitted a cloud of particles, each representing a small quantity of electricity; by catching these particles on a metal plate mounted within the lamp bulb and connected to a battery, the stream of electricity could be made to flow through an external circuit. Later it was found that if a wire grid was interposed between filament and plate, quite small signal voltages applied to this grid could be made to encourage or inhibit the stream of particles; the complete device thus constituted an electrical valve, which could regulate the flow of current as a tap regulates the flow of water, producing in the process an amplified copy of the original signal, with all its moment-to-moment fluctuations faithfully reproduced. An amplifier incorporating a single thermionic valve could be made to increase the signal power a thousandfold, while even greater magnification was obtainable by a multi-stage arrangement in which two or more valves operated in sequence.

For most purposes the thermionic valve has been superseded by the transistor, a tiny semiconductor device that produces an equivalent effect without the need for a heated filament; the necessary electrical conductivity is achieved by the introduction, during manufacture, of slight impurities into what would otherwise be a poorly conducting material. Frequently 'integrated circuits' are used in which a number of transistors, together with the associated electrical components – resistors and capacitors – required to give the equivalent of a multi-stage valve amplifier, are all fabricated on a single wafer of material only a few millimetres square. (Amplifiers of one kind or another perform a number of essential functions in a broadcasting or recording system. They are needed

particularly in studios not only to magnify the output signals from the various microphones but to make good the loss of signal strength incurred in various processing operations, and to produce the high audio-frequency power required to operate loudspeakers and recording equipment.)

2. MICROPHONE CHARACTERISTICS. To indicate the standard of performance of a microphone, and to distinguish one type from another, various characteristics have to be specified. The frequency characteristic or frequency response, for example, shows the way in which the sensitivity of the microphone varies with the frequency of the sound; in general, the less variation the better (i.e. the frequency response should be uniform). Another important characteristic shows the way in which a microphone's response to a sound depends on the direction from which that sound is coming. It is convenient to represent this characteristic in graphical form by starting from a central point, representing the location of the microphone, and measuring off in each direction a length that represents, to some scale, the sensitivity to sound coming from that direction. The resulting outline is known as a 'polar diagram' or 'polar characteristic'. Fig.2 shows some examples; in each case, M represents the position of the microphone, the front face of which is towards the top of the diagram. This two-dimensional representation relates to sound arriving in the horizontal plane; similar diagrams, which may or may not have the same shape, could be drawn for sound arriving at various angles in the vertical plane.

The circular polar diagram of fig.2*a* refers to a 'pressure' microphone, in which the sound acts only on the front surface of the diaphragm, the rear being enclosed: such a microphone is described as 'omnidirectional' because it responds equally to sounds coming from any direction. The figure-of-eight characteristic of fig.2*c* is obtained by exposing both the front and the rear of the diaphragm to sound; this construction produces a 'pressure-gradient' (or 'velocity') microphone, which is completely insensitive to sounds coming from either side (or from above or below). The figure-of-eight characteristic can be used to exclude unwanted sounds; in drama, moreover, an actor can give the effect of retreating into the distance simply by moving round to the 'dead' side of the microphone, so that the direct sound vanishes, leaving only the reverberation (see below). Probably the most generally useful form of directional characteristic is the cardioid of fig.2*d*, which covers a wide angle in front and has a 'dead' region at the rear. This can be synthesized by combining the signals from two microphone elements having individual polar curves of the circular and figure-of-eight forms respectively. Usually, however, the desired effect is achieved by a 'phase-shift' microphone, a variant on the simple pressure-gradient type, in which the diaphragm is directly exposed to sound in front and only partly enclosed at the rear; the same arrangement can be designed to produce the hypercardioid curve of fig.2*e*, which gives a lower response at the sides and a 'dead' region at about 120°.

2. *Typical polar characteristics of microphones: (a) pressure microphone, omnidirectional; (b) pressure microphone, partially directional at high frequencies; (c) pressure-gradient (or velocity) microphone; (d) phase-shift microphone, cardioid characteristic; (e) phase-shift microphone, hypercardioid characteristic*

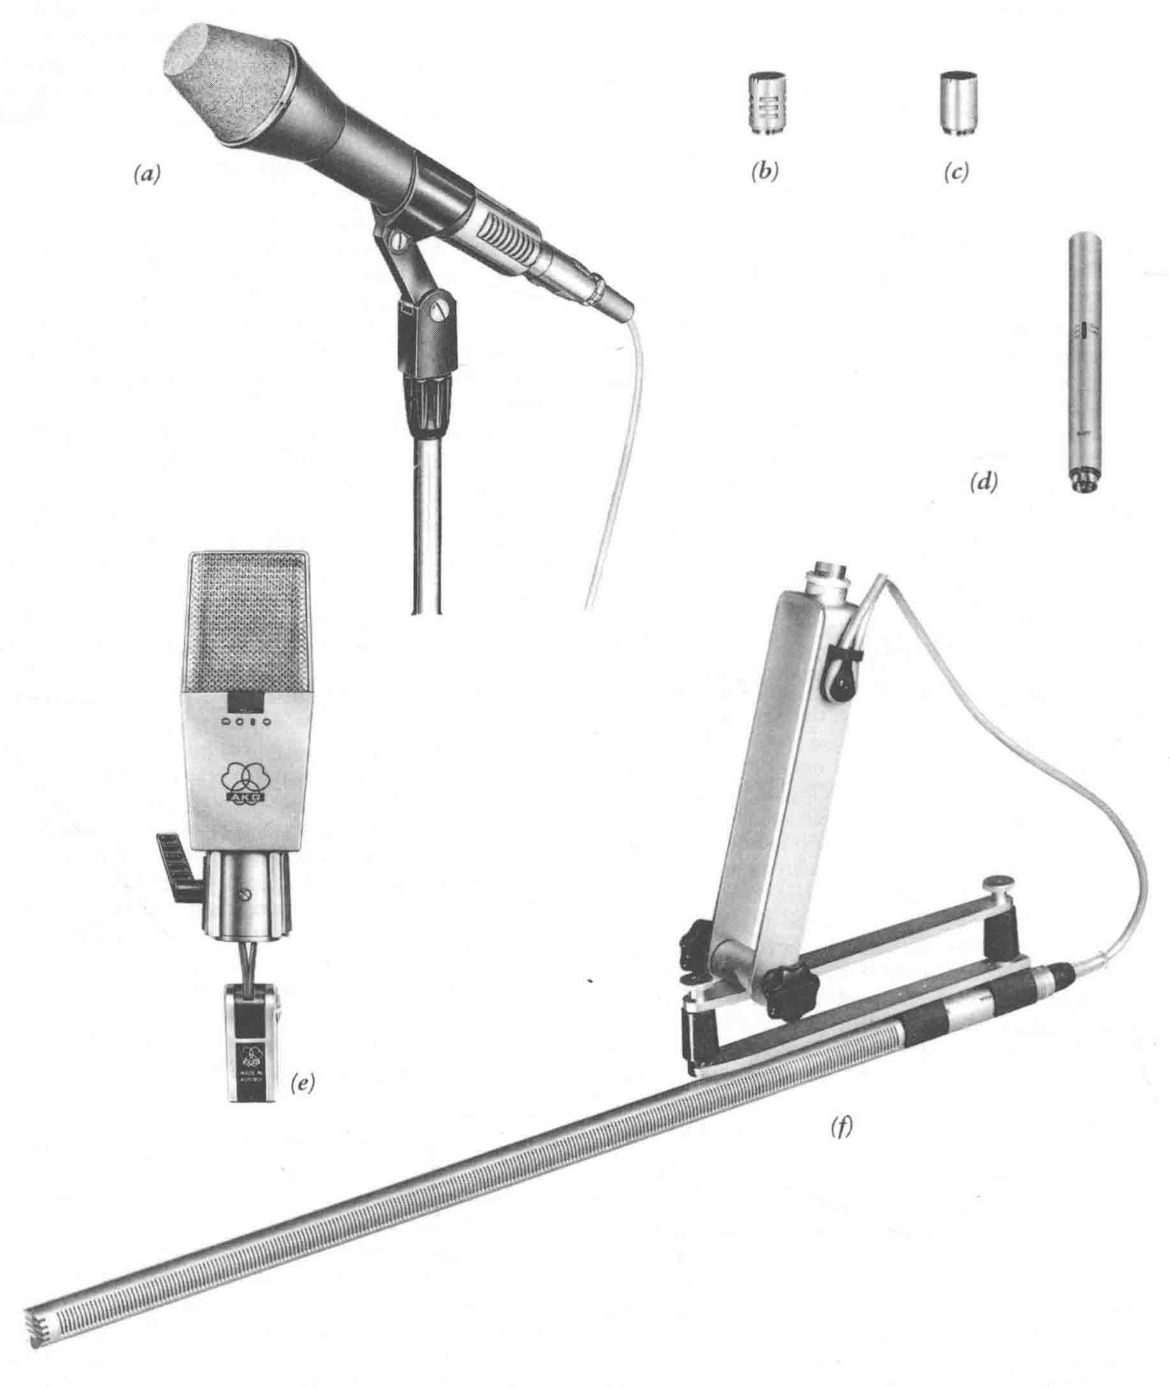
In a studio some of the sound emitted by the source reaches the microphone directly and some indirectly by repeated reflections from walls, floor and ceiling; the indirect component, which persists for a short time after the direct sound has ceased, is also known as 'reverberation'. If the microphone is brought nearer to the performer, the amount of direct sound reaching it is increased, but the amount of reverberant sound, which is distributed fairly uniformly throughout the studio, remains about the same; the ratio of direct to reverberant sound received is therefore greater. This ratio, other things being equal, determines the auditory perspective, the sense of nearness or remoteness of the reproduced sound.

All the microphones shown in fig.2, when pointed towards the performer, will give the same response to direct sound; but the response to reverberant sound, which arrives equally from all directions, will depend on the polar characteristic. Thus, an omnidirectional microphone, fig.2*a*, will respond to all the reverberant sound present, while a directional microphone, fig.2*b*, *c*, *d* or *e*, will respond to only a part of it. It follows that for a given ratio of direct to reverberant sound (a quantity determined by the acoustic perspective required) a directional microphone can be placed further from the source of sound than an omnidirectional microphone; with the more distant position it is easier to cover uniformly a large group of performers, such as a choir or large orchestra.

Ideally, the shape of the polar diagram should be the same at all frequencies, that is the frequency response should be the same for sounds coming from any direction. If this requirement is not met, the tonal quality of the direct sound will depend on the angle at which the sound arrives, while the ratio of direct to reverberant sound, and hence the acoustic perspective, will vary with frequency.

The frequency characteristics of pressure-gradient microphones and, to a lesser extent, of phase-shift microphones, show a progressive increase in bass response with diminishing distance from the source of sound. This phenomenon, which is known as the 'proximity effect' and becomes appreciable at distances of 50 cm or less, has long been used by singers of popular music to give the voice a more resonant character. For a given working distance, it can be compensated by electrically attenuating the low-frequency components of the signal, or by designing the microphone to produce the same result; in some broadcasting commentators' microphones, the effect is used to reduce the amount of background noise picked up. Some artifices used in microphones to avoid the proximity effect are described in §3 below.

Modern studio microphones can accept the loudest musical sounds without introducing distortion. But the volume range that can be transmitted is limited by background noise, usually in the form of a slight hissing sound, which may be heard during a quiet programme. This effect is produced by random fluctuations in the conduction of electricity within the microphone or its associated amplifiers. A full microphone specification includes a statement of the amount of background noise; this quantity is often expressed as the level of acoustic noise in the studio that would produce the same effect. In specifying noise levels, an allowance (known as 'weighting') is made for the unequal sensitivity of the ear in different parts of the audio-frequency spectrum.



3. MICROPHONE CONSTRUCTION. Most microphones used in the recording and broadcasting of music and drama fall into one of three categories according to the way in which the electrical signal is generated. In the dynamic or moving-coil microphone, constructed like a miniature loudspeaker, the signal is generated by the movement of a coil of aluminium wire, attached to the diaphragm, in the radial field of a permanent magnet. The motion of the diaphragm is to a large extent constrained by the air enclosed within the body of the microphone; the degree of constraint, and hence the response of the system to sound, is determined by a carefully designed arrangement of air channels and cavities. Many dynamic microphones are of the pressure type and are nominally omnidirectional, but become partly directional, as in fig.2*b*, at high frequencies, at which their dimensions are no longer small compared with the wavelength of the sound. Others are of the phase-shift type, in which a cardioid polar characteristic is obtained by allowing sound to reach the back of the diaphragm through an aperture, at the rear of the microphone, forming part of an acoustical delay or phase-shift network. In these microphones, the proximity effect can be much reduced by arranging for the external path length from the front of the diaphragm to the rear aperture to be increased at low frequencies. This can be achieved by providing two microphone elements mounted in a common housing; one has a long front-to-back path and operates at low frequencies only, while the other, of normal construction, covers the upper end of the range (fig.3*a*). A similar effect can also be obtained by a single phase-shift microphone element with a number of spaced alternative rear sound entrances, those giving the greatest front-to-back distances operating at the lowest frequencies.

In the ribbon microphone, the signal is likewise generated by the movement of an electrical conductor in the field of a permanent magnet. In this case the conductor is a flexible strip or ribbon of aluminium foil or leaf, usually 30–50 mm long and some 5 mm wide, which also serves as the diaphragm. The ribbon is mounted between parallel magnet poles so arranged that the magnetic flux traverses it from edge to edge. Most ribbon microphones are of the simple pressure-gradient type, with both faces of the ribbon freely exposed to sound, giving a figure-of-eight polar diagram. Some, however, are of the phase-shift type, the back of the ribbon being partly enclosed as described above; a variety of polar characteristics can be obtained by adjusting the size of the rear aperture.

The condenser (or capacitor or electrostatic) microphone has a diaphragm of paper-thin metal or metallized plastic, mounted in front of a fixed, electrically conducting back plate, the gap between the two being only a few hundredths of a millimetre. Deflection of the diaphragm by sound pressure alters the gap, and hence the electrical capacitance, between the two surfaces. In most of these microphones, a constant electrical charge is applied to the system; changes in capacitance then produce changes in the voltage between the diaphragm and back plate, which, when amplified, yield the required sound signal. The fixed charge is usually derived from an external power supply; alternatively one may use a diaphragm of special material, known as an 'electret', which is capable of retaining an impressed charge indefinitely, as a permanent magnet retains its magnetism. In some condenser microphones the changes in capacitance between the diaphragm and back plate are made to vary the frequency or amplitude of a radio-frequency current (i.e. an alternating current having a frequency of the order of megahertz); this variation is then converted, before amplification, to an audio-frequency signal by an action similar to that of a radio receiver. For technical reasons the first stage of amplification or other electronic circuitry has to be incorporated in the microphone; in some cases, however, the diaphragm and back plate are mounted in a detachable capsule that may be separated from the rest of the equipment by an extension tube of up to a metre or so in length.

Condenser microphones may be of the pressure, pressure-gradient or phase-shift type; in some cases, interchangeable capsules giving different polar characteristics are provided (fig.3*b*, *c*, *d*). A variable-directivity arrangement has also been produced, with two diaphragms symmetrically disposed on either side of a common back plate, which is perforated to allow the passage of sound. This system may be regarded as two phase-shift microphone elements placed back to back; by varying the charging voltages applied to the two diaphragms (an operation that can be controlled from a remote point), the contributions made to the sound signal by the front- and rear-facing elements can be added, subtracted or altered in amount and a variety of polar characteristics thus synthesized (fig.3*e*).

For some purposes a microphone much more directional than any of those so far described is required, so that a wanted sound may be picked up at a greater distance while avoiding excessive reverberation or extraneous noises. Such microphones have been devised, but because of the inherent difficulty in maintaining the same form of polar characteristic over a wide range of frequencies, their performance falls short of the best obtainable with other types; and for music, at least, their use is confined to special cases (such as, in TV, the pinpointing of a single instrument that happens to be in shot at the moment) in which their long-range capability outweighs all other considerations. The best-known device in this category is commonly described as a 'rifle' (or 'gun') microphone (fig.3*f*). It consists of a microphone element of one of the types already described, to which has been added a straight tube, usually 0·5–1 metre long and some 20 mm in diameter, through which the sound must pass in order to reach the front of the diaphragm. The tube is provided with a narrow slit or a series of closely spaced holes, extending over its entire length, so that sound waves can enter at any point. The tube is aimed at the source of wanted sound; sounds coming

3. Examples of microphones used in broadcasting or recording studios. (a) Dynamic (moving-coil) phase-shift microphone with cardioid polar characteristic; separate moving-coil elements are used for the high- and low-frequency ranges, allowing the proximity effect to be reduced (other microphones of this type are similar in appearance to condenser microphone combination (b) and (d)). (b) Capsule of phase-shift condenser microphone with cardioid polar characteristic; sound acts directly on front surface of diaphragm and also reaches rear surface via side apertures and internal acoustical phase-shift network. (c) Pressure-type microphone capsule interchangeable with (b); sound acts only on front of diaphragm, giving omnidirectional polar characteristic (in use, capsules (b) and (c) are attached, directly or via an extension tube, to pre-amplifier (d)). (e) Double-diaphragm condenser microphone with variable, remotely controllable polar characteristics. (f) Highly directional 'gun' microphone; a directional condenser element is used in conjunction with an interference tube having a series of distributed sound inlets (in this case, capacitance changes through movement of diaphragm produce changes in frequency of a radio-frequency oscillator, whence audio-frequency signal is derived in an FM radio receiver)

from any other direction arrive at the diaphragm by paths of different lengths, and their total effect is much reduced by mutual interference. The directional effect is less pronounced at low audio frequencies, and at the bass end of the range approaches that which would be obtained without the tube.

4. MICROPHONE PLACING. The relatively simple case of single-channel or monophonic recording or broadcasting will first be considered; the same basic principles apply also to the multi-channel systems stereophony and surround sound. In the case of works originally intended for direct listening, the object of the process is, in principle, to enable listeners to hear the performance, as nearly as possible, as if they were in the studio or concert hall. In general, the optimum microphone position will be determined by the need to maintain the balance between the different instruments of the orchestra, and to arrive at a ratio of direct to reverberant sound that gives a sense of spaciousness and perspective without loss of clarity. A soloist performing with an orchestra is usually provided with a separate microphone at relatively close range; the output from the soloist's microphone is then used to reinforce that of the main microphone by an amount sufficient to give greater clarity to the solo part but without introducing any noticeable incongruity in perspective through the combination of near and distant sounds. Allowance has also to be made for the difference in timbre of the sound radiated by a musical instrument in different directions; with the violin, for example, to make the most of the higher harmonics, the microphone should be on a line roughly at right angles to the belly of the instrument, but to reduce bow noise a position slightly to one side may be preferred.

A high proportion of recorded and broadcast music, however, is produced in a form not intended for direct listening, and the microphone technique is radically different from that outlined above. A large number of microphones are used, some of them placed very close to individual instruments or groups of instruments, so that their combined output, when reproduced on a loudspeaker, gives an effect different from anything that could be heard in the studio. In addition, the signal from any of the microphones may be modified in various ways, for example by increasing the response to sounds in the 1–4 kHz region so as to enhance the sense of 'presence', or a microphone designed to produce the same effect may be used. Extra reverberation may be added by a distant microphone or one with its dead side towards the performers; alternatively, artificially generated reverberation may be introduced. An electronic device known as a 'compressor' may also be used to reduce the volume range of the reproduced sound (artificial reverberation and compression are discussed below). The result, as heard on the studio monitoring loudspeakers, represents a newly created sound rather than a reproduction, and there is no question of fidelity to an original. The artifices described were originally confined to the recording and transmission of light entertainment and pop music, but some of them, notably the multi-microphone technique, are now increasingly applied to the presentation of classical works.

In stereophony the studio output consists of two signals that may be said to represent the left and right aspects of the array of sounds to be reproduced; at the receiving end of the chain, these signals are applied to the left and right loudspeakers respectively, and can then give the illusion of sounds originating at various points between the two. This process enables the listener to tell how far to the left or to the right the various instruments are placed in the studio, and it may be necessary to modify the orchestral layout to avoid an unbalanced effect when the sound is predominantly on one side or the other for too long at a time.

There are three basic methods of microphone placing in stereophony. In the first, the left and right sound signals are derived from a pair of directional microphones mounted close together, sometimes in a common housing, with their axes pointing respectively half-left and half-right; the relative strengths of the signals from the two microphones then depends on the direction from which the sound is coming. This arrangement is suitable for drama and for musical performances in which the players are grouped within the angle between the two microphone axes. The second system uses a pair of microphones, usually of the directional type, spaced 3 metres or more apart, each covering rather more than half the area occupied by the performers, so that there is some overlap in the centre region. This arrangement by itself has the disadvantage that the reproduced sound appears to be concentrated to left and to right – the so-called 'hole-in-the-middle' effect; but the deficiency can be made good by the use of a third microphone, centrally placed, with its output signal equally divided between the left and right channels. This last artifice forms the basis of a third system, which can also be used to supplement the other two. As in some monophonic transmissions, many microphones are used, each placed close to one instrument or group of instruments. The signal from each microphone is then divided unequally between the left and right channels, the ratio of the two contributions determining the position from which the reproduced sound appears to come. The resulting sound lacks reverberation, but this can be added, if required, by a pair of distant microphones connected to the left and right channels respectively, or by some artificial reverberation device with independent left and right outputs. (Reverberation from a single source divided between the left and right channels is unsatisfactory because the resulting sound, which, to give a natural effect, should be distributed across the space between the two loudspeakers, appears in this case to emanate from a single point.) Anomalous directional effects sometimes occur in stereophony, the apparent position of a particular instrument varying according to the pitch of the note being played. This phenomenon, which arises from interference between sounds reaching the microphones by paths of different lengths, has to be dealt with by trial and error.

Quadraphony was an extension of the stereophonic principle much in the news in the mid-1970s; in this case, four signals were generated at the studio and applied, at the receiving end of the chain, to four loudspeakers placed at the corners of the listening area. Several quadraphonic encoding systems competed for public attention but the idea did not catch on and was soon abandoned. By the early 1980s, however, a more sophisticated approach to surround sound began in the cinema using the four-channel Dolby Stereo system. This was extended to the domestic environment through video cassettes and discs, as well as through the medium of television (see §9 below).

In the recording and broadcasting of stereophonic and surround sound programmes, allowance has to be made for the fact that not all listeners are equipped to reproduce these in their original form, and compromises may be necessary in microphone placing and mixing to ensure compatibility between systems. Thus, the two signals making up a stereophonic programme must give a satisfactory effect when combined and reproduced monophonically (i.e. on a single loudspeaker).

5. Studio techniques.

(i) Artificial reverberation. The reverberant sound transmitted by studio microphones can be supplemented artificially and the effect of a longer reverberation time simulated. This artifice is used when reverberation is lacking (as in the case of singers who hold the microphone close to the mouth), when the original reverberation time is too short and has to be brought up to normal (for example, if music has to be performed in a heavily damped television studio), or when a long reverberation time is required for special effects in drama. Various devices suitable for particular applications are available, but few are entirely satisfactory for all purposes.

In the earliest form of artificial reverberation, part of the signal from the studio microphones is applied to a loudspeaker in a reverberation room – often referred to, incorrectly, as an 'echo chamber' – with hard, bare walls, floor and ceiling; the reverberant sound, picked up by a microphone with its 'dead' side towards the loudspeaker (for stereophony, two microphones, spaced 2 metres or so apart, can be used), is then added to the studio output. This method has the disadvantage that the length of the reverberation time cannot be varied except by introducing acoustic absorbent material; moreover, for economic reasons, the rooms are small, and as a result the quality of the reverberant sound produced is not acceptable for all purposes.

Magnetic recording devices using a continuous tape loop or disc provided with a number of playback heads can be made to provide a series of artificial echoes progressively diminishing in strength; if these are sufficiently numerous and irregularly spaced in time, the effect of reverberation can be simulated. In such devices, the equivalent reverberation time can easily be adjusted by electrical means; they may however give audible 'flutter-echo' effects, which are particularly noticeable with impulsive sounds such as gun shots, while with sustained sounds, components at certain frequencies may be overemphasized.

It is also possible to produce artificial reverberation by mechanical systems with a sufficiently large number of resonance modes to simulate the acoustical resonances of a room. Part of the signal from the studio microphones is applied to an electromagnetic drive unit, which produces corresponding vibrations at some point in the system; this unit is equivalent to the loudspeaker in a reverberation room. At another point in the system, a pickup device detects the vibration and generates a corresponding electrical signal. In one system operating on this principle, a thin metal sheet is made to vibrate in the flexural mode; in another, a long spiral spring is driven in the torsional mode. The reverberation time of the metal sheet can be controlled by acoustic absorbent material brought close to its surface, and that of the spiral spring by damping, applied electrically via the electromagnetic drive.

Artificial reverberation as described above is added to the signal coming from the microphones, and is audible only when the programme is reproduced on a loudspeaker. A variant on the magnetic recording system has however been devised in which the delayed signals from a series of playback heads are applied to a number of loudspeakers distributed about the studio, so that the artificial reverberation is audible to the performers. With this arrangement, which is sometimes known as 'ambiophony', great care has to be taken to minimize the amount of sound from the loudspeakers picked up by the studio microphones, otherwise unwanted emphasis at certain frequencies can occur or, in the extreme case, the system may produce a sustained oscillation (colloquially described as 'feedback' or 'howl-round'). Developments in digital techniques provide improved methods of delaying and storing audio-frequency signals, and these are increasingly used as the basis for all-electronic artificial reverberation systems.

(ii) Compression. A compressor is a device designed to amplify audio-frequency signals by amounts that vary automatically with their strengths; the weakest signals are amplified most and the strongest least, so that the final volume range is 'compressed' to less than that of the original, and, for a given maximum volume, a higher average is achieved. The amplification rises to its maximum value during pauses in the programme; on the arrival of a signal, it is automatically reduced to the appropriate value in a few thousandths of a second. On cessation of the signal, maximum gain is restored in half a second or less.

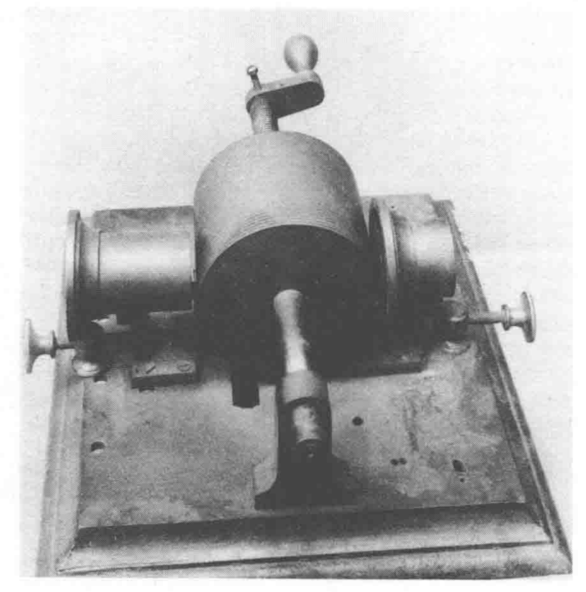
If compression is applied to a signal derived from more than one source of sound, the variations in amplification brought about by the predominant component are inevitably imposed on the others; with a sporting commentary, for example, the volume of crowd noise falls and rises according to the volume of the commentator's voice. For this reason, compression in music programmes is usually restricted to the sound of a single voice or instrument, picked up by a single microphone; if necessary, however, several compressors may be used, each operating on the signal from a different microphone. Care should be taken to minimize the amount of reverberant sound from a compressed soloist picked up on other microphones not subject to compression, or the acoustic perspective will vary according to the soloist's sound output.

(iii) Aural monitoring. Decisions on such matters as the deployment of microphones and the proportion in which their output signals should be mixed are necessarily based on the whole effect as heard on the monitoring loudspeakers provided in the studio control room. Any peculiarity in the characteristics of these loudspeakers will therefore influence, indirectly, the balance of sound reproduced in the listener's home. Monitoring loudspeakers are usually chosen on the basis of fidelity to the original sound as heard in the studio; for the purpose of this evaluation, a straightforward single-microphone arrangement is preferable, as this reduces the number of arbitrary factors involved.

In aural monitoring at the studio, it has to be borne in mind that many listeners will be using loudspeakers of inferior quality, or will be receiving the programme under adverse conditions that do not allow the full frequency range to be reproduced. It is not practicable to compensate

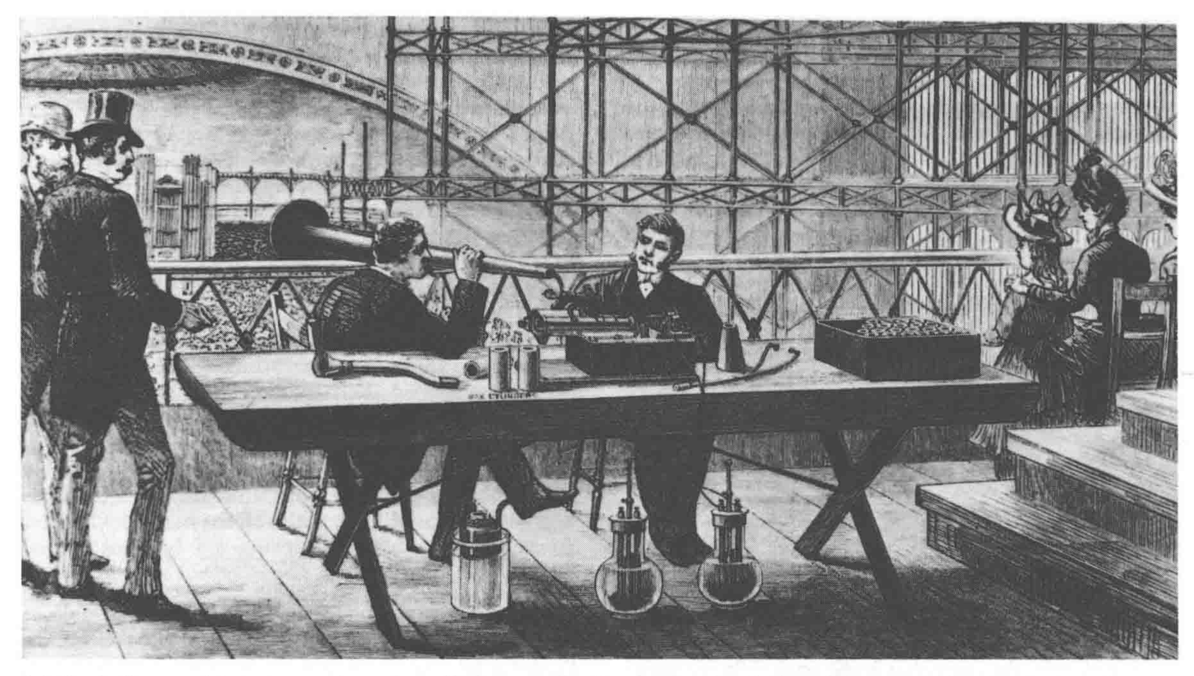
in the recording or transmission for these shortcomings, but the producer should ensure that the essential features of the programme do not depend on effects audible only to a minority. Similar remarks apply to the disparity between the realistic sound volume at which monitoring is usually carried out at the studio and the much lower volume of a great deal of domestic listening; because of this difference it is sometimes necessary to check the balance of the programme with the studio loudspeaker operating temporarily at reduced volume.

(iv) Control of signal volume. From the microphone onwards, every piece of apparatus in the recording or broadcasting chain is designed to carry signals up to a certain maximum strength. If this limit is exceeded, even momentarily, the reproduced sound may become distorted, equipment may be damaged, or (in the case of broadcasting) interference may be caused to other programmes. It is therefore necessary to regulate the signal at the studio so that the prescribed maximum value is never exceeded, even with the loudest passages of music. It is also necessary to ensure that the quiet passages in the programme are not drowned, at the receiving end of the chain, by background noises arising from radio interference, traffic or other local disturbances; the volume of the weaker signals, therefore, has to be artificially increased and the total volume range of the transmitted programme thus reduced.



To satisfy both these requirements without detriment to the artistic effect of the programme, the usual practice is to employ a skilled (and, where appropriate, musically trained) operator to observe the strength of the signal leaving the studio, with a special indicating instrument, and to regulate the volume in an unobtrusive manner by adjusting the amount by which the microphone output is amplified. The operator is provided with a script or score of the work being performed, and is thus forewarned of any large changes in volume that may require his intervention. For example, a sudden *fortissimo* in an orchestral programme may be prepared for by surreptitiously reducing the amplification in advance, either slowly and continuously, or in a series of steps, each timed to coincide with some change in the character of the music.

In addition to the volume range, the relative loudness of different broadcast items has to be regulated to avoid, as far as possible, the need for a listener to adjust the volume control of his receiver at each change of programme. To achieve the best compromise in this respect, account must be taken of the probable conditions under which a particular programme will be reproduced in the home. Thus, in broadcasting music of a kind likely to be used as a quiet background to other activities, any announcements should be at least as loud as the rest of the programme. If, on the other hand, the music is likely to be regarded as a concert performance in the home, and reproduced at as near natural volume as circumstances permit, announcements should preferably be kept at a lower level.



Attempts have been made to avoid the need for manual control at the studio by using automatic devices to restrict the volume range and to prevent the signal from exceeding the prescribed maximum level. Quick-acting devices such as the compressor referred to above are not satisfactory for every kind of programme material; because they operate from moment to moment, their action is more obtrusive than that of a human operator, and, as already pointed out, the sound from one prominent instrument can affect the sound level from the remainder. More refined forms of automatic volume regulator have been developed and used with some success in simple cases, such as talks and discussions, as well as in less demanding music in which the volume range is small and the quieter passages, if any, are brief. In general, however, the task of the skilled operator is beyond the capabilities of any practicable robot system. Manual or automatic volume regulation at the studio is sometimes supplemented by an automatic regulator at the broadcasting transmitter; transmitters are in any case protected by a 'limiter', a kind of compressor that operates only on the strongest signals, automatically reducing the amplification by the amount required to prevent the volume from exceeding the prescribed value. Any audible effects produced by either of these pieces of apparatus are not, of course, heard on the studio loudspeaker.

6. GRAMOPHONE RECORD AND COMPACT DISC TECHNOLOGY. Oddly, perhaps, sound recording was achieved before anyone had the idea of being able to reproduce it afterwards. In about 1857 the French typographer and physicist Léon Scott built his 'phonautograph', which consisted of an inverted megaphone or horn with a thin membrane stretched across the narrow end. A bristle was attached to this membrane and could be brought to bear on the smoke-blackened surface of a glass cylinder (later covered with a roll of paper). As the membrane responded to the vibrations of sound waves, its movements caused the bristle to etch a wavy line on the cylinder. Louder sounds caused the line to move further from side to side (greater amplitude); higher-pitched sounds produced a higher rate of vibration (higher frequency).

With such simple means Scott had developed a unique tool for his purpose, which was to study and analyse different speech sounds, the harmonic contents of musical sounds, etc. The pure tone of a tuning-fork, for example,

4. Edison's original phonograph of 1877 (Science Museum, London)

5. Edison's phonograph in the press gallery at Crystal Palace recording 'Israel in Egypt' at the Handel Festival in 1888: engraving from the 'Illustrated London News' (21 April 1888)

was found to produce a cyclically repeating waveform: the number of such cycles inscribed in one second could be measured on the paper record and accurately related to musical pitch. Raising the pitch by one octave doubled the number of cycles per second, and accordingly halved the length occupied on the paper by each cycle (the wavelength). If the speed of turning the paper was doubled, the recorded wavelength for any given frequency was similarly doubled. This strict relationship between frequency, wavelength and the speed of the recording medium remains basic to all systems of recording. It sets a limit to the highest frequencies that can be reproduced, and determines the optimum tip dimensions of pickup styluses, tape-head gaps and so on.

Thomas Edison's 'phonograph' consisted essentially of a grooved cylinder covered with tin foil and rotated by a crank (fig.4). A sort of speaking-tube was connected with the cylinder by a sharp metal point, which indented the tin foil in response to the sound vibrations in the air of the tube; on lowering the needle at the starting-point, and again turning the handle, the chattering of the needle in the indentations produced sounds that somewhat resembled the original speech. A poor imitation it must have been, yet the first appearance of Edison's commercial

7. Advertisement for the gramophone from 'The Graphic' (1902, supplement)

phonograms was greeted with tremendous excitement. In 1888 the *Illustrated London News* said of a recording of *Israel in Egypt* made at the Crystal Palace that it 'reported with perfect accuracy the sublime strains, vocal and instrumental' (fig.5). But a few people had reservations: Sir Arthur Sullivan made a recording that same year including the words 'I am astonished ... and terrified at the thought that so much hideous and bad music may be put on record for ever'.

After the experiments with foil Edison began using soapy wax for his cylinders; the surface could be shaved with a sharp blade to 'erase' the recording and make way for another. The stylus moved in and out to follow the vibrations, so that the modulations in the groove became referred to as 'hill and dale', to distinguish them from 'lateral' recordings in which the stylus moved from side to side in the groove, producing waveforms like those of Scott's phonautograph. Lateral recording was adopted by the next important pioneer of recording, Emile Berliner, whose 'gramophone' used flat discs instead of cylinders (fig.6). As with Edison's commercial machines, the recording (and reproducing) head was driven across the recording surface at a predetermined pitch (grooves per inch) by means of a lead screw that shared its drive with the motor causing the disc, or cylinder, to revolve. Berliner first used a disc of 12·7 cm diameter revolving at 70 r.p.m., with the spiral groove cut from the centre outwards.

The disc system had two technical drawbacks. First, with the constant turning speed of the disc (78 r.p.m. became an early standard, after a period when anything from 74 to 82 r.p.m. was used) the linear recording speed falls continuously as the groove spirals towards the centre; so, as Scott had shown, the recorded waveform is progressively cramped towards the centre until, at the end of each side, the shortest wavelengths (highest frequencies) can be traced only inefficiently by the reproducing stylus. There are other inherent causes of distortion because of the changing parameters associated with this slowing down of recording speed. Attempts to combat 'end of side distortion' were ingenious but short-lived. They included motors that speeded up as the pickup tracked across the record, to keep the recording speed roughly constant, and the recording of alternate sides of record sets from the inner groove outwards, so that the difference in quality at the changeover point would be less obvious. The cylinder avoids this problem as it does the second technical difficulty of the disc. This is 'tracking error', which comes about because the reproducing stylus does not strictly follow the path across the record taken by the cutting stylus. The latter, as noted, is driven by a lead screw and moves along a radius directly towards the record centre. At all times, therefore, the lateral vibrations of the cutting stylus are at right angles to the groove. On playback, with a pickup arm pivoted at its remote end, the head will track in an arc across the record and so the stylus plane of movement will mostly be at some angle other than 90° to the groove. A few, more advanced tangential tracking arms have appeared, but for most record players this form of distortion remains.

With the introduction of electrical recording in the mid-1920s (see §I, 3 above), the fidelity of recordings was enormously improved: a much wider range of sound frequencies and dynamics could be impressed on the

record; electrical cutter heads, acting like microphones in reverse by converting the energy of the electrical currents into mechanical vibrations of the plough-shaped cutting stylus, were both more efficient and less liable to uneven frequency response than the old acoustically driven cutters; and, above all, the bass frequencies were at last reproduced and gave a fullness to the sound matched by cleaner reproduction of the treble. At first electrical recordings were played on existing acoustic gramophones, but people soon changed to electrical reproducers. In electrical reproduction the gramophone pickup head is again a generator in which the movements of the stylus produce an equivalent electrical current. This tiny signal is amplified and applied to a loudspeaker that reverses the process, being constrained to perform vibrations and radiate sound waves into the air. Soon the record players added such refinements as volume and tone controls, extension loudspeakers and automatic record-changing mechanisms for which 'automatic coupling' sets of records were produced.

World War II seriously interrupted progress in sound recording. In the USA, for example, there was a ban on the use of shellac for non-military purposes as well as a crippling dispute with the American Federation of Musicians that prevented new records being made for over two years. Immediately after the war one technical advance followed another at a rapid pace. First came Decca's 'ffrr' (full frequency range reproduction) records, which added a couple of octaves to the span of earlier recordings and which the *Gramophone* described as 'a new and very exciting page of gramophone history'. The EMI group similarly extended the range of their recordings; gramophones and radiograms too were soon matching the records in sound quality. In the USA 275 million records were sold in 1946 and 400 million in 1947. This was all the more surprising considering that the shellac discs, with abrasive filler powders such as emery, were in a form hardly changed since the early 1900s. They were brittle, scratchy and had to be turned over or changed every four minutes or so.

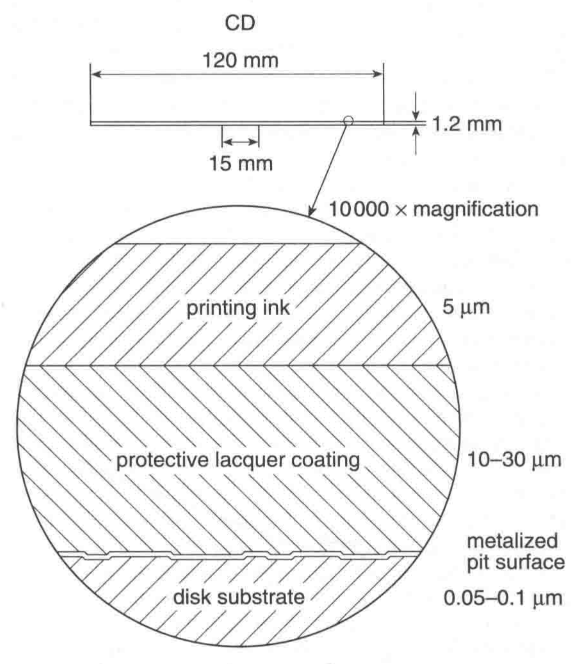
In June 1948 Columbia Records gave the first demonstration of their new non-breakable microgroove disc. Each 30-cm LP contained about 25 minutes of music per side, the extended playing time being achieved both by slowing down the turntable and packing more grooves to the inch. The new running speed at 33⅓ r.p.m. quickly became a world standard. The new pitch, or groove spacing, was about 100 grooves to the centimetre instead of under 40. The quality of the reproduction was universally acclaimed and was in no small measure due to the entirely new pressing material; this was the unbreakable plastic vinylite, or polyethylene, whose smaller grain structure made the microgrooves possible, and potentially increased the frequency and dynamic ranges of recording, also giving a substantial reduction in surface noise compared with the abrasive-filled shellac records. Again, as lightweight heads were obligatory for the new, softer materials, no filler was required to give strength to the record material. Thus lighter, flexible records became possible which, though relatively easy to scratch, did not break easily and had important storage and handling advantages quite apart from their much longer playing times per side.

A further step towards high fidelity was the introduction of stereophonic records in 1954. These restore to the listener the sense, which is totally lost in single-channel monophonic recording, of space and of separate sound sources. The aural mechanism of this process is not fully understood, but stereophonic reproduction depends on the recording of two (or more) signals from different positions (see §II, 4 above). Suitably impressed in the record groove and thence reproduced through a spaced pair of loudspeakers or special headphones, these signals combine to re-create a spatial image at the listener's ears more or less closely resembling the sound spread that would be experienced at an actual performance.

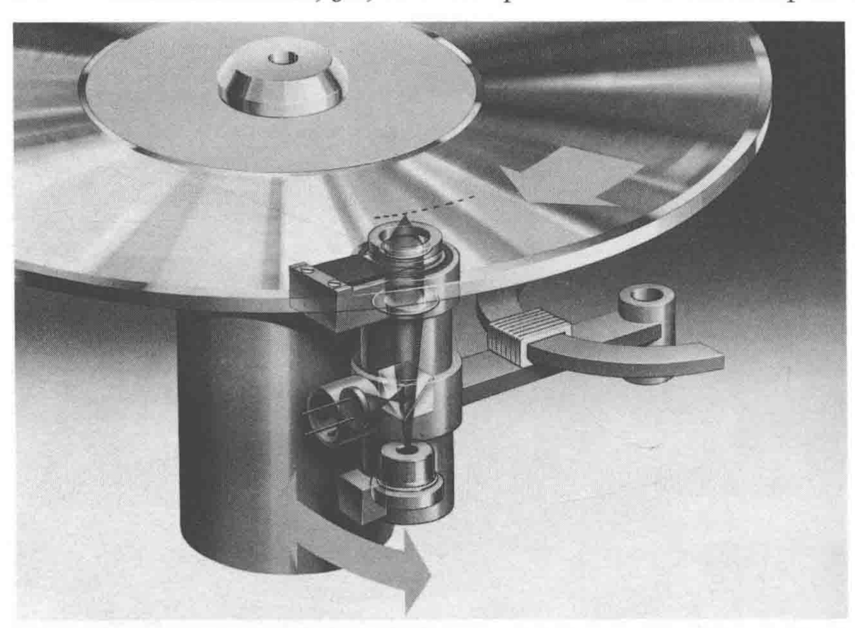
Having perfected the techniques for stereophonic recording and reproduction, the designers moved on to four-channel or 'quadraphonic' sound. This uses at least four microphones for recording and requires at least four loudspeakers, with the listener in a roughly central position, and thus surrounded with sound. The recording and reproduction of four discrete channels is simple on magnetic tape. For gramophone records or direct broadcasting, however, a matrix system was generally used, which encoded the four channels on to two for disc cutting; a decoder had to be added to the user's record player, as well as the extra two amplifiers and two loudspeakers, before the quadraphonic effect could be enjoyed.

The late 1970s saw the beginnings of a new development with greater potential for technical advance: 'digital' recording, in which the signals are not direct imitations or 'analogues' of the sound waveform but are first converted into a series of coded pulses. Many record companies and broadcasting stations changed to digital recording for their master tapes; this eliminated sound degradations associated with the tape process, such as speed irregularities, overload distortion and tape noise. In particular, digital recordings are proof against interference during storage and transmission since the reproducer has only to detect the presence or absence of pulses, not their amplitude. Records and broadcasts made from digital masters are thus potentially of higher quality. The advantages of compact discs are equally impressive. The digitally encoded signals are pressed in to the upper surface of a transparent polycarbonate substrate in the form of a spiralling track of tiny pits (fig.9). The pitted surface is then given a thin reflective coating (usually aluminium) and a final protective coat of lacquer on which the label can be printed. The track begins near the disc centre and spirals outwards. Unlike the LP, the linear tracking velocity is kept constant and so the disc rotational speed has to begin high, about 500 r.p.m. and fall steadily to about 200 r.p.m. at the outer edge. The digital track contains a synchronizing code (clock) which automatically maintains correct speed, and all unwanted speed fluctuations are eliminated.

Instead of a mechanical stylus bearing down on to the recorded surface, the playback head is located beneath the disc and makes no physical contact with it, thus avoiding wear (fig.10). The head comprises a laser light-beam source, sharply focussed through the clear PVC on to the light underside of the recorded track, and a light-sensitive photo detector which registers the presence or absence of light reflections from the pits. This generates an output electrical signal which recreates the original stream of digital data. Dedicated codes embedded in the data provide various functions which would be impossible to an analogue medium. These include almost instantaneous cueing to any track on the disc; visual displays;



8. Disc-cutting lathe on which the signals from the master tape are transcribed as a fine groove spiral on the disc

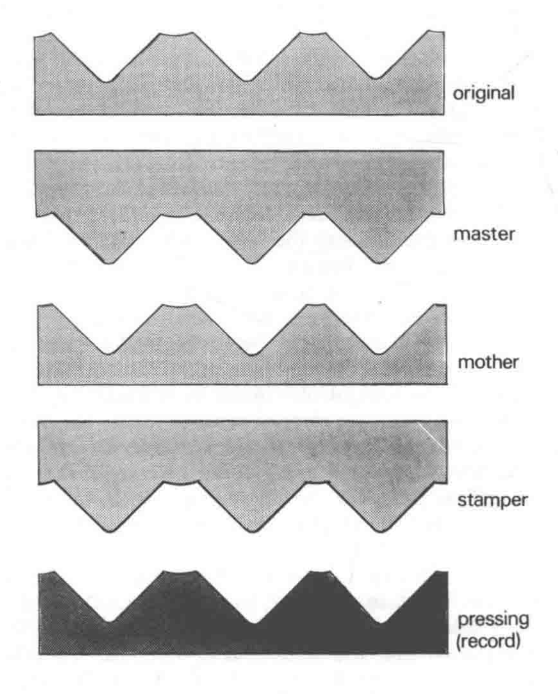


repeat, random and programmed track sequence playback modes; and error correction which enables the player to ignore the effects of dust or scratches.

7. GRAMOPHONE RECORD AND COMPACT DISC MANUFACTURE. Originally it was the practice to record for the gramophone on wax discs of 33 cm diameter and 2·5–5 cm thickness. These were difficult and time-consuming to set up and operate, a nuisance during the inevitable false starts, re-takes and technical hitches of a recording session. Magnetic tape machines have greatly improved the versatility of master recording; they are easy to set up, can be run in sequence to cover extra long takes or just as easily be restarted to take in any number of short repeats. Once every note has been recorded, together with any repeats or corrections, the main advantage of tape becomes apparent – the ease with which it may be cut and spliced. First the recording manager arranges a listening session with the musicians at which the best of any alternative takes are selected. Details of these are marked on a cue sheet and orchestral score and passed through to the tape editor who, while consulting the score, splices the selected passages together to produce the final complete master tape. Editing music tapes is a highly skilled job and, because many of the joins are at the end of a phrase where a cut in studio reverberation or sustaining pedal stands out, any slight mistake is liable to be readily apparent.

When the master tape is assembled and passed, it is then transferred, or 'dubbed', to disc. Operation of the cutting lathe and associated apparatus tends to be fully automatic so that the lead-in, lead-out, finishing and banding grooves are programmed beforehand. The pitch or spacing between grooves is greater at these points, which means that the speed of the motor driving the lead screw carrying the cutter carriage across the disc has to be accelerated at the right moments, and arrested altogether for the finishing groove that completes a circle. Fine control of the lead screw velocity, in an invention by Arthur Haddy of Decca, has produced the technique

9. Layered construction of a compact disc



10. Compact disc playback system, showing the tracking head with the laser beam that scans the recorded track and sends an interrupted series of reflections, which can be detected to recreate the original digital data stream

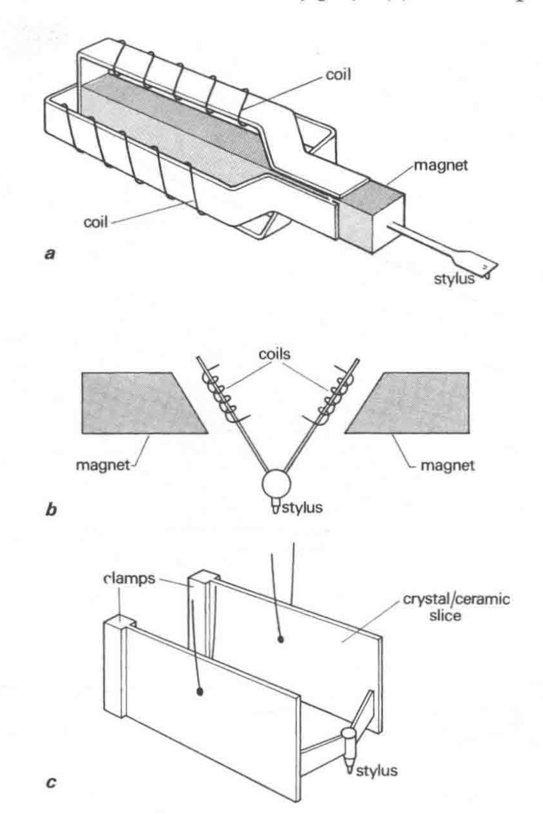
known as variable-groove recording; this makes more economical use of the recording area by moving the grooves closer together during quiet passages (less side-to-side amplitude in the recorded waveform) and spacing them further apart to accommodate loud passages. Sensing heads on the tape replay deck scan the tape at a distance equivalent to one revolution in front of the reproducing head proper. They collect advance information as to the nature of the recorded amplitude, frequency and vertical–lateral distribution (in stereo) of the signal. This information is automatically used to vary the groove spacing and even the depth of cut. Marked improvements in dynamic range and playing time per side have resulted.

For the next stage in record processing, the direct disc recording is submerged in an electro-plating bath and a copper 'master' is 'grown' on to it. When peeled off, the master is a copy of the disc in reverse, with ridges instead of grooves, and could be used for pressing out records of some suitable plastic material (fig.11). However, since it would soon wear out, the plating process is twice repeated so as to produce first a 'mother' (with grooves like the original) and then a 'matrix' or 'stamper', which is given a hard chromium plating and used for the actual job of pressing out records; when a stamper is in any danger of wearing out, further stampers may readily be produced from the mother. After finding where to drill the centre hole in the stamper, done by reference to a concentric line cut on the outside of the original disc for this purpose, the stamper is then placed in one jaw of a hydraulic press and the stamper that will produce the other side of the record is placed on the other jaw. Then the two paper labels are put into position on the vinyl plastic record material, which is in the form of Geon chips or a tarry-looking 'biscuit'. The heated jaws close to plasticize and press out the material, then are rapidly cooled and opened. There is a fuzz of surplus material round the disc that is roughly cut away and the edge is buffed smooth on a rotating machine.

The manufacturing cycle for compact discs is very similar (fig.12). Again it begins with the recording of a studio master, which is almost invariably in digital form whether recorded on a tape machine or a computer-controlled digital disc recorder. The digital medium produces a technically superior master with enhanced editing facilities. The signals are then transferred to the photo-sensitive coating on the surface of a glass disc master, using a laser beam which is interrupted in accordance with the digital bit-stream to expose a series of tiny areas along a spiralling track.

Then, in a process that resembles photographic developing, the coating is dissolved away to leave pits in the surface. As in gramophone record processing, this master disc is put through a series of electro-plating stages to

11. Stages in processing a gramophone record

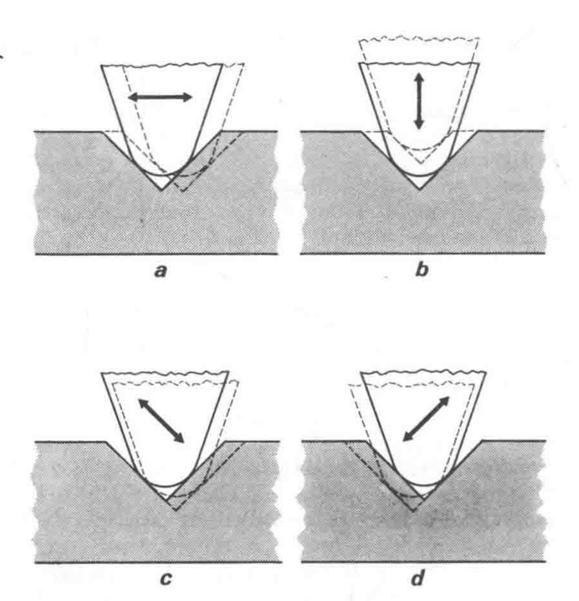


12. The manufacturing cycle of a compact disc

provide a nickel father from which a mother and successive stampers can be produced. A high-speed automated press then stamps out discs of clear polycarbonate, having the required spiral of pits on to which the reflective metal layer is deposited, followed by the protective layer of lacquer and label printing.

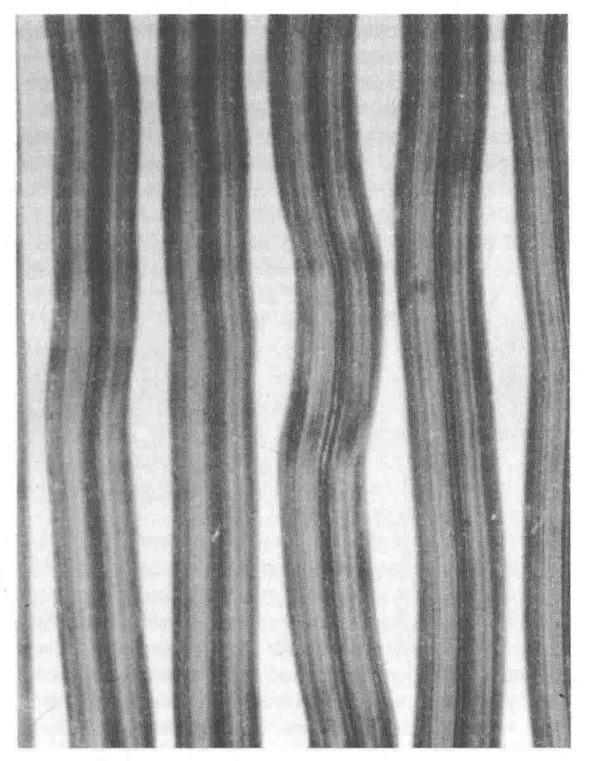
8. GRAMOPHONE RECORD AND COMPACT DISC REPRODUCTION.

(i) Cartridges. As described, the waveform corresponding to the complex sequence of changing sound pressures picked up by the microphone(s) is ultimately moulded into the fine grooves of a gramophone record. The reproducing head or 'pickup cartridge' has the task of reconverting this waveform into a corresponding electrical signal that can be amplified as necessary and sent to the loudspeakers or headphones. All pickup cartridges therefore consist of a fine stylus, suitably pivoted so that motion of the tip in following the groove undulations will cause a cantilever arm to rock correspondingly, and a miniature generator capable of transforming this rocking mechanical energy into an electric current. Most cartridges use the principle of electromagnetism to generate the current. The 'moving magnet' cartridge (fig.13*a*), for example, has a tiny permanent magnet fixed to the upper end of the stylus cantilever; the magnet rocks close to a coil of fine wire and the moving field of the magnet induces an alternating current in the coil. In a reversal of this idea, the 'moving coil' cartridge (fig.13*b*) has a coil fitted to the cantilever and the magnet is stationary. This latter form of construction is the basis of the cutterhead used to etch the waveform on the original master disc. The alternating current signal to be recorded is passed through a coil pivoted in the field of a fixed magnet; this causes the coil to rock about its pivotal point and the plough-shaped cutting stylus inscribes the resulting waveform in the soft lacquer surface of the disc. At the same time, the whole head is tracked towards the centre by means of a lead screw so that the familiar spiral groove results. 'Crystal' and 'ceramic' cartridges depend on the piezo-electric principle in which crystals of certain materials, notably quartz, exhibit an electrical voltage between opposite faces under the influence of an applied bending force (fig.13*c*). Another type of generator is met in the 'electret' cartridge, which is a tiny capacitor carrying a permanent electrical charge. Vibration of the stylus causes

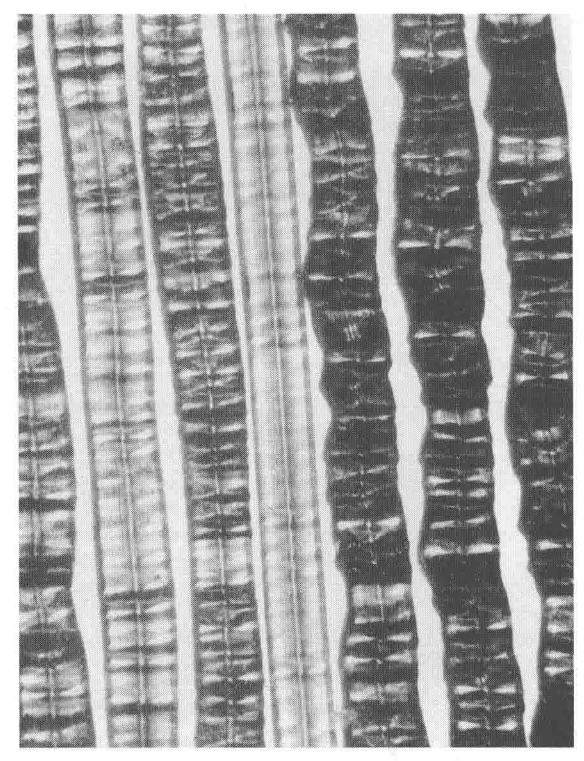


13. Cartridges: (a) moving magnet; (b) moving coil; (c) crystal or ceramic

the capacitance to oscillate about its average value and thus generate the required alternating current.



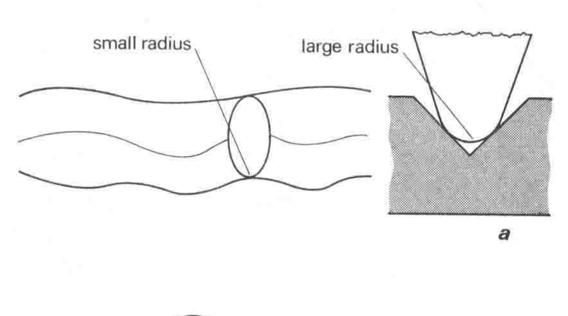
(ii) Stereophony. For monophonic gramophone records the plane of movement of the cutting stylus, and therefore of the reproducing stylus, is effectively parallel to the surface of the record. To introduce stereophonic recordings, which require two channels of information with a minimum of interference (crosstalk) between them, it became necessary to apply the driving force to the cutting stylus simultaneously in two planes mutually at right angles. At first, a combination of lateral and hill-and-dale recording was tried with the left-channel signal, say, driving the stylus in the horizontal plane and the right in the vertical plane (fig.14*a* and *b*). However, this arrangement is obviously unbalanced and a better solution was quickly established. In this 45°/45° system of stereo recording, the left and right signals are still applied at 90° to each other, but the axis of reference is turned through 45° so that the left plane is at +45° to the record surface and mainly affects the left wall of the groove, while the right plane is at –45° (fig.14*c* and *d*). A stereo pickup cartridge therefore has twin generators so as to produce separate left and right output currents boosted in a twin (stereo) amplifier before being sent to the required pair of spaced loudspeakers. An important advantage of the 45°/45° system, apart from the obvious one of improved symmetry, is that such a stereo groove can be traced satisfactorily by a standard monophonic pickup. The resultant lateral motion of the stylus effectively generates a current that is the sum of the left and right stereo signals and so an acceptable mono signal is reproduced. Reverse compatibility is also achieved in that a stereo pickup will play mono records perfectly well; in following the lateral recorded waveform in the mono groove, the stereo stylus produces identical signals in its left and right output circuits and so the stereo loudspeakers similarly radiate equal sounds and the listener hears the music reproduced monophonically as if from a point midway between the loudspeakers.



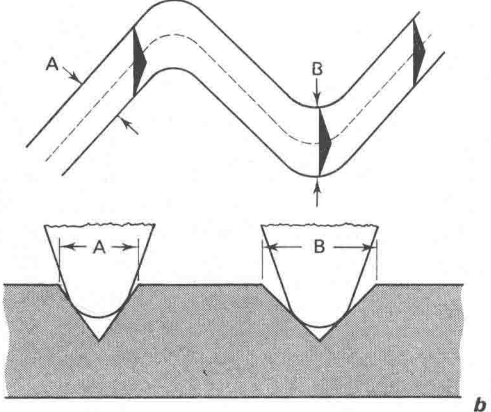
(iii) Pickup styluses. In the early days of 78 r.p.m. shellac records, the disc material was very hard and the relatively soft steel or thorn needles were quickly worn to an exact fit in the groove. Modern plastic records are of soft, and less noisy, material and modern styluses are made as hard as possible. This is to ensure that the precise tip dimensions created in manufacture will be maintained over a playing life of many hours. Diamond-tipped styluses are preferred; these give 1000 or more hours of playing before the 'flat' worn due to friction against the walls of the groove is sufficient to cause audible distortion or endanger the recorded waveform. Cheaper record players are sometimes fitted with sapphire-tipped styluses but these last only about 40 hours.

Best results from LPs require precise dimensions of the stylus tip so that the stylus will sit squarely on the shoulders of the groove without sinking too low. If 'bottoming' occurs, there is a serious increase in background noise. The most common tip shape is hemispherical and the optimum tip radius is 0·065 mm for 78 r.p.m. records, 0·025 mm for mono LP records and 0·0125 mm for stereo records. Although they are more difficult to manufacture, and therefore relatively expensive, elliptical-tipped diamond styluses are usually fitted in more complex record players. The preferred major and minor axis radii are 0·018 mm and 0·0075 mm respectively. The stylus must be precisely mounted in the cartridge so that the major axis sits across the groove (fig.16*a*); the minor axis is better able to follow the smaller waveforms associated

14. (a) Lateral and (b) hill-and-dale movement of the stylus used in early stereophonic recording; (c), (d) movement of the stylus in the 45°/45° system of two-channel stereophonic recording

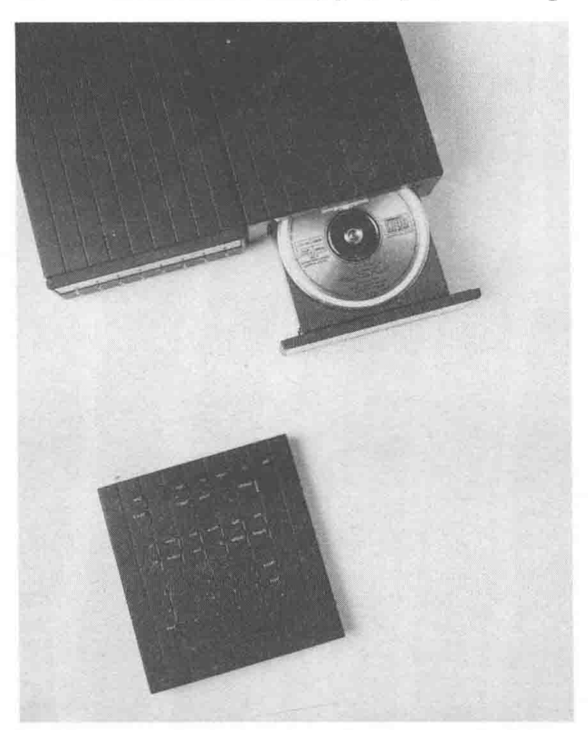


15. Comparison of (a) mono and (b) stereo record grooves; the mono groove is of constant depth, while the stereo groove is constantly changing in depth as well as lateral position



with high frequencies in the music, particularly as the waveform becomes more cramped towards the centre of a record.

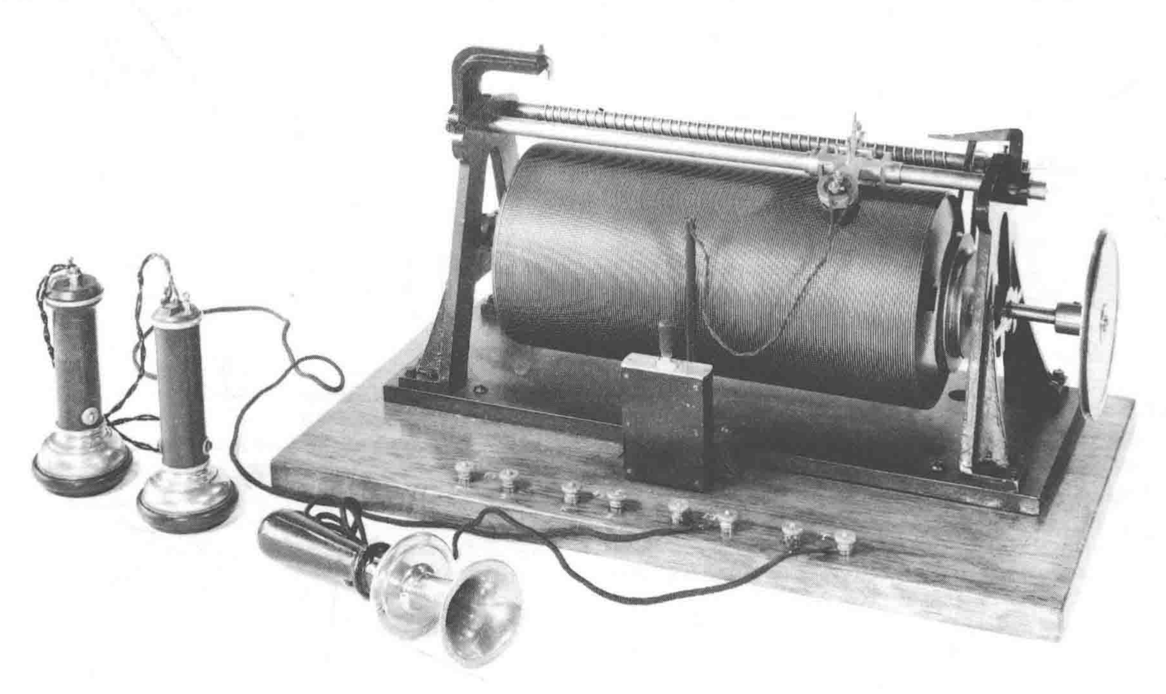
Some distortion is inevitable in the reproduction of gramophone records since the groove waveform was originally inscribed by a sharp, plough-shaped cutting stylus. A hemispherical playback stylus tends to be pinched by high-frequency waveforms so that it rides up and down and so produces unwanted harmonics of the original tones (fig.16*b*). An elliptical stylus is a better approximation to the cutter shape and so the 'pinch' effect is less marked.



A compact disc player substitutes a microprocessor-controlled disc platform for the ordinary gramophone motor and turntable platter. The gramophone pickup and stylus are replaced by a travelling head assembly comprising a laser light beam source and light-sensitive detector that converts the stream of reflected on/off pulses from the pitted track into a digital electrical signal. This is taken to a digital-to-analogue converter which supplies a suitable output for passing to an amplifier and (for stereo) pair of loudspeakers.

The physical dimensions of CD tracks are microscopically small. A single disc contains about 5 billion pits and there are about 6000 tracks per centimetre, compared with 100 on an LP. Great precision is clearly needed in the tracking system and the focussing of the laser beam, yet CD players have generally proved reliable and relatively inexpensive. Most of the forms of distortion inherent in LP reproduction are completely eliminated, though a certain hardness of tone characterized early

16. (a) Elliptical stylus in a stereo groove with a sharp high-frequency modulation on one wall and a less severe waveform on the other; (b) pinch effect when hemispherical reproducing stylus travels in the varying groove formed by a plough-shaped cutting stylus

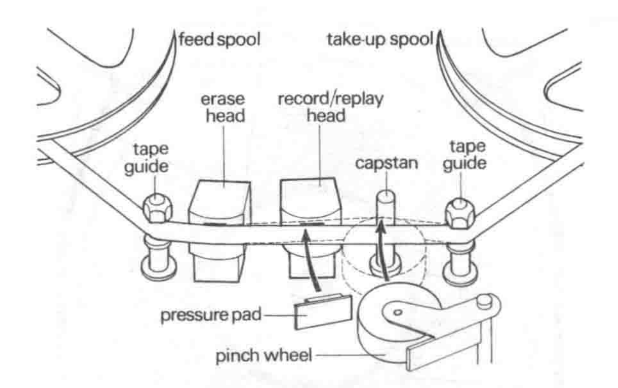


17. More advanced CD players raised the standard of performance by improving the disc transport system and placing the digital-to-analogue converter in a separate box

players and discs, until designers fully understood the importance of screening and anti-vibration mounting of the disc platform and the optical carriageway, and developed more accurate digital-to-analogue converters (fig.17).

9. Tape and tape recording. The origins of magnetic recording can be traced back almost as far as those of cylinder and disc recording. Valdemar Poulsen (1869–1942) patented his 'telegraphone' in 1898 after about four years of research into methods of recording telephone messages for later transmission at a higher speed to economize in telephone line time. His original device recorded sounds, as a pattern of magnetized domains, on a steel piano wire about 1·5 metres long, wound on a stationary drum (fig.18). An electromagnet tracked along the wire to record the signals, and retraced it to reproduce the sounds. In about 1900 Kurt Stille introduced a modified machine in which the steel wire was drawn past a fixed head and wound from one reel to another. By about 1929, notably in the 'Blattnerphone', the wire was replaced by a flat steel band, 6 mm wide and 0·2 mm thick, because the round wire was inclined to twist. Such recordings could be edited, and high-frequency erasing and bias were developed about 1927.

It was not until flexible coated tapes were introduced that magnetic recording gained real momentum. BASF showed their first tapes and 'magnetophon' recorders at the 1935 Berlin Radio Fair. Paper was used at first, then plastic-film-based tapes. By 1947 tape recording had been adopted by broadcasting and gramophone studios all over the world, and it took less than two years to oust disc recording for the storage of radio programmes and the preparation of studio masters (see §I, 4–5 above). Its more important advantages are ease of setting up, compared with direct-cut discs, increased length of playing time, ease of editing and the possibility of recording a number of tracks simultaneously. These tracks of course remain synchronous, and it is a simple matter to record the outputs of various microphones or groups of microphones on separate tracks. The final mixing operations



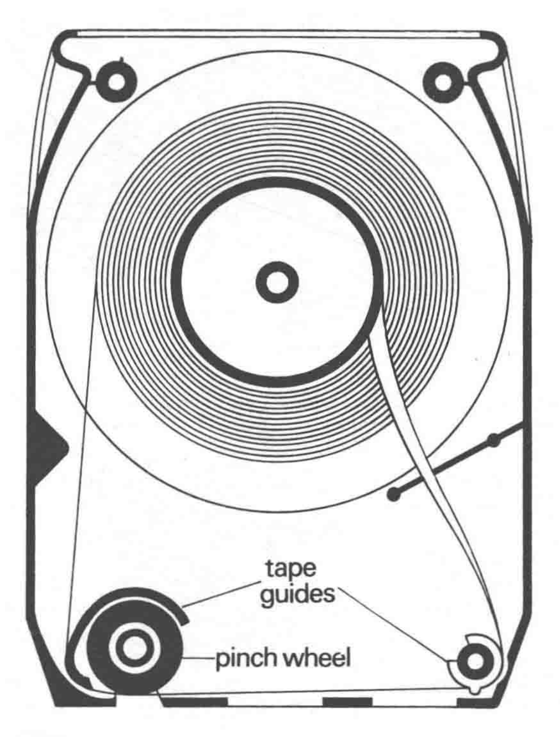
18. Poulsen's original telegraphone, 1898 (Danmarks Tekniske Museum, Helsingør)

can be postponed to a later, and perhaps less expensive, time. Recordings are often made without some of the performers and their tracks are added later.

In magnetic recording the record head is a shaped electromagnet with a fine coil of wire and a core of magnetic material formed so that the magnetic field, produced as the signal current flows through the coil, is concentrated across a narrow frontal gap (fig.19). The magnetic coating on the tape consists of many tiny elongated particles that can be regarded as miniature bar magnets. As the tape is drawn past the record head, these particles will be pulled into alignment with the polarity of magnetism existing at the instant of passing the head gap. This leaves a record of the alternating-signal current in the form of a sequence or pattern of magnetic polarities and densities of magnetization along the length of the tape. The magnetic recording is reasonably permanent, though there is a risk of the signal's being lost or weakened if a stray magnetic field (e.g. from a loudspeaker magnet) is brought too close to the tape. To replay the recording, the tape is wound back to the beginning and then re-run past a replay head. This resembles the record head (indeed, they are one and the same on the simpler domestic recorders) and the changing magnetic flux on the tape sets up a field at the frontal gap that induces the required electric signal current in the head coil. Ideally, during the recording process the tape should be in a completely neutral or demagnetized state when it reaches the record head; this is achieved by placing another sort of head just in advance of the record head. This 'erase' head is fed with a strong current at some supersonic frequency (generally at least three times the highest sound frequency to be recorded). Then, as the tape passes the erase head, it is first saturated with the high-frequency signal but, as each portion of the tapes moves on, it is subjected to rapidly reversing cycles of magnetization that continually diminish in strength so as to leave the magnetic particles in a completely random (i.e. de-magnetized) state. In practice, a portion of the supersonic tone is also mixed with the sound signal being fed to the record head. This is known as high-frequency 'bias' and has the effect of reducing distortion.

The first commercial tape records issued in the early 1950s met with little success. For the quality of tape reproduction to rival that of discs, a relatively high running speed (19 cm per second) and track width (no more than two tracks on a 6 mm tape) seemed necessary. This put tape at a distinct economic disadvantage, since the basic raw tape was much more expensive than the small amount of vinyl needed for a gramophone record. Also, tape duplicating requires the laborious, though much speeded-up, recording of every new copy. The introduction of 'stereosonic' recordings in the mid-1950s aroused some interest in tape records. However, very few people seemed ready to buy the elaborate stereosonic tape player units, and conventional mono machines could not reproduce both the stereo 'half-tracks' through the necessary twin loudspeakers. Inevitably, therefore, when stereo discs appeared in 1958, tape records were again relegated to the background. Successive economy measures were introduced in an attempt to make tapes more competitive with discs: the slower speed of 9·5 cm per second became popular; quarter-track tapes (and machines) were launched, to give a further halving of the raw tape needed. Unfortunately, these changes were to

19. Tape path in a typical recorder; when the mechanism is switched on, the pressure pad and pinch wheel move in as indicated



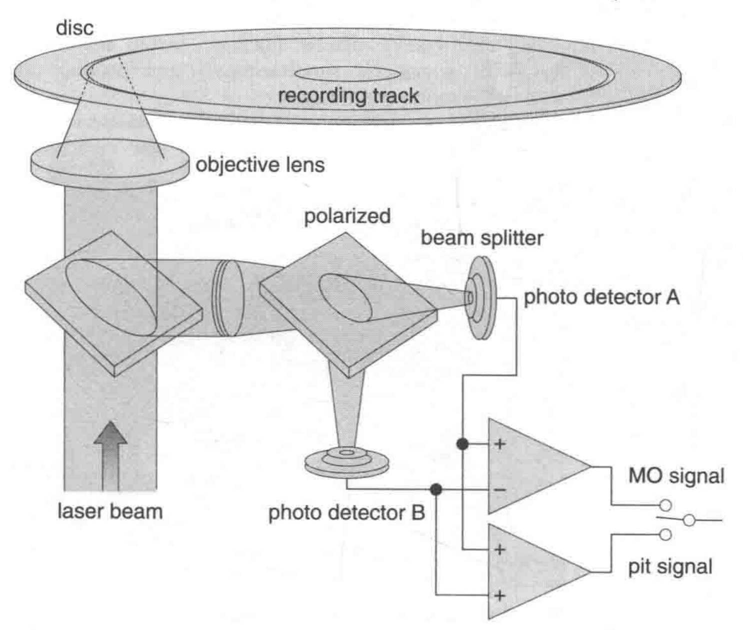
some extent counter-productive because owners of older machines could not play all the new tape records and potential buyers of new machines found the conflicting formats confusing.

A drawback of all these 'open reel' machines was the awkward need to thread the tape on to the empty spool before playing. Accordingly, ready-threaded and enclosed magazines, cartridges and cassettes were developed, including the RCA cartridge (1958), the Fidelipac cartridge (1962) and the Earl Muntz cartridge (1963), but with no more success. The Philips Compact Cassette system has had a wider impact than any other. It was planned as a long-term project, beginning with a small portable recorder in 1963: this used cassettes of 3·8 mm tape running at only 4·75 cm per second, and many manufacturers took up the system so that the existence of large numbers of machines soon made it profitable for Philips and other record companies to start selling pre-recorded cassettes. It was helpful that Philips avoided the tangle of stereo–mono incompatibility into which open-reel tape recorders had fallen. From the outset, cassettes were recorded in quarter-track stereo, but with the left and right signals for each tape side recorded on adjoining tracks (1 : 2 and 4 : 3) instead of divided (1 : 3 and 4 : 2) as on the conventional quarter-track system. Thus all mono (half-track) cassette machines could scan both tracks of a cassette simultaneously and produce an acceptable mono (sum) signal.

In serious competition with the Philips cassette, though mainly designed for use in cars, is the eight-track

20. Compact tape cassette, opened to show the internal structure

21. Eight-track continuous play cartridge, in which the tape is wound as an endless loop



continuous-play stereo cartridge. This was developed by the Lear Jet Corporation in 1965 and then taken up by RCA, Motorola and the Ford Motor Company. The eight-track cartridge tapes are of the standard 6·3 mm width and run at 9·5 cm per second, which, it is claimed, gives better fidelity than the 4·75 cm per second of the cassette; it does not usually incorporate the facility for making one's own recordings, but the tape is wound in a continuous loop so that it gives uninterrupted music (fig.21). The eight tracks comprise four stereo programmes on pairs of tracks (1 : 5, 2 : 6, 3 : 7 and 4 : 8) with an automatic changeover mechanism that moves the playback head at the end of each track.

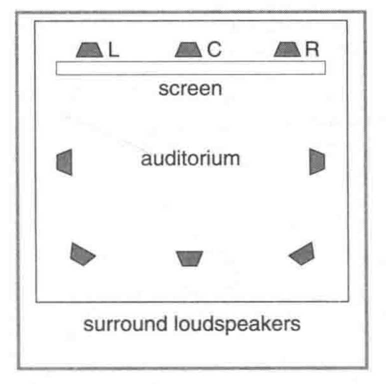
Successive technical improvements to the Philips compact cassette medium increased its popularity as a home recording format and persuaded the record companies to issue prerecorded cassettes (musicassettes) simultaneously with almost every LP, and later, CD version. The improvements included a change from the iron oxide tape coating to chromium dioxide, better duplication technology and Dolby B noise reduction. While sound quality remained inferior to that from LP records, and more especially CDs, it was quite acceptable for music on the move in cars or portable players.

A leap forward in sound quality from cassettes became possible in 1992 when Philips introduced their DCC (digital compact cassette). This came close to CD sound quality, though data compression was used, and DCC machines offered a digital recording facility along with backward compatibility which meant that the machines would also replay, but not record on, the conventional analogue cassettes. However the greater cost of DCC and the simultaneous appearance of Sony's MiniDisc (see §I, 6 above; fig.22) hindered its public acceptance and it was eventually abandoned.

10. Film recording. The development of the microphone and the thermionic valve amplifier, primarily for radio, advanced gramophone recording and reproduction from the acoustical to the electrical era. Aided by another invention, the photoelectric cell demonstrated by Lee de Forest in 1923, they also transformed the silent cinema into the 'talkies'. Initial troubles delayed the mass production of sound-on-film until 1928, when *The Jazz Singer* had its sound track recorded on a 40 cm disc at 33⅓ r.p.m.

To record the sound track on film, the first steps were, as usual, to set up the microphone and amplifier to produce an alternating electric current whose fluctuations corresponded to the frequencies and intensities in the original sound waves. The current was then passed to an

22. MiniDisc playback system, showing the alternative photo detectors A and B required to reproduce either magneto-optical discs or the pit signals from prerecorded discs

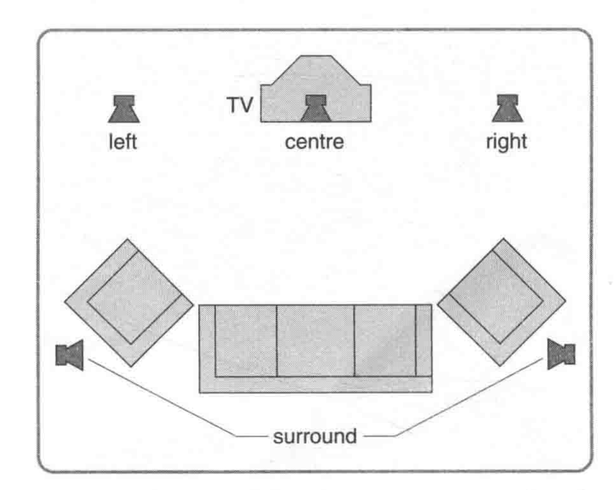


optical system consisting of an electric lamp whose light could be projected through a slit to illuminate a narrow strip of the moving film. The signal current was arranged to modulate the intensity of the light falling on the light-sensitive film. The effect was to record a track of constant width, say 3 mm of a 35 mm film, alongside the picture frames. The film was a negative and, when developed, had a succession of brightness patterns corresponding to the sound signals. When the film was run through a projector, a light of constant brightness was directed through a slit on to the sound track. Light passing through the film actuated a photoelectric cell that converted the light signal into a proportionate electrical signal. This could then be treated in the same way as the signal from a gramophone pickup, namely amplified and fed to one or more loudspeakers placed near the cinema screen. The system just described is called 'variable density' optical recording.

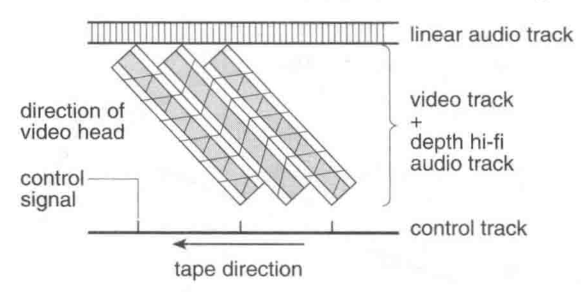
There are advantages, in terms of the sound intensity range that can be achieved, in the 'variable area' method, which allows a constant light intensity to pass through the slit during recording but modulates the width of the track; this is done by an electromagnetic device into which the signal is fed, and the envelope of the recorded track is in fact a replica of the sound waveform.

Optical recording has the advantage of keeping the sound and picture in perfect synchronism and allowing combined prints to be made in any desired quantity by normal photographic processing. It has the disadvantage that the producer must wait for the film to be developed before things like the quality and accuracy of editing can be checked; also, in the early days optical recording fell noticeably short of other recording media in terms of the quality of sound reproduced. For these reasons magnetic recording increasingly recommended itself to film producers and distributors, especially where the musical content of films was of first importance. Using the 'striped film' method, the signals are recorded on to a special film that has a track or stripe of magnetic iron oxide coating applied alongside one side of the picture area, with a thin 'balancing stripe' on the other so that the film will not lean over when spooled. This method clearly gives optimum synchronizing of sound and picture.

In the late 1980s a breakthrough in high-quality optical film soundtracks was introduced with a four-track system designed to provide a surround sound effect in suitably equipped cinemas. The system, called Dolby Stereo, fed sound signals to left, centre and right front speakers plus one or more 'effects' speakers arranged behind the audience (fig.23). In 1992 the idea was taken further when film soundtracks and cinema installations adopted digital encoding techniques. The so-called Dolby Stereo Digital 5·1 format, and a number of rival encoding methods, provided an enhanced surround sound effect using five tracks for the front speakers and left/right stereo effects channels plus a sub-bass channel to reproduce the popular blockbuster movie sound effects. Domestic television and video systems were introduced with similar playback facilities, using suitable decoders and extra speakers, to form what became known as 'home cinema' (fig.24).



11. Videotape recording and television. The advantages of magnetic tape for the recording of sound signals were carried over to vision by the introduction by the Ampex Corporation in the 1960s of videotape



23. Dolby Stereo loudspeaker layout for cinema surround sound

recorders. Whereas a bandwidth of 20 kHz is sufficient to accommodate sounds of all kinds, the more complex electrical signals involved in the transmission of television pictures necessitate a bandwidth of several megahertz. This requires a very high running speed of the recording medium past the recording and playback heads. The Ampex solution was to run the special 5 cm tape at a normal speed of 38 cm per second but to mount the video heads in a spinning block to give a much greater relative speed. The sound signals were carried on a conventional track near one edge of the tape. Later developments of videotape recorders led to much smaller mechanisms and the introduction of digital encoding to high-quality colour pictures. The gramophone and tape record companies in turn took up the idea of issuing recordings of combined audio and visual productions.

Music programmes are seldom completely satisfactory on TV. In televising an orchestral concert, for example, the smallness of the screen makes the performers much too tiny for a complete long shot to be satisfactory; the producer therefore tends to use several cameras to give alternative close-ups of the conductor or sections of the orchestra, and to cut from one to the other in time with changes in the music. Appropriate paintings, scenery or abstract patterns may be shown on the screen, but the optical memory is as sharp as the optic nerve is sensitive, and it is doubtful whether such pictorial patterns, even if

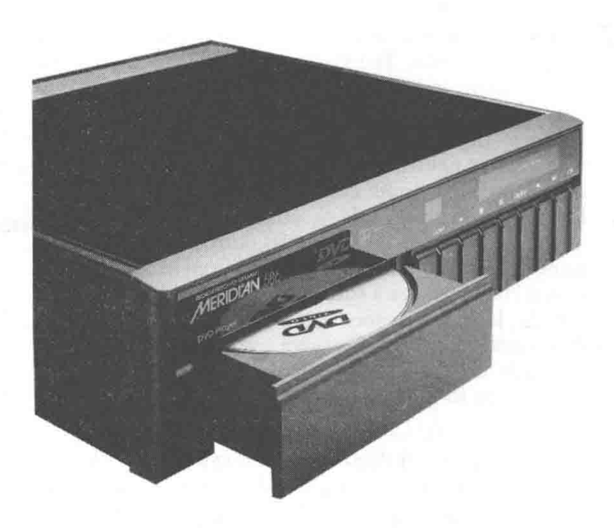
24. 'Home Cinema' arrangement of TV receiver and surround sound loudspeakers

25. VHS Hi-Fi track layout, showing the helical tracks carrying the video and stereo audio signals plus the linear analogue track along one edge of the tape

satisfactory for a single broadcast, would stand up to frequent replaying in the way that records do. Operas and certain types of popular music lend themselves to visual presentation, but for most music considerable research remains to be done to discover satisfactory answers to the question.

In the late 1970s there was fierce competition between two videotape cassette formats, Betamax and VHS, which required similar but incompatible VCRs (videocassette recorders) that could be plugged into an ordinary television set for playback and off-air recording. The VHS system prevailed and was soon taken up by all VCR manufacturers.

VHS cassettes use 12·7 mm wide tape loaded into a magazine offering playing times of three hours or more. To accommodate the very high frequencies needed for the video signals, a spinning head-drum is used as in professional video recorders to produce a helical scan, the tape/head speed being 5·8 metres per second whilst the linear tape running speed is only 2·4 cm per second. A conventional mono soundtrack is recorded along one edge of the tape and, at this slow running speed, is of relatively poor quality, with high frequencies sadly lacking.



However, in 1983 a change to VHS Hi-Fi added two soundtracks for stereo, frequency modulated onto a pair of carrier frequencies encoded within the video signal (fig.25). This extended the audio frequency response almost to 20 kHz and eliminated the effects of unwanted speed fluctuations. The linear mono soundtrack was retained to allow VHS hi-fi cassettes to be played on older VHS machines. High-speed duplication was much improved and commercial videos of films, plus a few musical issues from the recording industry, soon grew in importance both for hire from shops and public libraries and for 'sell-through'. The VCR became a familiar sight in homes where its timer-controlled off-air recording facility enabled viewers to watch programmes at any convenient time. A digital version of VHS was announced in 1996.

A protracted search for a viable videodisc system culminated about 1979 in the successful marketing of laserdisc (LD). This uses an optical record/play technology similar to that of the compact disc but with both the video and audio signals encoded onto a single spiralling track having data pits in the substrate surface. LDs are 30 cm in diameter (fig.26) and may be single- or double-sided, giving up to one hour's playing time per side, stereo or Dolby Surround sound, twice the picture resolution of VHS and quick access to any part of the disc. There is no recording facility but LD players can also play normal audio CDs.

Though more expensive than VHS cassettes, LDs have steadily grown in popularity as film companies, and to a lesser extent the record industry, have issued increasing numbers of LD titles. A return to the 12 cm CD size is predicted, however, with the DVD, which may in time replace all existing audio, video and computer disc media (fig.27).

12. Radio transmission. The idea of dispensing entertainment by electrical means to a large number of individuals listening simultaneously in their own homes is quite old; in the early days of telephony, consideration was given to the possibility of distributing news reports and even music to a group of subscribers connected by wires to a common microphone. In 1881 music was experimentally transmitted by telephone from the Leeds Festival; in the same year, visitors to an exhibition in Paris were given a demonstration of stereophonic sound, reproduced on pairs of earphones connected by wire to corresponding pairs of microphones concealed in the footlights at the Opéra. Later a number of theatres and concert halls were wired to provide a music service via the existing telephone network, and some of these systems

26. A LaserDisc player can play all types of optical disc including 30 cm LDs and 12 cm audio CDs

27. An early DVD player

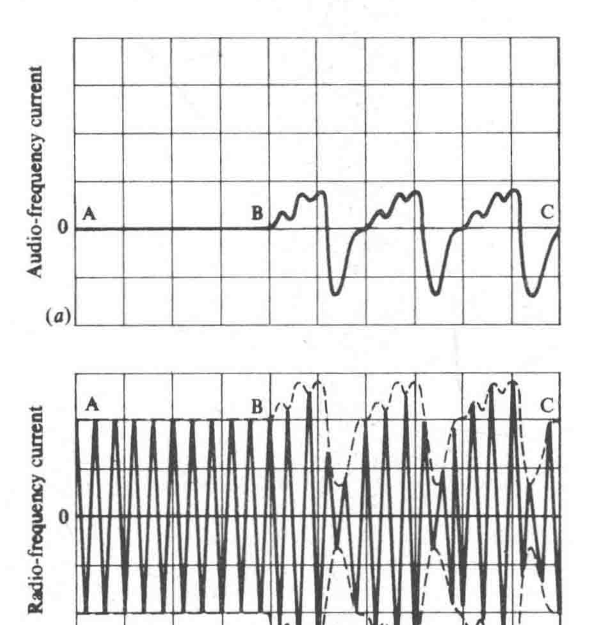
remained up to the 1920s. In the meantime, however, radio-telephony had been developed to the point at which its potentialities as a universal medium for the dissemination of entertainment were obvious, and broadcasting, in the modern sense of the word, began about 1920.

(i) Network distribution. For technical reasons connected with the propagation of radio waves, it is not in general feasible to provide a nationwide broadcasting service by a single, centrally situated transmitter; it is therefore necessary to have a number of widely separated transmitters, each covering a different part of the area to be served. Even when only locally produced programmes are broadcast, the radio transmitter, with its aerial masts over 100 metres high, is usually in open country, far from the studio. The electrical signal representing the programme, referred to here for convenience as the 'sound signal', has therefore some distance to travel before the process of broadcasting proper can begin.

The earliest method of conveying the sound signal from the studio to the transmitter was to rent an ordinary telephone line. Unfortunately the frequency range covered by this form of communication, while sufficient to give intelligible speech, fell far short of that required for the reproduction of music; moreover, the constant background of noise, known as 'crosstalk', caused by induced currents from the other telephone lines running in the same cable, proved unacceptable in a broadcast programme. Eventually, a number of telephone cables were provided with 'special music lines', electrically screened against crosstalk and capable of transmitting a wider frequency range. The loss of power suffered by the signal in travelling along the line was made good by 'repeater' amplifiers introduced at intervals along the route. Because of the electrical properties of the line, the overall loss varied with frequency, but this inequality was compensated by electrical circuits, known as 'equalizers', located at the far end of the chain.

This system, with some refinements, is still in widespread use. For local lines, such as those connecting a studio in a city centre with a transmitter on the outskirts, it can be made to satisfy all technical requirements. On longer routes, however, such as those between city centres, the frequency range that can in practice be transmitted does not usually extend much above 10 kHz. Moreover, when two such music lines are used to carry respectively the left and right signals of a stereophonic programme, the times taken for the two signals to travel from the studio to the broadcasting transmitter have to be made exactly the same, and this requirement is not easily met in a nationwide distribution network.

The technical and economic limitations of the system described above have led to the development of alternative methods of programme distribution in which the sound signal, originally a mixture of audio-frequency currents, is temporarily converted to some other form less likely to deteriorate in transit. The first of these methods uses a form of transmission, known as 'carrier telephony', by which a number of telephone conversations can be sent simultaneously over a single communication channel using special cables and radio links capable of carrying messages at frequencies far above the audible range. At the sending end of the system, each telephone signal is electrically transposed from the audio-frequency range to a designated region in the super-audible range, and at the receiving end, restored to its original form. By using the range of super-audible frequencies originally allocated to, say, four adjacent telephone channels, a single 'music channel', with four times the frequency range of a telephone, can be created and signal components corresponding to audio frequencies from 40 Hz to 15 kHz can be transmitted. Background noise, due mainly to interference from telephone circuits sharing the common communication channel, still presents a problem. Its effects can, however, be mitigated by introducing at the sending end of the system a compressor, which over-amplifies the weaker signals (see §II, 5 above), and providing at the receiving end an 'expander', which reduces these signals to their original proportions, at the same time reducing the noise. A compressor and expander used in this way are referred to collectively as a 'compandor'. Carrier systems of this kind, in some cases specially designed to meet the stringent requirements of stereophony, are used in a number of countries for internal network distribution and for international programme exchanges.



Later developments in programme distribution at super-audible frequencies are based on the principle that the fluctuations in current that constitute the audio-frequency signal need not be transmitted continuously. It is in fact sufficient that momentary samples of the signal current be taken at time intervals so short that the finest detail, corresponding to the highest harmonic component, can still be detected. If for each sample some kind of message, indicating the strength of the current, can be sent over the distribution network, it is possible at the receiving end of the system to re-create the original samples, and, from them, the original audio-frequency signal.

In this 'digital' method of transmission, known as 'pulse code modulation' (PCM), the current in each signal sample is measured electronically and represented by a number; the resulting series of numbers is then transmitted over the distribution network by a form of high-speed telegraphy. With PCM there is no practical limit to the distance over which sound programmes can be distributed without deterioration in tonal quality or increase in background noise. In Britain a system for distributing the sound component of a television programme in the form of PCM signals incorporated in the picture signal has been in nationwide service with the BBC from 1972; another PCM system, designed to allow up to 13 sound signals, any two of which can be paired for stereophonic transmission, to be distributed over a common channel, began widespread operation in the BBC sound broadcasting network in 1973.

(ii) Broadcast transmission. The radio waves emitted by a broadcasting transmitter are generated by an alternating current, with a frequency between about 100 kHz and 1000 mHz, flowing in the aerial. This is referred to as a 'radio-frequency' current to distinguish it from the audio-frequency currents that constitute the sound signal; it is generated by an oscillator, a kind of amplifier in which part of the outgoing signal is returned to the input, thus maintaining itself indefinitely without any external stimulus. During silent periods of the broadcast programme, the radio-frequency alternating current continues to flow in the aerial, rising to the same maximum value in each cycle; this is known as the 'carrier' current because it serves as a vehicle for the sound signal. A similar, but much weaker, alternating current flows in those radio receivers tuned to the frequency of the carrier.

The commonest method of impressing the sound signal on the carrier is to make the strength of the radio-frequency current depend on the strength of the audio-frequency current. This process, known as 'amplitude modulation' (AM), is illustrated in fig.28, in which curve *a* represents the sound signal arriving at the transmitter and curve *b* the corresponding aerial current. The time interval from *A* to *B* illustrates the conditions during a silent period, when the sound signal is zero and the aerial current is steady. Between *B* and *C*, a sound is produced in the studio, generating the complex signal waveform shown in curve *a*; in the corresponding section of curve *b* it will be seen that the tips of the radio-frequency current wave, which represent the amplitude (i.e. the maximum value reached during each cycle), trace out the form of the sound signal. In the receiver, there are corresponding variations in the strength of the radio-frequency current; these variations are detected by an electronic device, producing a replica of the original signal.

Although it is not obvious from fig.28, the process of amplitude modulation generates a number of additional radio-frequency components; these cover two regions, known as 'sidebands', extending respectively above and below the carrier frequency, with the components furthest removed from the carrier being associated with the highest audio frequencies in the sound signal. Ideally, to avoid interference, no two transmitters capable of being received at a given location should have their carrier frequencies so closely spaced that their sidebands overlap. Unfortunately the number of different transmissions that have to be accommodated in the available space in the radio-frequency spectrum is so great that some overlap has to be allowed; the situation is aggravated because for transmissions in the widely used medium frequency (or medium wave) range, reflections from the upper atmosphere after dark can lead to interference between broadcasting stations hundreds of kilometres apart. To minimize interference from unwanted transmissions, medium-frequency receivers are commonly designed, as a compromise, to reject part of the sidebands of the wanted transmission; the components thus sacrificed are those corresponding to the higher audio frequencies, the upper limit of the reproduced sound being then restricted to some 5 kHz or less. In addition, medium-frequency transmitters are often provided with quick-acting compressors, similar to those sometimes used in studios, to increase the sound volume in quiet passages that might otherwise be drowned by interference at the receiver; this expedient likewise represents a compromise at the expense of sound quality, since such compression can produce objectionable effects on some kinds of music (see §5 above).

28. *(a) Waveform of sound signal arriving at transmitter; (b) waveform of current in aerial (for the sake of clarity the spacing between cycles has been exaggerated)*

This unsatisfactory situation led to the introduction in the 1950s of additional broadcasting transmitters operating at radio frequencies of the order of 100 mHz; in this range, designated 'very high frequency' (VHF), long-distance propagation, such as occurs at medium frequencies in the dark, does not normally happen, so that interference from unwanted transmissions can more easily be avoided. At the same time, a new method of impressing the sound signal on the carrier was adopted. The carrier was maintained at constant amplitude, but its frequency was moved up and down the scale, above and below its nominal value, by an amount dependent on the audio-frequency current. The receiver was then designed to detect variations in carrier frequency instead of carrier amplitude, in order to recover the sound signal. This system is known as 'frequency modulation' (FM).

Fortunately the VHF region of the radio-frequency spectrum is less crowded than the medium-frequency region, so that the carrier in the FM system can be swept over a frequency range much wider than that occupied by the sidebands of the corresponding AM transmission; matters are so arranged that, in exchange for the greater radio-frequency band width occupied, the effect of any noise or interference picked up by the receiver is greatly reduced. As a result, FM broadcasting at VHF is characterized by a quiet background that allows the full audio-frequency range of the transmitted sound to be reproduced in the home. VHF broadcasting also allows frequencies above the audible range to be transmitted, and this property enables the extra signals required for stereophony to be accommodated. In the 'pilot tone' system, the transmitted sound signal is in two parts; the first of these represents the average of the left and right components generated in the studio, and provides the compatible reproduction in a monophonic receiver (see §II, 4 above); the second, in the super-audible range, contains the extra ingredients necessary for a stereophonic receiver to reproduce the two components separately.

(iii) Future development. Broadcasting at VHF must be regarded as supplementing, rather than replacing, the existing services in the medium- and low-frequency range (medium and long waves). The present FM system of transmission is likely to remain for some time the principal medium for the broadcasting of high-quality music; in modern TV broadcasting, the same principle is applied to the transmission of the programme's sound. Earth satellites, already used for international point-to-point communication and programme exchanges, have been

designed to broadcast television and radio programmes for direct reception by the public, and communal receiving arrangements allow local distribution by cable.

Following the pattern in the evolution of audio and video discs and tapes, a changeover to digital technology in radio and television broadcasting was inevitable. After some years of experiment, digital audio broadcasting (DAB) began in the UK in 1995 offering important benefits for radio listeners. DAB applies data reduction before sharing the signal between a large number of carrier frequencies packed closely together. This eliminates the effects of multipath interference when the broadcast signals are reflected from large buildings and provides totally consistent in-car reception. Sound quality is up to CD standards, and text displays and even pictures can accompany the music or speech signals.

The problems associated with the digitalization of TV broadcasting are considerable but solutions have been found. Land-based (terrestrial) TV transmitters were made ready for a launch by British Digital Broadcasting in July 1998 and its spread through the UK and other countries seems assured. It has the advantage over satellite and cable broadcasting that it uses spare frequencies inside the normal TV band and so homes need neither a satellite dish nor a special cable connection. At the same time, the benefits of digital TV, which include much improved picture and sound quality plus the possibility of interactivity between the viewer and the programmes, are being introduced via new satellites for suitably equipped home receivers and can, in turn, be relayed to cable subscribers.

A further advance to high definition TV and convergence of audio, video and computer media through the World Wide Web seems destined to transform the way in which recorded music, and indeed all forms of home entertainment, education and communications, will be disseminated.

13. Sound reproduction. Nearly all sound reproduction is effected by loudspeakers. These are, in principle, microphones operating in reverse; the moving-coil microphone has its counterpart in the moving-coil loudspeaker, the commonest type in use, and there are also 'electrostatic' loudspeakers that correspond to the condenser microphone. In a loudspeaker, however, it is much more difficult to achieve a comparable standard of performance, and even the best of loudspeakers is, in most respects, the weakest link in the chain.

(i) Loudspeaker construction. Most loudspeakers use one or more moving-coil units, each consisting of a diaphragm made from paper pulp, metal or plastic, to which is attached a coil suspended in the radial field of a permanent magnet. Audio-frequency currents passing through the coil cause the diaphragm to move in and out correspondingly, radiating sound from both front and rear surfaces. The sound pressures generated at front and rear are opposite in sense; to avoid destructive interference between the two, the back of the diaphragm is enclosed by a cabinet which, in high-quality loudspeakers, is lined with sound-absorbing material to minimize the effects of internal air resonance. The construction of such a loudspeaker is thus similar in general form to that of a moving-coil microphone, but to allow the required sound volume to be produced (to achieve this the diaphragm movement must displace a prescribed amount of air) the dimensions have to be much greater. Unfortunately a loudspeaker diaphragm that is large enough to reproduce at full volume the lowest audio-frequency components of the signal is too large to vibrate as a whole at high frequencies, and as a result exhibits a series of mechanical resonances; these, unless adequately damped by the diaphragm material itself, will impose a characteristic timbre on all reproduced sounds. In addition, since high-frequency components of the sound have wavelengths comparable with, or smaller than, the dimensions of the diaphragm, these will tend to be concentrated in a beam instead of being distributed over the listening area. To mitigate these effects most loudspeakers in the 'high-fidelity' class (i.e. those designed to reproduce the wide frequency range covered by VHF broadcasting and modern commercial recordings) are provided with a separate unit, with a smaller diaphragm, to radiate sounds in the upper part of the frequency range. Some loudspeakers incorporate three units, covering respectively the lower, middle and upper parts of the range (fig.29), and in a few cases a number of high-frequency units pointing in different directions have been used to distribute the sound over a wider angle.

29. High-fidelity three-unit loudspeaker; the upper unit covers the middle-frequency range (250 Hz–3000 Hz) while the high-frequency range (above 3000 Hz) is reproduced by the smaller unit mounted immediately below it, and the low-frequency range (from 250 Hz downwards) by the bottom unit which has a large, flat-fronted diaphragm of expanded polystyrene reinforced by an aluminium skin; provision is made for minor adjustments to the frequency characteristic to compensate for acoustical abnormalities in the environment

Instead of a large diaphragm radiating sound directly, a much smaller diaphragm radiating through a flared horn may be used. This arrangement, which is much more efficient than a direct-radiator loudspeaker, is used in cinema equipment; to ensure even distribution of sound over the auditorium at the highest frequencies, large horns are divided internally to form a cluster of small horns with their axes splayed out over a wide angle. Horns capable of operating at the lower audio-frequencies are too large for general use, but small horn units, designed to radiate at high frequencies only, are incorporated in a number of high-quality loudspeakers; in some of these horn units the diaphragm takes the form of a ribbon similar to that in a ribbon microphone.

In electrostatic loudspeakers the diaphragm consists of a thin plastic sheet, coated with an electrically conducting layer, moving in a narrow gap between two parallel perforated plates that form the fixed electrodes. An electric charge is maintained between the diaphragm and both fixed electrodes, producing forces of electrostatic attraction; audio-frequency signal voltages applied between the two plates cause these forces to vary, and this variation brings about a corresponding movement of the diaphragm. Since the driving force is distributed over the whole surface, any tendency of the diaphragm to divide up into independently vibrating areas is inhibited, and the system is relatively free from internal resonance. The movement of the diaphragm is necessarily small, and a correspondingly large area is required to produce sufficient sound at low frequencies; to avoid unwanted directional effects at high frequencies, however, the radiating system may be subdivided so that a smaller diaphragm area is operative at the upper end of the range. It is sometimes possible to dispense with the loudspeaker cabinet, both faces of the diaphragm radiating independently; interference between the front and back radiation in such cases is confined to the lower audio frequencies, and its effects are compensated electrically.

(ii) Amplifiers. Amplifiers designed to operate loudspeakers differ from most of those used elsewhere in the programme distribution chain on account of the relatively large amount of audio-frequency power that they must be able to deliver; excluding small portable devices, the figure usually ranges from a few watts to a few tens of watts. The efficiency of audio-frequency amplifiers in general is low compared with that of most other electrical appliances, less than half the power supplied to the transistors in the form of direct current being transformed into signal power at the output (and power has still to be supplied even when the signal is zero); the residue appears as heat which, in the case of a loudspeaker amplifier, has to be dissipated through a metal structure known as a 'heat sink'.

The rated output of a loudspeaker amplifier is defined as the maximum power that can be delivered, without distortion of the signal waveform, to a resistor of specified value, which for test purposes takes the place of the loudspeaker; the signal used for this test is at a single frequency, corresponding to a pure tone without harmonics. The electrical impedance of a loudspeaker, however, is not wholly resistive, but over a large part of the audio-frequency range also has the characteristics of an inductance or a capacitance; the power transferred to the loudspeaker is therefore less than the nominal figure based on a resistive load. In specifying the amplifier power required for a particular loudspeaker, allowance is tacitly made for this factor and also for the complex waveform and constantly varying level of the audio-frequency signals that appear in practice; with these signals, the maximum power required momentarily at the crest of the wave may be 100 or more times the average value, and a factor of safety has to be included to avoid any danger of distortion through amplifier overloading on the loudest passages.

(iii) Effect of environment and directional characteristics. The sound heard from a loudspeaker consists of two components, one reaching the listener's ears directly and the other by way of reflections from the walls, floor and ceiling; the latter is referred to as 'reverberant sound' (see §II, 2 above). The whole effect therefore depends to some extent on the acoustic properties of the environment, which in turn are a function of the dimensions, building construction and furnishing of the listener's home. To make the best of the situation created by these unknown quantities, aural monitoring at the studio should preferably be carried out in a control room acoustically comparable with an average domestic environment.

As with the microphone, the directional properties of a loudspeaker can be represented by a polar diagram. At the lowest frequencies most loudspeakers are omnidirectional if the back of the diaphragm is enclosed, but exhibit a figure-of-eight characteristic if the back is open. At higher frequencies the directional effects are more pronounced and more variable than with a microphone, and it is usually more informative to express the whole effect by a series of frequency response curves taken at different angles. Ideally, the frequency response should be constant over the range of horizontal and vertical angles within which the listeners are likely to be located, but it is only in better-quality loudspeakers that this condition is approached.

In stereophony the directional characteristics of the two loudspeakers can be used to some extent to reduce errors in the reproduction of positional effects. When identical sounds are radiated simultaneously from the left and right loudspeakers, the resultant sound should appear to the listener to come from a point midway between them. In fact, to a listener who is nearer to, say, the left loudspeaker, it will appear to come from some point left of centre; this is partly because of the greater volume received from the left loudspeaker and partly because of the earlier arrival of the sound from that side (the 'precedence effect'). The error can be partly compensated by placing the two loudspeakers so that their axes intersect at some central point at the front of the listening area; this helps to offset the left bias experienced at points left of centre by reducing the volume received at these points from the left loudspeaker (and vice versa on the right).

(iv) Earphones. The effects of room acoustics and of unwanted ambient noise can be eliminated by listening on earphones instead of loudspeakers, and the use of stereophony has stimulated interest in this form of sound reproduction. High-quality earphones, most of them constructed like miniature moving-coil or electrostatic loudspeakers, have been designed to cover the full frequency range required for music reproduction, but their performance under working conditions is subject to a number of variable factors; the sound pressures that they produce at high frequencies are a function of the size and shape of the listener's ear cavities, while the full reproduction of the bass components depends in most

cases on the avoidance of air leaks between the earphone and the head.

Broadcast or recorded material is monitored in the studio control room by listening to loudspeakers, so that in arriving at the optimum placing and mixing of microphones, the effect of room acoustics is automatically taken into account; when the same material is reproduced on earphones, which eliminate the effect of room acoustics, the original balance and auditory perspective may be altered. With stereophony, there is a further disparity between loudspeaker and headphone reproduction. This is partly because sound from both loudspeakers reaches both the listener's ears, that from the left side reaching the left ear before the right and vice versa. When left and right earphones are substituted for the loudspeakers, each ear hears only sound from one side, and the directional effects are modified. Special stereophonic or 'binaural' recordings intended for reproduction on earphones have been produced, the left and right signals obtained from microphones mounted in the 'ears' of a dummy human head; this system as it stands, however, does not give satisfactory reproduction on loudspeakers, and the programme material thus produced is therefore incompatible with normal stereophonic broadcasting.

Recorder. A woodwind instrument with a thumb-hole and (generally) seven finger-holes. It is the chief Western member of the class of duct flutes, i.e. flutes with a whistle mouthpiece, being distinguished from most other members particularly by its thumb-hole. Invented (or imported to Europe) during the Middle Ages, it was one of the most common wind instruments of the Renaissance and continued to play an important role in the Baroque. After being little used during the Classical and Romantic periods, it was resuscitated in the early 20th century and featured prominently in the early-music revival. Today it is a widely popular educational and amateur instrument and has attracted a skilled body of professionals.

Recorders are made in different sizes, with compasses corresponding to different vocal ranges. There are four main instruments in use today: the descant (known in the USA as the 'soprano'; lowest note *c''*); treble (in the USA 'alto'; lowest note *f'*), tenor (lowest note *c'*) and bass (*f*). Sopranino (*f''*) and great bass (*c*) instruments are also fairly common. The treble and tenor are written for as non-transposing instruments, but music for the sopranino, descant, bass and great bass is customarily written an octave below their sounding pitch.

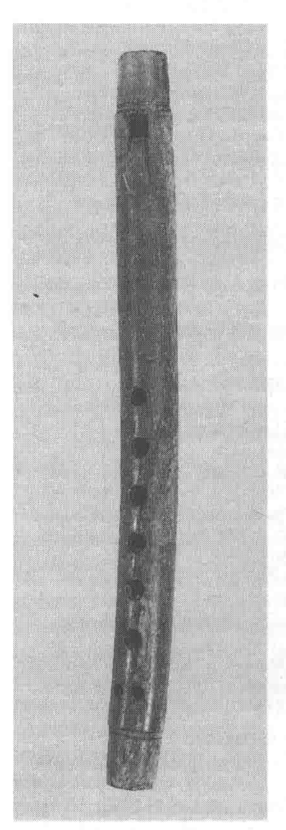
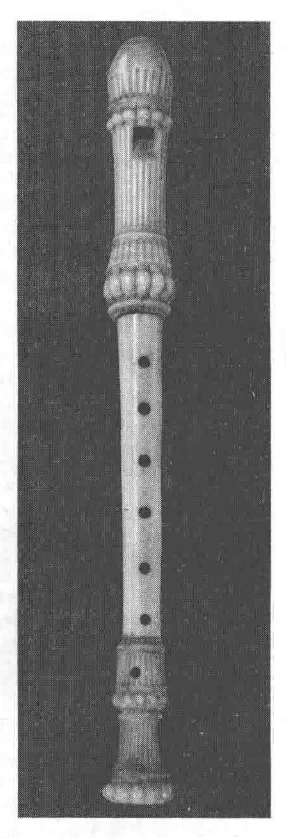
I. The instrument

1. Nomenclature. 2. Structure: (i) Middle Ages (ii) Renaissance (iii) Baroque (iv) Modern (v) Innovations.



1. NOMENCLATURE. The verb 'to record', meaning 'to remember for oneself, to recall to another', derives from the Latin *recordari*, 'to remember'; thus a recorder was a rememberer or relater, such as a minstrel or, by extension, his instrument (E. Partridge: *Origins: A Short Etymological Dictionary of Modern English*, New York, 1958). The first known use of the word to refer to a musical



instrument was in 1388, when the household accounts of the Earl of Derby (later King Henry IV) listed '*i. fistula nomine Recordour mpta London pro domino*' (the name of the instrument was misreported as 'Ricordo' by Trowell, D 1957). In English literature the term *recorder* first appeared in the poem *The Fall of Princes* by John Lydgate (written 1431–8) where it apparently referred to the pan pipes: 'Pan, god off Kynde, with his pipes sevene / Off recorderis fond first the melodies'. A Latin–English dictionary from 1440, *Promptorium parvulorum*, gave 'recorder or lytyll pipe' as the translation of *canula* (the *Campus florum* cited as the authority for the term has not been traced).

In most European languages, the first term for the recorder was the word for flute alone: in German 'Fleite' (von Aich, *LXXV–hubscher Lieder*, 1519) or 'Flöte' (Virdung, 1511, rendered as 'flute' and 'fluyte' respectively in the French and Dutch translations of 1529 and 1568); in Italian, 'flauto' (letter from G.A. Testagrossa, 1518) or 'fiauto' (Verona, list of city musicians, 1484); in Spanish, 'flauta' (testament of Antón Ancóriz of Saragossa, 1472). Beginning in the 1530s, an appropriate adjective was often added, describing either the nine holes of the medieval and Renaissance recorder (*fleute a neufte trous*; see J. Palsgrave: *Les clarissement de la langue francoyse*, 1530), the eight holes of the Baroque recorder (*flauto da 8 fori*, 'Tutto il bisognevole', ?1630), the vertical orientation (*flauto diritto*, letter from Giovanni Alvise, 1505), the soft or sweet tone (*fluste douce*, Mersenne, 1636; *flauto dolce*, Küsser, *Erindo*, 1694; *flauta dulce*, Pedro Rabassa, *Miserere*, 1715), the supposed association with England (*fluste d'Angleterre*, Mersenne, 1636; *litui anglicani*, rector of the English Jesuit College in St Omer, France, first decade of the 17th century) or with Italy (*flauto italiano*, Bismantova, 1677, rev. 1694), the block (*Blockflöte*, Praetorius, 1619), the 'beak' of the Baroque recorder (*flûte à bec*, Hotteterre, *Pièces*, 1708; *flauta bocca*, Reynvaan, 1795), or the ability of the recorder in *c″* to fit well into the hand (*handfluit*, Matthysz, Bc1649).

When the Baroque recorder was introduced to England by a group of French professionals in 1673, they brought with it the French names, 'flute douce' or simply 'flute', which overlapped with the traditional name until at least 1695. From 1673 to the late 1720s in England, therefore, the word 'flute', hitherto reserved for the transverse instrument, always meant recorder – a switch of terminology that has caused endless confusion among modern writers and editors. When the transverse flute overtook the recorder in popularity in England in the 1720s, the latter began to be distinguished further by the terms 'common flute' (John Loeillet, *Sonata's for Variety of Instruments*, 1722) or 'common English-flute' (Stanesby, *c*1732), later contracted to 'English flute' (*The Compleat Tutor for the Flute*, *c*1765). John Grano used 'German flute' and 'flute' interchangeably for the transverse instrument by 1728–9, although a few writers were still using 'flute' to mean recorder until at least 1765. Standard 20th-century names for the recorder include: *flûte à bec* or *flûte douce* (Fr.), *Blockflöte* (Ger.), *flauto dolce*, *flauto a becco* or *flauto diritto* (It.), *blokfluit* (Dutch), *furulya* or *egyenesfuvola* (Hung.), *flauta de pico* (Sp.) or *flauta dulce* (Latin–American Sp.) and *tatebue* or *rikōda* (Jap.). The neologism *blockflute*, derived from the German *Blockflöte*, goes back at least to F.J. Giesbert's recorder tutor (Mainz, 1936). The German terms *Längsflöte* and *Schnabelflöte* have long since gone out of fashion.

Although several sizes of recorder have been known since at least the 15th century, a consistent terminology for them was not established until the modern revival. In 18th-century England the smaller sizes were named according to their distance from the treble (lowest note *f′*) and notated as transposing instruments in relation to it: third flute (lowest note *a′*), fifth flute (*c″*), sixth flute (*d″*; fig.1*b*) and octave flute (*f″*). The term *flute du quatre*, or fourth flute (*b♭′*), was used by Charles Dieupart, although curiously he treated it as a transposing instrument in relation to the descant rather than the treble. In Germanic countries, the equivalent of the same term, *Quartflöte*, was applied both to the tenor, with lowest note *c′* (Walther, 1732) – the interval being measured down from the treble in *f′* – and to a recorder with lowest note *c″* (Speer, *Grunde-richtiger*... *Unterricht der Musikalischen Kunst*, 1697; and as late as J.D. Berlin, *Musikalske elementer*, 1744) – the interval of a 4th apparently being measured up from a treble with lowest note *g′*. In the early 20th century, Arnold Dolmetsch established the standard British terminology of sopranino (*f″*), descant (*c″*), treble (*f′*), tenor (*c′*) and bass (*f*). In recent years the recorder with lowest note *f* has sometimes been termed the basset, because larger sizes have become more widespread: great bass (*c*), contrabass (*F*) and even subcontrabass (*C*) also called bass, great bass and contrabass, respectively.

1. Recorders: (a) Descant recorder, ?late 14th century, found under a house at Dordrecht (Gemeentemuseum, The Hague); (b) sixth flute by W. Beukers, Amsterdam, 1704 (Dayton C. Miller Flute Collection, Library of Congress, Washington, DC)

2. STRUCTURE. The physical characteristics of the recorder – the duct or whistle mouthpiece and the basic principle of seven finger-holes and a thumb-hole – have remained the same throughout its history (for terminology, *see* DUCT FLUTE; but the details of construction have varied widely (see particularly Rowland-Jones, C1994, Van Heyghen, E1993, and Zaniol, C1986).

(i) Middle Ages. The two earliest surviving recorders are dissimilar. The earliest seems to be a 14th-century plumwood instrument in Göttingen (Hakelberg, C1995). It is 256 mm long, in one piece, with a wide cylindrical bore (13·6 mm in diameter), narrowing between the first and second finger-holes, between the second and third finger-holes, and especially at the seventh finger-hole (11·5 mm); the bore expands to 14·5 mm at the bottom of the instrument, which has a bulbous foot. The obliquely cut finger-holes taper conically outwards (the opposite of the undercutting found in Baroque recorders). There are widely spaced double holes for the bottom finger, allowing for left- or right-handed playing (according to Virdung, 1511, the unused hole in such instruments was filled with wax). The top of the Göttingen instrument is damaged. A reconstruction by Hans Reiners produced a penetrating sound, rich in overtones, and a range of about two octaves; opening the lowest finger-hole produced a semitone not a tone.

The second recorder, found in the former moat of the Huis te Merwede, near Dordrecht ('Dordrecht recorder', fig.1*a*), probably dates from the time of occupation of the castle (1335–1418) and most likely the late 14th century (Weber, C1976). It is 270 mm long with a narrow cylindrical bore (about 11 mm in diameter), and double holes for the bottom finger. The labium is damaged and the instrument cannot be played. Such cylindrical recorders are depicted in many medieval paintings, the earliest of which are probably *The Mocking of Christ* from the monastery church of St George in Staro Nagoričano near Kumanovo, Macedonia (the painting of the church began in 1315); and the centre panel of the *Virgin and Child* attributed to Pedro (Pere) Serra (*c*1390), painted for the church of S Clara, Tortosa (now in the Museu Nacional d'Art de Catalunya, Barcelona; see Rowland-Jones, 'Recorders and Angels', 1997).

(ii) Renaissance. The 16th century produced a variety of new design features for the recorder. In his important treatise on the recorder, *Fontegara* (1535; fig.2), Sylvestro di Ganassi gave fingerings for an instrument with several specific features, the most important of which was that the 15th (i.e. the second octave above the base note) was produced as the 4th harmonic of the base note, using the same fingering (but with two half-covered holes) and thus sounding like a change of register (see Table 1). The instrument was presumably also to play the notes of the third octave given by Ganassi in a separate set of fingering tables, although the 16th is found only twice and the 15th only six times in the musical examples in *Fontegara*, and Ganassi excluded the high notes for tenor and bass recorders. A damaged boxwood treble recorder with lowest note *g′* (perhaps made by one of the early members of the Bassano family), now in the Kunsthistoriches Museum, Vienna, conforms to Ganassi's criteria, as does an ivory treble (*g′*) in the Musée de la Musique, Paris (perhaps made by a later Bassano). These instruments have a wide cylindrical bore with a marked flare at the bell end from about four-fifths of the way down the bore (to aid in producing the higher notes), large finger-holes, a sound weak in harmonics and a very large range.

2. *Woodcut from the title-page of Ganassi's 'Opera intitulata Fontegara' (Venice, 1535)*

The 'Ganassi' recorder seems to have been used only in the first half of the 16th century. Two of the three maker's marks shown by Ganassi (in his diagrammatic recorders with fingerings for the third octave) are associated with southern Germany: a stylized A, belonging to the Schnitzer family, working mostly in Nuremberg, and a trefoil, belonging to the Rausch family of Schrattenbach, near Munich; the third mark, a stylized B, has not yet been attributed but is likely to have belonged to a Nuremberg maker.

Most surviving Renaissance recorders are of a different type from that described by Ganassi, having a cylindrical bore from the blockline down to about the uppermost finger-hole, and an inverted conical part (the 'choke') to about the lowest finger-hole, then a slight flare down to the bell. The external shape is similar to the bore ('stretched hourglass'). The sound is warm, rich in harmonics, and rather introverted. The range is small, at most an octave plus a 7th. This seems to be the type described by Praetorius (1619; fig.3), who remarked, however, that experienced players were capable of playing up to a 4th or even a 7th higher. The normal range is suitable for recorder parts in vocal music rather than purely instrumental music.

In 1556 Philibert Jambe de Fer introduced a set of fingerings for a hybrid instrument that had a narrow cylindrical bore like medieval exemplars but a choke foot like the Praetorius instrument. The 15th was now produced, as on most later recorders, as a variant of the 14th (Table 1 and fig.4). Two examples are in the Accademia Filarmonica, Bologna (the C***RAFIand P.GRE/C/E recorders). Weak in sound but with good pitch stability favouring dynamic expression, they are suitable for Italian music of the late 16th and early 17th centuries.

(iii) Baroque. Variants of the Jambe de Fer fingerings are found in every chart after Praetorius (Mersenne, Matthys, Blankenburgh, etc.). They correspond to a recorder similar to that described by Praetorius, except for a choke in the bore around and below the lowest finger-hole which allows for a considerably shorter foot section or joint, with higher harmonics resulting. Surviving examples are listed by Legêne (C1993), who coined the name Early Baroque for this type of recorder. They include: a boxwood treble with lowest note *g′* (Vienna, Kunsthistorisches Museum); a treble with lowest note *f′* or *g′*, marked 'I.V.H' (perhaps Jan Juriaanszoon van Heerde; Shrine to Music Museum, Vermillion, South Dakota); the so-called Rosenborg recorders (Musik-

[1] Fingering may be an error in Ganassi

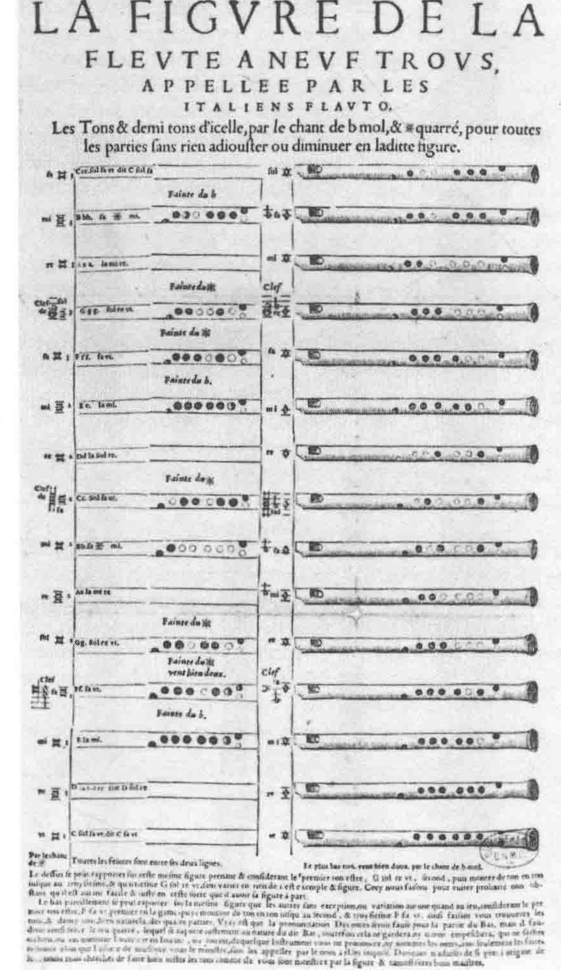
historisk Museum, Copenhagen); and a descant by Richard Haka (Russell Collection, Edinburgh). In at last ten surviving paintings of such recorders, a silver- or brass-coloured sheath is shown fitting over the head joint from top to labium.

Around the middle of the 17th century recorders began to be made in three joints: head, middle with seven finger-holes, and foot with the remaining finger-hole. This is the familiar Baroque recorder. It has a nearly cylindrical head joint, a slight taper up to the fourth hole in the middle joint, followed by a much steeper taper, prolonged into the foot joint. These changes in structure may have happened independently in Italy, France and perhaps elsewhere. The first depiction of such an instrument is the *flauto italiano* (lowest note *g'*) in Bartolomeo Bismantova's *Compendio musicale* (1677; rev. 1694). Such recorders, which had a bright high register that was relatively easy to play, continued to be made in Milan and other European centres.

In contrast, the French *flute douce*, a treble with lowest note *f'*, had a full, resonant low register and a relatively weak high register. The first fingering chart for this type of recorder (Hudgebut, B1679) goes only from *f'* to *d'''*. This type was made in Paris and, under French influence, in London. Its creation has often been attributed to the Hotteterres, and particularly to Jean Hotteterre (i) (*fl* *c*1628–92), although the evidence is extremely indirect. J.C. Denner and Johann Schell applied to the Nuremberg authorities in 1696 for permission to make the French type of instrument, which they believed had been developed in France about 12 years earlier. A few surviving examples by Peter Bressan have double holes to facilitate the playing of the lowest two semitones (Grosvenor Museum, Chester, fig.5; Kunsthistorisches Museum, Vienna), and one (Vienna) also has double holes for the third finger of the left hand; such holes are mentioned by Jacques Hotteterre (1707). The French type of Baroque recorder seems to have been first depicted in a *trompe*

3. *'Great consort' of recorders, (from left to right) Grossbass (F), Bass (B♭), Basset (f), Tenor (c'). Alt (f'), Discants (c", d"), klein Flötlein (Exilent, g") and gar klein Flötlein (with one thumb- and three fingerholes): woodcut from Praetorius's 'Syntagma musicum' (2/1619)*

l'oeil with musical instruments (1672) by the Flemish artist Cornelis Gysbrechts when he was living in Denmark (Nationalmuseet, Copenhagen); the first French depiction dates from as late as 1691, in Pierre Mignard's *St Cecilia* (Louvre, Paris; fig.6).



A double recorder was advertised by the Amsterdam maker Michiel Parent (1692): 'a combination of two recorders ... with which two different parts can be played at once'. An anonymous instrument survives (Grassi-Museum, Leipzig) in which two differently voiced recorders are joined together at the head and foot joints by flanges; this is presumably the principle of the 'flute d'echo' (Loulié, 1696), 'echo flute' (Paisible, 1713) or 'fiauto d'echo' (J.S. Bach, Brandenburg Concerto no.4, 1721) (*see* ECHO FLUTE).

(iv) Modern. The standard modern recorder was created by Arnold Dolmetsch (beginning in 1919) with further modifications by his son Carl. They began with the late-Baroque recorder of the French type, replacing the narrow, curved windway with a wide, straight one, reinventing the double holes for the lowest two finger-holes, and in the 1930s rescaling to modern pitch and equal temperament. Such instruments still tend to favour the low register and some have difficulty playing the 15th and 16th. The recorders with a long foot joint used in Germany in the 1920s and 30s (lowest note *A* or *D*) had an even more restricted range (about an octave) and a tone emphasizing the fundamental.

Carl Dolmetsch made a number of useful inventions to aid in the performance of the standard recorder: the thumb rest, the bell side-key (patented in 1958), the echo key (operated by lip or chin to help achieve dynamics; also patented in 1958), and the tone projector. Daniel Waitzman, who championed the bell key in the 1960s and 70s, proposed a specially designed bell end-key recorder (in which the high register would be in tune with the bell key closed).

Starting in the 1960s, makers such as Friedrich von Huene and Frederick Morgan started making more exact copies of historical instruments rather than (or as well as) the Dolmetsch-inspired modern types. Today, most makers of both handmade and mass-produced instruments make some kind of copy of at least one historical type.

A number of efforts have been made to modernize the recorder. Edward Verne Powell's 'Chromette' or 'Orkon', invented in 1943, was a modified descant recorder with simplified Boehm-system keywork. In 1975 Joachim and Herbert Paetzold patented plywood recorders (in sizes from bass on to subcontrabass) with a rectangular or

4. *Fingering chart for the recorder from Philibert Jambe de Fer's 'Epitome musical' (Lyons, 1556)*

square cross-section and a doubled-back bore like a bassoon, considerably reducing the length of the instruments; the keys are large flaps of wood. In 1988 Arnfred R. Strathmann patented the 'Strathmann flute', a recorder-like instrument with the elaborate keywork and fingerings of a saxophone, similar to the Boehm system and using an octave key rather than a thumb-hole; the block height is adjustable and the roof of the windway is removable. Strathmann has also patented a tiltable windway floor (1994).

One of the most promising developments, due to Maarten Helder, is based on an early 20th-century German type with a long foot joint. The head joint has a narrow cylindrical bore, the middle joint has a single taper, and the foot is again cylindrical, producing a recorder in which the harmonics are in tune up to the fourth harmonic. The instrument is louder than the standard recorder, has strong low notes and yet produces notes with ease in the third octave. Helder added an adjustable block, modified from Strathmann's, and a *piano* key, activated by the upper part of the left-hand index finger. In 1996 Klaus Grunwald's *Trichterblockflöte* (literally 'funnel recorder', but marketed as 'bell recorder' in English-speaking countries) began to be manufactured by Adler-Heinrich. This is a wide-bore recorder with a less developed conical bore than usual, large finger-holes with a raised tone-hole for the lowest finger, and a wide, funnel-like bell (in the case of the treble, made of brass) which improves the resonance of the recorder and makes the high notes easier to play. The instrument takes more air than the standard recorder, but for that reason enables a greater dynamic range.

5. Quartet of recorders by Bressan, London, late 17th century (Grosvenor Museum, Chester): (left to right) bass in F, treble in F, alto in D and tenor in C

6. 'St Cecilia' by Pierre Mignard, 1691 (Musée du Louvre, Paris)

(v) Innovations. The most promising addition of electronics to the recorder is Philippe Bolton's electro-acoustical recorder (in which a microphone is screwed into the side of the head joint and connected to a PA system and, if desired, an effects processor). Synthesizers such as the Suzuki Wind Controller and the Yamaha WindJamm'r are less like traditional recorders. Michael Barker's 'midified blockflute' is a system linking a Paetzold contrabass recorder to two computer-controlled synthesizers, enabling the mixing of 'real' and synthesized sounds.

II. Technique and performing practice

1. Renaissance. 2. Baroque. 3. Modern.

1. Renaissance. Most of what we know about recorder technique and performance practice before the 20th

century has been obtained from early treatises and tutors, which were generally aimed at amateurs and gave away few professional secrets. The earliest recorder instructions (*Introductio gscriben uf pfifen*, c1510; Virdung, 1511; Agricola, 1528) say little about performance; Agricola advised that graces (*Mordanten*), which make the melody *subtil*, must be learnt from a professional (*Pfeiffer*). The first book entirely devoted to recorder playing was Ganassi's *Fontegara* (1535). It gives us tantalizing glimpses of professional standards, describing but giving little context for an astonishingly well-developed technique and expressive style of playing, founded on imitation of the human voice and achieved by good breath control, alternative fingerings, a wide variety of tonguing syllables, and extensive use of graces and complex diminutions. Girolamo Cardano (*De Musica*, c1546) confirmed Ganassi's account of the imitation of the voice as well as the importance of articulation, breath control and diminutions. He also described aspects of recorder playing otherwise undocumented before the 20th century: controlling intonation by closing the bell hole, partially closing the bell to produce a tone or semitone below the lowest natural note, varying the position of the tongue in the mouth to improve and colour the notes, and creating a kind of vibrato by repercussively bending back the tongue. Ercole Bottrigari (1594) noted that expert wind players, including those of the recorder, were skilful at playing in tune through breath control and shading the finger-holes.

2. BAROQUE. Like the Renaissance authors, Bartolomeo Bismantova, a wind player in Reggio nell' Emilia and Ferrara, insisted that all wind instruments should be played 'in a singing manner and not otherwise' (*Compendio musicale*). His tonguing syllables are similar to the Renaissance ones, but in addition he placed importance on the 'smooth tongue' (*lingua legata*), or slurred pairs of notes, presumably reflecting the influence of violin technique.

Four English recorder tutors of the 1670s and 80s (Hudgebut, B1679; B[anister], B1681; Salter, B1683; and Carr, B2/1686) show that recorder players were using a tablature known as 'dot-way', derived from that for the FLAGEOLET. The tablature indicates a liberal use of ornaments, largely taken from the French style: the trill, beginning on the upper auxiliary or main note (at first called the 'beat', later the 'shake' or 'close shake'); the mordent, beginning on the main note or with a rising appoggiatura ('shake', then 'beat' or 'open shake'); the slur; the slur and mordent; and the 'double shake', a warbling trill across the registers on *g″* for the treble. The intervals involved in these ornaments are not always a simple tone or semitone. The use of such ornaments transforms the recorder music of this period, which can look dull on paper. By the time of the anonymous *Compleat Flute-Master* (1695), the tablature had been abandoned, and two ornaments were added: the 'sigh' (equivalent to the French *accent*) and the 'double relish' (trill with turn). *The Compleat Flute-Master* and the *Rules for Gracing on the Flute* (MS, c1690–1700, *GB-Lbl* Add.35043) each give a series of rules for adding ornaments on ascending, descending and repeated notes when they are not marked in the music. Curiously, the 1695 rules were incorporated into most English tutors until as late as 1780, when the ornaments must surely have greatly puzzled the performers of the Classical songs and dances contained therein.

The French tutors of the late Baroque (Loulié, B1680–90; Freillon Poncein, B1700; Hotteterre, B1707), all written by professionals, show that the French woodwind players were employing only two tonguing syllables, *tu* and *ru*. Freillon Poncein and particularly Hotteterre described a series of ornaments – *tremblement* or *cadence* (trill), *battement* (mordent), *flattement* (a fingered vibrato), *port-de-voix* (ascending appoggiatura), *coulement* (descending appoggiatura), and *double cadence* (trill with turn) – but in a manner which leaves their rhythm and accentuation open to interpretation; Hotteterre gave extensive fingering charts or descriptions of fingerings for the first three ornaments. Hotteterre's *L'art de preluder* (B1719) presents a method for learning how to improvise preludes and includes many examples for flute and recorder as well as a set of *traits* or exercises, 'in the style of caprices, which one makes when one so-to-speak plays about [*badiner*] on an instrument'. The practice of 'preluding' or 'flourishing' – improvising a passage to introduce a composed piece of music, whether in private or public – was also found in England, where some simple written-out examples are given in *The New Flute Master for the Year 1729* (presumably originating in some earlier tutor, now lost).

Outside France, we know little of the articulation practices of Baroque woodwind players before Quantz (*Versuch*, 1752). In France and Germany, as the Italian violin style became the predominant influence on woodwind music, flautists such as Michel Blavet and Pierre-Gabriel Buffardin modified the French syllables and reintroduced double-tonguing. A similar modification of the syllables described by Bismantova must have happened in Italy, particularly for playing the virtuoso solo and chamber concertos of Vivaldi.

Recorder-playing was also subject to experimentation. Mersenne (1636) described the possibility of 'sounding an air or chanson on the recorder, and at the same time singing the bass part ... for the wind that leaves the mouth in singing is capable of making the recorder sound, so that a single person can create a duet'. This practice is confirmed by accounts of novelty performances of the late Baroque. The *Stanley Poem* by Thomas Stanley the elder (c1650) describes a player who 'would shewe in a single recorder pipe / As many partes as any in a baggepipe ... To heare two partes in a single recorder, / That was beyond all their estimations far'. Zacharias Conrad von Uffenbach described hearing a Scotsman called Cherbourn in a London tavern in 1710 giving 'a perfect imitation on the recorder of the bagpipes and of a transverse flute, and he could also make it sound like two recorders in harmony. One could scarce have observed that he was singing, if one did not look prodigious sharp upon him'.

3. MODERN. The revival of the recorder in the 20th century at first introduced little in recorder technique that had not already been practised in the Renaissance and Baroque. Even the modern double-tonguing, *teke* or *dege*, often considered a post-Baroque innovation, was noted as far back as Ganassi (1535). In the late 1950s and 60s, however, Michael Vetter, Frans Brüggen and other virtuosos shocked the recorder world with bold new techniques (Vetter, E1969). Because of its construction with open finger-holes and duct mouthpiece, the recorder came to be considered the woodwind instrument capable

of producing the widest range of techniques and special effects. These have since been absorbed by professionals and employed in an increasing number of compositions. O'Kelly (A1990) made a valuable classification of the techniques and effects (slightly rearranged and extended in list form here). As already observed, not all of them are really new.

1. Non-standard fingerings*

a. single sounds (heard as such although consisting of a fundamental plus related harmonics)

i. fingerings to produce dynamics

ii. fingerings to produce variation in timbre

iii. harmonics or 'flageolet tones' (weak single harmonics)

iv. microtones (produced by fractionally opening or closing the finger-holes)

b. multiphonics (heard as a collection of discrete, frequently dissonant, pitches, the qualities of which vary with the type and make of instrument and the player)

2. Other techniques based on fingering*

a. glissando (produced by sliding fingers on or off finger-holes; because of the absence of keys, the changes can be smooth and can also produce accurate microtones)

b. random finger-play (usually over a group of finger-holes corresponding to an area of pitch which may be specified by the composer)

c. trills

i. conventional

ii. using microtones

iii. using intervals larger than a tone

iv. coupled with multiphonics

v. coupled with flutter-tonguing

**Both classes of fingering techniques (1 and 2) can be used with three different 'registers', depending on the extent of the closure of the bell-hole: normal or 'open', 'closed' and 'covered' (partially open)*

3. Articulation

a. single-tonguing

b. double- and triple-tonguing

c. flutter-tonguing

4. Vibrato (which can vary the tone-colour, intensity, dynamics, and/or pitch), produced by the

a. diaphragm

b. throat ('goat's trill'; 'chevroter')

c. tongue (a rapid *lu lu*)

d. fingers (*flattement*; lowers the pitch)

e. labium (covered with one cupped hand; lowers the pitch)

f. knee (shading the bell-hole; lowers the pitch, particularly of the high notes)

5. Tremolo

a. aspirated

b. uvular

c. flutter-tongued

d. tongued

6. Special effects

a. rustle tones (muted notes accompanied by air noise)

b. white noise (sounds encompassing a broad frequency spectrum; produced by overblowing, or blowing across the labium or any finger-hole)

c. percussive effects (tapping on a finger-hole, with or without blowing; striking with the fingernail or ring; slapping with the palm of the hand)

d. circular breathing

e. vocal effects (singing while playing; may be syllables or words)

f. mouth sounds (sucking, blowing, clicking, lip-smacking, kissing, laughing, etc.)

g. playing flute-style by using a finger-hole as an embouchure-hole

h. playing *shakuhachi*-style by blowing across the windway

7. Structural modifications to the instrument ('preparing' the recorder)

a. modifications to the windway and labium (moving block up or down; inserting strip of paper into windway; putting gauze over windway; loosely covering labium; tightly closing labium; tape partly covering labium)

b. modifications to the pipe (e.g. closing the bell-hole with tape)

c. foot-joint removed (the lowest note cannot be played; also affects the tuning and timbre of other notes)

d. head-joint removed (blow across the top or as into a cornett mouthpiece; also humming, singing, or speaking into the pipe)

e. foot-joint alone (if the joint has a key, this can be the source of percussive noises)

f. head-joint alone (varying the breath-pressure; occluding or closing the labium or bell-hole; vocal effects)

g. a recorder head on a flute body

8. Two instruments one player (the range of pitches can be altered by sealing some finger-holes with tape)

a. two recorders at the same pitch

b. two recorders at different pitches (e.g. *a'* = 440 and 415)

c. recorder and another woodwind instrument.

III. Social history and significance

1. Professionals. 2. Amateurs. 3. Music education. 4. Symbolism in art.

1: PROFESSIONALS. Although professional use of the recorder may go back to at least the 14th century, it is first documented clearly towards 1500 when the recorder emerged as one of the regular instruments of professional wind players (along with shawm, cornett, sackbut and sometimes flute or trumpet). All over Europe, inventories of royal and noble households generally include vast quantities of wind instruments, mostly in sets to be played together by the household musicians. The most celebrated is that of Henry VIII of England (1547) which includes 76 recorders. Henry imported a consort of recorder players, five brothers of the BASSANO family from Venice, in 1539–40 (Lasocki and Prior, D1995). This consort, expanded to six members in 1550, lasted intact until the amalgamation of the three court wind consorts into one group in 1630; such a focus on the recorder seems to have been an exception. A 'whole set of recorders' was acquired by the London waits in 1568, and the instrument gradually spread to the waits of Exeter (by 1575), Norwich ('five recorders, being a whole noise' by 1584–5), Chester (by 1591) and other cities. By the end of the 16th century, recorders were being used by the six-member consorts of musicians attached to all the London theatres.

Venice was a strong centre of wind playing by the early 16th century. Bernardin Bortolomeo, *piffaro* of the Doge,

Alvise Bassano, Gasparo Bernardo and Yipolito de San Salvador played recorders as well as cornetts, trumpets and shawms for processions of the Scuola di S Marco in 1515; the latter three musicians later worked at the English Court. In 1559 Jacomo Bassano and Santo Griti (Bassano), wind makers, entered into a contract with three *pifferi* of the Doge, Paulo Vergeli, Paulo de Laudis and Francesco da Zeneda, to provide recorders as well as cornetts, crumhorns, flutes and shawms, presumably for their own use; the *pifferi* also acted as agents for the makers.

In the Baroque period, almost all professional recorder players were primarily oboists or string players, occasionally concentrating on more unusual instruments. The 17th-century player about whom we know the most was Jacob van Eyck, composer of *Der fluyten lust-hof* and director of the carillons in Utrecht. He was engaged to play the recorder in the garden surrounding the Janskerk; his 'superhuman' ('boven-menschte') performance there is lauded in a poem by Regnerus Opperveldt (1640), and he was given a salary rise in 1649 'provided that he occasionally in the evening entertain the people strolling in the church garden with the sound of his little recorder'. In France the recorder, after being featured by the Hotteterres and other woodwind players in the orchestras of Lully, Charpentier and other prominent composers in the 1660s–90s, was quickly superseded by the flute. Etienne Loulié played the recorder for Charpentier and taught the Duke of Chartres (later Regent of France).

The playing of the handful of French performers who went to England around 1673 was singled out for praise by the French ambassador, Honoré Courtin (1676). One of them, James Paisible, settled in England, working at the court and later also in the theatre as a bass violinist and composer; in 1710 a visiting German, von Uffenbach, remarked that on the recorder Paisible's 'equal is not to be found'. Virtually all the recorder players in England during this period earned their living primarily on other instruments, and some also composed. An exception is Lewis Mercy, who began his career around 1708 and does not seem to have played other woodwind instruments until the 1730s, although he attempted to prevent the decline of the recorder as early as 1718.

Woodwind players at the German courts doubled on the recorder as well. Perhaps the most virtuoso was Johann Michael Böhm, Kapellmeister at Darmstadt 1711–29, who impressed Telemann as an oboist and also played the flute and recorder. J.C. Schickhardt, who published more recorder music than anyone else in this era, was a woodwind player who moved around the minor courts of Germany, the Netherlands and Scandinavia, and also visited England.

The first 20th-century professional to treat the recorder seriously was the German flautist Gustav Scheck, who took up the instrument around 1924 and used it extensively with the Scheck-Wenzinger Chamber Orchestra in the 1930s and on recordings into the 1960s. His students, especially Ferdinand Conrad and Hans-Martin Linde, have been influential as players and teachers. In England Miles Tomalin played an important role in the 1930s. After beginning on other instruments, Carl Dolmetsch became a recorder specialist and toured worldwide together with the harpsichordist Joseph Saxby from the 1930s to the 1980s. The Dutch school of recorder playing was founded by Johannes Collette in the 1930s and continued by Kees Otten in the 1950s and 60s. Yet, until the 1960s, despite the efforts of these and other players, the recorder was widely regarded as an amateur and educational instrument of little value to professionals.

This image was turned around by a student of Otten's, Frans Brüggen, who toured extensively and made numerous inspiring recordings in the 1960s and 70s. Through his musicianship, virtuosity and charisma, as well as his pioneering work with historical recorders, Brüggen demonstrated hitherto unsuspected lyrical and technical qualities in the recorder that attracted both audiences and students. At the same time, Brüggen and the German Michael Vetter developed many extended techniques for the modern recorder and commissioned new works to show them off. Brüggen's students and 'grandstudents', such as Kees Boeke, Walter van Hauwe, Han Tol and Marion Verbruggen, consolidated his work and amply demonstrated the possibility of making a successful career as a professional recorder soloist and teacher in the late 20th century. Players of similar stature in several European countries include Hugo Reyne in France, Dan Laurin in Sweden, and Conrad Steinmann and Matthias Weilenmann in Switzerland. In his tragically short career David Munrow (1942–76), the English player of early woodwind instruments, did wonders to popularize the recorder among mainstream audiences through his concerts, recordings, broadcasts and writings. More recently, the Danish player Michala Petri, operating outside the early music movement, has successfully taken the recorder out into mainstream ensembles and audiences. David Bellugi (Italy) and Scott Reiss (USA) have incorporated elements of the traditional music of various cultures into their playing. Joel Levine (USA) and Jean-François Rousson (France) have demonstrated the potential for the recorder in jazz.

Professional recorder consorts may be said to have started with the Dolmetsch Ensemble, founded in 1925 and still in existence. Successful recordings have been made by ensembles under the direction of Hans-Maria Kneihs (Wiener Blockflötenensemble, 1972–85), Bernard Krainis, David Munrow, Kees Otten (Syntagma Musicum), and Clas Pehrsson (Musica Dolce), among others. More recently, the Amsterdam Loeki Stardust Quartet (founded 1978) and the Flanders Recorder Quartet have combined in their programming original works with skilful arrangements, including elements of popular music and jazz.

2. Amateurs. 15th-century paintings show the instrument in the hands of upper-class men and women, and Virdung's vernacular treatise (1511), which sought to present 'everything ... made simple', was clearly aimed at the amateur. Henry VIII of England was a keen player: in 1511 he was reported as 'exercising himselfe dailie in ... plaieing at the recorders'; and his 1542 inventory has a notation that seven recorders had been checked out 'for the King's Majesty's own use'. Some 16th-century Italian paintings show the recorder being played by the aristocracy, both men and women. Yet many gentlemen in both countries considered playing wind instruments unbecoming to their status, because it occupied the mouth; they preferred the lute and, later, the viol. On the effects of recorders and flutes in society, Castiglione in *Il Cortegiano* (1528) recommended that they be used only in private, especially in the presence of women, but with 'tact and good judgement, for it is, after all, impossible to imagine

all the things that can happen'. In 17th-century Dutch art the recorder was one of the most frequently represented instruments, associated with both sexes and all social classes. The instrument is depicted alone and in ensembles, indoors and outdoors, but rarely with an audience. A Dutch amateur, Adriana van den Bergh, was the dedicatee of the solo recorder collection *Der Gooden fluyt hemel* (1644) and the second part of *'t Uitnemend kabinet* (RISM 1649[8]).

The late-Baroque recorder in all European countries was one of the most important amateur instruments for the rising middle class as well as the aristocracy. In England, those members of both classes who flocked to the theatres, concerts and 'music meetings' emulated the professionals to an unprecedented extent. A fascinating account of one amateur's discovery of the instrument is found in Samuel Pepys' diary: on a visit to the revival of Massinger's *The Virgin Martyr* in 1668, he was pleased 'beyond anything in the whole world' by 'the wind-music when the angel comes down, which is so sweet that it ravished me; and indeed, in a word, did wrap up my soul so that it made me really sick, just as I have formerly been when in love with my wife'. His purchase of a recorder six weeks later, 'the sound of it being of all sounds in the world most pleasing to me', clinches the nature of the wind instruments involved. Songs, and indeed whole operas, were printed with transposed parts for the recorder. The latest professional music, especially duets, solo sonatas and trio sonatas, was published for the consumption of the avid amateur. Professionals wrote some easy music especially for amateurs and gave away some token trade secrets in the recorder tutors that were issued in large numbers, replete with the latest airs and dances. Those amateurs who could afford to do so took lessons from professionals. This large and avaricious amateur audience transferred to the transverse flute during the 1720s (by 1710 in France), although a trickle of recorder tutors was published up to around 1780 and the instrument was played to a small extent throughout the 19th century.

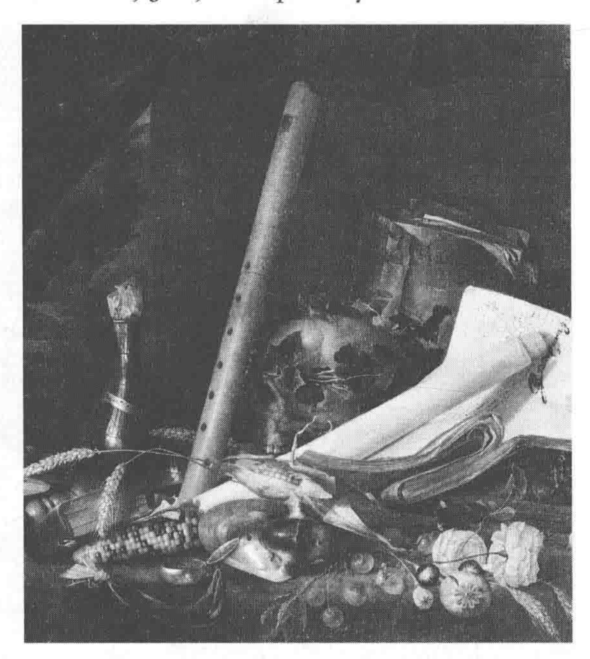
Towards the end of the 19th century, the assembly of large museum collections of early instruments and the growing interest in pre-Classical music helped to produce a climate in which the recorder could again flourish. In Germany, the recorder revival began with amateurs, when members of the Bogenhausen Künstlerkappelle performed early music on recorders and other instruments from 1899 to 1939, using original Baroque instruments and a copy of a Denner treble made by the Munich maker Gottlieb Gerlach by 1909. In England in the 1890s and 1900s the research and lectures of Joseph Cox Bridge, Francis Galpin and Christopher Welch drew amateur attention to the instrument which Arnold Dolmetsch soon capitalized on.

By the 1930s the recorder had become popular among amateurs in several European countries and has been a leading amateur instrument from the 1940s onwards. Recorder societies were formed to aid the process, such as the Society of Recorder Players (UK; founded 1937) and the American Recorder Society (1939), which hold regular meetings, sponsor workshops, publish magazines and certify teachers. Membership of these societies has held steady to the present day.

3. Music education. Hints at the recorder's value as a teaching instrument are found in the recorder treatises and tutors of the Renaissance and Baroque. The second edition of Agricola's treatise (1545) was aimed at 'our schoolchildren and other beginning singers'. *The Most Pleasant Companion* (1681) announced 'plain and easy rules and instructions for young beginners'. Loulié's manuscript tutor (1680s) seems to have been written for Mlle de Guise's academy for children of the nobility. The educational role of the recorder was acknowledged by Shakespeare: 'Indeed he hath play'd on this prologue like a child on a recorder – a sound, but not in government' (*A Midsummer Night's Dream)*.

In the 20th century, the German youth movement of the 1920s (co-opted by the Nazis in the 1930s) found the apparent simplicity of the recorder attractive. In several countries the recorder found its way into primary schools from the 1930s onwards, encouraged by the advocacy of Edgar Hunt and the manufacture of cheap descants in both wood and plastic, and has continued in this role to the present day. The recorder has also taken an important part in *Orff-Schulwerk*. The desire to raise playing and teaching standards encouraged the foundation of the European Recorder Teachers Association (ERTA) in 1990 (branches in Austria, Germany and the UK) and the American Recorder Teachers Association (ARTA) in 1993.

4. Symbolism in art. From the Middle Ages the recorder, like other instruments, has been used symbolically in art. In many medieval and Renaissance paintings angels play one or more recorders, often grouped around the Virgin Mary. In several notable paintings there are trios of angel recorder players, perhaps a sign of the Trinity, although the music must have often been in three parts.



Beginning in the late 15th century, the symbolism of the recorder gradually shifted away from the sacred. A pair of recorders (as in Francesco del Cossa's *Triumph of Venus*, fig.7*a*) represented sexual union, whereas a single recorder tended to signify a self-gratifying aspect of sex. In pastoral paintings, recorders were commonly found in the hands of shepherds as well as courtiers and others in Arcadian guise and nymphs of the pastures and meadows. The erotic and the pastoral are combined in a scene by Abraham Bloemaert in which a shepherd is seen putting a recorder, an explicit phallic symbol, under the skirt of shepherdess. The recorder's frequent appearance in 'Vanitas' paintings (fig.7*b*), which depict the vanity of the pleasures of this world, presumably represents the transience of purely sexual love.

IV. Repertory

1. To 1600. 2. 1600–1690: (i) The recorder in vocal music (ii) The recorder in instrumental music (iii) The recorder in the theatre. 3. 1690–1750: (i) The recorder in vocal music (ii) The recorder in instrumental music (iii) Telemann and J.S. Bach. 4. From 1750.

1. To 1600. Recorder trios are depicted in several paintings of the 15th century, but no specific repertory for them has survived. Some of the earliest music must have been transcriptions of vocal repertory; in 1505 Giovanni Alvise, a Venetian wind player, offered Francesco Gonzaga a motet to be played on eight recorders. The treatises of the first half of the 16th century (Virdung, 1511; Agricola, 1529; Ganassi, 1535) take it for granted that recorders should be played in four-part consorts, and the front cover of a set of dance choreographies, *S'ensuyvent plusieurs basses dances tant communes que*

7. *(a) Pair of recorders: detail from the 'Triumph of Venus', upper register of the 'Allegory of April' ('Taurus'), fresco by Francesco del Cossa, c1468–70 (Salone dei Mesi, Palazzo Schifanoia, Ferrara); (b) one-piece recorder: detail of 'Vanitas Still-life' by Jan Davidsz. de Heem, 1664 (Museées Royaux des Beaux-Arts, Brussels)*

incommunes probably published by Jacques Moderne in Lyons in the 1530s, depicts such a consort (fig.8). The first published collection specifying performance on recorders was *Vingt et sept chansons a quatre parties desquelles les plus convenable a la fleuste dallemant ... et a la fleuste a neuf trous*, published in Paris by Pierre Attaingnant (RISM 1533[1]), which contains 14 four-part chansons marked for recorders. Moderne's *Musique de joye* (RISM 1550[24]) contains ricercares and dances intended primarily for instrumental performance on 'espinetes, violons & fleustes'. It is clear from this and other evidence that recorder players performed vocal pieces, gradually adding dances and instrumental music written in imitation of vocal styles.

Some repertory probably intended for the recorder consort at the English Court has survived, beginning with a pavan and galliard by Augustine Bassano from around 1550, and further pavans and galliards by Augustine and Jeronimo Bassano from the third quarter of the century. From these simple dances a significant step up was made to the fantasias of Jeronimo Bassano (*c*1580), four in five parts and one in six parts, containing elaborate counterpoint and expressive harmony. The Fitzwilliam wind manuscript (*GB-Cfm* 734), apparently the repertory of the court wind consorts in the early 17th century, contains wordless motets and madrigals as well as dance pieces in six parts (one part is lost).

Mixed consorts, too, were depicted in paintings as early as the 15th century, particularly one recorder with singer and a plucked instrument, or with some combination of harp, lute and fiddle (fig.9). Larger mixed consorts are described in sources of the early 16th century: during the last course of a banquet given by Ippolito II d'Este in Ferrara in 1529, Alfonso della Viola conducted a composition with six voices, six viols, a lira, a lute, a 'citara', a sackbut, tenor and bass recorders, a flute, a 'sordina' and two keyboard instruments. During the second half of the 16th century, consorts of unlike instruments became common in England, the practice perhaps having been transmitted through Italian musicians at court. The mixed consort usually consisted of treble viol (sometimes replaced by violin), bass viol, lute, bandora, cittern and flute (a recorder, probably a descant, is specified only in the Matthew Holmes consort books, *c*1595, *GB-Cu* Dd.5.21). Praetorius (1619), however, stated that the wind instrument in the English mixed consort was 'a flute or recorder', and two continental depictions of the mixed consort include the recorder (Adriaen van de Venne, *Celebration in Honour of the Truce between the Spanish and the United Provinces of the Netherlands*, and Simon de Passe, engraving, *Musical Evening*, 1612, reproduced in *EMc*, vi (1978), 611).

8. *Consort of recorders: woodcut from the title-page of 'S'ensuyvent plusieurs basses dances tant communes que incommunes' (Lyons: Moderne, c1530–38)*

9. Renaissance recorder, lute, virginal and bass viol: 'Concert champętre' by an artist of the Italian School, 16th century (Hǫtel Lallemant, Bourges)

2. 1600–1690.

(i) The recorder in vocal music. In Italy, the recorder was called for in only 17 published works between 1600 and 1670, although the instrument was presumably used in similar pieces that never found their way into print (Van Heyghen, E1993). In Florence and Mantua the instrument was used predominantly in pastoral scenes in dramatic music: Peri's *Euridice* (1600), Monteverdi's *Orfeo* (1607) and Francesca Caccini's *La Liberazione di Ruggiero* (1625). In Venice, the recorder was not found in opera but in the more conservatively scored music by organists at the Scuole Grandi and monastic churches, such as Francesco Usper's *Synfonia prima a otto* from his *Compositioni armoniche* (1619). The earliest surviving sacred music with recorders is Monteverdi's Vespers of 1610, scored in a similar fashion to the court music of the day. Monteverdi represented the 'blessed' quality of the Virgin in the short part for two recorders in the 'Quia respexit' part of the *Magnificat*.

In France, Cambert's *Pastorale d'Issy* (1659) was reported to have contained 'concerts de flutes,' or sections scored with recorder consort (Saint-Evremond: 'Les Opera: comedie', *Oeuvres meslées*, xi, Paris, 1705), apparently in emulation of the use of the 'flute' (more properly the aulos) in the classical theatre. Lully continued this practice by employing the recorder extensively in his operatic works, writing parts for two to four recorders (treble, tenor and bass) with at least two players to a part. In his ballets and *comédies-ballets* the recorder is featured almost exclusively in instrumental pieces. In the *tragédies lyriques*, in contrast, it is found mostly in vocal *airs* for male or mixed voices, often symbolizing death or lamentation, as in the famous funeral music from *Alceste* and the 'Plainte italienne' in *Psyché*. The instrument also accompanied pleas to the Gods (*Bellérophon*), and was linked with the Muses (*Alceste*, *Isis* and *Acis et Galatée*). Not surprisingly, recorders were used in scenes involving pipes (the shepherd's pipe in *Persée* and the pipes of Pan in *Cadmus et Hermione* and *Isis*). The celebrated sleep scene from *Atys*, which uses treble and tenor recorders, became a favourite of Charles II (who demanded it frequently from his French recorder players) and a model for similar scenes by Lully himself, Charpentier, Montéclair and others. Little research has been done on the use of the recorder by 17th-century German and Austrian composers, although preliminary investigations have revealed a significant participation by the instrument in the vocal music of such well-known composers as Biber, Böhm, Buxtehude, Hammerschmidt, Keiser, Schütz and Zachow, as well as a host of minor composers.

(ii) The recorder in instrumental music. The first independent recorder pieces of the 17th century were two canzonas – one for recorder and bass, the other for two recorders and bass – published in G.B. Riccio's *Primo libro delle divine lodi* (*R*/1612, first ed. lost). Riccio's *Terzo libro* (1620) featured the recorder in two further canzonas and a motet. The first recorder pieces in a collection of purely instrumental music were two sonatas and a canzona in Giovanni Picchi's *Canzoni da sonar* (1625). Biagio Marini wrote only one sonata for the instrument: *Sonata sexta* for two recorders or cornetts and continuo from his *Sonate symphonie canzoni*, op.8 (1626). Jacob van Eyck's *Der fluyten lust-hof* (Amsterdam, 1646–9) for descant recorder is the largest collection ever published of music for a solo wind instrument by a single composer. It consists of over 140 sets of variations

(including many variation chains) on psalms and popular songs and dances, with a few original preludes and fantasias. The *Engels nachtegaeltje* from the collection is now his most popular set of variations, although the evocative tune was probably originally composed for the harpsichord. The consort tradition was continued in Moravia in the 1660s and 70s by Biber, Schmelzer and Valentini among others. Some of their works bear the designation 'pro tabula' or 'ad tabulum', indicating intended use as dinner music.

(iii) The recorder in the theatre. The recorder was used in 17th-century Spanish and English theatre with various associations. In *La gran columna fogos, San Basilio el Magno* (Spain, 1596–1603), 'flautas' accompany the discovery of an altar. And in *El truhán del cielo y loco santo* (1620–30), they accompany the discovery of a Christ figure and the appearance of a Christ-child. In the Elizabethan, Jacobean and Caroline theatre, apparently representing 'the music of the spheres', recorders are associated with the supernatural, death and appearances of or portents from the gods. In William Davenant's *The Cruel Brother* (1627), recorders play while Corsa dies, and Fores remarks: 'Hark / As she ascends, the spheres do welcome her / With their own music'. The most curious association is with fake funerals (in which the deceased is later found alive), as in John Marston's *Sophonisba* (1606) and Thomas Middleton's *A Chaste Maid in Cheapside* (1613). In two plays, Fletcher and Massinger's *The Little French Lawyer* (1619) and Shirley's *The Grateful Servant* (1629), recorders are introduced for their aphrodisiac effect.

3. 1690–1750. From the late Baroque, the extensive repertory of solo sonatas and the rather smaller number of pieces for recorder and orchestra have naturally attracted the most attention among modern professional players. Yet the chamber music and especially the vocal music involving the recorder tend to display the instrument to better advantage.

(i) The recorder in vocal music. In England, Henry Purcell wrote a great deal of vocal music featuring simple recorder parts, generally for two instruments. Perhaps influenced by both the earlier English theatrical tradition and French opera, Purcell associated the recorder with the supernatural and religious ceremonies. In his first music for the stage, the incidental music for Nathaniel Lee's play *Theodosius* (1680), two recorders accompany the bass aria 'Hark! Behold the Heavenly Quire' as an angel choir descends. In *Dioclesian* (1690), two recorders accompany the soprano aria 'Charon the peaceful Shade invites', which concerns crossing the River Styx. Recorders appear in a number of Purcell's odes as well. In *Hail! Bright Cecilia* (1692), the poet, Nicholas Brady, casts doubt on the recorder's ability to incite earthly love: 'In vain the am'rous flute and soft guitar / Jointly labour to inspire / Wanton heat and loose desire'; Purcell set this text as a duet for alto and tenor, with two recorders and continuo (presumably played by guitar). Purcell used the recorder for several texts involving shepherds, celebration of the pastoral life (the cantata *We Reap All the Pleasures*), the establishment of peace ('Return, fond Muse, the thoughts of war' from *Celebrate this Festival*) and the ability of music to heal ('Her charming strains expel tormenting Care' from *Celestial Music*).

In the vocal works of Handel, the recorder is used to represent death as well as the supernatural, often as liberation or a sacrifice for the sake of love (as in the duet 'Vivo in te' from *Tamerlano*). Of some 90 arias in which Handel included the recorder, about 30 are about love, often mixed with other elements, particularly the pastoral. Like Purcell, Handel generally used the recorders in pairs, as in the sublime 'Heart, the seat of soft delight', the expressive climax of the masque *Acis and Galatea* (1718). In the same work a single recorder contrasts with the bass voice of the lusting giant Polypheme in 'O, ruddier than the cherry'. In 'Vaghe fonti' from *Agrippina* (1708), recorders represent the murmuring fountains in the pastoral scene.

(ii) The recorder in instrumental music. Little purely instrumental music was written for the recorder in France, although publishers from the 1690s to the 1750s often listed the instrument on title-pages as an alternative to the flute, hurdy-gurdy, musette and others. Hotteterre recommended that his suites, trio sonatas and duets for flute in mixed French-Italian style (1708–22) could be transposed a minor 3rd higher for the treble recorder. The sole French recorder sonata was written by Anne Danican Philidor (1712), presumably for himself to play at court. Lalande's *Symphonies (pour les soupers du Roy)* (1703) have a few movements that specify recorders. Michel Corrette's *Les voyages du berger fortuné aux Indes orientales* (1737), which shows some influence of Vivaldi's programme music, has a solo part for musette or recorder.

Corelli does not seem to have left original recorder music, although several recorder arrangements were published of his solo and trio sonatas and concerti grossi in London and Amsterdam. Justly the most famous is that of his variations on *La Folia*, op.5 no.12 (London, 1702). Effective solo sonatas were published by Bellinzani, Mancini and Veracini. Alessandro Scarlatti wrote chamber music and 12 *Sinfonie di concerto grosso* with recorder parts, as well as including recorder obbligatos in some of his solo cantatas. A manuscript in Naples (*I-Nc* 38.3.13) includes 24 concerti grossi for recorder and strings by Mancini, Scarlatti and others. Vivaldi's imaginative Concerto in C minor for treble recorder and strings, RV441, is probably the most virtuoso recorder composition of the Baroque era, full of rapid passagework containing large leaps and awkward cross-fingerings. The three *flautino* concertos, RV443–5, presumably written for sopranino recorder or flageolet, are also showpieces. Vivaldi featured the recorder in eight chamber concertos with combinations of oboe, violin and bassoon (RV87, 92, 94–5, 101, 103, 105 and 108) and a virtuoso trio sonata with bassoon (RV86).

Gottfried Finger, a German working in England, published duets, trios, divisions, solo sonatas, trio sonatas and quintet sonatas (for two recorders, two oboes and continuo) which helped to popularise the Italian style. Around 1724–6 Handel wrote six sonatas which are generally considered the finest in the Baroque repertory. Their strengths are inventive melodic lines in a frequently vocal manner, unpredictable phrase-lengths, and interplay between melody line and bass. From about 1710 into the early 1730s there was a vogue for concertos for one or two small recorders in public concerts and interval 'entertainments' at the London theatres. The published concertos by William Babell, John Baston and Robert Woodcock are mostly Vivaldian in design, anglicised by

conjunct passagework. The most important of these concertos, by Sammartini, remained in manuscript; its passagework is more virtuoso and varied, the lyrical fast movements are in da capo form, and the slow movement is an impassioned siciliana.

Probably the most prolific recorder composer of the Baroque was the German woodwind player J.C. Schickhardt who between 1709 and around 1732 turned out a steady stream of publications for the amateur market in a Corellian style. His best recorder compositions, which transcend his generally short-breathed phrase structure, are the concertos for four recorders and continuo, op.19; the quartet sonatas for two recorders, oboe and continuo, op.22; and *L'alphabet de la musique*, op.30.

(iii) Telemann and J.S. Bach. Telemann, himself a recorder player, treated the instrument on a par with other woodwind instruments in his publications up to *Essercizii musici* (Hamburg, 1740, but probably written c1725–30). His manuscripts are specific about requiring the recorder, but in his publications he also offered transpositions so that the instrument could play music written for the flute, violin and bassoon. Telemann's eight solo sonatas, among the most popular Baroque recorder music, incorporate formal and stylistic procedures drawn from the operatic aria and concerto. Less well known, but at least as significant, are his trio sonatas with recorder, written between 1713–14 and 1737–44, in which the recorder is paired with obbligato harpsichord (one) oboe (five), another recorder (one), treble viol (five), bass viol (one) and violin (five). Telemann's quartet in G minor for recorder, violin, viola, and continuo (TWV43 g 4), written around 1710–15, is one of the earliest examples by any composer of the 'Sonate auf Concertenart' (concerted sonata), in which at least one movement exhibits features of ritornello form and has much in common with the chamber concerto. The three other quartets featuring the recorder (TWV43 d 1, G 6, a 3) and the concerto for recorder, horn and continuo (TWV42: F 14) are also examples of the concerted sonata. Telemann's A minor Suite for recorder and strings, one of the most frequently performed Baroque recorder works, mixes elements of the French and Italian styles and even Polish folk music in a tuneful manner. His two virtuoso recorder concertos in F major and C major make effective use of the instrument's high register. Telemann also employed the recorder in no fewer than 93 cantatas and vocal serenades, concentrated primarily in the years 1720–31. The best-known are the 13 in *Der harmonischer Gottes-Dienst* (1725) for voice, recorder and continuo, intended for home worship.

J.S. Bach employed a pair of recorders (sometimes one or three) in 19 cantatas. He generally placed the recorders in the orchestra, as in most of *Preise, Jerusalem, den Herrn*, BWV119, or else made them the only obbligato instruments in an aria, as in the opening alto aria of *Komm du süsse Todesstunde*, BWV161 (in the final chorus of which recorders represent the flight of the soul to heaven). Occasionally he gave the recorder unusual instrumental settings, as in the opening sinfonia from *Gleichwie der Regen und Schnee*, BWV18, for two recorders, four violas and continuo, full of striking suspensions; the opening sonatina from *Gottes Zeit ist die allerbeste Zeit*, BWV106, for two recorders, two bass viols and continuo; the pastoral alto aria 'Doch Jesus' from *Schauet doch und sehet*, BWV46, for two recorders and two unison oboes da caccia without continuo; and the soprano aria 'Die Seele ruht in Jesu Händen' from *Herr Jesu Christ, wahr'r Mensch und Gott*, BWV127, in which two recorders play an accompaniment of continuous staccato quavers against a florid oboe obbligato. In the *St Matthew Passion* (1727/9), the flutes are replaced by recorders (largely doubled by oboes da caccia) for the F minor recitative and chorus 'O Schmerz! Hier zittert das gequälte Herz', describing Christ's sufferings on the cross. Three recorders and continuo evoke a pastoral atmosphere in the opening tenor recitative 'Er rufet seinen Schafen mit Namen' and the alto aria 'Komm, leite mich' from BWV175.

Any solo sonatas that Bach may have written for the recorder are now lost. Perhaps the best-known recorder pieces of all time are his second and fourth Brandenburg Concertos (1721). No.2 in F major, BWV1047, treats a single treble recorder as an equal soloist with trumpet, oboe and violin accompanied by strings. No.4 in G major, BWV1049, matches two *fiauti d'echo* (echo flutes) with a violin. This concerto also exists in a version in F major, BWV1057 (*c*1738), written for two treble recorders with harpsichord.

4. FROM 1750. Use of the recorder was rare between 1750 and the 20th-century revival. In the 19th century, Carl Maria von Weber seems to have scored for the recorder twice (*Peter Schmoll und seine Nachbarn*, 1801; *Kleiner Tusch*, 1806), and Hector Berlioz may have intended 'La fuite en Egypte' from *L'enfance du Christ* (1853) for the instrument. In its incarnation as the CSAKAN, the recorder had a repertory of several hundred pieces, which are beginning to be explored by modern players.

Before the 1960s, the 20th-century recorder repertory was largely tonal or modal. The most significant exception is Paul Hindemith's chromatic trio from *Plöner Musiktag*, written for himself to play at a music festival with two of his composition pupils in 1932. Perhaps not coincidentally, many of the other important recorder works of this period were written by pupils of Hindemith, including Stanley Bate, Arnold Cooke, Franz Reizenstein and Walter Leigh in England, Hans-Ulrich Staeps in Austria and Harald Genzmer in Germany. A key figure in inspiring the composition of new works in the late 1930s was Manuel Jacobs, a pupil of Edgar Hunt, to whom we owe a number of works by composers including Sir Lennox Berkeley, Peggy Glanville-Hicks and Peter Pope. But the greatest influence on English recorder music was Carl Dolmetsch who, with two exceptions, commissioned a new piece for each of his concerts at the Wigmore Hall, London, in 1939 (twice), 1941, then annually in an unbroken series from 1948 to 1989. The finest works are those by Gordon Jacob and Edmund Rubbra, whose *Notturno*, op.106 (1962), for recorder quartet, was written for Carl's children. York Bowen's substantial sonata (1948) introduced the practice, later common, of a single player using more than one recorder in a piece.

The first avant-garde works of the 1960s introduced extended techniques and often a high degree of technical accomplishment. Among the best works are several written for Frans Brüggen: Rob du Bois's *Muziek* (1961), Louis Andriessen's *Sweet* (1964), Luciano Berio's *Gesti* (1966), and Makoto Shinohara's *Fragmente* (1968), which is influenced by the Japanese *shakuhachi.* The recorder music of the 1970s made more selective use of

extended techniques and introduced theatrical elements, the interchange of different recorders, and the recorder player vocalising or using other instruments. The finest examples are Japanese, again influenced by the *shakuhachi*: Ryohei Hirose's solo *Meditation and Lamentation* (1975) for recorder quartet, and Maki Ishii's *Black Intention* (1975), in which the player uses two descant recorders played together, tenor recorder and tam-tam as well as vocalisation. The extensive repertory of the 1980s and 90s from Europe, the Americas, Australasia and Japan features a bewildering variety of styles, from minimalist (e.g. Leo Brouwer's *Paisaje cubano con rumba*, 1985) to microtonal. Some recent pieces are of staggering difficulty: Mathias Spahlinger's 30-minute *nah, getrennt* (1993), for solo treble, has a vast dynamic range, changing wildly almost from note to note, nuanced microtones, and a variety of articulations and tone qualities.

DAVID LASOCKI

Reco-reco. A notched bamboo stem scraper or a metal scraper. *See* GÜIRO and BRAZIL, §II, 1(iv).

Recoupe (Fr.). A term used by Attaingnant for the first after-dance of the *basse danse commune*. The recoupe consisted of 12 *mesures* or step patterns, as against the 20 of the basse danse itself. The same section of a basse danse was called a 'moitié' in the Turin basse danse scroll (*c*1517) and in Antonius de Arena's treatise *Ad suos compagnos* (*c*1519), while in the Lyonnais treatise *S'ensuyvent plusieurs basses dances tant communes que incommunes* (*c*1535) it is called 'residue', and in Arbeau's *Orchésographie* (1588) it is called 'la retour de la basse danse'. Arbeau described the dance as being accompanied by repetition of one of the strains of the basse danse itself, but independent music for the recoupe section survives in Attaingnant's *Dixhuit basses danses* (1530), Moderne's *Musicque de joye* (*c*1544) and Susato's *Het derde musycke boexken* (1551).

See BASSE DANSE.

Reda, Siegfried (*b* Bochum, 27 July 1916; *d* Mülheim, 13 Dec 1968). German composer and organist. He began his studies in Dortmund and continued them under Pepping and Distler at the Kirchenmusikschule in Berlin-Spandau. In 1946 he took over the directorship of the Institute for Protestant Church Music at the Essen Folkwangschule, where he also taught the organ and composition. In addition, he was appointed director of church music for Mülheim (Altstadt) in 1953. His compositional work combined an awareness of tradition with contemporary elements such as 12-note melody, and his major contribution was to introduce recent developments into Protestant church music, previously based on archaic formulae. In the field of organ music, he evolved from the neo-classicism of the concertos, through a novel employment of timbre as a form-building factor (*Triptychon*), to the dense serial writing of aphoristic spareness found in the *Monologe*. His liturgical choral music developed Distler's principles, with a deeply emotional declamatory style, rich in animated gestures, which is relieved at intervals by quasi-instrumental melismas; the choral pieces and the concert works share textures constructed in several layers. Reda's greatest achievement was the Requiem, which may be regarded as a summation of his life's work. He exerted a powerful influence on the new currents in Protestant church music from the early 1950s, partly through the Heidenheim Arbeitstage für Neue Kirchenmusik which he instituted with Bornefeld in 1946, and partly through the development of an organ style freed from archaic limitations.

KLAUS KIRCHBERG

Redding, Otis (*b* Dawson, GA, 9 Sept 1941; *d* Lake Monona, WI, 10 Dec 1967). American soul singer and songwriter. He moved to Macon, Georgia, at the age of three, and later began playing the drums with a variety of gospel groups every Sunday morning at the Macon radio station, WIBB. As a teenager he sang in a gospel quartet before becoming lead singer in local guitar virtuoso Johnny Jenkins's secular group, the Pinetoppers. Redding recorded two singles as a solo artist for the Trans World and Orbit labels before auditioning at Stax records at the end of one of Jenkins's sessions. Influenced by Little Richard and Sam Cooke, Redding's initial release on the Stax subsidiary, Volt Records, was *These Arms of Mine* (1963), the first in a series of increasingly impressive 12/8 ballads which included *Pain in my Heart* (Atco, 1964) and *I've been loving you too long* (1965). Alternating with these ballads were several mid-tempo riff-based songs such as *Respect*, *I can't turn you loose* (both 1965) and covers of the Rolling Stones' *Satisfaction* (1966) and Sam Cooke's *Shake* (1967).

While at Stax he made over 120 recordings, of which only three include backing singers. Instead he preferred the three- or four-piece Stax horn section often referred to as the Memphis Horns. Redding played an important role in shaping the Stax horn sound, typically writing

syncopated lines that started in unison and finished in harmony. He also introduced the concept of arranged horn ensemble sections replacing a bridge or, more commonly, an 'improvised' instrumental solo.

For most of his life Redding was extremely successful with a black American audience while selling on a limited basis to a select number of whites. In 1967 that began to change when he headlined a Stax/Volt European tour (he was named the number one male singer that year in the *Melody Maker* annual readers' poll) and the second night of the three-day Monterey International Pop Festival in California in June. The same year he wrote and produced his first hit for another artist, *Sweet Soul Music*, for his protégé Arthur Conley.

In late 1967 Redding recorded enough material for four albums and both sides of a Christmas single. One of the last songs that he wrote and recorded was *(Sittin' on) The Dock of the Bay*. The song had partially been influenced by Dylan and the Beatles and it was thought by many in the soul music industry to be too pop-orientated for Redding's primarily African-American audience. Released shortly after his death in a plane crash, the song proved to be a watershed release, as it reached number one in both the rhythm and blues and the pop charts. Redding had nine further posthumous hits, his influence extending to the present. His sons, Dexter and Otis III, formed a group called the Reddings who had some success in the 1980s.

ROB BOWMAN

Redel, Martin Christoph (*b* Detmold, 30 Jan 1947). German composer. He studied percussion with Scherz and composition with Kelterborn and Klebe at the Nordwestdeutsche Musikakademie, Detmold (1964–9); his composition studies continued with Isang Yun at the Staatliche Hochschule für Musik und Theater, Hanover. In 1971 he accepted a teaching post at the Detmold Hochschule, where he was appointed professor of composition in 1979 and rector of the Hochschule in 1993. He has also taught at the Weikersheim courses for young composers; in 1992 he became president of Jeunesses Musicales. His honours include an award from the Gino Marinuzzi Competition and the Arthur Honegger prize. Never losing links with traditional techniques, his scores are based on tonal, 12-note and serial procedures, and exhibit clear formal structures, lyrical lines and strong contrasts between serenity and tension. His works for percussion have become part of the standard literature and are frequently performed as competition pieces. He is the author of *Grundlagen des Kadenzspiels im Tonsatzunterricht* (Berlin, 1975). (*KdG*, U. Sommer)

H. KUNZ

Redford, John (*d* London, will made 7 Oct and proved 29 Nov 1547). English composer and organist.

The earliest known mention of him dates from 20 June 1534 when, as one of the vicars-choral of St Paul's Cathedral, he signed Henry VIII's Act of Supremacy. At his death he was almoner and Master of the Choristers, and had probably succeeded to these posts on Hickman's death earlier that year. There was no specifically named post of organist at St Paul's at this time, but Redford was undoubtedly employed in this capacity in view of the substantial body of works that he composed for the instrument. On his death he was probably immediately succeeded by Sebastian Westcote as almoner, but the duties of organist appear to have been assumed, at least in part, by Philip ap Rhys. Redford was a poet and dramatist as well as a musician. A morality play with indications for music, *Wyt and Science* (edition in *Tudor Interludes*, ed. P. Happé, Harmondsworth, 1972), with a fragmentary dramatic interlude and other verse, is included in a separate section of a manuscript (*GB-Lbl* Add.15233) which also contains some of his organ music. The morality and the interlude were almost certainly intended for performance by the children of St Paul's, a tradition which was to be continued by Westcote. The latter certainly, and Redford probably, collaborated in dramatic productions with John Heywood, who later became virginalist to Queen Mary. Heywood was a witness to Thomas Mulliner's ownership of the manuscript now known as the Mulliner Book (*Lbl* Add.30513), which is a major source of Redford's music. The principal source (the first section of Add.29996) probably dates from shortly after Redford's death, but before the coming into effect of the Act of Uniformity in 1549.

Redford is one of the earliest English composers whose organ music has survived, and certainly the earliest of any importance. Before his day, organ music was almost completely an art of improvisation, using plainsong as its basis. Its function, as in Redford's own music, was to alternate with, and partially replace, the sung plainchant of the Latin services. In some forms (hymn, *Te Deum*, *Magnificat*), the organ shared the plainchant with the singing on a verse-for-verse basis; but in the offertory only the first few notes were left to be intoned by the cantors. The organ antiphon replaced the singing of such chants at the end of a psalm, a group of psalms, or a canticle. Redford's distinction was to raise this art to the status of written composition. His music is not entirely free from dryness; but it is completely instrumental in idiom and almost completely independent of vocal techniques. Redford often embellished the plainchant in a manner known as 'breaking the plainsong', each note of the chant melody being allotted a specific unit of time, within which the note itself or its octave must appear (special liberties were allowed for repeated notes and at cadences). Redford is cited as a master of this art by Morley in *A Plaine and Easie Introduction* (1597). His favoured texture consists of two or three parts with the

Ex.1 *(note values halved)*

plainchant in the bass or middle part, as may be seen in three successive verses of a hymn, *Deus Creator omnium* (ex.1). The widely spaced texture of the third verse, in which the middle part or 'mean' is transferred from hand to hand, is characteristic of Redford. Another of his methods was to use the faburden of the plainchant as the cantus firmus: this was a melodic line, originally designed to accompany the plainchant, formed mainly by duplicating at a 6th below (or a 3rd above), but falling to the octave (or unison) at cadences and certain other points. In his two settings of the odd-numbered verses of the *Te Deum*, Redford used a highly embellished faburden in varying transpositions according to the tessitura of the original melody, thus creating an immensely sophisticated cantus firmus technique in which the plainchant is thoroughly disguised.

Redford wrote a few four-part works for organ, but did not achieve the fluency of his artistic successor, THOMAS PRESTON, in this respect. Rhythmically he was unadventurous compared with Preston, the main foil to the predominant quadruple metre being the use of sesquialtera proportion. Occasionally, by disposing the plainchant in short notes, he achieved rhythmic patterns corresponding to the modern 3/4, 5/4 and even 10/4 (see his two settings of the *Te Deum*). The one source which may date from his lifetime (*Lbl* Add.15233) shows greater liberality in the use of accidentals than the other manuscripts, which perhaps indicates a disposition towards a moderate degree of chromaticism in his own performance. One of his vocal works, *Christus resurgens*, may have been the model, or at least the inspiration, for Byrd's setting in the first book of *Gradualia* (1605).

JOHN CALDWELL

Redgate, Roger (John) (*b* Bolton, 3 June 1958). English composer. A pupil at Chethams School of Music in Manchester, he went on to study composition with Roxburgh at the RCM, London and with Ferneyhough at the Hochschule für Musik in Freiburg. Between 1984 and 1994 he was a member of the Composers Forum at the Darmstadt summer school, and in 1988 was awarded the Darmstadt Kranichsteiner Prize for composition. From 1989 to 1992 he was Northern Arts Fellow in Composition at the universities of Durham and Newcastle; in 1997 he was appointed lecturer in composition and performance at Goldsmiths' College, University of London. Alongside his work as a composer he has been active as a violinist and conductor and since 1984 has directed Ensemble Exposé, the new music group he founded with Richard Barrett.

Almost half of Redgate's output is for solo instruments and only a handful of works last as much as 10 minutes. Yet Redgate is no miniaturist; rather the generative procedures of his work are pursued with such fierce rigour that the music which they yield exhausts its expressive potential extravagantly quickly. His fascination for the writings of Derrida has led him to an acute awareness of the critical distances between notation and sound, performer and listener, new music and musical tradition. That the densely layered textures of Redgate's music often recall the work of improvising musicians like Cecil Taylor and Anthony Braxton confirms the validity of the apparent paradox at the heart of his work – that only through the most painstakingly wrought compositional procedures can notated music ever reproduce the intensity of spontaneous creation.

CHRISTOPHER FOX

Redhead, Richard (*b* Harrow, 1 March 1820; *d* Hallingley, Surrey, 27 April 1901). English organist and composer. He trained as a chorister at Magdalen College, Oxford, under Walter Vicary. In 1839 he was appointed organist of Margaret Chapel (now All Saints), Margaret Street, London, by the Rev. F.W. Oakeley, under whose guidance he trained the prototype surpliced parochial choir which heralded the Tractarian choral revival. In conjunction with Oakeley, Redhead produced the first Anglican plainsong psalter, *Laudes diurnae* (1843), and other liturgical music for Anglo-Catholic use. From 1864 he was organist of St Mary Magdalene, Paddington, for which he published several works, including the *Book of Common Prayer with Ritual Music* (1865).

BERNARR RAINBOW

Redi, Tommaso (*b* Siena, *c*1675; *d* Montelupone, Loreto, 20 July 1738). Italian composer. He studied first with his uncle, G.O. Cini, *maestro di cappella* at Siena, and then perhaps with G.M. Casini, organist of Florence Cathedral. A priest, he was in Spain with the papal nuncio between 1706 and 1709; then he went to Rome. In 1711 his requiem mass for Francesco Maria de' Medici was performed in Siena Cathedral. According to Morrocchi, he was organist at S Maria in Provenzano; it may have been from there that he applied to be assistant to Franchi, *maestro di cappella* at the Santa Casa, Loreto, in 1731. Caldara also competed for the position but Redi, supported by Pitoni, was engaged, on 1 June 1731. On 2 December 1731, on Franchi's death, Redi became *maestro di cappella*, holding the title until shortly before his death.

Redi's music, written in response to the various demands of his position, ranges from a simple four-part homophonic *a cappella* sequence to a polyphonic, often chromatic, mass for two four-part choirs with string accompaniment. Redi's writing is always competent and in a clear, rhythmically regular 18th-century style.

But the main interest in Redi comes from his controversy with Padre Martini over the incomplete canon by Animuccia in an oil painting in the Cappella Lauretana. The young Martini found a solution (29 September 1732) with which Redi disagreed; his own, together with Martini's, was then sent to Pitoni (in Rome), Pacchioni (Modena), Calegari (Venice) and Vallotti (Padua). While appreciating Redi's proposal, they nevertheless voted for Martini who then wrote a long, scholarly defence that closed the question. There are in all nine letters on the subject, including one from Tartini. Redi was buried in Montelupone, in the church of the Padri Minori Conventuali.

CAROLYN GIANTURCO

Redlich, Hans F(erdinand) (*b* Vienna, 11 Feb 1903; *d* Manchester, 27 Nov 1968). British musicologist and conductor of Austrian birth. He studied the piano with Paul Weingarten, theory with Hugo Kauder and composition with Carl Orff up to 1921; he also attended the universities of Vienna and Munich. In 1931 he took the doctorate at Frankfurt University with a dissertation on the madrigals of Monteverdi and worked as assistant conductor at the Charlottenburg opera, Berlin (1924–5), and at the Stadttheater, Mainz (1925–9), where a number of modern works were produced at his instigation. Political events caused him to return to Austria in 1937 and to move to England in 1939; he took British nationality in 1947.

From 1941 to 1955 Redlich was an extra-mural lecturer in the Midlands and East Anglia; in 1955 he was appointed lecturer in history of music at Edinburgh University and in 1962 professor of music at the University of Manchester. In 1967 Edinburgh University awarded him the honorary degree of DMus.

Redlich was a man of great energy, humour and charm, who found time to write several books and many articles and to produce a large number of practical editions (some in his capacity as general editor of Eulenburg miniature scores). His interests were wide, but he was chiefly known first as a student of Monteverdi and secondly of Austrian music of the late 19th and early 20th centuries. He did much to help popularize in the English-speaking world the music of Monteverdi, Bruckner, Mahler and Berg when it was unfamiliar. His private library formed the nucleus of the music department library at the University of Lancaster.

ARTHUR D. WALKER

Redman, Don(ald Matthew) (*b* Piedmont, WV, 29 July 1900; *d* New York, 30 Nov 1964). American jazz composer, arranger, bandleader and alto saxophonist. He was a child prodigy from a musical family, and learnt to play most conventional instruments. By the end of his years at school he had already begun writing arrangements. At the age of 20 he graduated from Storer College in Harper's Ferry, West Virginia, with a degree in music. While on tour with Billy Paige's Broadway Syncopators Redman joined FLETCHER HENDERSON in several recording sessions in New York. When Henderson formed an orchestra shortly afterwards, Redman was one of the members; besides writing the band's arrangements he played the clarinet, saxophones and occasionally other instruments. The addition of Louis Armstrong in 1924–5 as jazz specialist had a deep impact on all the players and also on Redman's arrangements; the band turned increasingly from dance music to jazz, and by the mid-1920s it was the most prominent black jazz orchestra in the country.

Redman left Henderson in 1927 to become music director of McKinney's Cotton Pickers, and in a few months he transformed this group from a little-known novelty ensemble into one of the major jazz orchestras of the period. The Cotton Pickers focussed less attention on its soloists than Henderson's band had done and concentrated more on Redman's arrangements, which were played with precision and control. Redman's writing became more elaborate, especially in harmony and rhythm; his new sophistication is apparent in his outstanding arrangement of *Rocky Road* (1930, Vic.). Besides playing as a soloist (principally on alto saxophone) and in the reed section, Redman began to appear as a singer, performing in a high-pitched, half-spoken style. He also composed his best-known popular songs with the Cotton Pickers: *Cherry* (1928, Vic.) and *Gee, ain't I good to you?* (1929, Vic.).

In 1931 Redman formed his own band and composed *Chant of the Weed* (1931, Bruns.), perhaps his most masterly work. His band broadcast regularly on radio and made numerous recordings before breaking up in 1940. Redman spent most of the 1940s composing and writing arrangements for radio, television and many big bands, including those of Count Basie and Jimmy Dorsey. He organized a big band to tour Europe shortly after World War II, and in 1951 became musical director for Pearl Bailey, an association which lasted throughout the 1950s. He seldom performed during his final years, but spent his time writing several extended works (which have never been performed in public).

Redman was an outstanding jazz arranger and one of the first masters of jazz orchestration; his influence was greatest during his early years as chief arranger for

Henderson. His early arrangements integrated solo improvisations with passages for ensemble in the style of improvised jazz, and he also incorporated certain aspects of collectively improvised jazz, such as breaks, chases and call-and-response patterns, into his scores. His versions of *Copenhagen* (1924, Voc.), *Sugar Foot Stomp* (1925, Col.), *Go 'long mule* (1924, Col.) and *Shanghai Shuffle* (1924, PAct) for Henderson are important landmarks in the evolution of ensemble jazz.

ROBERT KENSELAAR

Redoble (Sp.). An ornament, variously a form of ornamental division or a trill. *See* ORNAMENTS, §2.

Redolfi, Michel (*b* Marseilles, 8 Dec 1951). French composer. After studying music in his native city, he was one of the founders of the Groupe de Musique Electroacoustique of Marseilles in 1969. He spent the period from 1973 to 1984 in the United States at the University of San Diego, and then returned to France. Since 1986 he has been director of the Centre International de Recherche Musicale (CIRM) and of the MANCA festival in Nice. During his time in California he conceived the idea of the first 'sub-aquatic concerts', inviting the members of the audience to immerse themselves and listen to electronic music played underwater. After the series *Sonic Waters*, performed in the Pacific in 1981 and then in a swimming pool at the La Rochelle Festival, he developed the concept further in other works: *L'écume de la nuit* (1984), *Crysallis*, a sub-aquatic opera (1992), *In Corpus*, a sub-aquatic multimedia work (1994), and the sound installation, *Liquid Cities* (1996). Parallel to his research into situations involving audience participation, he also composes electro-acoustic music or in mixed genres, which are intended for concert performance, including *Pacific Tubular Waves* (1978), *Desert Tracks* (1988), *Jazz d'après Matisse* (1989), *Appel d'air* (1991) and *Jungle* (1991). Michel Redolfi won the Prix Luigi Russolo in 1978, the SACEM medal in 1988, the Prix Ars Electronica in 1994 and 1996, and is a Chevalier of the Ordre des Arts et des Lettres.

BRUNO GINER

Redonda (Sp.). *See* SEMIBREVE (whole note); *semibreve* is also used. *See also* NOTE VALUES.

Redowa (Ger.; Cz. *rejdovák*, *rejdovačka*, from *rej*: 'round dance', 'whirl'). A Czech folk dance introduced as a salon dance in Prague in 1829, later spreading beyond Bohemia. In Bohemia it was a double dance: the *rejdovák* resembled the *sousedská* (earliest notations have tunes similar to typical minuet and ländler tunes) and was danced at a moderate 3/4 or 3/8; the *rejdovačka* (a feminine variant of the masculine word *rejdovák*) provided a second half, often set to a rhythmic variant of the *rejdovák* tune speeded up to a brisk polka-like 2/4 or 4/8. An early example is S.W. Schiessler's *Neuester Reydowak sammt Reydowaczka* (1829), which he published the next year in his Carnival anthology (ex.1). Other versions of the

Ex.1 S. W. Schiessler: *Neuester Reydowak sammt Reydowaczka* (1829)

coupled *rejdovák–rejdovačka* were composed by F.K. Landrock, J. Köhler and J.N. Škroup during the height of its popularity in Prague in 1830–32; by 1840 it had disappeared from fashionable Czech balls. Jaroslav Langer claimed in 1834 that the dance was immediately taken up 'in Hamburg, Vienna, France, England and even in America' (Nejedlý, p.349); most printed Redowas, however, mostly by German composers, were published later, in the 1840s and 1850s. Examples include several pieces by Anton Wallerstein, Carl Voss's *Rosalie, redowa élégante* and Ferdinand Beyer's *Les belles de New York, 3 polka-rédowas*. Abroad the two names were collapsed into the single German 'Redowa' and its metrical peculiarities variously interpreted, e.g. J.F.F. Burgmüller's two published redowas (both 1846) – *La redowa, nouvelle*

valse Bohemienne and *Redowa, polka* – suggests the Czech metrical differentiation of the 3/4 *rejdovák* and the 2/4 *rejdovačka* continued to exert influence. Later accounts are of a triple-time dance: Barclay Squire described it as 'like a Mazurka, with the rhythm less strongly marked'; Nettl's description suggests more of a waltz on the same spot. The dance can also be found (as 'redova') among the 19th-century mestizo forms in Mexico.

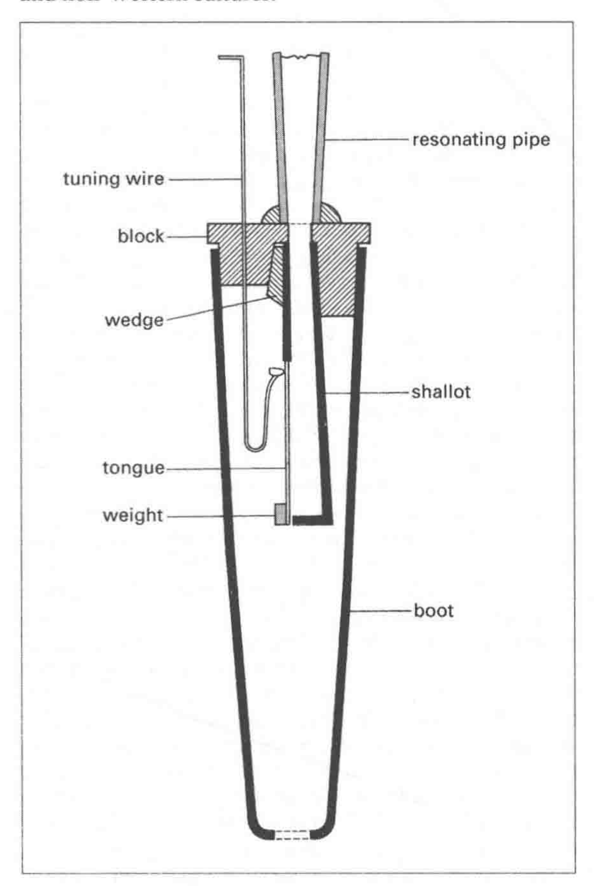
JOHN TYRRELL

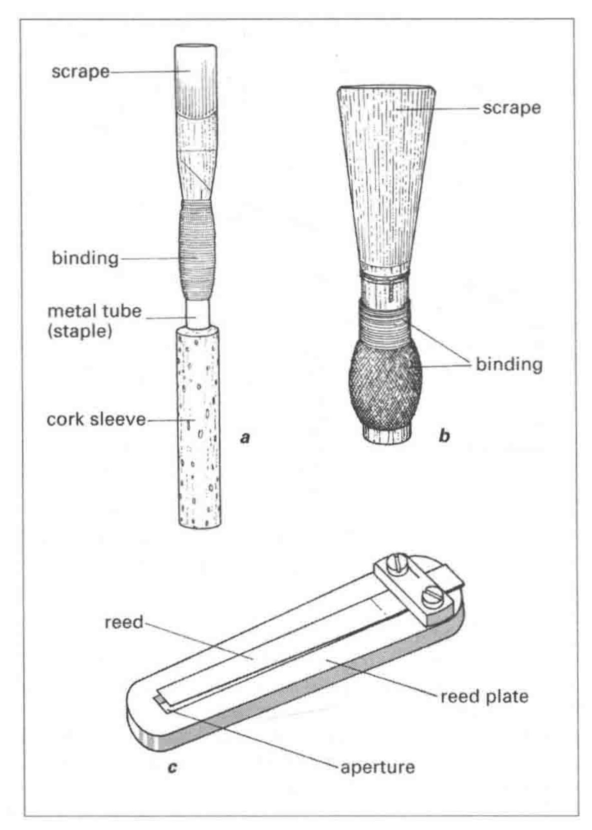
Reduction. *See* LAYER.

Reed. An elastic lamina of natural vegetable tissue (bamboo, leaf, straw or wood), metal, plastic or other material which, under the influence of an airstream from a wind player's lungs or from bellows, will vibrate at a frequency determined by its dimensions, mass and elasticity. This vibration is used to excite periodic pressure waves in an air column within the tube of an instrument. The frequency of these waves and hence the note sounded is mainly determined by the form and dimensions of the air column which are the more important factors in such a coupled acoustic system. Reeds are categorized as 'beating' or 'free', the former being again divided into 'single' and 'double'. For instruments used in Western art music, reeds are made from the large semi-tropical grass *Arundo donax* or *Arundo sativa*, commonly called 'cane', which is indigenous to many countries but is grown for this purpose chiefly in the Var region of France. The earliest discussion of the cultivation and preparation of cane for musical reeds is found in Theophrastus, *Enquiry into Plants*, iv.11 (*see* AULOS, §I, 5(iv)). The stems are harvested when of suitable size and somewhat unripe, and are then matured in the open air, a process which calls for careful judgment. The rough slips are cut to length, flattened on the inner side, and on the other scraped down to a feather edge at one end (fig.1*a*).



The single beating reed, typified by that of the clarinet or saxophone (*see* CLARINET (ii)), is a tapered piece of cane fastened at its thicker end with cord or a metal ligature to a mouthpiece that is roughly conical with a flat 'table' tangential to the base (fig.1*b*). The thinner portion of the reed is positioned over the opening of the mouthpiece and vibrates as the air is introduced. This motion periodically closes and opens the aperture, thus transmitting bursts of energy to the air column within the instrument. By means of his or her embouchure the player may determine the maximum aperture, and can also modify the characteristics of the reed's vibrations by selectively dampening the harmonics. The player's tongue controls the quality of the attack and transient, and this also affects the reed's tonal characteristics.

In reed pipes of organs (fig.2) the action is similar but in this case a slight curve is applied to the metal blade or the tongue instead of to the table (*see* REED-WORK). In some cases the tongue is loaded with a supplementary weight to lower its natural frequency. The structure equivalent to the mouthpiece of a woodwind is called the shallot, or by organ builders a reed – a curious reversal of usage.



1. *(a) single reed of a clarinet; (b) clarinet mouthpiece with reed in position*

The body of some non-European instruments is itself a length of cane; a reed is formed by splitting a section of cane from below a natural knot. Such instruments are termed 'idioglot', and are exemplified by the Near Eastern *zummarah*. Detached reeds of similar construction are widely used in the drones of bagpipes in both Western and non-Western cultures.

2. *Reed pipe of an organ*

3. *(a) double reed of an oboe, and (b) a bassoon; (c) free reed of a concertina*

The beating double reed of the oboe or bassoon is made from one piece of cane folded on itself and bound, with the concave faces joining, onto a metal tube or staple (oboe), or the cane itself is formed into a tube and fastened with wire (bassoon). The bark is removed and the surfaces scraped before the tip is slit to form the two blades. When blown the elliptical gap between the ends of the blades opens and closes, again giving bursts of energy to the air column. As is the case with single reeds, the form and degree of 'scrape' applied to the tip of the reed has a profound influence on its behaviour and sonority; styles vary considerably from player to player and between different national styles. The scrape of typical American oboe reeds is longer and less evenly tapered than European, particularly German, styles.

Both double and single reeds are found in reed and wind-cap instruments where the player's lips do not come into contact with the reed, e.g. the CRUMHORN and BAGPIPE. These reeds are housed in a closer chamber with a single aperture through which the player blows, or into which air is forced from a bellows. The construction of double reeds for reed-cap instruments is similar to that for instruments where the player's lips are in contact with the reed. In general these reeds need to be lighter so that the air pressure alone will set them in vibration. (Certain instruments such as the SHAWM and the Arabic *zurna* function in a similar way, because the reed is taken whole in the player's mouth, meaning the player's lips have only minimal influence on the reed's vibration.)

In Western musical instruments the FREE REED (fig.3*c*) is less common than the beating type and is chiefly found in certain organ pipes and bellows-blown instruments such as the accordion and reed organ. Here the tongue does not close against the slot in the shallot or mounting plate, but can pass freely through it. The common MOUTH ORGAN and the traditional Chinese *sheng* are two of the few examples of mouth-blown free reeds.

In many Asian cultures, dried and smoke-cured leaves of different plants are fashioned into reeds; many of these are double, but some instruments require reeds of four or six blades. Throughout the 20th century Western musicians have sought viable substitutes for *arundo donax* as the raw material for reeds. Silver, whalebone, lancewood, fibreglass, plastic and partially laminated cane have all been tried, but while orchestral musicians have been reluctant to replace the traditional material, fibreglass and other synthetic substitutes are widely used by jazz musicians. Plastic single and double reeds have proved indispensable both for musicians who work in environments such as marching bands and military ensembles where the reeds are exposed to a greater degree of wear and tear, and players who lack the expertise to carry out the constant adjustments required by cane reeds if they are to function optimally.

In some organological contexts, the word 'reed' is used to describe somewhat different acoustic elements. Lip-energized brass instruments are frequently called 'lip reeds' since the player's lips form with the mouthpiece the vibrating element of the tone generator, and the term 'air reed' sometimes refers to the generating element in organ pipes, recorders, or transverse flutes. In both of these cases the mode of sound generation differs acoustically from the reeds described above.

For further illustrations *see* REED INSTRUMENTS.

PHILIP BATE/GEOFFREY BURGESS

Reed [Friedman], **Alfred** (*b* New York, 25 Jan 1921). American composer and conductor of Austrian descent. Born Alfred Friedman, be began studying the trumpet at the age of ten and was playing professionally under the name Alan Reed while still in high school. Private study

in theory and harmony with John Sacco and Paul Yartin (1937–8) led to a position as staff composer, arranger and assistant conductor for the Radio Workshop, New York (1938–42). After serving as associate conductor of the 529th US Air Force Band, he attended the Juilliard School (1946–8) where his teachers included Giannini. In 1948 he took a post as staff composer and arranger for NBC and later held a similar position at ABC. He became conductor of the Baylor University SO in 1953, and continued his education at that institution (BM 1955, MM 1956). In 1955 he joined Hansen Publications as executive editor. From 1966 to 1993 he taught theory, composition, music marketing and music education at the University of Miami, where he also conducted the wind ensemble (1980–87). He has appeared as a guest conductor throughout North and South America, Europe, Asia and Australia. His over 250 works for band, orchestra, chorus and chamber ensemble are written in a melodic, post-Romantic style.

RAOUL F. CAMUS

Reed, Florence. *See* TOBANI, THEODORE MOSES.

Reed, Lou [Lewis Alan] (*b* Brooklyn, New York, 2 March 1942). American rock musician, singer and songwriter. He studied journalism and creative writing at Syracuse University, NY, where he worked with the poet Delmore Schwartz. After a formative period as a songwriter for a record company, he came to prominence in 1965 as a singer, songwriter and guitarist with the rock band THE VELVET UNDERGROUND, through which he was strongly influenced by the Welsh experimental musician John Cale and the pop-artist Andy Warhol. Reed wrote most of the lyrics for the group's studio albums: *The Velvet Underground and Nico* (Verve, 1967), which included his most infamous song 'Heroin', *White Light/White Heat* (Verve, 1967), *The Velvet Underground* (MGM, 1969) and *Loaded* (Cot., 1970), by which time the Velvet Underground had effectively become a backing band for his songs. He left to pursue a solo career, but his first album, *Lou Reed* (RCA, 1972), was poorly received. His second, *Transformer* (RCA, 1972), established him as a rock star; with sexually ambiguous lyrics, it contained what became two of his most commercially successful songs 'Walk on the Wild side' and 'Perfect Day'. With *Berlin* (RCA, 1973), he created the rock concept album as a combination of existentialist novel and neo-Romantic film score. There followed *Sally Can't Dance* (RCA, 1974), the experimental but commercially disastrous *Metal Machine Music* (RCA, 1975), and a further series of painfully self-exploratory 'rock novellas', including *Coney Island Baby* (RCA, 1975), *Growing up in Public* (Ari., 1980), *New York* (Sire, 1989), *Magic and Loss* (Sire, 1992) and *Set the Twilight Reeling* (WEA, 1996). In 1989 Reed collaborated with Cale to write *Songs for Drella* (Warners, 1990), a tribute to Andy Warhol, and in 1992 the Velvet Underground unexpectedly re-formed with its original members, touring Europe in 1993. Reed subsequently collaborated with the American performance artist Laurie Anderson, whose use of amplified violin and minimalist repetitions recall aspects of the early Velvet Underground.

MAX PADDISON

Reed, Richard. *See* READE, RICHARD.

Reed, Thomas German [German Reed, Thomas] (*b* Bristol, 27 June 1817; *d* Upper East Sheen, Surrey [now London], 21 March 1888). English impresario and composer. He first studied music with his father, Thomas Reed, who was conductor at the Haymarket Theatre and later the Garrick Theatre in London. Reed's first appointment was as organist at the Catholic Chapel in Sloane Street. In 1838 he became musical director at the Haymarket Theatre, where he remained until 1851 (during the temporary closure of the theatre, he produced Pacini's *Saffo* at Drury Lane in 1843). In 1852 he conducted a season of opera presented at Sadler's Wells by his wife Priscilla Horton (1818–95), a popular contralto and actress who had first appeared, aged ten, at the Surrey Theatre, London. Following their marriage in 1844 Reed directed the production of English opera at the Surrey, and together they made prolonged provincial tours. On 2 April 1855 the first of 'Miss P. Horton's Illustrative Gatherings' was held at St Martin's Hall. These performances evolved into 'Mr and Mrs German Reed's Entertainments' at the Royal Gallery of Illustration, Regent Street, and typically consisted of one or two short comic operas composed or adapted for the resident company of from four to six characters with accompaniment of pianoforte and harmonium (much later, an instrumental ensemble). Reed directed the entertainments, and he and his wife invariably appeared in the programme. Over the next three decades he commissioned nearly a hundred musical pieces, providing early training for many of the important composers and dramatists of the late 19th century. Among the composers enlisted by Reed were Arthur Sullivan, Frederic Clay, George Macfarren, Alfred

Cellier, J.L. Molloy and Hamilton Clarke; among the librettists were W.S. Gilbert, F.C. Burnand, William Brough, Gilbert à Beckett, Robert Reece and Arthur Law.

In 1867 Reed leased the new St George's Hall, Langham Place, for the production of comic opera. Here he produced full-length musical pieces, with full cast and orchestra, including Sullivan's *The Contrabandista* (18 December 1867), Auber's *L'ambassadrice*, and *The Beggar's Opera*. This endeavour, however, was not a commercial success. Reed also played an important role in the development of the 'Savoy opera'. He produced six early pieces by W.S. Gilbert, whose *Ages Ago* (1869, music by Frederic Clay) was one of Reed's longest-running attractions. It was at the Gallery of Illustration that Gilbert and Sullivan were first introduced in 1869 by Clay; and the German Reed entertainments were later recognized as the breeding-ground for the Savoy operas: many situations in the Gilbert and Sullivan operas have antecedents among Gilbert's early pieces.

As the composer of more than a dozen of the entertainments, Reed proved to be an imaginative and effective writer of music for the stage. Most of his librettos were provided by Burnand and Gilbert à Beckett, but of particular importance were his three collaborations with W.S. Gilbert: *Our Island Home* (1870), *A Sensation Novel* (1871) and *Eyes and No Eyes*; or, *The Art of Seeing* (1875). Apart from a few individual songs, his scores were unpublished, and with the exception of *Our Island Home* (autograph, *US-NYpm*) they appear to have been lost. When Reed's lease of the Gallery of Illustration expired in 1873 the entertainments continued at St George's Hall. After his death the enterprise continued under the direction of his son Alfred and the comedian Richard Corney Grain until they died, both in 1895.

WORKS

selective list; all in one act unless otherwise stated; all first performed in London

The Drama at Home, or An Evening with Puff (review, J.R. Planché), Haymarket, 8 April 1844
A Match for the King (comedy, C.J. Mathews, after D'Ennery, Dumanoir: *Don César de Bazan*), Haymarket, 7 Oct 1844
The Golden Fleece, or Jason in Colchis and Medea in Corinth (extravaganza, Planché), Haymarket, 24 March 1845
Who's the Composer? (farce, J.M. Morton), Haymarket, 28 Oct 1845
The Wonderful Water Cure (operetta, B.N. Webster, after T. Sauvage:*L'eau merveilleuse*), Haymarket, 15 July 1846 [rev. of Grisar's comique, 1839]
Our Island Home (W.S. Gilbert), Gallery of Illustration, 20 June 1870
A Sensation Novel (Gilbert), Gallery of Illustration, 30 Jan 1871
Mildred's Well, a Romance of the Middle Ages (F.C. Burnand), Gallery of Illustration, 5 May 1873
He's Coming (Via Slumborough, Snoozleton & Snoreham) (Burnand), St George's Hall, 17 May 1874
The Three Tenants (G. à Beckett), St George's Hall, 16 Dec 1874
The Ancient Britons (Beckett), St George's Hall, 25 Jan 1875
Eyes and No Eyes; or, The Art of Seeing (Gilbert), St George's Hall, 5 July 1875
A Spanish Bond (Beckett), St George's Hall, 1 Nov 1875
An Indian Puzzle (Beckett), St George's Hall, 28 Feb 1876
The Wicked Duke (Beckett), St George's Hall, 9 June 1876
Matched and Mated (Burnand), St George's Hall, 6 Nov 1876
A Night's Surprise (West Cromer [A. Law]), St George's Hall, 12 Feb 1877
No. 204 (Burnand), St George's Hall, 7 May 1877

FREDRIC WOODBRIDGE WILSON

Reed, W(illiam) H(enry) (*b* Frome, 29 July 1876; *d* Dumfries, 2 July 1942). English violinist and teacher. He studied the violin and composition at the RAM in London and became an accomplished solo and chamber music player. In 1904 he joined the LSO on its formation, and served as its leader for 23 years (1912–35), and as chairman of its board from 1935 until his death, enjoying throughout the unswerving support and regard of his fellow musicians. At successive Three Choirs festivals with the LSO Reed formed a close friendship with Elgar, who sought his advice on some technical aspects of the solo part of his Violin Concerto. Reed took part in the first performances of Elgar's Violin Sonata, String Quartet and Piano Quintet, and wrote two books on the composer, the first of which includes Elgar's sketches for his unfinished third symphony with Reed's commentary on them, based on first-hand discussions with Elgar. For many years Reed taught the violin at the RCM in London, and was active as a conductor, mainly of amateur orchestras, and as an examiner and adjudicator; he died while adjudicating in Scotland (he was buried in Worcester Cathedral, near the Elgar Memorial Window). His compositions are skilful but not individual, and include orchestral tone poems (some performed at Three Choirs festivals), a Violin Concerto, a Rhapsody for violin and orchestra, and chamber works.

H.C. COLLES/NOËL GOODWIN

Reed-cap instruments. *See* WIND-CAP INSTRUMENTS.

Reed instruments (Ger. *Rohrblattinstrumente*). A term commonly used for musical instruments in which an airstream is directed against a lamella which is thereby set into periodic vibration and interrupts the stream intermittently (*see* REED). In classifying musical instruments, Hornbostel and Sachs (1914) divided aerophones into two subclasses: free aerophones (*freie Aerophone*) and wind instruments proper (*eigentliche Blasinstrumente*). Reeds appear in both categories, and although the classification may be based on controversial acoustic premises it provides a valuable compendium for surveying various kinds of reed instrument. It is listed in full under AEROPHONE (classes 41 and 42).

In this scheme the word 'clarinets' is used as a generic term for all reedpipes with a single reed 'consisting of a percussion lamella' – regardless of the shape of the bore and regardless of whether there is an air reservoir (as in a bagpipe). Likewise 'oboes' is used as a generic term for all reedpipes with a double reed 'of concussion lamellae'; some writers use the word 'shawm' instead, but others reserve 'shawm' for instruments with a wider bore than an oboe, or with a pirouette, or disc, against which the player's lips may rest, or for Renaissance instruments, etc.

Classification of beating reeds, with examples of instruments in which each are found. Free reeds: (a) mouth organ (harmonica – inset shows airflow: inhale, lower tier; exhale, upper tier); (b) harmonium (cf inset with REED ORGAN, *fig.1); (c) mouth organ (sheng, China – pipes carrying brass reeds shown inserted into common wind chamber); concussion reeds: (d) oboe; (e) śhahnāī (India); (f) crumhorn (reed enclosed in wind cap); (g) sk'a'na (British Columbia – reed enclosed in body of instrument); percussion reeds: (h) saxophone, (i) pūngī (India – reed enclosed in wind cap); (j) reed pipe of an organ; (k) double reedpipe (zamr, Tunisia)*

Traditionally, reed instruments often have a rustic or pastoral connotation. Milton evoked 'the sound of pastoral reeds with oaten stops' and Shakespeare referred to those occasions 'when shepherds pipe on oaten strawes'. Children in the country still make their own reed instruments from the stalk of an oat or some other kind of straw by detaching a long, narrow tongue from the wall of the stalk (leaving it rooted to the body).

Reed instruments are often deemed to have common characteristics in timbre. Current sentiment among Western musicians about reed players was summed up by Baines (*Woodwind Instruments and their History*, 1957): they 'are entirely dependent upon a short-lived vegetable matter of merciless capriciousness, with which, however, when it behaves, are wrought perhaps the most tender and expressive sounds in all wind music'. This is certainly true of the modern Western oboe and english horn. Bartók gave a different account, however, when he heard a reed instrument in Algiers: 'its tone is much stronger than that of the lowest notes of the oboe; throughout its registers the tone remains equally piercing and shrill, and indoors it almost bursts one's eardrums'. A Swahili name for double-reed instruments is *parapanda*, an onomatopoeic word that conveys the piercing shrillness described by Bartók. Ethnomusicologists sometimes use the word 'reed' in unfortunate juxtaposition with 'flute', in the term 'reed-flute ensemble' (*see* STOPPED FLUTE ENSEMBLE). This term refers to the sets of singly-blown, stopped tubes without finger-holes, cut from vegetable stalks. Although made of reed, the instruments are not reed instruments in the sense defined above, but rather flutes, i.e. edge-blown.

For discussion of reed pipes, free reeds and valvular reeds in organs, *see* ORGAN, §III, 2–4; *see also* FREE REED.

KLAUS WACHSMANN

Reed organ. A generic term for those keyboard instruments whose sound is produced by freely vibrating reed tongues (usually without individual resonators; *see* FREE REED) and activated by air under either pressure (fig.1*a*) or suction (fig.1*b*). Common names for such instruments include harmonium (commonly used in Europe), melodeon, vocalion, seraphine, *orgue expressif*, cabinet organ or American organ, the latter term generally used in Europe to distinguish suction from pressure instruments. Particularly during the 19th century, an increasing number of patents were taken out for various types of reed organ under such names as Aeolina, Euphonion, Mélodiflute, Organochordium and Physharmonika. Other members of the reed organ family include such portable instruments as the ACCORDION and CONCERTINA. Reed organs range in size from compact single-manual instruments with one set of reeds, powered by one or two foot treadles, to large two-manual (rarely three) and pedal instruments having several sets of reeds of differing colours and pitches, and powered by a separate blowing lever or an electric motor, as in pipe organs. The commonest types had two to five sets of reeds, one manual and such accessories as octave couplers and tremulant. These instruments vied with the piano for popularity as domestic instruments for much of the 19th century (hence the use of such terms as 'cottage' or 'parlour' organ) and were used extensively in small churches or chapels as an inexpensive substitute for the pipe organ.

See also REED and REED INSTRUMENTS.

1. History. 2. Construction. 3. Repertory.

1. HISTORY. The principle of producing musical sound from freely vibrating reeds (as opposed to reeds vibrating against a fixed surface, as in the reed stops of pipe organs) dates from prehistoric times; the earliest instruments using this principle were hollow straws with a flap cut in the side. A much more sophisticated version of the principle is applied to the SHENG, in which several reed-driven pipes of varying lengths are controlled by one player. Such instruments were first documented around 1100 BC.

The first use of the reed principle in keyboard instruments was in pipe organs, where beating-reed pipes with resonators of varying lengths and thin metal tongues appeared in the 15th century and possibly earlier (*see* ORGAN, §III); the portable REGALS, with (usually) one set of beating reeds, also dates from the 15th century. A free-reed instrument based on the regals and called 'organino' is said to have been made by the Italian instrument maker Filippo Testa in 1700, but no example of it remains. Testa's instrument ushered in a century of experimentation with free-reed keyboard instruments. An instrument of this type is said to have been used in the mid-18th century by the St Petersburg musician Johann Wilde, prompting Christian Gottlieb Kratzenstein, a physicist from Copenhagen, and later his compatriot the organ builder Kirschnigk, to experiment with free-reed keyboard instruments. Between 1782 and 1789 Kirschnigk built a kind of claviorgan called the Organochordium, in which free reeds were combined with a pianoforte. Kirschnigk's work came to the attention of G.J. VOGLER (1749–1814), who was intrigued by the expressive possibilities of the free reed, and commissioned the Swedish organ builder Rackwitz, a former associate of Kirschnigk, to make a set of free-reed pipes (probably with resonators) for a portable organ which he called the ORCHESTRION (not to be confused with the self-playing instrument of the same name popular in the late 19th century). This is said to have inspired J.N. Maelzel of Vienna to include one or more free-reed stops with the flue pipes, beating reeds and percussion of his complex barrel organ which he called the PANHARMONICON.

It was not until the early 19th century, however, that free-reed instruments recognizable as true reed organs were made. As is often the case, these began to appear independently in various countries. In Germany Bernard Eschenbach (1769–1852) of Königshofen, with his cousin the organ builder J.C. Schlimbach, built his Aeoline (*c*1810), a keyboard instrument with reeds fashioned in the manner of a jew's harp and activated by air under pressure from a knee-operated bellows (the name was derived from the Aeolian harp, which it was intended to imitate). J.H. Förstner, an organ builder of Mannheim, is also said to have experimented with free reeds at about this time.

In the USA the Boston organ builder Ebenezer Goodrich (1782–1841) made a reed organ, possibly as early as 1809, for the artist Gilbert Stuart. His inspiration is said to have come from a *sheng* which Stuart had imported as a curiosity, but it may also have come from the free reeds in the Maelzel Panharmonicon exhibited by his brother William Goodrich in 1811–12. Goodrich is known to have combined free reeds with pipes in some of his chamber organs. One of these, dating from 1815, is in the Smithsonian Institution, Washington, DC, but without its reed stop, which was apparently of the resonatorless type. The first American reed-organ patent was issued to Aaron Merrill Peasley of Boston in 1818; this contains

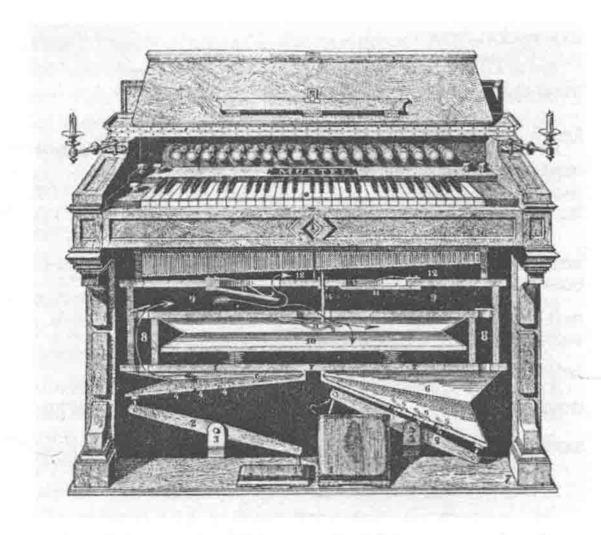
1. Mechanisms of (a) the compression reed organ (with expression); (b) the suction reed organ (without expression)

what is probably the first reference to the possibility of activating the reeds by suction instead of pressure.

In France a development along slightly different lines began in 1810, when Gabriel-Joseph Grenié (1757–1837) of Bordeaux built his *orgue expressif*. This resembled a small pipe organ, with a typical windchest and action, but its pipes were free reeds with resonators. Grenié's most significant contribution was a double bellows and reservoir system which permitted dynamic variation through control of wind pressure by the player's feet on the blowing treadles. This is possible only with free reeds, since their pitch, unlike that of flue pipes and beating reeds, is relatively unaffected by variations in wind pressure.

Grenié was ahead of his time, for while reed-organ experimentation continued in France, it was not until 1830 that a more practical, compact and resonatorless *orgue expressif* was developed in the form of Aristide Cavaillé-Coll's POÏKILORGUE (fig.2). It is this instrument, rather than that of Grenié, which was the true precursor of the French harmonium as it later developed. The first *poïkilorgue* (made by Cavaillé-Coll in Toulouse, when he was working with his father) attracted the attention of Rossini, who scored a part for it in *Robert le diable* and was responsible for the young instrument maker going to Paris in 1833. The *poïkilorgue* was small and portable, having originally only one set of reeds and a variant of Grenié's blowing system. In his early years in Paris, Cavaillé-Coll built several other *poïkilorgues*. One was exhibited in Paris in 1834, and others were sold for use as choir organs in churches as late as 1841 and 1842. Shortly afterwards, in order to devote himself wholly to pipe organs, he turned over the manufacture of the instrument to Alphonse Mustel.

The first significant developments in England are noted in 1828 and 1829, when Charles Wheatstone patented reed organs under the names Aeolina and Symphonium (*see also* CONCERTINA). Around 1830 John Green of London built an instrument which he called the Royal Seraphine. In Green's *Concise Instructions for Performance on the Royal Seraphine or Organ* (London, 1833)



2. Poïkilorgue by Cavaillé-Coll, Paris, 1834

the instrument is sufficiently described to identify it as a true reed organ of the pressure type. Its original features included a crude swell, achieved by raising the top panel of the case with a pedal, and a means of colouring the tone quality by placing strips of differing materials over the reeds. No reed-organ industry comparable to that of France, Germany or the USA ever developed in England, but reed organs were made there throughout the 19th century and in the early 20th. W. Dawes of London patented a 'melody attachment' in 1864 and later a 'pedal bass'. Some sources attribute the invention of the 'double touch' (later employed by Mustel) to the English inventor Augustus L. Tamplin.

Much experimental activity was also going on in Germany and Austria in the first half of the 19th century. In 1821 Anton Haeckl of Vienna made a compact instrument of four octaves with the reeds directly beneath the keyboard; he named this the Physharmonika, a term which would later be applied to free-reed stops in pipe organs. The Stuttgart piano maker J.L. Schiedmayer patented the Euphonion, apparently a true reed organ, in 1816, but that firm's entry into the actual manufacture of reed organs did not occur until more than 30 years later. An instrument similar to Haeckl's was made in Paris by J.C. Dietz in 1828, but with an improvement in the form of a resonance chamber over the reeds. A patent was taken out by one Voit for the Aeolodikon in 1820, and a few years later Friedrich Sturm (1797–1883) of Suhl in Thuringia built an *orgue expressif* which aroused the interest of the composer Spontini, and to which he gave the same name. Sturm appears to have been the first to add a set of reeds at 4′ pitch, but in 1838 J.B. Napoléon Fourneaux (1808–46) of Paris made a two-manual reed organ which included a set at 16′ pitch.

In 1840 François Debain (1809–77) of Paris patented a single-bellows reed organ under the name Harmonium. This would appear to be the first use of the term which later became virtually universal in Europe for reed organs activated by pressure. Debain's first instruments were small and rather delicate in appearance with only one set of reeds. By 1842 he was making a larger model, with four sets of reeds divided between bass and treble and a sub-octave coupler. While Debain attempted to retain sole use of the name 'harmonium', it was soon used to refer to the instruments of two serious competitors whose work was ultimately to eclipse Debain's (because of Debain, they at first used the term *orgue expressif* in their advertising). These were Jacob Alexandre (1804–76), who had been making free reed instruments since 1829, and Victor Mustel (1815–90), to whom Cavaillé-Coll had turned over the rights to the *poïkilorgue* in the 1840s. Louis-Pierre-Alexandre Marlin, a member of the Alexandre family firm, invented a percussion device acting directly on the reed tongues in 1841 and later a sustaining device called *prolongement*, both of which were later widely used by European harmonium makers. Mustel's firm, too, made some significant improvements, including the *double expression*, *forte expressif* and *harpe éolienne*, all first introduced in 1854; and Victor's son Charles invented the Métaphone in 1878. Mustel and Alexandre may be regarded as jointly responsible for bringing the harmonium to a high level of sophistication.

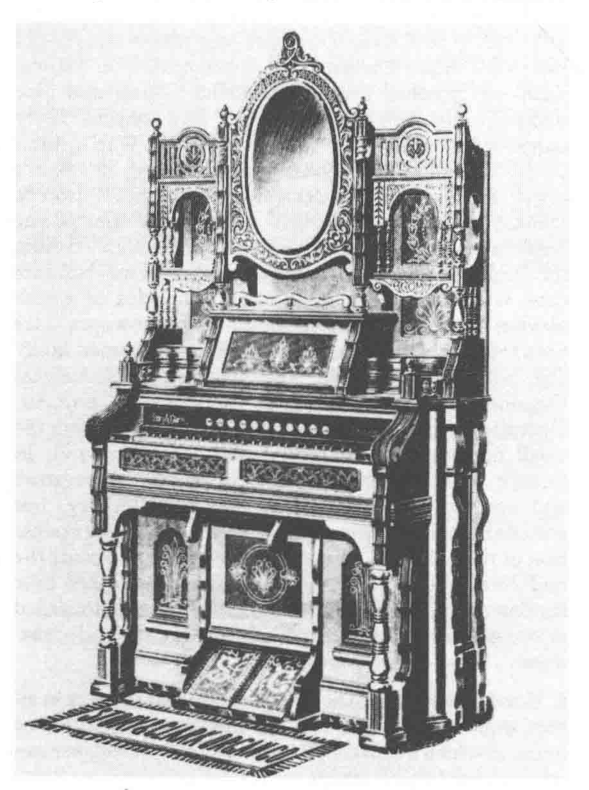
Despite all of the early experimentation in Germany, the first firm to undertake the mass production of reed organs in that country was founded by Julius and Paul

3. *Mustel's harmonium (19th century), with front removed to show mechanism; white arrows indicate the direction of wind flow from feeders to reeds*

Schiedmayer (*see* SCHIEDMAYER). Trained in the workshops of Alexandre and Debain, they returned to Stuttgart in 1853 to begin the manufacture of a modified version of the French harmonium, patented in 1851. They too made significant contributions to the development and popularity of the instrument; towards the end of the century they produced some instruments of considerable size, used not only in churches but for concerts. In 1881 a Russian musician named Hlavatch was giving recitals on a 24-stop Schiedmayer 'Concert Harmonium' in St Petersburg, and a Herr Poenitz gave several concerts on Schiedmayer instruments in Berlin in the 1890s. Music played in such concerts consisted of both original works and transcriptions. As in America and elsewhere, some piano makers, including Hildebrand of Halle, added harmoniums to their wares, as did such organ builders as Steinmeyer of Oettingen. In 1913 no fewer than 55 firms are listed as making reed organs within the boundaries of Germany, but of these Schiedmayer unquestionably had the largest output.

While European builders were perfecting the pressure reed organ with its expressive possibilities, American makers, early turning towards the suction type, followed a largely independent course. As in Europe, progress during the early 19th century was slow and experimental. In 1832 Lewis Zwahlen of New York, who may have been an immigrant, was issued a patent for a 'Seraphina or harmonicon organ', about which nothing further is known. An American variant of the reed organ popular in the early and mid-19th century was the 'rocking melodeon' or 'lap organ', a miniature portable instrument of short compass (three octaves or less), originally played by a button keyboard like an accordion, although later examples have normal keyboards. The wind is supplied by a double-wedge bellows located underneath the case containing the keyboard and reeds, with an internal return spring. The player places the instrument on the lap or on a table, rocking it back and forth with the heels of the hands or elbow to activate the bellows while playing. The inventor of this instrument appears to have been James A. Bazin, an immigrant from the island of Jersey who settled in Canton, Massachusetts, in 1778. His design

was later adopted by the New Hampshire instrument maker Abraham Prescott who in 1836 began manufacturing a three-octave lap organ with a normal keyboard in Concord, an early centre of reed-organ manufacture.



After 1840 the making of reed organs accelerated in the eastern USA; 39 patents for reed organs and reed-organ improvements were issued by the US Patent Office between 1840 and 1858. The most significant of these was that granted in 1846 to Jeremiah Carhart of Buffalo, New York, for the exhaust (or suction) bellows. Such bellows had been attempted before, in both Europe and America, but, because a fire a decade earlier had destroyed many patent records, it was at first thought that Carhart was the first to patent the idea. It was immediately licensed to Carhart's then employer, George A. Prince, and later to others, but during the ensuing years Carhart was frequently embroiled in litigation over the use of the exhaust bellows. In the 1850s one such lawsuit unearthed evidence, including Peasley's mention of a suction bellows in his 1818 patent, which caused Carhart's patent to be declared void, and henceforth the suction system was almost universally employed in America. Its advantage over the pressure system was stability, although at the sacrifice of the expressive properties so valued by the French.

The second half of the 19th century could well be called the era of the reed organ in America. At least 247 companies have been recorded as having made these instruments, many of them small. Prescott, Prince and Carhart, as well as Carpenter of Brattleboro and Shoninger of New Haven, were pioneers; but after the middle of the century several firms began to eclipse them. Led by the firm of Estey in Brattleboro, Vermont, they also included Riley Burditt (later Burdett) of Brattleboro, Chicago and Erie, Daniel F. Beatty of New Jersey, the Fort Wayne Organ Co., founded by I.T. Packard, Story & Clark of Chicago, and S.D. & H.W. Smith of Boston, makers of the 'Smith American Organ'. But the two firms which vied with Estey for volume and popularity were those of W.W. Kimball of Chicago, which by the end of its reed organ production in 1922 had manufactured 403,390 such instruments, and Mason & Hamlin of Boston. This firm was responsible for a number of improvements, including the double bellows and knee swell.

Something of a latecomer was the VOCALION, a pressure-type instrument developed by a Briton, James Baillie Hamilton, who began manufacture in Worcester, Massachusetts, in 1886. This instrument was unique in its use of unusually wide reed tongues, which gave it a smoother, more organ-like tone which made it popular for use in churches. Hamilton sold his interest in the Vocalion to the New York Church Organ Co. in 1888. Vocalions were later made by Mason & Risch of Worcester, Massachusetts, and as late as 1910 were still being made by the Aeolian firm.

The instruments made by these firms in the first half of the 19th century had a single manual and usually only one set of reeds. They were most commonly called melodeons, but the term 'seraphine' was also used, and occasionally other names were applied to instruments of this class, such as the Aeolodeon patented by Rufus Nutting in 1848, and said to be more pleasing and less nasal in quality than other melodeons. These early reed organs had the appearance of a square piano, sometimes with 'lyre' legs. The number of stops increased in the 1850s and 1860s; instruments of two manuals were made, and the 'square piano' and 'lyre leg' styles gave way to the more continental-looking boxy 'flat-top' model, with its two large treadles. The more familiar 'gingerbread' type of parlour organ, often sporting ornamental lamp stands, bric-a-brac shelves and mirrors, began to appear in the 1870s and 1880s (fig.4). By this time reed organs were being made in all possible sizes, from Mason & Hamlin's portable 'Baby' organ, introduced in 1881, to large church instruments such as Estey's Phonorium of the 1890s, with two manuals and pedals and a façade of dummy organ pipes.

It is interesting to contrast the use of the reed organ in various countries. The French *orgue expressif* reached a high degree of mechanical and musical sophistication in the late 19th century and was treated with respect by serious composers and musicians. Because pedalling had to be carefully coordinated with playing, it was not an easy instrument to master, and for the novice it was necessary to provide a mechanism allowing it to be winded from a fixed-pressure reservoir as well as directly from the blowing treadles. Harmonium playing was taught in conservatories, and the instrument developed a considerable literature. The Germans made suction as well as pressure instruments, a good proportion of which were fixed-pressure instruments intended for supporting congregational singing in village churches. French harmoniums were used in churches as well, but usually as supplementary choir organs for liturgical use. The British also used reed organs in homes and small chapels; but domestic production was never on a par with other countries, and instruments were imported from the USA, Germany and France. By 1877 there were sufficient

4. Reed organ by Story & Clark, Chicago, 1895

French harmoniums in use in England to prompt the organist John Hiles to publish an instruction manual for their proper use.

American reed organs, made with few exceptions on the exhaust principle, were of simpler construction if less musical sophistication. As early as 1856 Carhart patented a machine to mass-produce reed cells, and it was not long before large factories were being established to mass-produce low-cost reed organs; Estey even surrounded theirs with a 'mill village' of workers' houses. Because of its simple construction, low price and ability to stay in tune, the reed organ actually exceeded the piano in use as a domestic instrument for more than a half century. The smaller, lighter versions were the first keyboard instruments taken to the west by the pioneers. As small new churches sprang up, their first instrument was usually a reed organ, and larger churches with pipe organs in their main auditoriums used reed organs in Sunday schools and chapels. It was a popular instrument with such travelling evangelists as Moody and Sankey, and was taken abroad by missionaries. This resulted in its introduction to Japan, one of the few countries where reed organs are still manufactured, and India, where its integration resulted in the small, portable harmoniums still made there. At the height of their popularity American reed organs could be found throughout the world; in Europe they were even copied by such builders as Mannborg of Saxony and others in Scandinavia.

Interest in the reed organ began to wane in the first decades of the 20th century. Mass-production techniques had been applied to piano making, lowering the cost of pianos and increasing their availability and desirability as domestic instruments. Pioneer churches were prospering and buying pipe organs, and attempts to introduce reed organs for use in theatres met with little success. Around 1911 Story & Clark, Shoninger and many others sold their reed-organ interests and concentrated on pianos. Estey and Kimball diversified, adding pianos and pipe organs while slowly phasing out reed organs; Estey continued to make them until after World War II, their output including a Government Issue folding 'chaplain's organ' and an amplified electrified reed organ. Mason & Hamlin sold their reed-organ interests outright to the Aeolian Co., which shortly afterwards began marketing the Orchestrelle, a large player reed organ in an elaborate case, which enjoyed a brief vogue. The idea of a self-playing reed organ was not new, however (*see* ORGANETTE). Before the turn of the century small table-top 'roller organs' with such names as 'Mechanical Orguinette' and 'Chautauqua Organ' were popular. Operation was by a hand crank which operated both the small bellows and the pinned wooden player roll. In Europe Schiedmayer continued to make both pressure and suction reed organs into the 20th century, but Alexandre ceased business and Mustel increased production of the CELESTA, which they had invented. Before the mid-20th century electronic instruments had taken over the domestic market, and reed organs were often discarded or converted into desks; eventually they became collectors' items.

2. CONSTRUCTION. The sound-producing element in all reed organs is the free reed, a unit, usually entirely of brass, in which a thin tongue vibrates freely in an aperture when excited by air under suction or pressure (*see* REED INSTRUMENTS, fig.1*B*). The length of the reed tongue determines pitch, and timbre is determined by several factors, chiefly its width and thickness, although a slight twisting of the tongue also has an effect on tone quality. Reeds are tuned by scraping or filing either on the end (to sharpen) or at the base (to flatten); to prevent possible damage to the tongue, this is usually done with a thin piece of brass (reed slip) placed between the tongue and its mounting. Reeds are removed from their cells with a special tool called a reed hook, which fits a notch cut into one end of the unit.

In the pressure type of reed organ (fig.1*a*), wind is supplied by two feeder-bellows, which fill a spring-loaded reservoir above. Wind then flows from this reservoir into the valve-box of a windchest not unlike that of a pipe organ. Stop-valves admit air into channels above, one for each set of reeds. When a key is depressed, opening a valve above all reeds of that note, air will exhaust through the reeds from any channel which has been pressurized by drawing a stop-knob, causing them to sound.

In the *orgue expressif*, a stop-knob labelled 'E' or Expression allows a mode of operation in which the reservoir is bypassed, opening a set of valves which feed air to the reed chest directly from the feeder bellows. Because the pressure in the feeders can be increased or decreased by the action of the player's feet on the treadles, a wide and controllable dynamic range can be achieved. This requires skill on the part of the player in order to keep the wind supply smooth.

In the suction type of reed organ (fig.1*b*), foot treadles (one in early organs; two in most later ones) operate suction bellows which exhaust a spring-loaded vacuum reservoir of wedge shape. Use of the exhaust system simplifies the construction of the windchest (or 'pan'), which consists simply of a shallow box with a single note-valve for each note in the top board, depressed by a sticker pushed down by the key. The reed units are above the valves, each in its own 'cell' routed into a covering board. The stop action opens or closes the apertures of a given set of cells, so that when a key depresses its valve, only those reeds sound whose cells are open, allowing air to be drawn down through them by the vacuum. In two-manual organs the chest for the upper manual is usually in an upside-down position, so that the key-stickers are pushed up from the key tails, rather than down from the key fronts. When there is a pedal keyboard, its chest is usually located in the bottom or at the back of the case.

The pitch of reed organ stops parallels that of pipe organs, with 8′ pitch the basic or normal level, but with the possibility of additional stops of 16′, 4′ and, occasionally, 32′ and 2′ pitch. In most single-manual reed organs, both American and European, the stops are divided usually at *c*′, requiring a 'treble' and a 'bass' knob to activate the entire stop. Swell or Forte mechanisms are also usually divided to enhance possibilities for playing and accompanying solos on a single manual, and in some French harmoniums it is also possible to apply varying pressures to the treble and bass, providing further flexibility and shading possibilities. In American reed organs the knee-operated swell is used for shading.

French reed organs were fairly standardized in specification, although varying in size. The standardization of stop-names and their location on the stop-jamb above the keyboard made it possible for composers and publishers of harmonium music to indicate registrations in a kind of

shorthand (in parentheses in Table 1) which could be applied to instruments of most major makers.

A typical medium-sized instrument was Mustel's Model 2–A, with seven sets of reeds and speaking stops as shown in Table 1. It also had the following accessory stops: Prolongement ('Pr'), a device operated by a small lever near the player's left heel which causes any note depressed in the lowest octave to be held until the next note is played (in some larger models it acts on the entire keyboard); Métaphone ('Met'), a kind of mute which, by almost completely closing the reed cell apertures, softens and subdues a normally bright reed tone; and Forte expressif ('O'), a simple swell-shutter device above the reeds (called Forte in other makes), but in Mustel's instrument operated by a pneumatic device which responds to changes in wind pressure when the Expression knob ('E' or 'Ex'; see above) is drawn. In addition (1P) provides stop (1) with a percussion effect caused by actually striking the reed tongues with small hammers. The Harpe éolienne and Voix celeste both consist of two sets of reeds, one tuned slightly sharp and the other slightly flat to produce a gentle undulating effect.

Debain, Alexandre and others made models of similar resources, though without some of Mustel's patents; thus Alexandre's Forte ('O') was a simple shutter which was either open or closed, with no gradations, and their undulating stops had only one set of reeds, tuned to beat slightly sharp with the other stops. Many instruments also had Grand jeu ('G'), a pleno stop which brought on all stops except the undulating ones. The basic style was copied in other countries, and a Viennese version (*c*1875) by Peter Titz uses French stop nomenclature and the usual shorthand symbols, including Sourdine ('S'), a mute for the Cor anglais, and Tremblant ('T'), a stop not as common on European reed organs as it later was on American ones. Like Mustel and some others, Titz divided his keyboards between *e′* and *f′* rather than between *b* and *c′*. In the hands of a knowledgeable player, organs such as these are capable of a wide range of effects both subtle and dramatic.

American reed organs also achieved a certain amount of standardization, although on a less official level than in Europe, and without the registration symbols. A typical parlour organ would have two to four sets of reeds, usually divided at *c′*. A Smith American Organ of the 1870s, a fairly typical example, has the resources shown in Table 2. The two reed sets were a Diapason 8′ and a Principal 4′, the other two stops on each side being softer versions produced by closing a muting shutter over the reed cell unit. The only accessory is a pair of knee-levers which allow these shutters to be opened or closed independently, and with gradation.

A slightly larger instrument was Estey's Model 38, with three full sets of reeds plus a 12-note Sub Bass extension (for specification, see Table 3). This instrument also has a Forte knob which opens the shutters (or mutes) and a Tremolo. This latter, sometimes also called Vox humana, was a simple device consisting of a suction-activated rotating dowel fitted with two vanes of metal, pasteboard or thin wood, and placed near enough to the reed cell openings to produce an undulation. The Vox jubilante is a loud stop, analogous to the Diapason, and in some organs had two sets of reeds; the Dulciana is a muted Diapason, although in larger organs there is occasionally an independent set of reeds with this name.

Despite many patents taken out by Americans on reed organs, these usually concerned improvements in construction or production methods. American instruments generally lack some of the more esoteric mechanical devices found in European ones, but they include such oddities as reed organs combined with sewing machines, writing desks or pianos; chime or bell stops of steel bars (perhaps inspired by Mustel's *Orgue-celesta*); and a pure example of Yankee ingenuity in Kimball's 'safety pedal', which folded up in such a way as to prevent mice from entering the cabinet.

The larger the instrument, the more it attempted to emulate a pipe organ. A fairly typical example is the Schiedmayer two-manual-and-pedal suction model of about 1900 (Table 4), which was quite capable of supporting the singing of a congregation of 100 or more with all Forte stops and couplers drawn. In addition, there is a *Manual Koppel* operated by both a knob and a foot lever, and a *Volles Werk* foot lever which brings on all but the Dolce stops, which are only mutes, and the Aeolsharfe, which is an undulating stop with two sets of reeds.

Many American makers built instruments similar to this example, Estey going so far as to make a 'Student organ' model, in which the cumbersome reed box under the lower manual was eliminated to make the key-desk proportions as close to those of a pipe organ as possible.

The English firms of John Holt and Rushworth & Dreaper went a step further in the early 20th century, making two-manual-and-pedal instruments modelled closely after a standard pipe organ console. Alexandre and some of the Americans even made a few instruments (not totally successful because of tuning problems) combining pipes and reeds, and Alexandre also made a powerful instrument expressly for church use enclosed in an organ-type swellbox. Some of the larger vocalions were, internally, hardly distinguishable from a small tracker-action pipe organ. In the 20th century Estey and others made a small number of reed organs operated by electric action, on the principle of a unit organ, and the Everett piano firm for a short time made a reed organ with electrostatic transducers, the Orgatron. These instruments failed to compete successfully with fully electronic instruments, although some of the older mechanical-action reed organs of this type remain in use as church and practice organs.

3. Repertory. During the late 19th century in Europe the reed organ was regarded as a serious instrument for serious musicians, and harmonium courses were taught at the Paris Conservatoire, at one time by César Franck. Numerous harmonium tutors were published, and such composers as Franck, Louis and René Vierne, Guilmant, Dubois, Lemmens, Loret, Merkel, Lefébure-Wely, Leybach, Karg-Elert and Reger wrote original works for harmonium. Catalogues of the period are also filled with transcriptions for harmonium from operas, oratorios and orchestral, piano and organ works. In America the literature tended to be simpler, although reputable composers including Buck, Zundel, Clarke and Bird wrote tutors and original compositions, as did Pearce and Rimbault in England. American reed organ books in general, however, are aimed at the amateur performer. Secular music, particularly operatic transcriptions, folk-songs, popular songs, marches and dances make up the bulk of such collections, as well as a few hymns and voluntaries for church use.

In Europe there was less emphasis on the 'home amateur'. Franck's two volumes entitled *L'organiste* (published 1896–1900) and Louis Vierne's 24 *pièces en style Libre* (1913) are examples of serious harmonium music that is still performed, although usually on the pipe organ. Karg-Elert's output for the harmonium was extensive, including two tutors (*Die Kunst des Registrierens*, op.91 and *Gradus et Parnassum*, op.95), many small pieces and some of the longest and most technically exacting works ever written for the instrument. The reed organ was used extensively for ensemble music on the Continent, especially with violin, cello, flute and piano (Franck even arranged some of his own organ works for harmonium and piano), and one catalogue of around 1900 lists music 'for three or four hands'. Reed organs were also used extensively in salon orchestras as a substitute for brass and woodwind instruments. Many transcriptions, ranging from Strauss waltzes to Mozart overtures, were made for these ensembles, including some transcribed by Schoenberg.

The harmonium was also extensively used to accompany voices; Rossini and others scored for it in some of their operatic and church music. Perhaps one of the last instances of such use is in the original score of Weill's *Die Dreigroschenoper* (1928). In America, perhaps because of the virtual absence of a serious literature and limited expressive properties, the reed organ was unable to compete with the piano or organ as a concert instrument, although it was widely used to accompany voices, and sometimes used for this purpose in small concert halls possessing no pipe organ. After 1900 American composers took little interest in the reed organ with the exception of Bird, commissioned to write some harmonium pieces by a German firm, and possibly Ives, who may have intended accompaniments to such songs as *Serenity* (1919) for reed organ. In France, however, serious music continued to be written throughout the 20th century by major composers such as Vierne, Tournemire, Litaize and Langlais. As recently as 1988 Langlais and his pupil Naji Hakim collaborated on a collection of 30 pieces for harmonium entitled *Expressions for Organ*.

In the later 20th century interest in the reed organ and its music was renewed, albeit from an antiquarian standpoint. Well-restored reed organs of all kinds now are being acquired for public and private instrument collections, and research into the literature and the desire for authenticity in performance have resulted in the occasional appearance of reed organs in concerts and on recordings. They are also being restored for use in chapels and small churches at the insistence of musicians who prefer them to electronic substitutes, and because they are more durable. In 1981 the Reed Organ Society was formed; in addition to encouraging the collection and preservation of reed organs, it has been instrumental in reawakening interest in the instrument's repertory.

BARBARA OWEN

Reedpipe (Fr. *pipeau, pipet, pipette, tuyau à anche*; Ger. *Lingualpfeife, Zungenpfeife*; It. *canna ad ancia*). In the classification system of Hornbostel and Sachs, reedpipes are defined as instruments in which the air stream has intermittent access to the column of air made to vibrate through means of two lamellae placed at the head of the instrument (*see* AEROPHONE). The term is generally used for any simple or rustic pipe made from a reed or cane, or from several reeds, for instance the PANPIPES. Later studies of ancient and folk instruments, however, tend to restrict the term to instruments in which the sound is produced through vibration of a reed (single, double or free), the pipe itself being commonly, but not necessarily, made from reed or cane (*see* AULOS). By this definition panpipes would be classified with flutes rather than with reedpipes.

Organ 'reed pipes' are those provided with a reed (normally of metal) as opposed to the 'flue pipes', which sound on the duct-flute or whistle principle (*see* ORGAN, §III, 2).

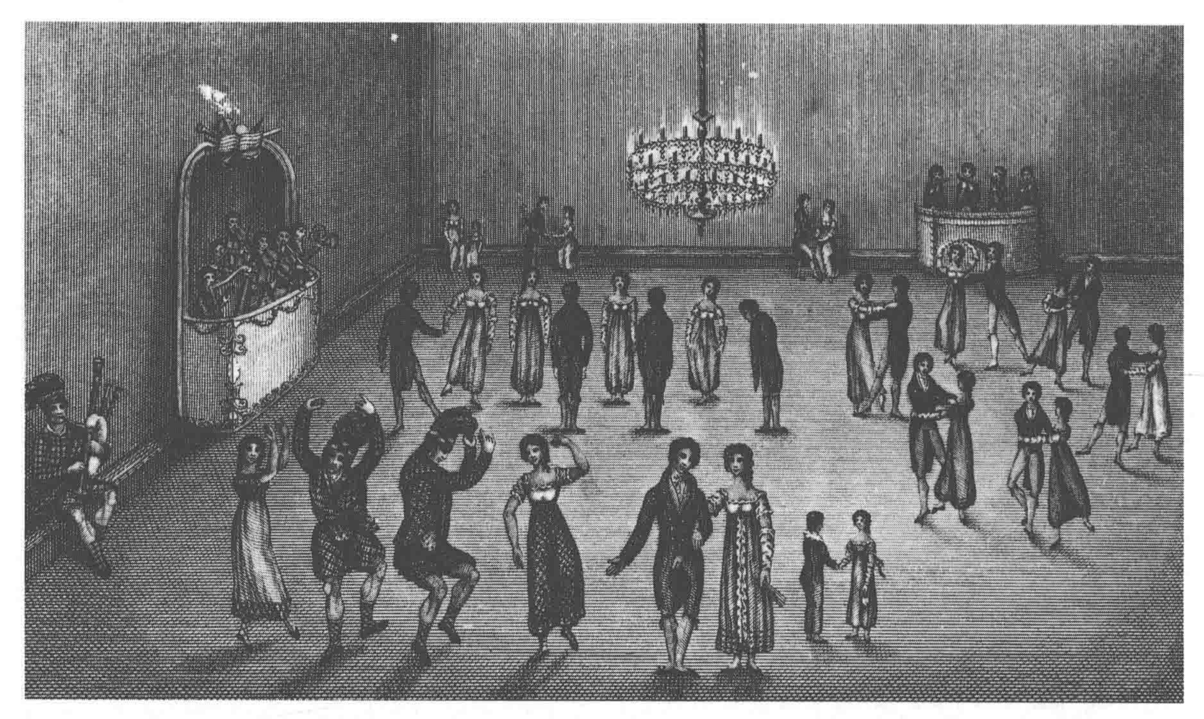
See also REED; REED INSTRUMENTS; STOPPED FLUTE ENSEMBLE.

ANTHONY C. BAINES

Reed-pipe ensemble. *See* STOPPED FLUTE ENSEMBLE.

Reed-work (Fr. *anches*; Ger. *Zungen*). The reed stops of an organ collectively (as distinct from FLUE-WORK), i.e. those in which sound is produced in each pipe by the wind exciting an elastic metal blade or tongue. The small metal tube cut away longitudinally against which the tongue 'beats' is properly called the reed or 'shallot'. Reed-work refers to the Trumpet family of flaring pipes, the Krummhorn family of cylindrical pipes, others of short, fanciful, stopped, half-stopped pipes and all varieties of metal and wooden stops other than those of the flue-work. The term also encompasses the many types of regal and 'free reed' or harmonium stops (*see* ORGAN, §III, 2–3; REED and FREE REED).

James Talbot (MS treatise, *GB-Och* Music 1187, *c*1695) called the shallot 'reed', but described the reed stops in general as 'Regal stops'. Occasionally 'reed pipe' (*ryetpijpen*) was used in the Netherlands (Michaelskerk, Zwolle, 1505) and hence, probably, in England; certainly 'rede' was used in a sense of 'reed instrument' by Chaucer (*House of Fame*, 1380) and John Gower (*Confessio amantis*, *c*1390). It is older than the term 'flue stop' by about two centuries. Burney (*BurneyGN*) used the phrase 'reed-work' of the organ in Ulm Cathedral.



PETER WILLIAMS/MARTIN RENSHAW

Reel (Anglo-Saxon *hreol*; Suio-Gothic cognate of *rulla*: 'to whirl'; Gael. *ruidhle*, *ruidhleadh*). An indigenous and probably very ancient Scottish dance. The reel contains two basic dance elements: a setting step danced on the spot, and a 'travelling' figure, i.e. movement in a particular pattern. One of the earliest specific references to the reel as a dance is in the report of the trial of the witches at North Berwick in 1590 at which Geilles Duncan, a servant girl, was stated to have played the reel *Commer goe ye before*, 'upon a small trumpe called a Jewes trumpe' (jew's harp), for the witches' dance. An early Gaelic reference to the reel occurs in a waulking-song:

> Reels around in endless mazes,
> With the great reed pipe a-straining

It is possible to establish the approximate date of the song because Gillie Calum, Chief of MacLeod of Raasay from 1648 to 1651 is mentioned in it as contemporary.

The reel has existed in Scotland in a number of forms, with qualifying names such as 'threesome', 'foursome', 'sixsome' and 'eightsome'; these indicate the number of dancers. Many of these forms are now obsolete. The earliest reel, which may go back to medieval times, was

Foursome reel (foreground) danced to the accompaniment of a bagpipe: engraving by J. Shury after J.H.A. Randall, from Thomas Wilson' 'A Companion to the Ball Room' (London, 1816)

probably the Circular Reel for two couples, of the western Highlands and Isles, in which the travelling figure was a circle. This could well have been performed round the fire, which in ancient times was in the centre of the floor. In the eastern Highlands and the Lowlands the threesome reel was danced, using the figure-of-eight as the travelling figure. It has been supposed that the threesome reel is related to the HEY or hay, a threesome dance that may have spread from the Continent to both Scotland and England in about 1500. The threesome reel was gradually displaced by the foursome reel (see illustration), also known as the Scotch Reel, first mentioned in 1776 by Topham; this remained a popular dance until after World War I.

The two reels most often danced today are the Reel of Tulloch and the eightsome reel. The modern version of the latter appears to have come into popular use in about 1868. The Reel of Tulloch (Gael.: *Ruidhleadh Thulachain* or *Hullachan*), as it is now danced, is said to have been devised in about 1880. The original dance, however, must have been older, for the tune *The Reel of Tulloch* appears in the McFarlan Manuscript (*c*1740). A folk-tale attributes the original composition of the dance to Iain Dubh MacGregor of Glen Lyon; this would date the dance from the late 16th century or the early 17th.

Ex.1 *Johnnie made a wedding o't*

♩ = 120

The first appearance in print of a reel tune with 'reel' in the title is in Playford's *A Collection of Original Scotch Tunes* (1700). Other early reel tunes appear in the McFarlan Manuscript, the Young Manuscript (1740) and in Walsh's *Country Dances* (1773). The music of the reel is of a rapid but smooth-flowing quaver movement in *alla breve* time, minim = 120 (ex.1). Orkney and Shetland have their own species of reels and reel tunes, some of which are obsolete. The 'auld reel' of Shetland, frequently with lines of irregular phrase structure, is thought to have some affinity with the Norwegian *halling* and other Scandinavian dances; this suggests that the reel may have been of Scandinavian origin. It may equally be, however, that the dance is Celtic, and spread from Scotland to Scandinavia and the Netherlands. The reel flourished in Ireland following its introduction from Scotland during the second half of the 18th century, and it is now a favourite dance-tune type among traditional instrumentalists (*see* IRELAND, §II). In North America the reel is the staple musical fare for square-dances, though in the central and southern USA it is often known by the name BREAKDOWN or HOEDOWN.

FRANCIS COLLINSON

Re-entrant scale. A SCALE which, when its letter names are arranged in alphabetical order, contains at least one descending interval (e.g. A–B♯–C♭–D–E–F–G).

Re-entrant tuning. A term used to describe the tuning of string instruments in which successive strings are tuned not to successively higher pitches but to a pattern of rising and falling intervals. Re-entrant tunings are found, for example, in the Renaissance four-course guitar (*g′/g′–d′/d′–f♯′/f♯′–b′*), the Baroque five-course guitar (*a/a–d/d′–g/g–b/b–e′/e′*), the ukulele (*g′–c′–e′–a′*), the five-course cittern (*d–a–g–d′–e′*) and the South American charango (*g′/g′–c″/c″–e″/e′–a′/a′–e″/e″*); Cerreto, Praetorius and Mersenne described various re-entrant tunings for the lirone (*see* LIRONE, §1). They are also found in certain instruments that have a short string to one side of the fingerboard (uppermost in instruments held horizontally, nearest to the player's face in instruments held vertically), such as the five-string banjo, the sitar and West African lutes of the *konting* and *khalam* family.

Such tunings produce characteristic effects of timbre and colour, including bright chordal accompaniments and clarity of delineation in melodic passages. Their widespread use, both historically and geographically, suggests that they have many inherent advantages, especially for smaller and more intimate plucked instruments such as the Baroque guitar and the ukulele, where brilliance of attack rather than sustained tone is required.

GRAHAM WADE

Rees, J(ohn) T(homas) (*b* Cwmgiedd, nr Ystradgynlais, 1857; *d* Bow Street, Cardiganshire, 14 Oct 1949). Welsh conductor and composer. He came to music after working as a coal miner for many years. Baptized John Morgan Rees, he allowed himself to be known as John Thomas Rees to avoid confusion with another miner of the same name. He studied music under Joseph Parry at Aberystwyth, took a MusBac at Toronto University, taught briefly in the USA and in 1889 settled in Bow Street near Aberystwyth. There he taught music, served as organist and conductor of the choir at 'Y Garn' Chapel, composed, wrote about music in Welsh journals and worked as an editor. For many years he was music editor of *Trysorfa'r Plant*. Of his compositions, which include an opera and most forms of instrumental composition, only his hymn tunes are now known ('Isfryn', 'Bronceiro', 'Llwynbedw', 'Salem', 'Neuadd Las'). Rees was a powerful figure in Welsh musical life, and was reputed to have conducted over many years more *cymanfaoedd canu* than anyone (the *gymanfa ganu* is a distinctive and uniquely Welsh kind of devotional entertainment at which large numbers of people join together in worship to sing hymns in four-part harmony under the direction of a conductor). During the late 1960s copies of several of his works were donated by his son to the National Library of Wales.

OWAIN EDWARDS

Reese, Gustave (*b* New York, 29 Nov 1899; *d* Berkeley, 7 Sept 1977). American musicologist and teacher. He attended New York University (LLB 1921, MusB 1930) and taught there, from 1927. He also served as visiting professor at a number of American universities including Harvard, Duke, UCLA, Southern California, Michigan and CUNY, and gave courses in musicology at the Juilliard School. He was associate editor (1933–44) and then editor (1944–5) of the *Musical Quarterly*. He was head of the publication department of G. Schirmer (1940–45) and director of publication at Carl Fischer (1945–55), a firm with which he was later connected in an advisory capacity.

Reese was a leading figure in American musicological administration. He was a founder-member of the AMS in 1934; having been its secretary (1934–46), vice-president (1946–50), and president (1950–52), he continued to serve the society as a member of various committees. In 1958 he became a vice-president of the Plainsong and Mediaeval Music Society; he was a member of the council of the IMS (1967–72) and served as president of the Renaissance Society of America (1971–3). He received honorary degrees from the Chicago Musical College (1949) and from Rutgers University (1972). In 1972 he received New York University's 'Great Teacher' award.

With the publication of *Music in the Middle Ages* (1940) Reese established himself as a scholar of the first rank. His *Music in the Renaissance* (1954) did more than simply add to his reputation; the two books taken together gave tremendous impetus to the study of early music and to musicology in general. In many respects Reese's work set new standards; the completeness and precision of bibliographic documentation, together with the orderly marshalling and clear exposition of fact in his books, have made them model textbooks. His fairness in representing the work of other scholars and his ability to select the best from among conflicting theories are exemplary. Another feature of these books is Reese's apt mixture of bibliographic fact with aesthetic judgment based on genuine acquaintance with an enormous body of music (this last no surprise to his students, with whom he always stressed the importance of getting to know the sound of as much early music as possible).

The sense of indebtedness felt by musicologists to Gustave Reese can be seen in the imposing scope and quality of the Festschrift volume presented to him on his 65th birthday. This indebtedness is still felt; his work,

especially *Music in the Renaissance*, remains indispensable to students.

JAMES HAAR

Reeser, H(endrik) Eduard (*b* Rotterdam, 23 March 1908). Dutch musicologist. He studied musicology (with Smijers) and art history (with Vogelsang) at the University of Utrecht and took the doctorate in 1939 with a dissertation on the violin and piano sonata in Paris at the time of Mozart. He taught history of music at the Conservatory of Rotterdam (1930–37) and together with Herman Rutters he was editor of the monthly *Caecilia en de muziek*; he also became music editor of the *Nieuwe Rotterdamsche courant*. After World War II he acted as government music adviser until 1947, when he joined the faculty of the University of Utrecht, where he continued to build up the reputation of the musicology department founded by Smijers by broadening its programme. Reeser was made reader in 1950 and professor in 1956; he retired in 1973.

Reeser continued the work of Smijers in creating a school of musicology at Utrecht, though in a different way from his predecessor since his interests were not limited to his own subject – music since 1600 – but extend broadly through the history of Western culture. A special interest was the Dutch composer Alphons Diepenbrock (1862–1921). His studies of Diepenbrock and the extensive *Brieven en documenten* (11 vols., 1962–98) are the most important documentation and commentary on art and life in the Netherlands between 1860 and 1920. *Een eeuw Nederlandse muziek 1815–1915* is unequalled as a history of Dutch music in the 19th century.

As a member of the board of many organizations Reeser played a prominent part in furthering Dutch musical life. He has been a member (1934–57) and chairman (1957–71) of the Vereniging voor Nederlandse Muziekgeschiedenis, secretary (1940–70) and chairman (1970–86) of the Alphons Diepenbrock Foundation, president (1947–57) and government advisor (1957–75) of the Donemus foundation, member of the board of the Prins Bernhard Foundation (1946–57), of the Willem Pijper Foundation (1947–57), and of the Holland Festival (1947–69), chairman of the Maatschappij tot Bevordering der Toonkunst (1951–69), and secretary of the department for literature of the Royal Dutch Academy of Sciences (1964–77). A member of the IMS council from 1958, Reeser served as president from 1972 to 1977.

ELLINOR BIJVOET/LEO SAMAMA

Reeve, William (*b* London, 1757; *d* London, 22 June 1815). English theatre composer and organist. After abandoning an apprenticeship as a law stationer, he studied the organ with Mr Richardson of St James's, Westminster, and in 1781 became an organist in Totnes, Devon. In 1783 he returned to London to compose all-sung burlettas for John Astley's equestrian theatre and John Palmer's short-lived Royalty Theatre; these non-patent houses were not permitted to perform spoken drama. Some of Reeve's pieces were revived at the patent theatres after the Royalty closed in 1788: the ballet-pantomime *Don Juan* (1787), for example, proved particularly successful, and both Drury Lane and Covent Garden adopted it for their repertories.

Reeve was elected to the Royal Society of Musicians in 1787, eventually serving as a Governor in 1794 and 1804. He acted in the Haymarket company in 1789 and at Covent Garden for two seasons (1789–91 at £2 a week), playing minor roles at both. When Covent Garden's house composer, William Shield, left abruptly in autumn 1791, Reeve took over the position (at £4 a week), which included completing Shield's score for the ballet-pantomime, *Oscar and Malvina* (1791). After Shield's return in 1792 Reeve became organist of St Martin Ludgate but continued as a freelance composer for London's patent and minor theatres. He also provided much rather facile music for the topical spectacles and pantomimes at Sadler's Wells. During Lent 1794 he was engaged at the Lyceum Theatre for four nights a week, producing *Mirth's Museum*, a variety entertainment. He served a second term as Covent Garden's house composer during 1797–8 and began collaborating with other composers.

From 1803 until his death Reeve also served as co-proprietor, director of music, and shareholder of Sadler's Wells Aquatic Theatre, where he set about 80 librettos, many written by co-proprietor Charles Isaac Mungo Dibdin. Because of the success at Drury Lane of Reeve's comic opera *The Caravan* (1803), which featured an on-stage water tank into which Carlos the wonder dog leaped to rescue a drowning child, Sadler's Wells installed an irregularly shaped 8000-gallon tank, three feet deep, beneath the stage. Reeve wrote music for the new specialty, 'aquadrama': all-sung musicals featuring pirates, waterfalls, nautical battles, ocean fiends and other watery terrors.

Reeve wrote largely to support and highlight the talents of specific performers, such as the clown Joseph Grimaldi at Sadler's Wells, and to provide easy listening. He could rapidly compose strophic comic songs in the popular Scottish style and compile scores based on genuine ballads and folksongs. Reviewers found his music entertaining. Some of his other popular later works included a melodrama, *The Purse* (1794), a Robin-Hood pantomime, *Merry Sherwood* (1795) (especially the drinking song 'I am a friar of orders grey') and a comic opera, *The Cabinet* (1803). At his death, Reeve owned seven of Sadler's Wells's 40 shares, which he bequeathed to his daughter, Charlotte. His family pursued theatrical careers as well: Mrs Reeve sang at Astley's and in *Mirth's Museum*, Charlotte was an actress and his son George composed for Sadler's Wells and played the trumpet. A portrait of Reeve engraved by J. Hopwood (after E. Smith) appears in the libretto to *The Cabinet*.

WORKS

STAGE

only works from which music survives are listed; all first performed in London and published in London shortly after first performance; librettos or song texts published unless otherwise stated

LCG – *Covent Garden*
LDL – *Drury Lane*

LINDA TROOST

Reeves, David Wallis (*b* Owego, NY, 14 Feb 1838; *d* Providence, RI, 8 March 1900). American bandmaster

and composer. His first band experience was as an alto horn player in the Owego Municipal Band. At 15 he moved to Elmira, New York, where he studied harmony, the violin and the cornet with the cornettist and bandmaster Thomas Canhan. They travelled and performed with a circus band during the summer and played in concert halls and for dances during the winter. At 19 Reeves returned to Owego to lead the Owego Band, then moved to New York to play with the Dodworth Orchestra. He next went to England with the Rumsey and Newcomb Minstrel Troupe.

In 1862 Reeves became cornet soloist with the Dodworth Band in New York and in 1866 assumed leadership of the American Band of Providence, Rhode Island. For a brief period in 1892 he was leader of the Gilmore Band. However, his tenure was stormy and many of his players left to join the new Sousa Band. Reeves accused Sousa's manager of raiding his ensemble, an allegation strongly refuted by the players. Reeves returned to Providence, where he resumed leadership of the American Band. A prolific composer, he wrote three operas and over 100 marches, of which the *2nd Reg[imen]t, Conn[ecticut] N[ational] G[uard] March* is the best known.

FRANK J. CIPOLLA

Reeves, Sims (John) (*b* Shooters Hill, south-east London, ?26 Sept 1818, bap. 25 Oct 1818; *d* Worthing, 25 Oct 1900). English tenor. He was the son of John and Rosina Reeves; his father, who taught him the piano, cello and bassoon, was a Royal Artillery bandsman at Woolwich. After studying with George Mackenzie, J.B. Cramer and W.H. Callcott, Reeves made his début as a baritone on 14 December 1838 at Newcastle upon Tyne in Bishop's *Guy Mannering*. After three seasons he found that his voice was changing and trained with J.W. Hobbs and T. Cook. He sang second tenor roles with Macready's company at Drury Lane in 1842–3, and then went to Paris and Milan for further study with Bordogni and Mazzucato. He made his début at La Scala in 1846 as Edgardo in *Lucia di Lammermoor* and in 1847 he appeared as Zamoro in Verdi's *Alzira*. Returning to London in December that year he sang Edgardo at Drury Lane, where on 20 December 1847 he created the role of Lyonnel in Balfe's *The Maid of Honour*. In February 1848 he sang Faust in the first performance in England of Berlioz's *La damnation de Faust* under the composer. From 1848 he sang at Her Majesty's Theatre, first under Lumley's and then Mapleson's managements. In 1851 he was briefly engaged at the Théâtre Italien, Paris. In London he sang the title role in *Faust* in the opera's first performance in English in 1864, and Huon in the revival of *Oberon* in 1866. In 1848 he appeared at the Norwich Festival and sang in Handel's *Messiah* at the Sacred Harmonic Society, and thereafter he appeared regularly at the various choral festivals. He was particularly admired in Handel oratorios and for his performance of the Evangelist in Bach's *St Matthew Passion*, which he sang under Sterndale Bennett in 1862. In the late 1860s he pressed for the adoption of a lower musical pitch in England. He made his formal farewell appearance at the Royal Albert Hall in 1891, but reappeared in a concert in 1893, and made a tour of South Africa in 1896 with his pupil Maud Richard, whom he had married the previous year. His first wife had been the soprano Emma Lucombe (*d* 1895) who performed in operas and concerts. Their son Herbert Reeves, and daughter Constance Sims Reeves, both appeared in concerts.

HAROLD ROSENTHAL/GEORGE BIDDLECOMBE

Reeves, William. English firm of publishers and music antiquarians. The first of five with that name may have owned a bookshop in London in the 1820s. His son, William Dobson Reeves (1825–1907), a partner in the antiquarian firm of Reeves and Turner, also published some books and several series, but his only music venture appears to have been to issue the *Musical Standard* from 1862 to 1875.

The third William Reeves (1853–1937) continued to publish it and other journals – *The Strad*, *The Orchestra*, *Reeves' Musical Directory* and several on non-musical subjects – after opening a shop in Fleet Street in 1875. He printed hundreds of books in all fields, including over 300 on music. He courageously issued the first legitimate edition of *The Communist Manifesto* and an early edition of *Das Kapital* whose editor, Friedrich Engels, frequented the shop. His later non-music publications reflect similar social, economic and political concerns; many appeared in the USA under the imprint of American firms. In 1900 William Reeves (iii) opened a new shop, primarily for antiquarian music, in Charing Cross Road; it became a Mecca for London's musicians. To accommodate the huge music stock he rented a number of warehouses, and to encourage sales he issued catalogues of fictitious firms at invented addresses. His son Frank, a skilled printer, performed the necessary presswork. Frank's brother, William Harold (1880–1960), left the firm to open his own music antiquarian business and by 1919 operated in Bournemouth under the trade name Harold Reeves.

The William Reeves firm moved to Norbury in 1953 and the antiquarian trade was continued largely by post. Around 1960 a number of earlier publications, including music titles by Berlioz, Wagner and others, were successfully reissued. But selling William (iii)'s accumulations remains the major enterprise of the firm which is the oldest music antiquarian business in England. The firm is now run by William Arnold Reeves (*b* 1916), the son of Frank Reeves who regularly issues sale catalogues of items from these collections.

JAMES B. COOVER

Refardt, Edgar (*b* Basle, 8 Aug 1877; *d* Basle, 3 March 1968). Swiss musicologist. After receiving the doctorate in law in 1901, Refardt devoted himself entirely to musicology, specializing in music bibliography. His *Historisch-biographisches Musikerlexikon der Schweiz* (1928) aimed to assemble as much biographical knowledge on Swiss music as possible. It was the first overall treatment of Swiss musical history and placed him, together with Peter Wagner and Karl Nef, among the first Swiss music historians. Refardt devoted special attention to the work of Theodor Fröhlich (he was really responsible for the rediscovery of this Swiss early Romantic composer) and Hans Huber. From 1921 to 1948 he was director of the Basle Orchestral Society.

JÜRG STENZL

Refice, Licinio (*b* Patrica, nr Frosinone, 12 Feb 1883; *d* Rio de Janeiro, 11 Sept 1954). Italian composer and conductor. After studying composition and organ at the Rome Conservatory, graduating in 1910 and in the same year taking orders, he taught at the Scuola Superiore (later the Instituto Pontificio) di Musica Sacra (1912–50) and was *maestro di cappella* at S Maria Maggiore (1911–47). In his later years he made several international tours as a conductor (sometimes with the Cantori Romani di Musica Sacra); the last of them took him to Brazil, where he died. Refice's output chiefly comprises church music for chorus and organ. Regarded as Perosi's heir, he was supported by the Vatican, which widely propagated his masses *Regina Martyrum* (1920), *In honorem Sancti Eduardi Regis* (1933, dedicated to Cardinal Eugenio Pacelli, later Pope Pius XII), *In honorem Beatae Theresiae* (1938) and *In honorem Virginis Perdolentis* (1940). His style is a mingling of archaism, with lines overtly derived from plainsong, and late Romantic and 20th-century harmony. Dramatic gifts led him to write many 'mysteries', 'biblical scenes', oratorios and two operas on hagiographical subjects, both (along with many oratorios) to librettos by his friend and biographer Emidio Mucci. *Cecilia* (1922–3) was performed in Rome in 1934 with Claudia Muzio in the title role. The success of the opera caused Refice to undertake another, *Margherita da Cortona*, performed with success at La Scala in 1938. Both show an interesting juxtaposition of mysticism and passion, a careful reconstruction of historical settings and a sensitivity in the orchestral writing; *Cecilia*, in particular, won a degree of international fame.

Orats, cants. etc.: La Cananea (orat), 1910; La vedova di Naim (P. Ferretti) (cant.), 1912; Maria Magdalena (Ferretti) (orat), 1914; Martyrium S Agnetis Virginis (Ferretti) (orat), 1919; Dantis poetae transitus (G. Salvadori) (poema sinfonico-vocale), Ravenna, 1921; Trittico Francescano (Mucci) (orat) (1926); La samaritana (Mucci) (episodio evangelico) (1930); L'oracolo (Mucci) (mistero), Milan, 1946; Lilium crucis (Mucci) (mistero), Naples, 1952; Pomposia (G. Pascoli), Assisi, 1957; Emmaus (Mucci) (episodio evangelico), inc.
Masses: over 40, incl. Regina Martyrum, 1920; In honorem Sancti Eduardi Regis, 1933; In honorem Beatae Theresiae, 1938; In honorem virginis Perdolentis, 1940
Other church music: Stabat mater, 1917; Te Deum, 1918; hymns, motets, psalms, many other pieces
Other works: few secular songs, small inst pieces etc.

LUCA ZOPPELLI

Reformed and Presbyterian church music. The music of Protestant denominations belonging to (or inspired by) the Reformed tradition inaugurated by Ulrich Zwingli and, particularly, Jean Calvin in Switzerland during the early decades of the 16th century. In almost all the Churches metrical-psalm singing has remained the distinguishing musical element of their worship.

I. Continental Europe. II. Britain and North America.

I. Continental Europe

1. Liturgical background. 2. The Genevan Psalter. 3. Polyphonic compositions on Genevan psalm tunes. 4. Other countries.

1. LITURGICAL BACKGROUND. The Reformation ushered in by ULRICH ZWINGLI in Zürich in 1525 caused a break with traditional worship and its music. Unlike Luther, Zwingli did not preach within the framework of the Mass but in a special form of service based on the sermon. The liturgy employed for such a service, whose roots lay in late medieval practice, was entirely (or almost entirely) said rather than sung. At this early stage of the Reformation congregational singing within the liturgy was a rare occurrence, so that after the celebration of the Mass declined in Zürich and the preaching service became the central act of worship, liturgical music lost its foothold. That congregational singing was not introduced in Zürich in the years following the Reformation was probably connected with Zwingli's death in 1531, after which his successors for a long time adhered strictly to the late Reformer's decrees. In other Swiss and north-German cities, however, where Zwingli had been equally responsible for shaping the Reformation, congregational singing was introduced quite soon, at much the same time as in Lutheran areas. Scriptural authority was usually cited in justification of sacred song.

2. The Genevan Psalter. The Reformation of 1536 in Geneva brought about a complete ban on music in the sermon-based church services; Geneva followed the example of Berne, its protecting power, where, in imitation of Zürich, music was also excluded from all services. Early in 1537 the pastors of Geneva petitioned the town council to introduce psalm singing; however, the expulsion of Jean Calvin in 1538 through disputes over church discipline obstructed this plan at first. Calvin went to Strasbourg and as pastor to the French refugee community in that city came into contact with the German psalm-singing tradition; in 1539 he compiled the first collection of metrical psalms, *Aulcuns pseaumes et cantiques mys en chant*, containing 13 psalms translated into rhyming verse by the poet and literary theorist Clément Marot (*see* Psalms, metrical, §II, 2(i)). It is not known how these texts reached Strasbourg and who composed the melodies. Calvin himself contributed six metrical psalms to this collection as well as verse translations of the Ten Commandments, the Creed and the *Nunc dimittis*. Apart from the *Nunc dimittis*, Calvin's texts were to be sung to German hymn tunes from Strasbourg.

Calvin was recalled to Geneva in 1541, and the first Genevan Psalter, *La forme des prières et chantz ecclésiastiques*, appeared the following year; it contains the order of service and prayers, together with the 13 psalms by Marot and five of the psalms, the Decalogue and *Nunc dimittis* by Calvin from the Strasbourg Psalter, as well as 17 new metrical psalm translations by Marot. The new melodies were most probably by Guillaume Franc, 'chantre' of the church and singing master in the school. The preface clearly expresses Calvin's ideas of the purpose of music: 'to move and inflame the hearts of men, so that they may call upon God and praise him more fervently'. However, he emphasized the special dignity of liturgical music as distinct from the kind of music 'that is made to give people pleasure at table and in their houses', by which he may also have meant sacred music. The second edition of the Genevan Psalter, *Cinquante pseaumes*, appeared in 1543 (the preface bears the date 10 June); all the texts are by Marot, who in 1542–3 was in Geneva taking refuge from persecution, and there is a separate melody for each text. The single extant copy of the *Cinquante pseaumes* of 1543 contains the texts alone, but the melodies, again all probably by Franc, may be inferred from the later 1548–9 edition.

Loys Bourgeois, who succeeded Franc in 1545, first of all wrote polyphonic versions of the existing melodies for domestic use; they were published in 1547 in Lyons because of the printing equipment available there. In 1548 Théodore de Bèze arrived in Geneva and continued the task of providing metrical versions of the psalms. An enlarged edition of the Psalter, *Pseaumes octantetrois*, with new melodies by Bourgeois, was published in 1551. The editions of 1554 and 1556 included six and seven additional psalm texts respectively, but without melodies of their own (possibly because Bourgeois was no longer in Geneva – a substantial cut in his salary had obliged him to leave in 1552). The complete Psalter was not published until 1562; all the new texts are by de Bèze, and 'Maître Pierre le chantre' (probably Pierre Davantès, although his exact identity has not been established) is named as composer of the melodies.

An important element in the background history of the melodies was the humanistic composition of odes: the setting of ancient texts to music in accordance with their metres, using only two different note values corresponding to the long and short syllables ('mesuré à l'antique'). This interplay of long and short notes was also adopted for French metrical psalm melodies, but with little regard for the accentual and grammatical structure of the text. The correspondence between words and music is, therefore, less close than in, for example, Luther's hymns, a factor of undoubted significance when Genevan melodies came to be adopted for metrical psalms in other languages.

Lines are clearly marked off from each other both by long initial and final notes and by pauses. There are no dotted or triple rhythms and few tied notes, so that the performance remains as closely related to speech as possible. The melodies often rise and fall quite steeply and display a wide range within relatively short phrase-units; their basic orientation is modal, although a tendency towards major and minor tonality is also evident in many cases. The various stages of development of the Genevan Psalter show that considerable effort was expended on composing the melodies, which by comparison with most German hymn tunes of the Reformation period have more in common with art music than with folksong. Although some melodies are based on Gregorian models and a few on German hymns and secular chansons, the psalm melodies as a whole display so many common features and such strongly characteristic formal principles that there could have been no routine dependence on models. Unlike Luther's psalms, in which a degree of interpretation from a New Testament perspective is evident, the words of the Genevan psalms conform as closely as possible to the biblical texts. Consequently, when the process of rendering the texts into metre was completed in 1561, the University of Paris vouched for their fidelity to the 'vérité hébraïque'; without such testimony a royal privilege to print them would not have been granted. In the Psalter there are 125 different melodies and almost as many different verse metres for the 150 psalms, the metrical Decalogue and the *Nunc dimittis*; despite its unity of structure, it has greater formal variety than any other repertory of sacred song.

In church services the psalms were not chosen for their subject matter but were sung in a set order so that the congregation could cover the whole psalter twice in one year. The singing was unaccompanied and in unison, partly to ensure the simplest and clearest manner of worship, but also because prevailing musical circumstances in Geneva made it impossible to call on any church choir to provide liturgical music.

3. Polyphonic compositions on the Genevan psalm tunes. The many polyphonic works based on the psalms indicate that polyphony was not entirely rejected, although such compositions were performed in schools and in the home rather than in divine service. There were three types of setting: the large-scale, imitative, polyphonic motet, whose material was derived from one of the psalm melodies; the cantus firmus motet, in which the psalm melody was sung unchanged in one voice (usually the tenor or treble), the other voices singing in more or less close imitation; and the homophonic, syllabic setting, with the melody usually in the tenor voice.

The earliest psalm compositions were by Loys Bourgeois (1547, 1555, 1561), but the settings of Claude

Goudimel proved particularly influential. Goudimel published separate collections in each of the three genres (the second and third styles used for complete editions of the psalms). The homophonic settings (Paris, 1564; Geneva, 1565) enjoyed extraordinarily wide distribution, particularly through Ambrosius Lobwasser's use of them in his German version of the Genevan Psalter (Leipzig, 1573). Other complete psalters were composed by Philibert Jambe de Fer (Lyons, 1564), Paschal de l'Estocart (Geneva, 1583) and Claude Le Jeune. Le Jeune's homophonic settings (Paris, 1601), issued a year after the composer's death, were also widely distributed at certain periods but not to the same extent as Goudimel's. His motets, for which he employed different types of setting and numbers of voices, include three books (1602, 1608 and 1610), each containing 50 three-part psalms. The elaborate psalm motets written at the beginning of the 17th century by the Dutch composer J.P. Sweelinck (1604, 1613, 1614 and 1621) are of great importance; their range of influence is attested by the singing of Rheto-Romanic versions of these compositions during church services in the Engadine area of Switzerland.

The existence of psalm settings for lute, or for lute and singing voice, is evidence of the place of the psalter in domestic music-making; some of the versions are intabulations of vocal settings, but others are genuine lute compositions. Complete psalters for lute survive by Adrian Le Roy (1547), Daniel Laelius (1617) and Nicolas Vallet (1620).

4. Other countries.

(i) French-speaking regions. In France itself the constant persecutions and restrictions meant that there were no distinct Reformed areas of any considerable size. Reformed church music, therefore, barely developed beyond the singing of psalms in divine service. However, a number of chansons with sacred texts were composed in the 16th century, and new sacred texts were set to the melodies of existing secular chansons. Among the composers of such works were Clément Janequin, Jacques Arcadelt, Pierre Certon, Eustorg de Beaulieu and, again, Goudimel. The metrical texts of the psalter were revised, and Valentin Conrart and Marc-Antoine Croziat wrote new versions in 1677–9. Further revisions and new editions appeared in the 20th century, most notably *Le psautier français* published in 1995 with texts by Roger Chapal.

In French-speaking Switzerland, a prominent role was played by the city of Lausanne, where a psalter was published in 1565 containing new melodies for almost all the psalms without their own tunes in the Geneva edition. The additional melodies were by Guillaume Franc, who had become 'chantre' in the city after leaving Geneva. Some of the melodies of the Genevan Psalter were revised or replaced.

Accompaniment of congregational psalm-singing began in the 17th century in western Switzerland: wind instruments were used at first in the Waadt region (governed by Berne), and groups of singers were employed elsewhere; the organ was introduced in the 18th century. At about the same time, newly composed *cantiques spirituelles* and hymns adapted from the German tradition were also sung. There were no notable compositions of sacred music in French-speaking Switzerland until the 20th century and the works of Frank Martin, who was descended from a Genevan pastor's family.

The Waldensians may be counted as belonging to the French-speaking area in its wider sense. Originally from France, they settled in the mountain valleys of the Piedmont during the 13th century and adopted Genevan Calvinism after the Reformation. For divine service they generally used the French language and thus the Genevan Psalter in its original form. However, a partial edition in Italian, with Calvin's preface of 1542–3, was published in Geneva in 1585. A particular Waldensian practice was the singing of *complaintes*, narrative songs in the style of traditional music and based on biblical themes or stories of Waldensian martyrs.

(ii) Netherlands. The Reformed communities in the Netherlands led a clandestine existence during the mid-16th century. At the beginning they sang the Souterliedekens, a collection of metrical psalms to secular song tunes first published in 1540 and appearing in a further 33 editions by 1613, including a revision by Clemens non Papa in 1556–7 for three voices and one by Gherardus Mes in 1561 for four voices. However, with the strong influence of Calvinism, the *souterliedekens* were soon replaced by metrical psalms to the Genevan melodies. The first translation was by Jan Utenhove for the Dutch refugee community in London, although he indicated that a different tune was to be used in some cases. The translation by Petrus Dathenus then became the standard version. Introduced in 1568 by the synod of Wesel, it was confirmed as the official psalter by subsequent synodical decrees, despite some criticism of it and the existence of other metrical versions such as that by Philip Marnix van St Aldegonde (Antwerp, 1580). It was not until 1773 that Dathenus's version was replaced by a new translation known as the *Statenberijming*.

Although use of the Dathenus Psalter was mandatory and exclusive, other sacred songs were sung in the Netherlands, most of them from the Lutheran areas of Germany. In 1574 *De Psalmen Davids ... ende ander Lofsangen* appeared in Emden, with sacred songs forming the second part. Some centuries later, the repertory for divine worship was extended by the publication in 1938 of the *Liedboek voor de kerken* (revised in 1973), incorporating a substantial amount of material from other traditions as well as a number of new compositions (both texts and music). The *Statenberijming* psalms were replaced with new texts by Martinus Nijhoff, Jan Wit, Ad den Besten, Jan Willem, Schulte Nordholt, Willem Barnard, Muus Jacobse, Gerrit Kamphuis and Willem Johan van der Molen.

Following the Genevan example, Dutch congregations after the Reformation sang in unison and unaccompanied, led by a cantor; organ accompaniment was introduced in about 1630. (Polyphonic psalm settings were strictly non-liturgical.) As in Germany and Switzerland, the tempo of congregational singing became considerably slower during the course of the 17th century, making it impossible to keep to the original rhythms. A characteristic feature of Dutch practice was the improvised ornamentation of notes sung slowly and regularly. With the *Statenberijming* of 1773, the *korte singtrant* ('short or quick manner of singing') was introduced; only the first and last notes of each line were sung in the usual slow manner, the notes between them were sung at twice the speed. A return to original rhythms and appropriate tempos took place in the mid-20th century.

In contrast to Switzerland, organs remained in place in almost all Dutch churches after the Reformation, although at first they no longer fulfilled a liturgical function. Organists became civic employees, their task being to play before and after divine worship for the spiritual edification and pleasure of the faithful; they were also required to play at certain other times (e.g. after the bell for evening service had been rung) and on official occasions, which were often held in churches (being the largest public 'rooms' available). Reformed church music thus became one of the major sources of non-liturgical sacred music and led to the establishment of the church concert.

Except for the works of Sweelinck, very little organ music by early Dutch composers has come down to us, probably indicating that such music was largely improvised. Sweelinck combined the early English and Italian keyboard styles, and as the teacher of Heinrich Scheidemann and Samuel Scheidt, among others, he exercised a significant influence on the German organ repertory. Other works for organ include versions of psalm tunes by Henderik Speuy (tablature book of 1610), Anthoni van Noordt (*Tabulatuur-boeck*, Amsterdam, 1659) and Quirinius Gerbrandszoon van Blankenburg (*Clavicimbel-en orgelboek der gereformeerde psalmen en kerkzangen*, 1732).

Special mention should be made of the carillons in Dutch churches that regularly 'broadcast' psalm tunes to the outside world. This phenomenon, like the development of the church concert, is closely connected with the Calvinist belief that no special distinction is to be made between the sacred and the secular: the Church and the world are an indivisible and all-embracing whole, equally suited to the worship of God. Accordingly, organ music and polyphonic choral music, genres originally considered to be non-liturgical, were later adopted into the order of service.

(iii) German-speaking Switzerland. Although in 1525 Zwingli had instituted in Zürich a sermon-based service without singing (a tradition subsequently adopted by other towns, e.g. Berne in 1528), music was not entirely absent from church services during the Reformation century in Switzerland. In Basel congregational singing was introduced in 1526, at the start of the Reformation itself, and the Reformed community of St Gallen (1527) also sang from the first instance. In 1566 the Second Helvetic Confession expressed itself in neutral terms on music in worship, but the general trend was positive. After the middle of the century singing was introduced into the order of service in Schaffhausen (*c*1555), Berne (1573–4, after preliminary stages in 1538 and 1558) and Zürich (1598). The sung repertory was essentially based on that of Konstanz and Strasbourg. The first edition of the Konstanz Gesangbuch was printed in Zürich in about 1533–4 and subsequent editions were also printed there; it would appear, therefore, that singing had not been completely rejected in the city or the authorities would hardly have granted the work a printing licence.

From about the end of the 17th century until well into the 19th, the Genevan Psalter was dominant. The Zürich Gesangbuch of 1598 contained all 150 psalms in Lobwasser's translation; the Berne Gesangbuch of 1606 consisted of a mixture of Strasbourg and Genevan psalms, as did the St Gallen Gesangbuch of 1606, which also included settings by Goudimel. As the 17th century proceeded, Lobwasser's version of the psalms was largely established as standard; four-part settings were the general rule, although Goudimel's music was usually revised and simplified, most notably in the *Transponiertes Psalmenbuch* (1675) of J.U. Sultzberger, music director of Berne. Besides the Lobwasser psalms, these books usually contained a small number of 'festive hymns' (i.e. for the church year, for baptisms, the Communion service and weddings) and 'old psalms' (i.e. psalms from the 16th-century Strasbourg and Konstanz repertories).

Congregational singing was led by a Kantor, usually with the support of a choir consisting of schoolchildren and a few adults. In the 17th century it was often led by a wind ensemble; the organ was reintroduced in the canton of Berne in the 18th century and in the Zürich canton in the 19th. Basle, where the organ came back into use as early as the 16th century, occupies a special position; it was here that Samuel Mareschall published several settings of psalm tunes with the melody in the treble (1606). The Basle books also contained a larger repertory of hymns that were not part of the Lobwasser Psalter.

In the 18th century Lobwasser's texts were replaced by various new metrical versions, such as those of Johann Jakob Spreng (Basle, 1743) and Johannes Stapfer (Berne, 1775), but the new metrical version by Johann Rudolf Ziegler (Zürich, 1763) did not become popular. In the 19th century the Genevan psalms disappeared either wholly or partly from Gesangbücher, making way for German hymns, both older and more recent; those to texts by C.F. Gellert were especially prominent. The first Gesangbuch for the whole of German-speaking Switzerland appeared in 1952; it begins with a short section devoted to metrical psalms, following to some extent the tradition of the old psalters.

Early Gesangbücher provide only limited indications of singing practice. From contemporary accounts, it seems that in the first instance the congregation hardly joined in at all, leaving the singing to the Kantor or choir. Only gradually during the course of the 17th and 18th centuries did genuinely congregational singing become the norm. For long periods, too, polyphony must have been a very imperfectly realized ideal. It is noteworthy that church authorities, pastors and schoolmasters made constant efforts to teach singing. Until the 19th century the Berne Gesangbuch included in its appendix an elementary theory of music to enable members of the congregation to learn to sing from musical notation. The psalms were sung at a very slow tempo, and, in accordance with the clear instructions given in the Berne book, no difference between long and short notes was to be observed in the psalm melodies.

Singing gained a new impetus with the introduction of the organ. In Lutheran areas the organ was at first more commonly associated with choral music or with the solo performance of preludes and voluntaries; only later did it assume the role of accompanist to congregational singing. In Reformed Switzerland, on the other hand, when the organ was introduced in the 18th and 19th centuries, its primary function was to accompany the singing. In view of this limited scope, instruments were usually quite modest. In many places organists compiled manuscript books containing the psalm tunes, with Goudimel's basses and additional figured continuo, and often the patterns for interludes to be played between the lines of the psalms. Except for the larger cities, organ music of a more

artistically demanding nature was not commonly heard in Calvinist churches until after church music reforms in the 20th century.

During the early days of Calvinist music as well as later, singing in schools and at home took its place beside singing in the church. In towns and larger villages, the musical ensembles founded to promote congregational singing were the very foundations upon which the musical life of the middle classes was gradually built. An 18th-century movement initiated by J.C. Bachofen and Johannes Schmidlin to encourage singing in the Zürich Oberland focussed, in line with the spirit of the times, on sacred songs of an edifying and sentimental nature written in the style of the late-Baroque continuo song. Settings for two sopranos and bass are typical of Bachofen; and Niklaus Käsermann, Kantor of Berne Minster, contributed a number of settings for similar forces of sacred songs by Gellert (1804). Käsermann also wrote a version of each song for voice and simple piano accompaniment; aesthetically, these may be regarded as a form of 'naive art'. The ventures of Bachofen and Schmidlin were continued through the Volkschor movement of the singing teacher H.G. Nägeli (1773–1836), a significant figure in the history of the choral society. During the 19th century and the early 20th, church choirs were founded in many places as independent choral societies; they combined in 1897 to form the Schweizerische Kirchengesangsbund.

During the 20th century, church music in the German-speaking Reformed areas of Switzerland largely followed German church music reform, but it retained its own identity through the use of the Genevan psalms and the Reformed order of service centred on the sermon. The works of Willy Burkhard and Adolf Brunner, among others, are of particular note. In the second half of the century, large-scale, usually non-liturgical works with their roots in the Reformed Church were written by composers such as Daniel Glaus and Ulrich Gasser.

(iv) Germany. Lobwasser's German translation of the Genevan psalms appeared in Leipzig in 1573. With four-part homophonic settings by Goudimel, this metrical psalter soon formed the basis of liturgical music in Reformed areas of Germany, although psalms and hymns of the Lutheran and other German traditions were usually sung too. In 1607 Moritz, Landgrave of Hesse, wrote melodies for those psalms in the Genevan Psalter without tunes of their own, and in 1612 he set the entire psalter for four voices. Later in the 17th century Elector Friedrich Wilhelm von Brandenburg, who belonged to the Reformed Church, commissioned the Berlin Kantor Johannes Crüger to prepare a new, polyphonic version of the Lobwasser Psalter; the settings (*Psalmodia sacra*, 1657–8) are in continuo style with additional instrumental parts. For his own melodies (e.g. to the texts of Paul Gerhardt), Crüger often took the structural principles of the Genevan melodies as a basis, using similar rhythmic patterns or quoting melodic elements. Lobwasser's psalm texts were replaced in 1798 by the translation of Matthias Jorissen; some of his versions are still sung.

In Lower Germany the Reformation led to the Pietist movement, which produced two major German hymnodists, Joachim Neander and Gerhard Tersteegen. While the latter is significant only as a writer of texts, Neander also composed several melodies, some of which have continued in use.

(v) Hungary. During the Reformation period in Hungary Lutherans and members of the Reformed Church remained relatively close to each other. The Calvinists neither rejected congregational singing nor confined it to the psalms alone. The introduction of the Genevan Psalter at the beginning of the 17th century evidently resulted from an increased demarcation between the two confessions; translated into Hungarian by Albert Szenci Mólnar, this psalter was first published in 1606–07, has since appeared in more than 100 editions and is still in use. In 1743 György Maróthi produced a version containing Goudimel's four-part settings. Contemporary hymns displaced the psalms in the 19th century, but in 1948 the entire psalter was restored to the Hungarian hymnbook. Polyphonic compositions on the psalm tunes have been written in modern times by Zoltán Kodály and other composers.

(vi) Bohemia and Moravia. The Czech translation of the Genevan psalms by Jiří Strejc appeared in 1587 and by 1602 had gone through 16 editions. The prohibition of all non-Catholic denominations in 1627 prevented further development. After the 1781 Edict of Tolerance, Bohemia and Moravia were subject to Reformed influence from Hungary. The first part of the 1978 *kancionál* of the Evangelical Church of the Bohemian Brethren contains all 150 psalms with the Genevan melodies.

(vii) Poland. The Reformation in Poland was strongly influenced by Calvinism, but in contrast to Geneva a separate Reformed repertory of sacred song developed. Polyphonic versions of some of its compositions were created for court music ensembles and domestic use. Metrical psalms with texts by Jan Kochanowski were set to music by Mikołaj Gomółka in 1580. The translation of the Genevan Psalter by Maciej Rybiński appeared in about 1600 (the 1605 edition survives). Polish Reformed books of the 17th century contain the Psalter and other sacred songs.

II. Britain and North America

1. Great Britain. 2. North America: (i) Presbyterian tradition (ii) Reformed tradition.

1. Great Britain. British Presbyterianism was 'as by law established' in England between 1647 and 1652. The earliest Presbyterians were psalm singers who were influenced by the Genevan Psalter (1562), the Sternhold and Hopkins Old Version (1562) and various editions of Francis Rous's *The Psalms of David* (1641–6); most influential, however, was the Scottish *Psalms of David in Meeter* (1650). Although an occasional hymn might be included in worship, these Presbyterians took seriously Calvin's command to 'sing only psalms'. (For a full discussion of early Protestant worship, metrical psalmody and performing practice in Great Britain *see* Psalms, metrical, §§III–IV, esp. §III, 1.)

Calvin himself as well as his immediate successors used a number of other biblical texts, such as the Lukan canticles, in addition to their staple diet of psalmody. Numerous attempts during the 16th and 17th centuries to paraphrase such non-psalmic texts of scripture were renewed in Scotland in 1742, eventually leading to the *Translations and Paraphrases in Verse* (1781), which contained 67 songs based on texts from both the Old and the New Testaments. The use of these paraphrases led to a growing popularity of 'hymns of human composure',

although psalmody was still the only repertory to be officially sanctioned. It was not until the second half of the 19th century that the 'established' Church of Scotland issued hymnals: *Hymns for Public Worship* (1861) and the important *Scottish Hymnal* (1870; enlarged edition, 1884, containing 442 hymns). The Free Church of Scotland, formed in 1843, authorized *Psalm-Versions, Paraphrases and Hymns* (1873) and the *Free Church Hymnbook* (1882). The best-known hymn writer of the Free Church was Horatius Bonar (1807–89). The 1852 *Hymnbook of the United Presbyterian Church* contained almost 500 songs and was extensively revised by Henry Smart in 1877.

The development of Presbyterianism in England embraced elements of strict Calvinism, Congregationalism and even Unitarianism. After a reorganization in 1836, Presbyterians in England also grew to accept hymns in addition to the traditional repertory of psalms. Their *Paraphrases & Hymns* (1857) was followed by *Psalms and Hymns for Divine Worship* (1867), which included 521 psalms, biblical paraphrases and hymns. Following the 1876 union of English Presbyterians and English congregations of the United Presbyterian Church of Scotland, the new Presbyterian Church of England issued *Church Praise* (1882, 2/1908), which provided some 550 psalms, hymns and doxologies.

The *Church Hymnary* of 1898 was authorized for use in the Church of Scotland, the Free Church of Scotland, the United Presbyterian Church and the Presbyterian Church in Ireland; the music edition was prepared by John Stainer and shows something of an English bias in its 625 selections. Its successor, the *Revised Church Hymnary* (1927) edited by the Welsh musician David Evans, was a much loved hymnal, containing 707 hymns and offering various psalter supplements to suit the needs of Presbyterians in England, Scotland and Ireland. The *Church Hymnary, Third Edition* (1973) reveals a renaissance of Scottish music in its choice of hymn tunes.

The 1972 union of English Congregationalists and English and Welsh Presbyterians to become the United Reformed Church led to the publication of *New Church Praise* (1975) as a supplement to *Congregational Praise* (1951) and the *Church Hymnary, Third Edition*. The United Reformed Church's hymnal, *Rejoice and Sing* (1991), is a fine anthology of hymns drawn from the various Christian traditions of song and its contemporary manifestations in Great Britain and North America of the last quarter of the 20th century (what the hymnologist Erik Routley called the 'hymn explosion').

The organ was introduced into Presbyterian churches during the late 18th century in England, and later still in Scotland and Wales; nevertheless some Scottish Presbyterian congregations continue to sing their psalms, paraphrases and hymns without any instrumental accompaniment. Choirs were similarly slow in coming to Presbyterian and Reformed churches in the British Isles, but to the extent that such ensembles are evident, they draw on a wide range of anthems and liturgical music to supplement the normal congregational singing.

2. North America.

(i) Presbyterian tradition. The earliest congregations of Presbyterians in the American colonies were established in the 17th century by New England Puritans. Their church repertory consisted of metrical psalms, for which they used most commonly the Scottish *Psalms of David in Meeter* (1650); some also used the Bay Psalm Book (1640). In accord with their British heritage, the psalms were 'lined out' and sung unaccompanied in unison. (For further discussion of metrical psalm singing in North America *see* Psalms, metrical, §V.)

The scarcity of psalters and a decline in musical literacy among these American pioneers led to the retention of only about a dozen psalm tunes, which were sung with melodic and rhythmic 'liberties' and at extremely slow tempos. The establishment of singing schools in the American colonies after 1720 by leaders such as John Tufts contributed notably to the improvement of psalm singing. Presbyterians came to enjoy 'regular singing', that is, by note and according to musical rules. Consequently the first American Presbyterian General Assembly recommended in 1788 that the custom of lining out be set aside, and by the turn of the century, many Presbyterians had accepted organs to accompany congregational singing. Another important result of the singing school movement was the introduction of church choirs into Presbyterian worship.

In 1741, on the introduction of new psalmody, Presbyterian congregations split into the 'Old Side' and the 'New Side'. The Old Side fought fiercely to retain their familiar Scottish Psalter of 1650, whereas the New Side favoured the New Version Psalter of Nahum Tate and Nicholas Brady (1696) and the *Psalms of David Imitated by Isaac Watts* (1719). This 'Psalm Controversy' continued in some Presbyterian churches for almost another century, while in many others it was soon eclipsed by an even more vehement battle, the 'Great Hymn Controversy'. Watts had recast the psalms but also wrote a number of hymns 'of human composure', and his verses became widely known to Presbyterian congregations during the Great Awakening of the mid-18th century. *Urania, or a Choice Collection of Psalm-Tunes, Anthems, and Hymns*, published by the Presbyterian James Lyon (1761), psalm and hymn tune books such as *The New England Psalm Singer* by William Billings (1770), and the evangelical hymns of Charles Wesley were gaining popularity in the American colonies. Soon a large group of Presbyterians began a shift from exclusive psalmody to an ever-increasing repertory of hymns. By 1788 the General Assembly could declare that the public praise of God was fulfilled 'by singing psalms or hymns'. In 1802 a revision of Watts's *Psalms* with a collection of hymns was compiled by the Presbyterian president of Yale College, Timothy Dwight. In 1831 the Presbyterian Assembly authorized its first hymnal, a volume combining the two streams of congregational song – psalms and hymns – suitably entitled *Psalms and Hymns Adapted to Public Worship*, which included items not only by Watts but also by 70 other authors; it was revised and its hymnic content expanded in 1843.

The Civil War led to the division of American Presbyterians into southern and northern denominations; each branch issued its own authorized hymnals. The significant hymnals of the (northern) Presbyterian Church–USA were *The Hymnal of the Presbyterian Church* (1866); *The Presbyterian Hymnal* (1874), which was influenced by the British *Hymns Ancient and Modern* (1861); *The Hymnal* (1895), edited by the distinguished hymnologist Louis F. Benson; and *The Hymnal* (1933), edited by Clarence Dickinson, the contents of which were noticeably influenced by the British *Revised Church*

Hymnary (1927). The (southern) Presbyterian Church in the USA published *The New Psalms and Hymns* (1901) and *The Presbyterian Hymnal* (1927), both of which exhibited a conservative approach with their retention of older hymns and psalm versifications. In the latter half of the 19th century, a Presbyterian minister, Charles S. Robinson, produced some 15 hymnals, many with the assistance of Joseph P. Holbrook. Though never officially adopted, Robinson's hymnals such as *Laudes Domini* (1884) and *In excelsis* (1897) were widely used in northern Presbyterian congregations and to some extent in the south.

In 1955 the two main Presbyterian branches joined three other Presbyterian and Reformed denominations in publishing *The Hymnbook*; edited by David Hugh Jones, its 600 selections included more New England content and some gospel hymns. Before the reunion of the southern and northern branches in 1983, both bodies had also co-published *The Worshipbook* (1972), which included liturgical material and a collection of 373 hymns (in alphabetical order of first lines). The hymnal of the reunited Presbyterian Church, *The Presbyterian Hymnal: Hymns, Psalms, and Spiritual Songs* (1990) edited by LindaJo McKim, contains 605 hymns in a range of musical styles, employs 'inclusive' language and incorporates some black American, Hispanic and Asian hymns. A separate *Psalter* (1993) is available for both speaking and singing the psalms.

Some Presbyterians have continued the tradition of singing only metrical psalms. The United Presbyterian psalters of 1881 (music edition, 1887) and 1912 (prepared with assistance from eight other Presbyterian and Reformed denominations) and *The Book of Psalms for Singing* (1973) of the Reformed Presbyterian Church reflect this tendency. Some smaller Presbyterian bodies have issued their own hymnals, for example, the Orthodox Presbyterian Church's *Trinity Hymnal* (editions of 1961 and 1990).

Presbyterianism in Canada developed initially in Nova Scotia in the mid-18th century and gained momentum through continuing immigration from the British Isles (especially by members of the Church of Scotland) and the USA. A formal union of various Presbyterian congregations in 1875 led to the establishment of the Presbyterian Church in Canada. Their traditional use of the Scottish *Psalms of David in Meeter* (1650) and the Scottish *Paraphrases* (1781) had already been complemented in the earlier 19th century by psalms and hymns of Isaac Watts and later 18th century British hymnody. The *Presbyterian Book of Praise* (1897) was their first significant hymnal. Edited by Alexander MacMillan, its 621 selections included both metrical psalmody and a strongly British-orientated group of hymns; it was revised in 1918 to include more hymns from the USA.

Two-thirds of Canadian Presbyterians joined with Methodists and Congregationalists to form the United Church of Canada in 1925. The first hymnal of that new denomination, *The Hymnary* (1930), still reveals the Scottish Presbyterian influence of the *British Revised Hymnary* (1927). The 'continuing' Presbyterians retained their name as the Presbyterian Church in Canada and revised their *Book of Praise* again in 1972 to include a larger variety of hymns from the USA in addition to the classic British material. Their *Book of Psalms* (1995) includes prose psalms which can be spoken, or sung with psalm refrains or psalm tones. The *Book of Praise* (1997 edition) consists of some 500 hymns (including modern hymns, scripture choruses, third-world hymns and greater Canadian content) and 100 metrical psalms.

(ii) Reformed tradition. The Dutch merchants who landed in what is now New York in 1613 and set up the Reformed Church in America brought with them Peter Dathenus's Dutch translation (1566) of Calvin's Genevan Psalter (1562). For more than 100 years these Dutch settlers sang their psalms in unison, *a cappella*, in slow tempo, and usually under the leadership of a *voorzanger* (cantor) until organs were introduced late in the 17th century. Their first English psalter was *The Psalms of David* (1767), for which Francis Hopkinson adapted the psalm paraphrases of Tate and Brady's 'New Version' (1696) to be sung to altered versions of the Genevan tunes (*see* PSALMS, METRICAL, §V, 1).

After the American War of Independence, the Reformed Church in America (RCA) gained its independence from the Dutch Church, and a new psalter was authorized with a supplement of 'some well-composed spiritual hymns'. The resulting volume, *The Psalms of David with Hymns and Spiritual Songs* (1789), featured the psalms in short, common and long metres, with many texts from Isaac Watts and the 'New Version'. Most of its 133 hymns were designated for use with preaching based on the Heidelberg Catechism and with the administration of the sacraments. This change from Dutch to English, the adoption of Watts's texts and of hymnody, and the loss of virtually all Genevan tunes marked a clear break with the Dutch Reformed tradition. In each later edition of the book (1814, 1831, 1869) the number of hymns was increased. A *Sabbath School and Social Hymn Book* (1843) and *Hymns of Prayer and Praise* (1871) were published for use in the RCA's Sunday schools and informal services of worship. By 1890 the Church had approved an altered version of Edwin Bedell's hymnal; it appeared as *The Church Hymnary* (1891), with almost 1000 hymns and a few metrical psalms. By this time, choirs who sang primarily anthems were customary in RCA worship.

During the first half of the 20th century, the Church participated in the preparation of two ecumenical hymnals. The *Hymnal of the Reformed Church* (1920) was prepared jointly by the RCA and the (German) Reformed Church in the USA; it contained a few psalm paraphrases interspersed with the hymns, an arrangement that contributed to the further decline of psalm singing in this Church. The *Hymnbook* (1955), containing almost 600 hymns and edited by David Hugh Jones, resulted from the cooperation of several Presbyterian denominations and the RCA. *Rejoice in the Lord* (1985), edited by Erik Routley, contains significant hymn texts and tunes from the medieval period to the present day and more than 60 psalm paraphrases, but no American gospel hymns.

The *Hymnbook* (1955), *Rejoice in the Lord* (1985), Hope Publishing Company's *The Worshiping Church* (1990) and numerous other hymnals are now in use by RCA congregations in the USA and Canada. A joint project with the Christian Reformed Church was begun in 1997 to produce a hymnal supplement that would include new psalmody, new hymnody from the later 20th century 'hymn explosion' and the Third World, and scripture and praise choruses.

As a result of a secession in the Reformed Church of the Netherlands (1834), Dutch immigrants moved to Michigan and Iowa, and, after briefly uniting with the RCA, formed the Christian Reformed Church (CRC) in 1857. Initially isolating themselves from American culture, these settlers sang exclusively Dutch psalms, using an edition of 1773 that featured tonal, isorhythmic versions of the Genevan tunes. Later in the 19th century, unions with some German-speaking Reformed congregations in Iowa and Illinois and English-speaking Reformed congregations in New Jersey brought some marginal use of hymns into the denomination, although the CRC remained largely committed to Dutch metrical psalmody until just before World War I. In 1914 it adopted the United Presbyterian Psalter (1912) as its first English-language songbook; this had 413 settings of British and American psalm and hymn tunes for the 150 psalms. The texts of the RCA catechism hymns were appended, but these could be sung only by the English-speaking CRC congregations in New Jersey. Only four (corrupt) Genevan tunes appear in this book. This psalter, similar to the RCA's book of 1789, thus signalled for the CRC a significant break with its Dutch roots.

The inclusion of hymn tunes and hymn texts in the 1914 psalter, the popularity of hymn singing in singing-schools associated with the CRC and in church choirs, and the commercial promotion of American Sunday school and gospel hymnody led to the 'hymn question' in the Christian Reformed Church. After much debate, the battle was settled in favour of hymns, and the 'red' *Psalter Hymnal* was published in 1934. This contained 327 psalm settings and 141 hymns, including 39 Genevan tunes with new English paraphrases by Dewey Westra and some CRC clergy. Although metrical psalmody was to be maintained, members of the Church could now sing a variety of English translations of Latin, Greek and German hymns, and many 18th- and 19th-century hymns. Thus the *Psalter Hymnal* indicated a growing ecumenical awareness within the CRC, and in its eclectic selection of psalms and hymns revealed the Americanization that had broken the earlier isolation. Although the Genevan tunes were presented in rhythmic versions in the 1934 edition, later printings (1939, 1948) saw changes in their harmonizations and reversions to isorhythm. After World War II, new Dutch immigrants to Canada led to the CRC's growth in that country and brought a renewed interest in psalmody to the denomination.

To mark the denomination's centennial in 1957, a 'blue' edition of the *Psalter Hymnal* was published (1959), containing 310 settings for the 150 psalms and 183 hymns from a larger group of sources than in the 1934 edition. A number of the 37 Genevan tunes in the 'blue' book appeared again in rhythmic settings. The 'hymn explosion' of the second half of the 20th century, the greater ethnic diversity within the CRC, and the influence of scripture singing and 'praise and worship' choruses led to another edition of the *Psalter Hymnal* in 1988. This 'grey' book, edited by Emily Brink, contains 150 psalm settings (one complete versification and one tune per psalm), 86 Bible songs and 405 hymns. Its texts and tunes are drawn from the rich, ecumenical heritage of Christian psalmody and hymnody, including material from black American, Hispanic and Asian cultures. Many of its psalm versifications are new, and inclusive language is used throughout the book.

Christian Reformed worship often involves choirs in the American part of the denomination and more psalmody in its Canadian churches, but strong congregational singing, supported by competent organists, is still the most notable feature of the Church's Sunday services.

German Reformed pioneers initially came to the USA in the 1700s and were strengthened by new waves of immigrants in the 1800s. These settlers shared with their Dutch contemporaries a similar heritage of Genevan psalmody from the Calvinist Reformation of the 16th century. First associated with the Reformed Church in America, these German-speaking Reformed pioneers formed the General Synod of the Reformed Church in the United States in 1863. Their native psalter, *Neue Bereimung der Psalmen* (1798), had been prepared by Matthias Jorissen to improve upon the older German translation of the Genevan Psalter by Ambrosius Lobwasser (1573). But their edition of Jorissen also included 355 hymns and chorales in a section called 'Einige Gesängen'. As the German language was exchanged for English by these immigrants, English hymnody became their staple repertory. Thus *The Hymnal of the Reformed Church in the United States* (1890) included 795 hymns mostly from British and American sources but displayed little trace of the denomination's original German roots.

After a merger with the Evangelical Synod of North America (another body of German-speaking immigrants), the new denomination took the name Evangelical and Reformed Church, and published a new *Hymnal* (1940) which drew on a wider group of sources. A merger in 1957 with Congregational Christian Churches (who were almost ready to begin using their 1958 *Pilgrim Hymnal*) resulted in the United Church of Christ and led to *The Hymnal of the United Church of Christ* (1974), edited by John Ferguson and William Nelson. This volume and its successor, *New Century Hymnal* (1995), include among their ecumenical contents a few Genevan tunes and a larger group of German chorales. The latter book contains some 600 hymns (many of whose texts incorporate alterations in language for God and for humans) and a psalter that uses both sung responses and pointing with 12 psalm tones. The denomination's connection to a German Reformed heritage is evident in its new translations of some classic pietist hymns.

The same wave of Dutch immigration to Canada that produced the Canadian segment of the Christian Reformed Church after World War II also led to a smaller denomination called the Canadian Reformed Church. It is still largely a psalm-singing body: their *Book of Praise* (1972, 2/1984) includes English versifications of the 150 psalms that fit all the traditional Genevan psalm tunes (it is thus sub-titled 'Anglo-Genevan Psalter') and only 65 hymns.

ANDREAS MARTI (I), BERT POLMAN (II)

Refrain (Fr. *refrain*; Ger. *Kehrreim*; It. *ripresa*). (1) In poetry, a phrase or verse that recurs at intervals, especially at the end of a stanza. The term has been adopted to describe analogously recurring passages in musical forms, whether or not they involve the repetition of text. One of the three ancient forms of psalm intonation in the Hebrew chant tradition involved the congregation chanting a short, simple refrain, for example on the words 'alleluia' or 'amen', after each verse of a psalm. Responsorial psalmody in Western chant was regarded as an innovation in the late 4th century, and its opponents objected to congregational refrains. The antiphon also has a refrain structure; once more elaborate, modern practice typically includes no more than the intonation before the psalm and the full antiphon after it. Some of the rondelli in the last fascicle of the 13th-century Notre Dame manuscript *I-Fl* Plut.29.1 contain refrains that are taken from antiphons of the Office or Graduals of the Mass. The simplest type of rondellus is strophic with refrains, while more elaborate ones have the structure of the medieval rondeau and are thus seen as its forerunners. The three medieval *formes fixes*, the rondeau, ballade and virelai, all depend on internal refrain repetition for their formal structure. The multistrophic chansons of the troubadours and trouvères also made use of a recurrent refrain, which was usually located at the end of each stanza. Other examples of forms that rely on recurrent refrains are the 13th-century monophonic Italian *lauda* and Spanish cantiga; the Italian ballata and frottola (where the refrain is called the RIPRESA), the Spanish villancico (where it is called the ESTRIBILLO) and the 15th-century carol (where it is called the BURDEN). The kind of intermittent repetition that the refrain affords has perhaps always been recognized as a simple structuring device: it was used by Schubert in his four *Refrainlieder* (D866) and is important to many jazz forms. In the later 19th century, the American congregational or gospel song always contained a refrain which, because of its uplifting nature, was often repeated several times between stanzas. The ritornello and rondo in the instrumental concerto grosso and in rondo form are related to vocal refrains.

(2) The term 'refrain' has a specific meaning when applied to vocal forms from about 1150 to about 1350. Its primary defining feature is that it migrates from one genre to another as a kind of quotation; in some cases such a refrain may also be repeated within a single text, but this is usually considered incidental. The migrating refrain's importance to the medieval aesthetic is attested by the fact that refrains appear in virtually all vernacular musico-literary genres. Van den Boogaard (1969) catalogued a corpus of some 1933 refrains, ranging in length from a single word to as many as eight lines of text, though the majority are shorter; he located about 650 in motets and 470 in chansons. The largest single source of refrains is the manuscript *F-MOf* H196, (*see* SOURCES, MS, §V, 2) which contains over 400, most of which appear in the fifth fascicle. Many of these refrains are, however, unica and their status is therefore the subject of much modern debate. They were identified by Gennrich and van den Boogaard from the characteristics they share with those refrains that do have concordances, such as a shift to direct speech or a disruption in textual rhyme and metre, which may be matched in the music by a disruption in rhythmic mode. In *romans*, refrains are sometimes even inserted into the narrative as autonomous citations, and are additionally identifiable because their text often begins with a capital letter, a practice of demarcation also found in chansons.

For the most part the origin of these medieval refrains is uncertain. Their lower poetic tone and dance-like melodies could suggest popular, oral origins, yet only 67 refrains can be found in extant trouvère music, suggesting that the practice was virtually passed over by this logical intermediary. A few cases, however, reveal more information. *Cele m'a s'amor donné/Qui mon cuer et mon cors a* (van den Boogaard, no.314) is particularly interesting, not least because its six presentations appear in a wide variety of genres: a clausula, three motets, a rondeau-motet and a chanson. The existence of the Notre Dame clausula is thought to be important, suggesting that the refrain was probably created in the process of setting a new text to it. Rokseth identified five other motets in *F-MOf* H196, which, because they are derived from clausulas, may similarly bear witness to new refrains. Refrain no.314 is also unusual in that the music of each citation survives and reveals a strikingly stable melodic transmission. Although Jeanroy defined the medieval refrain as text that always travels with its own melody, in practice the texts are much more stable than the melodies (if they are notated at all). This makes it difficult to assess the degree to which music is meant to form part of the unique identity of a refrain. It is usually impossible to deduce the chronology of melodic variations or to determine whether they are deliberate alterations.

Refrains have been used to distinguish types of chanson and motet. Chansons may be divided into 'chansons à refrains', which have an internally repeating refrain (see §(1) above), and 'chansons avec des refrains', which have a different refrain in each stanza. Most manuscripts containing the latter provide music for the refrain only in the first stanza, although different music was undoubtedly sung for each refrain. Motets have also been divided into types according to the position of the refrain. Modern scholarship has questioned the wisdom of such an array of classifications for the motet, however, especially as the categories become confused in those pieces that exploit more than one refrain position. For this reason the incorporation of refrains should be regarded as a compositional technique rather than a matter of genre. Refrains usually appear in one or more of the upper voices, though van den Boogaard lists 14 motets with at least one in the tenor. The term 'refrain motet' denotes the presence of a single refrain, while the refrain cento is somewhat like a

quodlibet, with one voice-part consisting entirely of refrains. In the rondeau-motet one voice-part is structured like a rondeau with repeating refrains that may or may not be borrowed. The term 'motet enté' is found in the manuscript *F-Pn* fr.845 (f.184*r*), where 15 monophonic pieces are announced with the rubric 'Ci commencent li motets enté'. However, only six of them behave as they have come to be defined, that is, as a motet with a single refrain divided into two and placed at the beginning and end of a voice-part. The term also appears in a rubric in a trouvère text manuscript, *GB-Ob* Douce 308, and the index to *F-Pn* fr.146 refers to 'dix entez'. It seems likely that contemporaries understood 'enté' to mean the grafting of pre-existing refrains onto newly composed material regardless of position. One further category is the *Kurzmotette*, so called because of its short duration of usually no more than one or two refrains.

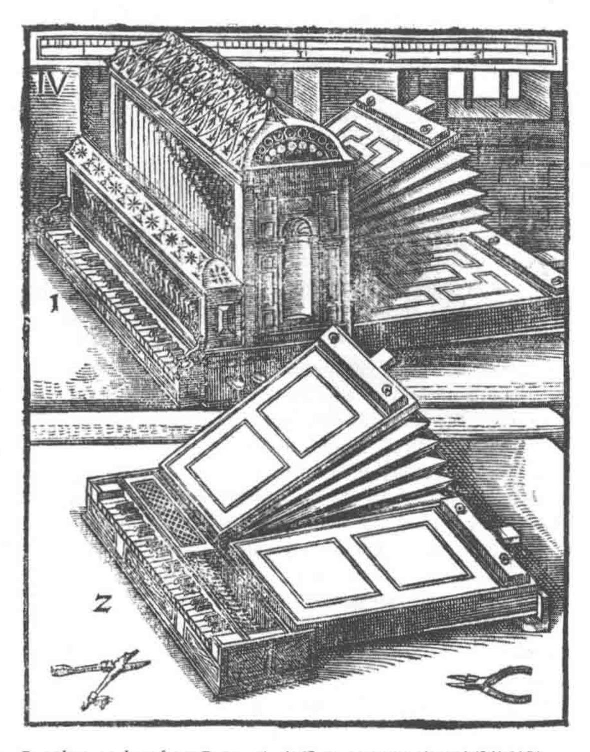
SUZANNAH CLARK

Regals [regal] (Fr. *régale*; Ger. *Regal*; It. *regallo*). (1) A kind of small organ in which the sound is produced by one or more sets of beating reeds provided with little or almost no resonators. It usually has 'pin' action (*see* ORGAN, fig.2), in which the key depresses a short rod below the finger-end, which in turn presses down and opens the pallet. The bellows are usually placed on the same level as the keyboard, at the other side of the row of reeds. Thus the whole instrument at its simplest is several centimetres deep, and square or rectangular in horizontal section (of which the shorter side is that of the keyboard). Such instruments were placed upon a table, although larger ones could have an integral stand.

(2) A group of organ stops in a larger flue-pipe organ, built on the same principle as (but without the longer resonators of) reed stops, and often provided in about 1600 with a prefixed name describing their sound or construction (*Apfelregal*, *Rackettregal* etc.). *See also* ORGAN STOP and ORGAN, §III, 2.



1. History. 2. Repertory.

1. HISTORY. The terminology, etymology and origin of the regals are equally uncertain. Like 'virginals' and *orgues* the plural is the more traditional form of the name. English versions are 'regalles' (1537 etc.), 'regalls' (1538 etc.), 'reygaals', 'regols' (1554, 1556) and 'regal' (1676); French stop names include 'ung jeulx de regalles' (Bordeaux, 1531), 'régalle pour servir de voix humaine' (Gisors, 1580) and 'regales ou voix humaine' (Mersenne, 1636–7); German instrument names were *Regale* (Virdung, 1511), *Regahll* (*PraetoriusSM*, ii), *Rigal*, *Rygal* (16th century). However, one of the earliest references to organ reeds, in Arnaut de Zwolle's manuscript of about 1440, uses instead *l'anche*. The word 'regal' does not appear in England until at least 1500; and some later Italian sources call the regals *organi di pivette* (1565). For the more general name 'regal' many explanations have been offered. Praetorius said some people thought it so named because it could serve as a royal gift; more recent authors have related it to *rega* (a 'row' of reeds, cf *Reihe*), to *rigole* (late French term for the reed-pipe shallot), to *rigols/régale* (for Grassineau a kind of xylophone or row of wooden strips, hence *régale à bois*), to *rigabello* (obscure term in one 16th-century source), to *regula* ('regulating' the pitch of the singers, cf *regolo*).

Already by 1511 (Schlick, Virdung) there was a clear distinction in central Europe between reed stops with long

resonators, organ stops of the *regall oder super regall* kind (8′ and 4′, Schlick), and the independent keyboard instrument called regals or *Regal*. But it is noticeable that the Flemish and Dutch organ builders who were most inventive in creating reed and regal stops about 1510 found more picturesque names than simply 'regal' – for example the *moesele* ('bagpipes'), *queenkens* ('old woman's voice') and *hommelkens* (? a Zink stop) at the church of Our Lady in Antwerp (1505). Such names as Vox humana arose as descriptive adjectives for the organ stop regal (or *reael* at Diest in 1530), as seen in the phrase from Gisors above. As far as the organ stop is concerned, both the name 'regal' and its sound are neutral until for the one a prefix and for the other an adequate resonator are supplied, as they both were during the 16th century.

As instruments, the regals also underwent certain development. In England from about 1540 a 'payre of Regalls' was a standard term, while 'Double Regals' almost certainly indicated a compass below *G*; the two phrases are very likely related. Already in the various royal inventories of 1547 etc., it is clear that makers had begun to add other, presumably small-scaled flue stops to the regal rank(s), such as 'one Stoppe of pipes of woode' and 'a Cimball' (high metal Mixture); a set of spinet or virginal strings (8′ or 4′) might also be added, the whole making an instrument still relatively portable (*see* CLAVIORGAN). The regals illustrated by Praetorius may be considered the standard simple type, but clearly the small boxed section holding the reeds would be enlarged if larger resonators were added. Several German cuts of the 16th century show such resonators as already very fanciful in shape though still rather drastically diminished in scale, that is the bass pipes were very short in relation to the treble; also, the resonator, whatever its shape, was basically a half-stopped pipe. The completely open,

Regals: woodcut from Praetorius's 'Syntagma musicum' (2/1619)

inverted conical resonator (often of a hard metal such as copper, but occasionally of turned wood) was a recognized type of regal, the so-called *Trichterregal*; but most ingenuity was to be found in the little cylindrical or square-section stopped or half-stopped regals, right through from 1500 to 1750, and across Europe from Seville to Königsberg (now Kaliningrad). Praetorius noted that Austrian builders were distinguished regals makers, and mentioned others in Augsburg, Nuremberg and Regensburg, as well as an unnamed maker who, to Praetorius's scepticism, claimed to be able to make a regals that would stay in tune.

It was a Nuremberg maker, G. Voll, who was said to have made the first 'Bible regals' towards the end of the 16th century, that is a regals whose pair of bellows are shaped like two halves of a book, the whole folding up to resemble a large closed Bible. Praetorius also credited another Nuremberg maker in the late 15th century with inventing a stop that was 'said to sound like a Schalmey' but which was probably known by many makers before 1500.

2. REPERTORY. In large organs regal ranks served to give varieties of tone-colour, especially in the manual and pedal *Brustwerk* departments. The latter were in many instances before about 1650 nothing more than a kind of regals instrument incorporated in a church organ. The regals instrument in its own right was used in many ways. By 1713 Mattheson thought its sound 'extremely disgusting' ('höchst eckelhafft') and recommended the use of other keyboard instruments for continuo in church; but his remarks suggest that it was still in use in some Hamburg churches. Earlier it had been useful to the writers of *intermedii* in Florence (*c*1589), of music at English guild feasts (Parish Clerks, 1522), pageant plays (Coventry, 1550s) and drama (mourning song in Edwards's *Damon & Pythias*, 1565). It was used in early opera and its later imitations (*Orfeo*, 1607, to accompany Charon; *Pomo d'oro*, 1667, for the infernal scene) when expense was not spared, in princely chapels with *cori spezzati* groups of instruments for motets (Praetorius, Schütz) or Passions (Selle, 1643), where an organ might be used for the chorus, regals for the soloists, or organ for accompanying brass instruments, harpsichord for strings, regals for cornetts and oboes, etc.

Although the regals can never have been very common outside Germany, Praetorius (1619, pp.72ff) showed that it was used there for continuo (for which it was better than a harpsichord because more sustained in tone, and could play loud or soft depending on whether the cover above the reeds was open or not), in princely convivial assembly, in large and small churches ('almost better than a positive organ') and portable enough to be taken from one to the other (hence requiring care if taken from a cold church to a warm dining-room).

In England 'tuner of the regalls' was one of the titles in the court appointments from the time of Henry VIII until at least 1767, but it is doubtful if it kept its literal meaning beyond the Commonwealth period, for references to regals were becoming rare even by the time of Elizabeth I. To James Talbot (MS, *c*1695) the name 'regal' was puzzling. He applied it both to full-length reed stops in general and to a little 4′ Vox humana stop, but not to a self-contained keyboard instrument. Many of the major theorists in about 1700 (North, Muffat, St Lambert) and even about 1600 (Banchieri, Agazzari) mentioned it as a

continuo instrument rarely if at all. Praetorius seems to have preferred the soft sound of the stopped, sweet Dolcian-like regals (*regale dolce* in Munich *intermedii*, 1568); and it is possibly the coarser sound of regals with short, open copper-alloy resonators that helped to make the instrument lose its popularity, even in central and north Germany.

PETER WILLIAMS

Regamey, Constantin (*b* Kiev, 15/28 Jan 1907; *d* Lausanne, 27 Dec 1982). Swiss composer and pianist. Born of a Swiss father and a Russian mother, he studied ancient and oriental languages at Warsaw. He directed the Polish review *Muzyka polska* from 1937 to 1939. During World War II he was arrested and imprisoned by the Germans, but his Swiss passport ensured his survival. He was allowed to leave for Switzerland in 1944. While holding the chair of Slavonic and oriental languages at the Universities of Lausanne and Fribourg, he pursued his career as a composer, begun in Poland where he had been self-taught. He also made several tours as a concert pianist. Between 1954 and 1962 he was co-editor of the *Revue musicale de Suisse Romande* and from 1963 to 1968 he was president of the Association of Swiss Musicians. Numerous voyages to India and East Asia gave him the opportunity to study the music of these countries, and this influenced his sensibility and aesthetics deeply.

Regamey evolved a complex style which makes free use of serial techniques. His orchestration is skilful and his treatment of the voice is assured. In order that the verbal content should not intrude, he deliberately chooses poems in languages which his audience will not understand: the études are based on texts in ancient Indian dialects and the *Symphonie des incantations* uses texts from prehistoric, ancient Indian and Mesopotamian sources.

PIERRE MEYLAN/CHRIS WALTON

Regan, Anna (*b* Aich, 18 Sept 1841; *d* Munich, 18 April 1902). Austrian singer, wife of ADOLF SCHIMON.

Regensburg. City in Germany. It is situated at the northernmost point of the Danube in Bavaria. Regensburg was a Roman legionary headquarters from 179 CE, seat of a bishopric from 739, imperial free city from 1245, seat of the imperial parliament from 1663 to 1806, and under the Bavarian crown from 1810 to 1918.

Under Bishop Baturich (817–48) the city was already a distinguished centre of learning, and the earliest datable example of neumatic notation, the alleluia prosula *Psalle modulamina* (notated by the clerk Engyldeo), together with other examples, was made in Regensburg during his time. The Regensburg gradual *D-Bs* Lit.6 probably dates from the time of Bishop Wolfgang (972–94), and several chant books (the tropers *Mbs* clm 14083 and 14322 are particularly important) survive from the first half of the 11th century, for part of which time the city was an imperial residence. Several figures of music-historical importance were monks at the Benedictine monastery of St Emmeram: Arnold, composer of the proper office of St Emmeram (*c*1030); Otloh, composer and music theorist, involved in the composition of a proper office for St Dionysius (*c*1049); and Wilhelm (*d* 1091), music theorist and later abbot of Hirsau. Hermannus Contractus of the Reichenau composed the proper office for the Regensburg canonization of St Wolfgang in 1052. Chant books also survive from the Benedictine monasteries of Prüll and Prüfening on the outskirts of Regensburg, and from the city's Dominican friary and convent. A proper office was composed for another patron saint of the city, Erhard, by Konrad of Megenberg in about 1365.

The manuscript *Mbs* clm 14274 of the mid-century, a well-known source of music by Du Fay and his contemporaries, was compiled by Hermann Poetzlinger, *rector scolarium* of the monastery school of St Emmeram in the 1450s and 60s. The Burggraf of Regensburg (*fl c*1170) is one of the earliest Minnesinger known by name, but music for his lyrics has not survived. There is plentiful archival evidence of the activities of city waits and other secular musicians in the later Middle Ages.

After Regensburg had declared for Protestantism in 1542, the Gymnasium Poeticum (founded 1505) and the musical establishment (Kantorei) of the Neupfarrkirche (1542), St Oswald (from 1553) and the Dreieinigkeitskirche (consecrated 1631) formed the institutional basis of a flourishing musical tradition. Andreas Raselius (Kantor 1584–1600) and Paul Homberger (Kantor 1603–*c*1632) were leading figures, Gregor Aichinger, Sebastian Knüpfer and Johann Pachelbel among the most famous pupils. Christoph Stoltzenberg, Kantor from 1714, composed many annual cycles of cantatas. The Benedictine monastery of Prüfening to the west of the city enjoyed a vigorous musical life in the 18th century. Church music by Marianus Königsperger (1708–69) is preserved, but the Tafelmusik and theatre music also performed at Prüfening is lost.

In the 19th century Regensburg became the centre of a movement to reform Catholic church music. Carl Proske (1794–1861) was a seminal figure; he acquired a large number of original sources of the 16th and 17th centuries

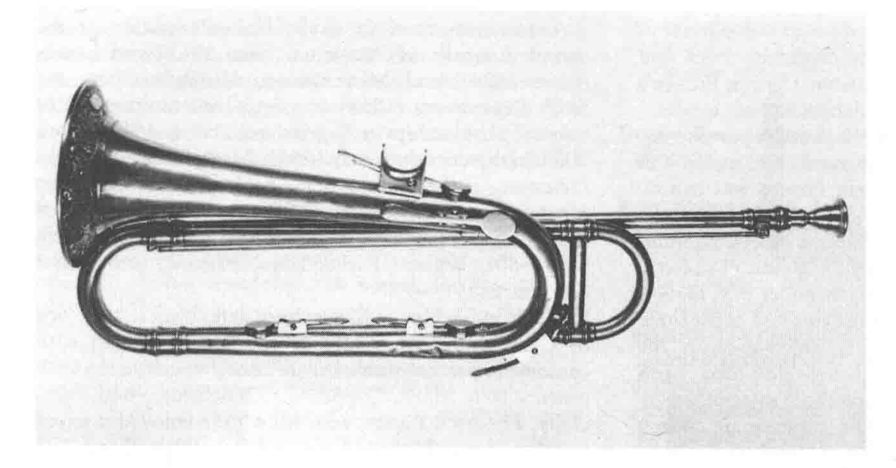
and transcribed over 7000 items of vocal polyphony, in particular that of Palestrina, his contemporaries and successors. Pieces were published from 1853 in Proske's series Musica Divina. The replacement of modern, instrumentally accompanied church music by unaccompanied works of the 'golden age' was carried out first in the Alte Kapelle from 1839, where Proske was canon, then in the cathedral from 1856 under Joseph Schrems. Proske's work was continued by, among others, Dominicus Mettenleiter (1822–68), Joseph Hanisch (1812–92) and F.X. Witt (1834–88). Particularly under F.X. Haberl (1840–1910), the cathedral choir became one of the three pillars of the reform movement, together with the Allgemeiner Deutscher Cäcilienverein (founded 1868 under Witt) and the Kirchenmusikschule established by Haberl and Witt in 1874 for the training of church musicians. Under Theobald Schrems (Domkapellmeister 1924–63) and Georg Ratzinger (1964–94) the cathedral choir (known as the 'Regensburger Domspatzen') has become internationally famous. Roland Büchner became Domkapellmeister in 1994.

The imperial parliament met in Regensburg from the end of the 16th century (permanently from 1663) until 1806, which entailed the presence of numerous ambassadorial musical establishments and frequent festival performances on state occasions. For example, several items in Monteverdi's Eighth Book of Madrigals (1638), dedicated to Ferdinand III, may have originated on these occasions. In 1653 Bertali's opera *L'inganno d'amore* was performed for the coronation in Regensburg of Eleonore Gonzaga as Empress and Ferdinand (IV) as King of the Romans.

In 1748 Prince Alexander Ferdinand of Thurn and Taxis was appointed imperial Prinzipal-Kommissar and moved his court to Regensburg. Outstanding musicians such as F.X. Pokorny (*c*1729–94), Joseph Touchemolin (1727–1801) and Joseph Riepel (1709–82, also known as a music theorist) helped create a brilliant ensemble performing operas, cantatas and all types of instrumental music, enjoying frequent exchanges of both repertory and personnel with Vienna, Eszterháza, Munich and Dresden. Maddalena Allegranti (who later starred in London) and Ludwig Fischer (Mozart's Osmin) were prominent members of the establishment. Italian opera was regularly performed from 1774 to 1778 and 1784 to 1786, German Singspiel from 1778 to 1783. Schikaneder directed seasons which mixed spoken drama, opera and Singspiel from 1787 to 1789. In 1804 a new theatre was opened, the forerunner of the present Stadttheater, where spoken drama, opera and ballet are presented.

Regensburg's most prominent organ builders were J.K. Branderstein (1695–1757), J.J. Späth (1672–1760) and his son Franz Jakob (1714–86). The latter, together with his son-in-law C.F. Schmahl, also built pianos, praised among others by Mozart and Forkel; he also developed instruments with a unique mechanism known as tangent pianos. J.N. Maelzel of Regensburg (1772–1838) constructed the celebrated panharmonicon for which the second part of Beethoven's *Wellingtons Sieg* op.91 was written, and in 1816 invented the metronome. One of Germany's most famous violin makers, G.D. Buchstetter (*fl* from 1752), worked in Regensburg. In 1999 the city still boasted three violin makers: O. Laudi, H. Goldfuss and H. Pöser.

Apart from Proske's work, Haberl's edition of the complete works of Palestrina (from 1862) and Lassus (from 1894), and Mettenleiter's *Musikgeschichte der Stadt Regensburg* (1866) are significant monuments of musical scholarship in Regensburg. From 1953 Bruno Stäblein directed the newly established Institut für Musikforschung at the Philologisch-Theologische Hochschule, forerunner of the University of Regensburg. The chair of musicology at the latter has been held by Hermann Beck (1968–80), Warren Kirkendale (1983–92) and Detlef Altenburg (1994–9).



Music publishing in Regensburg dates back to the work of Gräf, Dalnsteiner, Fischer and Müller in the 17th century. Important publishers of church music in the 19th century were Manz, Coppenrath, Feuchtinger and, especially, Friedrich Pustet, who for a time enjoyed a papal privilege for publishing books of Gregorian chant. The Gustav Bosse Verlag published principally musicological literature in Regensburg from 1912 to 1993.

Apart from the performances of the Stadttheater, whose orchestra, as the Regensburg PO, also gives concerts of orchestral and chamber music, the city has a strong tradition of amateur music-making and concert activity, exemplified by the Regensburger Liederkranz from 1837, the Regensburger Kantorei from 1888, the collegium musicum from 1935 and the Regensburger Musikverein from 1849. Since 1984 Regensburg has hosted an international early music festival, the Tage Alter Musik.

Regent's bugle by Richard Curtis, Glasgow, early 19th century (Albert Spencer Collection, Brighton Museum)

Regent's bugle. A keyed bugle with a slide. In 1815 the *Allgemeine musikalische Zeitung* of Leipzig stated that Johann Georg Schmidt, then solo trumpet in the Prince Regent's private band, had recently introduced a new brass instrument that he called the 'regent's bugle'. Pontécoulant, Fétis and Billert left contradictory accounts of the instrument. Sachs, taking Schmidt's own account as his source (but lacking an authenticated specimen), described the instrument as a slide bugle. Morley-Pegge (1956), offered the suggestion that Schmidt's choice of title might have been motivated by his rivalry with the celebrated keyed bugle player, John Distin, whose reputation was largely founded on Joseph Haliday's instrument, which he had named 'Royal Kent Bugle' after his own patron the Duke of Kent, younger brother to the Prince Regent.

In 1966 Joseph Wheeler investigated an instrument (no.37 of the Albert Spencer Collection in the Brighton Museum; see illustration) that presents all the characteristics mentioned by previous writers. The main tubing of this instrument is strictly cylindrical and provided with a graduated telescopic mouthpipe and a U-shaped tuning-slide which, when drawn together and to the same distance put the instrument into C, D♭, D, E♭, E or F. In addition opening one or more of five keys on the bell section furnishes semitones, whole tones and minor 3rds above the natural notes of each slide setting. This instrument, made by Curtis of Glasgow, seems to be the true 'regent's bugle', and so far the only recorded example.

Regent's Harmonic Institution [Royal Harmonic Institution]. English firm of music publishers. It was founded in London in 1818 as a joint-stock company of 23 (then 21) professional musicians, including Attwood, Ayrton, J.B. Cramer, William Hawes, Ries, George Smart, Thomas Welsh and Samuel Wesley, to finance reconstruction of the Argyll Rooms, Regent Street. The plan, led in part by the Regent Street architect John Nash, in conjunction with the Philharmonic Society, called for the investors' money to be recouped through the sale of music, pianos and harps in a lower saloon. The company was formed by January 1819 and its first publications registered in April; the shop and concert room were ready in January 1820. Mismanagement and internal dissension soon led several investors to withdraw, notably Smart, Ries and Charles Neate, and the speculation foundered. The Philharmonic Society dissociated itself and by spring 1823 Welsh and Hawes were principal shareholders. The imprint, altered to 'Royal Harmonic Institution' in December 1820, became 'Welsh and Hawes, at the Royal Harmonic Institution', 246 Regent Street, in September 1825. After Hawes declared bankruptcy in July 1827, Welsh continued alone until fire destroyed the building in February 1830. It was soon rebuilt and he resumed trading at the New Argyll Rooms in 1831, continuing to May 1833.

The firm's output consisted chiefly of glees, songs, arrangements of opera airs and piano pieces by its members, especially T.F. Walmisley, Griffin, Rawlings, Calkin, Beale, Attwood and Ries. Its most notable publication, however, was Beethoven's Piano Sonata op.106, the 'Hammerklavier' (registered at Stationers' Hall in September 1819), in an edition authorized by the composer.

LEANNE LANGLEY

Reger, (Johann Baptist Joseph) Max(imilian) (*b* Brand, nr Bayreuth, 19 March 1873; *d* Leipzig, 11 May 1916). German composer. His musical style, which combines a chromatic harmonic language with Baroque and Classical formal procedures, situates him as both a successor to

late 19th-century Romanticism and a forerunner of early 20th-century modernism.

1. Life. Although Reger is often considered the quintessential Bavarian composer, his origins in the Upper Palatinate, however, with its subtly different landscape and more complex history, introduce the possibility that he was also the heir to other traditions. As Hermann Wilske's necrological studies have shown, Reger's birthplace, which calls to mind otherworldly seclusion and the pastorale, possesses attributes that distance it from the environment of an 'authentic' Bavarian such as Richard Strauss. Reger's fascination with the music of Bach and the Protestant chorale also suggests that his life and music should not be regarded in an exclusively Bavarian context. Although he insisted that he was a Catholic through and through (despite a renunciation of confession at the age of 11), the curiously ecumenical character of his career flowed from a unique combination of religious and professional characteristics: his mastery of a primarily Protestant genre displays a blend of his professional training as an organist and his high regard for absolute music.

Reger's family background also helps to explain the mixture of practical and spiritual influences that distinguish his personal character and musical style. His father Joseph's musical skill sat easily alongside a career as a schoolteacher. He played the organ, bass, clarinet and the oboe and was the author of a well-regarded harmony textbook. Reger's mother, Philomena, on the other hand, came from a family with a background in farming, small business and industry, and maintained a religiosity bordering on the mystical. The early deaths of three of Reger's four siblings also coloured his childhood.

In 1874 the Reger family moved to Weiden, where the young Max's musical talents were somewhat haphazardly developed by his father. Piano lessons with Adalbert Lindner, emphasizing the polyphonic models of Beethoven and Brahms, began in 1884. It was after a visit to Bayreuth in 1888, however, where the young Reger saw *Die Meistersinger von Nürnberg* and *Parsifal*, that he first told his father that he wanted to pursue a career in music. He was not interested in music drama or the opera house, however, and although Lindner noted that the visit led to a greater degree of chromaticism in his organ improvisation, Wagner's influence on Reger's musical style was limited. It was Wagner's polyphonic writing that made the deepest impression on the young composer, confirmed later in life by Reger's particular enthusiasm for the Prelude to Act III of *Meistersinger* and of Wolfram's 'Abendstern' aria in *Tannhäuser*. (Pfitzner's remarkable judgment that Reger, almost alone in his generation, remained quite unaffected by Wagner is, therefore, true only to certain extent.)

Between 1886 and 1889 Reger frequently acted as deputy organist for Lindner. His organ repertory included works of Mendelssohn, Schumann and Liszt, as well as some of Bach's music, although he did not acquire a comprehensive knowledge of Bach, or the organ works of Brahms, until studying with Hugo Riemann. Reger first attracted Riemann's attention when Lindner sent him some of the young composer's earliest compositions. For a time it was unclear whether Reger would study with Riemann in Sondershausen or with Rheinberger in Munich. Rheinberger's lukewarm response, in addition to Reger's earlier study, under Lindner, of Riemann's theory of phrasing, contributed to the eventual decision.

An increasingly welcome guest in the Riemann household, Reger followed his teacher to the conservatory at Wiesbaden in 1890. The beginnings of his systematic study of Bach's keyboard works, what he described as 'the way backwards from enchantment with Liszt to honouring Beethoven and Bach', date from these years. The Violin Sonata op.1 (1890), one of Reger's most significant early works, sufficiently impressed Riemann, its dedicatee, to recommend Reger for a teaching appointment in theory at the Wiesbaden Conservatory. Riemann also arranged for some of Reger's compositions (including the Violin Sonata) to be published by Augener in London.

Reger devoted his time in Wiesbaden to cultivating musical contacts (such as Richard Strauss, whom he met in 1896, Eugen d'Albert and Busoni) and crystallizing his thoughts on music. His increasing knowledge of Bach and Brahms led him away from the world of programmatic music; his ideal was 'architectonic beauty, melodic and imitative magic', buttressed by 'intellectual content'. After his formal study ended, he remained in Wiesbaden for his compulsory year of military service (1896–7). Reger spoke of his time in the city as his 'Sturm- und Trankzeit' and there is no doubt that his life as a student and a soldier encouraged him to embrace tobacco and alcohol, often to excess. His enthusiasm for the wines of the Rhine region developed into an increasing fondness for drink. This in turn grew into a legend of the composer as relying on alcohol for creative stimulation. Recent writers, however, have stressed that there is conflicting evidence about Reger's drinking; there is enough in his own writings to refute the idea that he composed best when under the influence of alcohol. Nevertheless, the final years in Wiesbaden led to a gradual breakdown of his mental and physical health. Although he had a growing circle of friends there, including Elsa von Bercken, a divorced member of the distinguished Prussian Bagenski family, he returned to his family in Weiden in 1898 to recuperate. To help sustain himself financially, Reger taught privately. Teaching continued to be his primary source of income after a move to Munich in 1901.

While his years as a student of Riemann pointed Reger in the direction of chamber music, a genre for which he retained a lifelong predilection, his brief return to Weiden marked the climax of his output for organ, indicative of an increasing preoccupation with the Protestant chorale. Between 1898 and 1903 he composed a number of fantasias on famous chorale melodies. The distinguished organ virtuoso Karl Straube, whom the composer met in 1897, introduced the fantasias to the public in spite of the technical difficulties posed by the monumental and symphonic nature of some of the works. Straube's performance in Munich, as well as a publishing contract with Aibl (1898), saw the beginning of the composer's ultimately ill-fated attempt to succeed in the Bavarian capital. His lack of support contrasted greatly with the situations of Richard Strauss, who had champions in Schillings and Thuille, and Pfitzner, whose journalistic friend Louis, the music critic of the *Münchner Neueste Nachrichten*, became one of Reger's bêtes noires. The periodical *Kunstwart*, under its influential editor Batka, was a centre of opposition to Reger's music.

Reger's outspoken antipathy to the 'Aktiengesellschaft für angewandte Impotenz' (as he called his musical

opponents in Munich) and blunt criticism of his contemporaries (such as his remark that 'homeopathic "Wagnerism"' had destroyed Schillings's considerable talent) were consistent with his vaunted belief in absolute music. Yet it is clear from his own works that he too was influenced by the Lisztian symphonic poem and had no objection, in principle, to the much-trumpeted 'Musik als Ausdruck'. He maintained polite and friendly relations with Strauss and Pfitzner despite their philosophical differences; Pfitzner even found an endorsement for his own musical view in Reger's assertion that 'an inspiration [Einfall] is dearer to me than a hundred thousand tons of musical work'.

Reger's years in Munich were not without their reward. In 1902 he married Elsa von Bercken, a Lutheran, in a Protestant ceremony. Reger was hardly estranged from the religion of his birth, however. The opening decade of the 20th century saw an increasing recognition of his music among Catholic circles, where it had been largely ignored because of his preoccupation with Protestant genres. His concert activity in Munich also increased, particularly in his role as accompanist for the violinist Marteau, who later gave the first performance of his extremely demanding Violin Concerto (1907–8). The monumental concerto for piano and orchestra (1910) was written for another Munich friend, Frieda Kwast-Hodapp.

With the performance of the Piano Quintet in C minor (1902), Reger's reputation grew, gaining him the confidence to begin a series of major keyboard and chamber works. In 1903 he also produced his most substantial theoretical treatise, the *Beiträge zur Modulationslehre* (Leipzig, 1903), in which he distanced himself from Riemann's view of the role of chromaticism. He aimed to provide in the work 'a key to the understanding of modern modulation' and to prove even to 'musical dilettantes' that music theory need not be 'a book with seven seals'. Riemann viewed the publication of the treatise as something of a betrayal, despite Reger's professions of admiration for his teacher. In his essays of 1904, Reger also proved that he could wield a sharp polemical pen. His article, entitled 'Hugo Wolf's künstlerischer Nachlass' (*Süddeutsche Monatshefte*), valiantly champions Wolf's music. (Wilske has pointed out a number of suspicious parallels between Reger's perception of his own circumstances in Munich and the picture he paints of the persecuted Wolf.)

Max Reger

Susanne Shigihara ('Reger und München', 1987) has identified 1904 as the year of Reger's breakthrough to wider success, marked by the composition of two important sets of piano variations, the completion of *Schlichte Weisen* and several chamber works for an all-Reger concert in the newly established Munich branch of the Allgemeiner Deutscher Musikverein. Reger was one of the first to be elected to the new committee, which also included his rival Schillings and Thuille. The range of his public recitals and conducting appearances also began to expand. Prokofiev witnessed his 1906 visit to St Petersburg. The performance there of the Serenade, op.95 (1905–6) may have influenced (along with the writings of Busoni) the development of a neo-classical style in the younger Russian composers. European tours gradually became a physical ordeal for Reger, however; the physical debility which afflicted him during concerts was all too frequently cited by unsympathetic critics as evidence of 'alcohol abuse'.

In 1904 Reger took a post as teacher of theory, composition and organ at the Munich Akademie der Tonkunst and in 1907 he accepted the position of director of music at the University of Leipzig. His departure from Munich had no single cause, though his opinion of the Akademie der Tonkunst and his failure to be elected to the board of the ADMV must have contributed to a feeling that his opponents were too numerous and powerful. In contrast, the four years in Leipzig brought him the first truly sustained recognition of his career. Although the press was markedly conservative, including outspoken critics of modern music such as Arthur Smolian and Walter Niemann, it was aware of Reger's stature. A steady stream of pupils, such as Othmar Schoeck, Jaromír Weinberger and George Szell were added to a list of prominent friends that included Max Klinger, Christian Sinding and Arthur Nikisch. In addition, Reger was awarded honorary doctorates from the universities of Jena and Berlin (though some controversy was aroused at the latter institution by a musician being awarded a doctorate of medicine). Fritz Stein, Reger's counterpart at the University of Jena and a young admirer of the composer, was primarily responsible for his honorary doctorate from that institution. In return for the recognition, Reger composed the first movement of his setting of Psalm 100 (1908–9), later completed and given its first performance under his own baton in Chemnitz. It has remained the most popular of Reger's choral works. Stein would eventually write Reger's biography (Potsdam, 1939).

Of more importance to Reger was meeting the 16-year-old violinist Adolf Busch at the Cologne Conservatory in

1909. Busch, with his brother accompanying, played Reger's own violin concerto for him. Two years later, Reger and Busch gave their first public recital together at a Bach-Reger Festival (which also included a performance of the Violin Concerto) in Bad Pyrmont. Festivals devoted to Reger's music had become an important aspect of his growing reputation since Marteau organized the first such festival in Dortmund in 1910.

Although Reger continued to produce chamber music in considerable quantities, his Leipzig years are most notable for his maturation as an orchestral composer. Before his arrival in Leipzig, he had not been successful in writing an orchestral work (an attempt to write a symphony at the time of his marriage came to nothing). The Hiller Variations (1907) were followed by the Violin Concerto (1907–8) and the *Symphonischer Prolog zu einer Tragödie* (1908). Although this non-programmatic symphonic poem shared the stern tone of the later Piano Concerto (1910), Reger's orchestral output gradually acquired softer, more Romantic contours. This was especially true after 1911 when Reger became director of the orchestra of the ducal court of Saxe-Meiningen in a line of succession that included Bülow and Richard Strauss.

Reviews of Reger's concerts in Munich suggested that he conducted in an angular style that paid little attention to technique. A considerable freedom with expression marks was also noted. If these characteristics were drawbacks to writers like Louis, others, like Prokofiev in 1906, noted that his hands were often highly expressive, particularly his left-hand interpretative gestures. In Meiningen, Reger spoke out against the cult of the virtuoso conductor, stressing his role as the mere transmitter of the composer's wishes. A similar refusal to indulge in virtuosity for its own sake was apparent in his piano playing, which was probably never of a high enough technical standard to aspire to the repertory of d'Albert or Busoni. He concentrated more on chamber music (in particular the works of Beethoven, Brahms and Mozart) than on solo work. Although widely regarded as a great Bach interpreter, his playing had its critics. Paul Bekker found it 'more flabbergasting than convincing' in its astonishing command of fine shadings of touch'. His orchestral programmes were much more adventurous, including works by Bruckner, Grieg, Richard Strauss, Tchaikovsky and Debussy, as well as his own music.

Undoubtedly his conducting activities, combined with his unrelenting outpouring of compositions, continued to weaken his already unreliable constitution. His decision to resign from Meiningen largely on health grounds was delayed by the death of Duke George II and the outbreak of World War I. But in early 1915 he retired to Jena where he intended to sustain his family, which now included two adopted daughters, through continued composition and concert tours. He concentrated on further refining a musical style that was clearly overcoming the tendency towards polyphonic excess at which most of his critics balked. *Eine vaterländische Ouvertüre* (1914), a war-inspired composition featuring national songs, stands out as something of an oddity since he did not contribute to many of the patriotic demonstrations supported by other German artists. More representative of his late style are the Hebbel *Requiem* (1915) and the Eichendorff setting, *Der Einsiedler* (1915), which are at once personal meditations and reflections of wartime. The estrangement from reality projected by these works and the late chamber music emphasizes that Reger could now be seen more easily as a Romantic (Eichendorff and Böcklin figure prominently among his late muses) than as a contemporary of Schoenberg, who accorded him considerable respect. Death, when it came, was not unexpected. He suffered a fatal heart attack in Leipzig, on his return home from a final tour to the Netherlands.

2. WORKS. The large-scale genres most popular with Reger's generation, the symphony and the music drama (or opera), do not appear among Reger's works, despite the several compositions whose titles allude to symphonic style. Large-scale choral works are also conspicuous in their absence. Such omissions manifest one of the central difficulties of Reger's career and provide at least a partial explanation of why history has, to some extent, overlooked him. In Reger's mature music the act of recreating through variation, homage and historical transmutation became his essential means of expression. His recreation of Bach's monumental Baroque 'through the prism of Johannes Brahms' (Wirth, 1974), his curious relationship to Eichendorff, whom he set more convincingly in orchestral rather than vocal works, and his connection to Böcklin, whose spirit he evoked without capitulating to the ideals of programmatic music, serve as examples of this tendency.

Although the organ played a major role in Reger's early education, there is enough evidence to suggest that from 1894 onwards he failed to maintain his technique as a performer. His most demanding and ambitious works for organ, therefore, were composed after he was no longer capable of playing them himself. The first works that do not seem derivative of Rheinberger (Weyer, 1989), come from the second Weiden period. Reger's organ music, however, rarely strays from Baroque models. The 'large free forms' in Weyer's classification are all based on the fantasia-and-fugue pattern, with one, op.57 (1901), distinguished as symphonic because of its formidable technical demands, Lisztian influence and impressive scope. The organ sonatas are also permeated by Baroque types (i.e. fantasias, passacaglia and fugue), though the first movement of the second (1901) makes an interesting attempt to rethink sonata form, replacing a development section with harmonic chiaroscuro. In very little of this music was Reger genuinely original, instead he worked within the tradition of 19th-century organ composers, such as Liszt and Franck.

Nowhere does the proximity of recreation and *Gebrauchsmusik* seem closer than in Reger's fascination with the chorale, partly motivated by his friendship with Arnold Mendelssohn, the reformer of Lutheran church music. His collection of 25 chorale preludes, op.67 (1902) was intended to be 'easily performable' in the context of the service. The seven large-scale fantasias, on the other hand, use chorales as fixed points for chromatic improvisation, substituting them for a programme in a type of symphonic poetry that shows the influence of Liszt. While the pedagogical works breathed new life into liturgical organ music, the choral fantasias revivified the Baroque with 19th-century expression and harmony.

Among the orchestral works, the *Symphonischer Prolog* (1908) most clearly exemplifies Reger's expressive, yet non-programmatic, symphonic style. The *Prolog* is more easily understandable as preparation for writing a symphony than as the musical embodiment of a particular

literary work. The composition's title verges on the ironic, given the work's duration of over 40 minutes, and a certain lack of focus is projected by the music's vehement tone. The alternation of apparently unrelated ideas at the beginning of the composition is never quite reconciled by Reger's whirling counterpoint, although the loud, minor motive of three ascending steps remains an emblem of forceful protest until the final climax. It is perhaps most interesting to consider the work as a source book of orchestral techniques over which Reger was gradually assuming mastery. Certain moments clearly point to the imaginative scoring of the late suites.

The most approachable of the suites is the *Vier Tondichtungen nach Arnold Böcklin* (1913). The first three of these tone poems feature an intensity coupled with simplicity that is new in Reger's music. A similar statement could be made of the fourth, 'Bacchanal', were it not for its gauche humour which precisely captures the banality of Böcklin's painting. 'Der geigende Eremit', with its detailed modal inflections and improvisatory solo violin writing conveys an affinity with Wolf (as in 'Auf ein altes Bild') much more intensely than Reger's often perfunctory song settings. The meditation on 'Isle of the Dead' lacks the hypnotic rhythm of Rachmaninoff's tone poem, but condenses the blackness of Reger's earlier orchestral works into a grim snap-shot. Reger was still breaking new ground in these final orchestral works. The *Romantische Suite nach Gedichten von Joseph von Eichendorff* (1912), which takes the first stanza of *Nachtzauber* as its inspiration, is striking in its sophisticated orchestration, which verges on impressionism in its evocation of Eichendorff's poetry.

Variation form (on themes by Beethoven, Hiller and Mozart) is one of the strongest threads running through the various genres in which Reger worked. Although the Hiller set is probably the best known, the Bach variations for piano give a better indication of the freedom with which Reger handled the form. Themes are transformed from cantus firmi into complex motivic material. The locus classicus of Reger's habitually cumulative treatment of the form is the concluding fugue, rising from shadowy beginnings to opulent figuration. If his phrases are often short-winded, if contrapuntal elaboration is favoured over symphonic development, if progressive chromatic elaboration is preferred to long-range tonal planning, these characteristics contribute to works which, in spite of their Baroque elements, belong to the world of the 19th-century character piece.

Dahlhaus identified the idiosyncratic nature of Reger's output (*Nineteenth-Century Music*, J.B. Robinson, trans., Berkeley, 1989, pp.336–7, 370–73) as the product of his historical position. He proposed that modernism, or at least the notion of musical progress, was initially linked to the idea of the magnum opus as 'a monumental piece in the "sublime style"'. Reger, like Strauss, Mahler and Pfitzner, was caught up by this idea, as the two formidable concertos show, but 'repeatedly lost heart and left his projects unfinished'. The advent of atonality, serving as a clear marker of musical progress, shifted the direction of modernism away from the magnum opus towards the aphorism, leaving Reger's larger works of 1908, the *Symphonischer Prolog* and Psalm 100, at 'a penultimate evolutionary stage which ... was never followed by an ultimate one'. Dahlhaus supports this interpretation with charges levelled against the composer by contemporary critics. The chromatic nature of his mature music was said to display 'precarious' motivic development, while the extreme refinement of the harmony grows 'labyrinthine'. 'Refinement, a daily exercise for Reger, turns into coarseness', a situation Dahlhaus described in an essay on Scriabin's music as a 'break ... between rhetoric and pedantry' that comes close to kitsch. This could perhaps be best exemplified by the almost unbridgeable gulf between the simplicity of Hiller's theme and the crushing weight of the elaboration which Reger's variations pile upon it (1907).

While Dahlhaus considers Reger to be a pedantic reactionary, other writers call attention to his position as a historical bridge between Brahms and Schoenberg. A comparison of Reger and Schoenberg is to some extent inevitable, based on the fact that Schoenberg himself identified Reger among his precursors. In 'Criteria for the Evaluation of Music' (1946), Schoenberg grouped Reger with Mahler and himself as pioneers of a 'new technique' ('developing variation') which turned against four-bar phrasing and the sequence. The five-bar phrase from the Violin Concerto quoted in 'Brahms the Progressive' (1947) adds substance to this claim, as does the demonstration of Reger's debt to Brahms in W. Frisch: *The Early Works of Arnold Schoenberg 1893–1908* (Berkeley, 1993, pp.14–19). For Reger's music, however, such support is a two-edged sword. Killmayer's phrase, 'das In-sich-beschlossen-Sein der Regerschen Musik', sums up the nature of the problem. If the music is understood on its own terms, it is in danger of being ignored; if, on the other hand, it is understood within a historical context, it runs the risk of losing its unique identity.

Reger's prodigious output of chamber music serves as a useful corrective to Dahlhaus's argument. The sonata forms so lacking in his most public works are to be found in his sonatas and quartets. By his own testimony, Reger saw the future of chamber music in the hands of 'a few leading spirits' among whom he intended to be numbered. His chamber works represented his clearest commitment to 'absolute music', even if he occasionally indulged his humour in musical code: the imposing Violin Sonata in C (op.72), for example, gained wide notoriety because of Reger's motivic references to his critics as 'Schaf' and 'Affe'. A desire to combine sonata features with fugal elements is also present. The incorporation of a fugue into the finale of the String Quartet in E♭, op.109 is faintly depressing, though the ingenuity of the treatment is beyond question. The Quartet as a whole is comparable in intensity to Schoenberg's First Quartet, with which it shares an alternation of lyrical and explosive elements which are partly mediated through counterpoint. In general, Reger's later chamber music participated in the clarification of his styles, most marked in the *Serenade für Flöte, Violine und Bratsche*, op.141a. In this work, Reger indulged his gift for unsentimental formal and melodic clarity.

Like few of his contemporaries, Reger was capable of creating thematic motives of a Beethovenian pregnancy and force (as in the stormy Piano Concerto). Employing these motives in works of the 'sublime style' was more difficult, however; the rhetoric of his ambitious setting of Psalm 100, for example, seems inflated beside Bruckner's more monumental style. To identify Reger's true compositional significance in the late, less self-conscious, more intimate style of the Mozart Variations is to make his

achievement seem unfinished. Yet this verdict concentrates on the positive achievements of Reger's turbulent career and evaluates at its true worth his legacy to Hindemith's generation.

JOHN WILLIAMSON

Reggae. A term denoting the modern popular music of Jamaica and its diaspora. It also refers specifically to a rhythmic format that originated in 1968, sparked a worldwide cultural trend in the 1970s, and has continued as the bedrock of the digital forms that have come to dominate Jamaican pop music.

1. ORIGINS. The origins of reggae are found in MENTO, Jamaica's Cuban-inflected calypso music that dates from the late 19th century. Mento was a celebratory, rural folk form that served its largely rural audience as dance music and an alternative to the hymns and adapted chanteys of local church singing. As the Jamaican population began to shift in the late 1950s, urban migration and the social changes that accompanied industrialization created a demand for a faster, electrified dance music. In the capital of Kingston and in the larger island towns, entrepreneurs set up mobile sound systems to bring in the powerful rhythm and blues of American stars like Fats Domino and Louis Jordan. By 1959, as rhythm and blues declined under the commercial shock wave of rock and roll, local record producers sought a new dance music. Absorbing the instrumentation of the swing bands and the pulse of rhythm and blues, infused with bass-driven mento, Jamaican musicians developed a native rhythm called SKA. This used a 4/4 shuffle rhythm close to classic rhythm and blues, with an afterbeat originally played on piano, whose sound the term sought to approximate. In these ensembles, horns and reeds emphasize the guitar's chordal beat, and the trombone came to dominate solo sections after the Jamaican virtuoso Don Drummond rose to prominence around 1960, playing with the leading band, the Skatalites. In the early 1960s, Ska songs like *Oh Carolina* captivated Jamaica and helped launch a proud post-independence cultural identity, while the style also followed a generation of Jamaicans to England, where the music was known as bluebeat.

Members of the Skatalites quickly became local celebrities as they began to identify with a new millenarian religion spreading through the shantytowns of western Kingston. The Rastafarians, who worshipped the Ethiopian emperor Haile Selassie I and preached redemption through African repatriation, began to capture the imaginations of Jamaican artists who saw in the movement a viable spiritual nationality and a soulful alternative to the black power movements sweeping the cities of North America.

By the mid-1960s, popular singers were the heroes of the western Kingston ghettos where new musical forms were created. Singers like Desmond Dekker and Joe Higgs trained the young vocal harmony trios, patterned after the Chicago soul group the Impressions, and who would soon take over the music. Trios like the Wailers and the Clarendonians developed close harmony styles in a milieu where musical instruments were scarce and expensive, and electricity was not supplied. As the turbulence of the decade spread through the ghettoes and anarchic youth went to war against society and each other, the ska singers turned to protest, spawning the Rude Boy movement, with uptempo ska-style songs of caution (like the Wailers' *Simmer Down*), judgement and incarceration. By 1967, the ska tempo had slowed to almost half its early metre, and Jamaican music changed again. Horns faded from the texture, replaced by bubbling, monochromatic guitar figures, and the drum and the bass-line also became locked together. Called ROCK STEADY, it bears traces of resurgent American soul music, with new sounds from Latin America, especially the bossa nova and samba nova of Brazil. Social commentary in the form of increased calls for justice and equality became the norm of rock steady. Most crucially, the electric bass became the most important instrument of the rock steady ensemble. Rhythmic statement and strength took priority over melodic and harmonic considerations. As the foundation of the reggae bass aesthetic, the electric bass was a talking drum that played a definite rhythm, but did not necessarily play a distinct melody line. A great number of the most seminal bass lines ('riddims') underpinning reggae are the work of Leroy Sibbles, who played bass in 'Sir Coxone' Dodd's Studio One band in this period.

2. 1968–75. The reggae beat and the word applied to it both date from approximately 1968, when the vocal group the Maytals released the single *Do the Reggay* in Kingston, in which the rock steady pulse was slowed down. A new regular two-chord guitar pattern provided persistent counterpoint to the bass and drum riddims. The chords of the guitar and keyboard were meshed so that their accents took on reggae's characteristic pulse-like metre. Producer Clement 'Sir Coxone' Dodd has said that the beat and the sound evolved spontaneously during rehearsals within the recording milieu of Kingston, where, in addition to Dodd, producers Lee 'Scratch' Perry and Leslie Kong maintained groups of players who cross-pollinated musical ideas in the city's clubs and nightspots. The Maytals' lead singer Frederick 'Toots' Hibbert, credited with the first use of the word reggae, defined the term: 'Reggae just mean comin' from the people, an everyday thing, like from the ghetto. When you say reggae you mean *regular*, majority. And when you say reggae it means poverty, suffering, Rastafari, everything in the ghetto. It's music from the rebels, people who don't have what they want'.

In its formative years, reggae stayed mostly in Jamaica, with a few of the island's singers, such as Jimmy Cliff and Desmond Dekker, occasionally heard on radio in Europe and North America. In 1972 the locally produced film *The Harder They Come*, starring Cliff and featuring performances by other Jamaican artists, achieved cult status in metropolitan music markets. Using proceeds from his English rock music business, Island Records'

Chris Blackwell pledged international backing to reggae music and especially to its rising star, the singer and writer BOB MARLEY. As leader of the Wailers vocal trio and band, Marley (1945–81) had been active in Jamaican music since 1962 and had worked with all the leading producers, including Coxone, Leslie Kong and, most successfully, Lee Perry. Heavily influenced by James Brown and the tenets of Rastafarianism, Marley's rebellious lyrics and piercing tenor voice, joined to the infectious swing of the Wailers' band, propelled reggae into cultural arenas all over the world. Beginning in 1973 the Wailers began to experiment with reggae forms in order to appeal to international audiences. By 1975 the re-named Bob Marley and the Wailers accelerated the basic reggae tempo, and added blues-heavy, amplified rock guitar and a gospel-inflected female trio, the I-Threes, to help propel Marley's messages of personal liberation and human rights. The Wailers also integrated the archaic African-Jamaican hand-drumming Burru rhythms, which had been absorbed by the burgeoning Rastafarian movement, into their cosmopolitan reggae ensemble. Throughout the 1970s and into the 80s albums such as *Exodus* (1977), *Survival* (1979) and *Uprising* (1980) established Bob Marley as the leading figure of reggae and a Third World prophet with a worldwide audience.

3. 1975 ONWARDS. While Bob Marley served as the spearhead of the reggae movement, in the 1970s other musicians began to transform the music. In 1975 the drummer Carlton 'Santa' Davis originated the flying cymbals or 'flyers' reggae pattern. While his left hand played the steady reggae beat, his right hand played the half-open hi-hat cymbal in a sizzling pattern of afterbeats. The following year, drummer Sly Dunbar and bass player Robbie Shakespeare, in association with Dunbar's mentor, the drummer Leroy 'Horsemouth' Wallace, began to play an even faster reggae style, known as rockers, or militant. More strictly patterned than before, this style featured a military-sounding snare figure on top of an eight-to-the-bar marching figure on the bass drum. With the advent of the rockers style, the original ticking reggae beat was relegated to a rhythmic category styled roots reggae, where it languishes today as a respected if dated form.

As it branched out internationally, reggae still had to serve the needs of its home audience in Jamaica, which continued to get its local dance music from mobile sound systems, as opposed to live performances, and which underlines the origin of reggae as a recorded music rather than a performed one. In the late 1960s and early 70s, sound system DJs began to talk over the instrumental passages of the records they were playing, spreading messages of comically exaggerated braggadocio and social awareness, and developing into popular entertainers rivalling the leading singers of the day. To accommodate early talking DJs like U Roy, I Roy and Big Youth, reggae producers began to release singles whose flip-sides contained a version of the same song with the original vocals dubbed-out, or deleted, by the studio engineer. Consequently, the DJs could 'toast' or 'rap' over the pared-down drum and bass riddim. These versions, sometimes enhanced with echo and sound effects, quickly became a popular new form, known as dub, which evolved in time into various forms of pop, including TECHNO. The rapping Jamaican DJs in turn heavily influenced the early practitioners of American rap music.

Bob Marley's death in 1981 from cancer signalled a broad change in reggae. While pop singers like Gregory Isaacs and Dennis Brown crooned a sub-genre known as lovers rock, DJs like Yellowman injected a misogynistic stream of boasting and invective into the music. Soon this 'slackness' style merged with the new digitized rhythms called dancehall. Dancehall originated around 1982 when a Jamaican producer accidentally sped up the pre-set reggae rhythm on a digital synthesizer and became intrigued by the possibilities of mechanizing the essential beat. This style has ruled Jamaican music ever since, spawning other pop variations such as bam bam, effectively dancehall without bass as the guitar carries the rhythm with the drums, and ragga, played solely on digitized instruments. Roots reggae, however, remains the heartbeat of Jamaica, and no other modern form of popular music can claim reggae's astonishing success in its global dissemination.

STEPHEN DAVIS

Reggio, Fattorin da. The name under which DOMENICO VALLA published his only known work.

Reggio, Hoste [Spirito da]. *See* HOSTE DA REGGIO.

Reggio, Pietro (Francesco) (*b* Genoa, bap. ?6 July 1632; *d* London, 23 July 1685). Italian composer, singer, lutenist, guitarist and teacher. He sang bass in the troupe of Italian musicians employed by Queen Christina in Stockholm (not Rome, as stated in *EitnerQ*, *Grove5* and *MGG1*) from 30 November 1652 to 1 March 1653; he may have stayed in Sweden until the queen's abdication in 1654. He is reported to have travelled to Germany and Spain, and there is documentary evidence dated September 1657 that about that time he sang in the French royal choir. By July 1664 he was in England: Pepys noted 'one slovenly and ugly fellow, Seignor Pedro, who sings Italian songs to the theorbo most neatly'. He remained in England, settling in London and Oxford and earning his living by singing, playing and teaching music. The private homes in which he performed included those of Pepys and Evelyn. According to Evelyn in 1680 he 'sung admirably to a Guitarr and has a perfect good tenor and base'. Reggio taught singing to Evelyn's daughter Mary. He also

worked as a music copyist (see *GB-Lbl* Harl.1501 and *US-LAuc* fC697 M4) but he did not copy the manuscript (*GB-Lbl* Add.31440) described as a Reggio autograph in the catalogue of the British Library, London, and in *MGG1*; it dates from an earlier period and contains neither his handwriting nor any of his music. He was among the composers who contributed to Shadwell's adaptation of *The Tempest* in 1674: he wrote the song 'Arise, ye subterranean winds'. This and other songs by him in English and Italian were included in manuscripts of the period, and 46 of his songs and duets were published in 1680. A treatise on singing by him was advertised in 1678 and although a copy was catalogued by Marsh's Library, Dublin, no copy seems to survive. When he died he was buried in St Giles-in-the Fields, with a handsome inscription on his tombstone.

Reggio had a moderate success as a composer: his output was small, of limited scope and rather ordinary in quality. He was probably more gifted as a singer and player. His main role, perhaps, was to bring music and musical styles from Italy to countries across Europe: by performing and teaching this music abroad he made it more widely known. In England in particular he contributed usefully to the musical scene.

WORKS

[42] Songs, S, bc [and 4 duets, S, B, bc] (London, 1680) [most to poems by A. Cowley]

1 song, 1v, bc in 1685[5]; 14 songs, 1v, bc; 2 duets; 1 Lat. motet, 3vv, bc: *GB-Cfm*, *Lbl*, *Ob* (Tenbury), *Och*

WRITINGS

GLORIA ROSE/ROBERT SPENCER

Regina. A trade name for a MUSICAL BOX, an American offshoot of the Leipzig-made Polyphon.

Regina caeli laetare (Lat.: 'Queen of Heaven rejoice'). One of the four large-scale Marian antiphons. It is now sung at the conclusion of Compline from Easter Sunday to the Friday after Pentecost; since 1742 it has also been used to conclude the *Angelus* during the same season.

Its use as a concluding antiphon at Compline, and probably also its connection with the Easter season, date from at least the mid-13th century. The view is distorted, however, by the late medieval practice of arranging the Marian antiphons in weekly cycles; the Roman breviary of 1468 also requires these antiphons to be sung at services other than Compline. The earliest known sources, the Old Roman antiphoner *I-Rvat* S Pietro B.79 and the Lucca antiphoner *I-Lc* 601, both date from the 12th century and indicate an Italian if not specifically a Roman origin for the antiphon. It appears in both manuscripts among a group of Marian antiphons to be sung with the *Magnificat* after Vespers in the Easter season; according to Nowacki ('Antiphon', *MGG2*), this need not indicate that it was previously in use as an office antiphon in the usual sense. The melody as given in these two manuscripts differs from that found in later medieval sources. Of the two versions in the *Liber usualis* the more elaborate (p.275) dates from the mid-13th century; there are polyphonic settings of this version by Dunstaple, Busnoys, Victoria, Philips and others. The second, simpler version dates from the 17th century and is probably by Henry Du Mont.

See also ANTIPHON and MOTET, §II.

KEITH FALCONER

Regino of Prüm (*b* ?Altrip, nr Ludwigshafen, *c*842; *d* Trier, 915). German monk, historian, canonist and music theorist. A 17th-century annalist of Prüm, Heinrich Brandanum, asserted that Regino was born of 'very noble parents'; he gave no birthdate, but it may be deduced from the date of his abbacy. Regino probably entered the Benedictine abbey of Prüm as a youth, where he received instruction under Abbot Markward, one of the most learned men of his time. In 885 he became provost (*custos*) of the monastery; in 892 he was elected abbot, but was forced to resign seven years later under political pressure. Archbishop Radbod of Trier then appointed him Abbot of St Martin, where he wrote a *Chronica* of the years from the birth of Christ to 906, a handbook of canon law for bishops to use during annual diocesan visitations (*De synodalibus causis*) and a music treatise together with a tonary (*Epistola de armonica institutione; Octo toni de musicae artis*). He died at the abbey of St Maximin of Trier, where his tomb was discovered in 1581.

The music treatise was written in the form of a letter dedicated to Radbod, hence the title *Epistola*. It must have been compiled about 901, shortly after Regino's arrival in Trier. Only the beginning and the end are original, the main body of the longer version being a compilation of Boethius, Martianus Capella (through the compilation of Remigius of Auxerre), Macrobius and, to a lesser extent, Calcidius, Cassiodorus and Fulgentius. Regino's principal intention was to correct the intonations and confirm the modes of the antiphons and responsories of the Mass and Office, for the benefit of the clerics of the diocese of Trier; some of these intonations, he claimed, were 'degenerate', probably because they reflected the modal and melodic changes embodied in the newly emerged Romano-Frankish repertory, and because of the abuses (vehemently denounced) of some cathedral singers.

Two versions of the treatise survive in the original form as a letter: a shorter version (in a Brussels manuscript containing a full tonary), and a longer one (in a Leipzig manuscript) which was most likely expanded after Regino's death by one of his disciples, as in the case of the *Chronica* (*Continuatio Reginonis*). There exists also an early 11th-century 'abridgement' (*Breviarium de musica*) which may well be a product of the monastic reforms of GUILLAUME DE DIJON (*d* 1031), modelled on those of Gorze and Cluny. In the *Breviarium* version all reference

to people's names, even that of the author, was eliminated. Although the treatise is mostly a compilation of previous music writers, it sets out two important rules concerning 9th-century plainchant: the tone or mode proper to antiphons, introits and communions is determined by their first note; the tone or mode proper to responsories is determined by their last note.

Regino's is the first comprehensive tonary surviving after the Metz Tonary of about 870 (*F-ME* 351; ed. W. Lipphardt: *Der Karolingische Tonar von Metz*, Münster, 1965), and together with the Hartker Antiphoner (*c*1000, *CH-SGs* 390–91; ed. in PalMus, 2nd ser., i, 1900) and the Sarum Gradual (ed. W.H. Frere, *Graduale sarisburiense*, London, 1894/*R*) it is one of the most comprehensive plainchant sources in existence. Modelled on an antiphoner of Trier (now lost), and akin to a later one from the same city (*D-TRs* 1245/597, originally from Prüm), it contains the incipits of 1261 antiphons, 150 introits, 127 communions and 26 responsories and their verses; it formed the basis for Gevaert's classification of antiphons into 47 main groups. The tonary appears in full in *B-Br* 2750–65 [2751] (c930), which is notated in Messine neumes, whereas the much different version of *D-LEu* Rep. I.8.93 [169] (*c*950), notated in florid Messine neumes from the Mosel area that reveal a certain Irish influence, contains a classification of approximately the same repertory according to the eight modes within the cycle of the liturgical year, but omits the introits and communions while adding the alleluias, tracts, invitatories and antiphons of special feasts. These two manuscripts contain differing introductions, which cannot safely be ascribed to Regino. The other early sources of the *Epistola*, *Breviarium* and tonary are as follows: *F-MOf* H.159 (*Breviarium* without tonary; 11th century); *ME* 494 (early 11th-century copy of the preceding); *I-Vnm* Z.L.497 [1811] (*Breviarium* without tonary; mid-11th century); *MC* 318 (short excerpts without tonary; mid-11th century); *GB-Ob* Lyell 57 and *Ob* 613 (fragments; 13th century). The supposed Ulm manuscript was an invention of F.J. Beyschlag (in his *Sylloge variorum opusculorum*, Schwäbisch Hall, 1728).

YVES CHARTIER

Regis, Johannes [Leroy, Jehan] (*b* *c*1425; *d* ? Soignies, *c*1496). Franco-Flemish composer. The commonness of his name has led to considerable confusion over Regis' biography. He is almost certainly the Jehan Leroy first recorded in 1451 serving as master of the choristers at the collegiate church of St Vincent, Soignies (18 km north of Mons, diocese of Cambrai). References to Regis that appear to place him in Mons, Ghent and 's-Hertogenbosch have all been shown to involve other men, while the assertion that he was choirmaster at Antwerp in 1463 derives from the misreading of a document from Cambrai. Archival records concerning yet another man named Johannes Regis, who served as *chevecier* at the church of St Martin, Tours, reveal intriguing connections with singers and officials of the French royal chapel, including the composer Johannes Ockeghem. It is unlikely this Regis was a composer, however, since in none of the many references to him is there any indication that he was a musician, or that he was involved in musical activities of any kind.

The mid-15th century saw the emergence of an impressive musical establishment at St Vincent: during the 1450s Regis' colleagues there included the composers Binchois, Guillaume de Malbecque and Jacobus de Clibano. In November 1460, the chapter of Cambrai Cathedral deputed Guillaume Du Fay to invite Regis to become master of the choirboys there. Regis ultimately turned down Cambrai's offer and remained at St Vincent, where in 1462 he was named *scholasticus*, a position he held for the rest of his life. At Soignies the *scholasticus* was responsible not only for directing the chapter school and drafting the acts and correspondence of the chapter, but also for carrying out the duties otherwise associated with a cantor, including leading the choir on double feasts and other important liturgical occasions. The office of *scholasticus* was dissolved at Regis' death, which, according to pay records from St Vincent, probably occurred in the early summer of 1496.

In contrast to the peripatetic careers of many of his contemporaries, there is no record of Regis ever having worked or travelled outside the diocese of Cambrai, and his ties both to Du Fay and to Cambrai Cathedral apparently remained strong. He is mentioned as having been Du Fay's *clerc* in the latter's executors' account, and is among the musicians named in Loyset Compère's motet *Omnium bonorum plena* (composed probably for the dedication of Cambrai Cathedral in 1472). Moreover it is at Cambrai that we find the earliest evidence of music by him: between 1462 and 1465, three of his works (now lost) were copied into the cathedral's choirbooks. These included a *Missa crucis*, a *Regina caeli laetare*, and a *Missa 'L'homme armé'*, the last of these being the earliest recorded 'L'homme armé' mass. Evidence that he enjoyed a broader reputation by the 1470s comes from three theoretical treatises by Johannes Tinctoris, who grouped

Regis with Ockeghem, Busnoys, Caron and Faugues as leading composers of the generation after Du Fay and Binchois. From this same decade date the earliest extant copies of his works (the songs *S'il vous plaist* and *Puisque ma dame*, and the *Missa 'Ecce ancilla Domini'/'Ne timeas Maria'*). His motet *Clangat plebs flores* existed by 1477, when Tinctoris praised the work for its compositional *varietas* in his *Liber de arte contrapuncti*. His masses and songs may pre-date most or all of the motets, though a detailed chronology is hindered by the relative lateness of some of the more important sources of his music. Nearly half of the pieces in the original motet section of the Chigi Codex (*I-Rvat* Chigi C.VIII 234, copied *c*1500) are securely attributable to Regis, a degree of representation comparable to that of Ockeghem in the mass corpus of the same manuscript, and it seems likely the collection was intended in part as a retrospective of works by the two recently-deceased composers. Six of Regis' 11 Latin-texted works appear in Petrucci's prints (four of them in the *Motetti a cinque* of 1508), an unusually high number for a composer of his generation.

The 'L'homme armé' mass described by Tinctoris cannot be identified with his *Missa 'Dum sacrum mysterium'/'L'homme armé'* (copied in *I-Rvat* CS 14), thus making Regis one of the few composers known to have written two masses on the 'L'homme armé' melody. Striking in the 'Dum sacrum' mass is Regis' treatment of borrowed materials, including the combination of sacred and secular cantus firmi. Though the 'L'homme armé' tune serves as the principal *cantus firmus* (often transposed and set in inexact canon), it carries various texts drawn from the office of St Michael. Other texts and melodies from this same office are added at different points, with the result that at times three of the four voices are based on pre-existing melodies. Transposition and the combining of multiple *cantus firmi* are also prominent features of his remarkably long *Missa 'Ecce ancilla Domini'/'Ne timeas Maria'*, for which Du Fay's *Missa 'Ecce ancilla'/'Beata es Maria'* apparently served as a point of departure. Like Du Fay, Regis employed two musically and liturgically related chants; however, rather than presenting these successively in the tenor alone, he had them sound simultaneously in the tenor and bassus. He added to the web of borrowed material by introducing five further Marian antiphons (with their texts) at various places in the work, though without ever utilizing more than two at a time.

Regis' most innovative and influential works are his cantus-firmus motets in five voices. These represent one of the earliest sustained attempts to compose in five parts and appear to have been models for younger musicians such as Obrecht, Compère, Weerbeke and Josquin. Most of the motets are laid out in two sections in contrasting mensurations, with the tenor cantus firmus set as an axial voice in the middle of the texture. This disposition of voices, with two parts in distinct ranges lying beneath the tenor, extends the notated range downward in some cases (three of the motets descend to D) and facilitates Regis' varied treatment of the cantus firmus. Though set initially as a structural foundation in longer note values, the tenor is subsequently integrated into the contrapuntal fabric of the other voices. In *Clangat plebs flores/Sicut lilium* this results in an uneven distribution of the three statements of the cantus firmus over the two sections, with the last two statements squeezed into the final quarter of the piece. Evident in all of Regis' works, though especially marked in the motets, is an interest in sonorous effects. This manifests itself through the careful spacing of vertical sonorities, frequent and sharp textural contrasts, and a liberal use of explicit accidentals. In *Lux solempnis adest/Repleti sunt omnes*, perhaps his most accomplished work, Regis employs the tenor within a five-voice texture so sparingly that a single cantus-firmus statement is sufficient to span one of the longer motets of the 15th century. Two of the five-voice motets depart from his usual practice. *O admirabile commercium* is in three sections and mixes various liturgical and popular melodies associated with Christmas in a manner reminiscent of the masses. *Ave Maria . . . virgo serena* seems not to be based on a structural tenor (it lacks an inner voice part in its unique source) and employs paired imitation more systematically than in Regis' other works, in which contrapuntal coherence stems largely from the subtle interlacing of small rhythmic-melodic motives. The three-voice *Ave Maria* is organized on the smaller scale of secular songs, with neatly contoured melodic lines and brief imitative passages. More generally, Regis' preference for chanson-like melodies in his Latin-texted works (recalling the melodic styles of Du Fay and especially Binchois) sets him apart from his contemporaries and may be related to his extended personal contact with these composers.

Textural contrasts and the combining of texts mark his two extant songs as well. In its presumably original three-voice version the rondeau *S'il vous plaist* consists in large part of a series of shifting duos. The four-voice *Puisque ma dame/Je m'en voy* combines its primary poem with a second, incompletely preserved text in the contratenor altus in a way that finds no counterpart among songs of the period.

WORKS

Edition: *J. Regis: Opera omnia*, ed. C. Lindenburg, CMM, ix (1956) [L]

Missa crucis (lost); see Houdoy
Missa 'Dum sacrum mysterium'/'L'homme armé', 4vv, L i, 1
Missa 'Ecce ancilla Domini'/'Ne timeas Maria', 4vv, L i, 25
Missa 'L'homme armé' (lost); cited by Tinctoris
Credo 'vilayge', 4vv, L i, 62
Ave Maria . . . benedicta tu, 3vv, L ii, 60 (to BVM)
Ave Maria . . . virgo serena, 5vv, L ii, 42 (sequence to BVM; 5th v missing)
Celsitonantis/Abrahae fit promissio, 5vv, L ii, 5 (to BVM)
Clangat plebs flores/Sicut lilium, 5vv, L ii, 21 (to BVM)
Lauda Sion Salvatorem/Ego sum panis, 5vv, L ii, 14 (sequence for Corpus Christi)
Lux solempnis adest/Repleti sunt omnes, 5vv, L ii, 30 (for Whitsuntide)
O admirabile commercium/Verbum caro, 5vv, L ii, 49 (for Christmas)
Regina caeli laetare (offertory; lost); see Houdoy
Salve sponsa, 5vv, L ii, 1 (to ?BVM; 5th v missing)
Puisque ma dame/Je m'en voy, 4vv, L ii, 63 (rondeau); ed. in L.L. Perkins and H. Garey, *The Mellon Chansonnier* (New Haven, 1979)
S'il vous plaist, 4vv, L ii, 62 (rondeau); version for 3vv, ed. in MRM, vii (1983), version for 3vv ed. in G. Thibault, *Chansonnier de Jean Montchenu* (Paris, 1991), version for 4vv ed. in RRMR, cvi (1996)

DOUBTFUL WORK

Ave rosa speciosa/Beata mater et innupta virgo, 6vv; anon. in source, attrib. Regis and ed. in Houghton; attrib. questioned in Winkler (1993), 5, and Gallagher (1998), 269–86

SEAN GALLAGHER

Register (Ger. *Lage*). (1) A part of the RANGE of an instrument, singing voice or composition. No interval can prescribe the size of a register, though the construction or playing of an instrument and the manner of singing can help to determine whether two notes are in the same or a different register, for example the strings of a violin (a 5th apart), the register key of a clarinet (12th), overblowing on a flute (octave), lip tension on a brass instrument, and singing with a 'head' or 'chest' voice, or in falsetto.

In determining the registers of a musical work it is necessary to have some understanding of its style or structure. Medieval plainsong, for instance, distinguishes between higher (authentic) and lower (plagal) modes, thus suggesting that the interval between corresponding pairs of modes – a 4th – defines a difference in register. The 4th is also the difference between successive hexachords (*see* HEXACHORD) in the notational system used in the late Middle Ages and Renaissance. In tonal music the octave became an important register-defining interval; for the first time melodies were repeated in different octaves for contrast. Some were conceived to bring two octave regions together (ex.1). One often encounters the

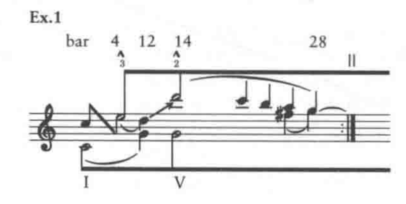
Ex.1 Mozart: 'Haffner' Symphony K385, opening

expression 'in a higher register' meaning no more than 'in a higher octave', and modern PITCH NOTATION (i.e. *C′–B′*, *C–B*, *c–b*, *c′–b′*, *c″–b″* etc.) tends to support the primacy of the octave as a determinant of register. The importance of register to melodic unity was first clearly expressed by Heinrich Schenker, who believed that the fundamental melodic resolution to the key note or tonic is confined to one OBLIGATORY REGISTER. In TWELVE-NOTE COMPOSITION the octave is of fundamental importance in giving meaning to 12-note sets, which consist of pitch classes with no particular registral identity.

(2) An ORGAN STOP; *see also* STOP, (3).

(3) In an organ, the slider in a slider-chest.

(4) *See* REGISTRATION.



WILLIAM DRABKIN

Register key. *See* SPEAKER KEY.

Registerknopf [Registerzug] (Ger.). *See* STOP, (4).

Register transfer. In Schenkerian analysis (*see* ANALYSIS, §II, 4), the raising or lowering of a line by one or more octaves, either by direct leap or in connection with other techniques of PROLONGATION. In the first movement of Mozart's Piano Sonato in C K545, for instance, an 'ascending register transfer' (Ger. *Höherlegung*) sets off the beginning of the second subject group (beginning on *d‴*) from the preceding passage (whose last downbeat is *d″*); this is shown by the arrow in ex.1, a reduction of the

Ex.1

exposition of the sonata taken from Schenker's *Der freie Satz* (1935), fig.47/1.

In Chopin's Mazurka in E minor op.41 no.2 shows a 'descending register transfer' (Ger. *Tieferlegung*) whereby the bass is brought down from *e* to *E* in the cadential progression, which allows the first true tonic chord (in bar 4) to gain more emphasis than the V⁷/IV with which the piece opens. In the analysis of the bass line, shown in the bottom stave of ex.2 (after Schenker 1935, fig.75), the interlocking slurs track the cadential progression, while the beam attached to the *E* shows the start of a tonic prolongation.

Ascending and descending register transfers can be used conjunctly to produce a COUPLING of two parts in different octaves.

WILLIAM DRABKIN

Registration. The selection of different pitches and tone-colours available on an instrument. The two instruments that offer the player a choice of registration are the organ and the harpsichord.

I. Organ. II. Harpsichord.

I. Organ

The musical forces of the organ are available selectively by means of separate stops, or registers, which together provide the entire tonal capacity of the instrument. Each of the stops controls the 'on' or 'off' position for a series of pipes, grouped so that one or more pipes will respond to each key on a manual or pedal keyboard. The term 'organ registration' takes in the large body of advice about what is appropriate when combining organ stops, as well as the aggregate tonal effect of any combination drawn for a particular musical need. There is a rich store of information about registration for the organ that can be classified generally into two categories: practical advice, often supplied by organ builders, which consists of lists of combinations capable of being turned to good use; and instruction from composers or theoreticians about combinations appropriate for performing a particular musical composition.

1. Registration and the organ. 2. Early Spanish organs. 3. Early Italian organs. 4. North-western Europe. 5. Classical French organs. 6. English organs. 7. The 19th century. 8. The 20th century.

1. REGISTRATION AND THE ORGAN. The history of organ registration is inextricably bound up with changing styles in organ building. Its origins lie in the transition between the stopless organ (*Blockwerk*) and instruments equipped with selective registers. In the indivisible *Blockwerk* of the early 15th century, the *plenum*, a mighty mixture of pipes sounding fundamentals and harmonics, was the only registration. The introduction of the *fluitwerk-sterkwerk* option (foundations alone, or with the large 'mixture' of upperwork), the second manual division (*Positif-de-dos*, or *Rückpositiv*) and Trompes (Bordunen) made some variety in registration possible; but still there was no selectivity in the modern sense within the sections of the instrument. In Italy towards the end of the 15th century there were one-manual organs whose *plena* had been entirely divided into separate stops, each controlling a single rank of pipes. As this new fashion spread northwards through France and Germany, organists were confronted for the first time with the necessity of choosing and blending their registrations, and builders often supplied them with advice about the most attractive combinations available. The earliest known organ music and the earliest instructions for registration date from the late 15th century. But until the early decades of the 17th century there was no apparent attempt to identify any registration with a certain musical texture or style.

Mersenne, in his *Harmonie universelle* (1636–7), opened his section on organ registration by summing up possible combinations of stops for an instrument of 22 registers. Taken in pairs, he said, the individual sounds of the instrument may be varied in 231 ways; taken in threes, 1540 ways; and taken in fives, 26,334 ways. But 'among the many possible combinations there are several which are disagreeable'. This statement suggests that a player of good taste should refer to Mersenne's advice to find the most agreeable registrations, and eventually learn enough about the tonal resources of the organ 'to invent several others by experimenting at the keyboard'.

Mersenne's lists of 'agreeable' registrations summed up more than a century of innovatory development for the French organ, a period from which considerable information about habits of registration has survived. A typical organ contract of the 16th century, or a list of registrations made out to assist the player, first described the make-up of the plenum (called *fourniture*or *plein jeu*). The plenum was the ancient *Blockwerk* split into three or more registers controlling doubled or tripled ranks of 16′, 8′ and 4′, with two mixtures, called Fourniture and Cymbale. These mixtures held diverse ranks of many pitches contributing to the plenum; they were not useful by themselves, but neither was the plenum complete without them. Alongside the plenum, additional registrations developed for newly invented stops – flutes, reeds, bells, birdcalls, drums – bearing the names of their most distinctive components, such as Nasard, Doublette or Cromorne. Names of familiar sounds were applied to certain registrations, such as *petit carillon*, 'parrot', 'canaries' or the 'voice of pilgrims of St Jacques'.

Major developments in organ building during the 16th century and the early 17th led to sharp stylistic delineations along national lines. Mersenne's 'agreeable' registrations would not necessarily have been applicable to Italian or German musicians of his time, whose instruments were designed according to different tonal concepts, although some basic combinations had international acceptance. Yet organ builders and theorists supplied the broadest range of advice available for playing early organ music. Schlick, in his *Spiegel der Orgelmacher und Organisten* (1511), mentioned that preludes should be played on the plenum, and the cantus firmus could be brought into prominence on the *Hauptwerk*. Numerous characteristic sonorities were discovered and recorded, such as Krumhorn and Zimbel, which appeared in the Netherlands as early as 1505.

2. EARLY SPANISH ORGANS. Two post-Cabezón documents deal fully with possibilities for one- or two-manual organs contemporary with Francisco Correa de Arauxo. They are the *Documents per a la historia*, which relate to the organ in S Joan de les Abadesses, Catalonia (1613), and *Archivo musical* (document 1404 at Lérida Cathedral) for a 25-stop, two-manual organ built in 1624–5. The latter is most remarkable for its systematic coverage of 117 registrations. One-manual combinations were classified under the following headings: plenum, Flautados, Nasardos and Misturas; two-manual registrations, usually using the *cadira* (*Rückpositiv*) for melodic purposes, were grouped as: *unisonus*; 'other combinations' to be used with or without Tremulant; Flageolets; Gaytillas; Cornetillas; Regalies; and ways of using the *medio registro partido* (half-registers split between bass and treble). Although Correa's tientos seem to have been written mostly for a one-manual organ with split stops (divided at *c*′), the Lérida manuscript shows richer possibilities for contemporary adaptation to an instrument provided with a *cadira*.

The introduction in the late 17th century of the famous horizontal trumpets of Spanish organs (Clarines, or Trompettes *en chamade*) further heightened the contrasts between those instruments and organs in other European countries. As early as 1706 directions for using horizontal trumpets were given in the titles of pieces in the *Flores de música ... por Fray Antonio Martín y Coll, organista de San Diego de Alcalá*: 'Cancion de clarín, con eco, a discreción', 'Entrada de clarines' and 'Registro de clarines, mano derecha'.

A late 18th-century Spanish source shows the influence of Bédos de Celles, the third volume of whose *L'art du facteur d'orgues* (1770) gave valuable advice on registration. A series of letters to a friend by Don Fernando Antonio of Madrid, dealing with the construction and maintenance of organs, was published in 1790. Despite his feeling that organists should know how to find suitable registrations for their own playing, Don Fernando was persuaded to add a section on registration. It is, in effect, a Spanish adaptation of Bédos' instructions, and probably not truly representative of common practice.

3. EARLY ITALIAN ORGANS. The Italians, who were probably the first to use spring- and slider-chests that made the separation of stops possible on the organ, called attention to the correlation between certain registrations and suitable musical textures. Diruta, in his *Seconda parte del transilvano* (1609), assigned moods to the 12 modes, and recommended a registration for each. Banchieri, in *L'organo suonarino* (1605), not only noted registrations but even included changes between sections of two compositions, the *Battaglia* and the *Dialogo*. But the most significant contribution came from the builder Costanzo Antegnati, in *L'arte organica* (1608), which was written in the form of a dialogue between father and son. Antegnati explained his 12-stop organ at Brescia Cathedral, and gave instructions on how to play it during the Mass. The stops all spoke from a single manual, typical for Italian organs of the period, with a coupled pedal which controlled the bass section of a Principal stop (see no.2 below):

1. The complete Principale (24′)
2. The split Principale (24′), divided at *d*, the bass played by the pedals
3. Ottava (12′)
4. Quintadecima
5. Decimanona
6. Vigesimaseconda
7. Vigesimasesta
8. Vigesimanona
9. Trigesimaterza
10. Another Vigesimaseconda, to play in concert with the Ottava, and Flauto in ottava and Decimanona, which gives the effect of cornets.
11. Flauto in quintadecima
12. Flauto in ottava

Registrations and important comments were as follows:

1. *Ripieno*, for intonations, introits or preludes: 1.3.4.5.6.7.8.9
2. *Mezzo ripieno*: 1.3.8.9.12
3. 1.3.12
4. 1.12
5. 3.5.6.12 for the concerto style. These four stops resemble a consort of cornets.
6. 3.12. These two are excellent for playing diminutions and for canzonas *alla francese*.
7. 3.12 + Tremolo; for the same sorts of pieces, but not for diminutions
8. 1 alone. 'I usually play this at the Elevation of the Mass'.
9. 1.2 in unison may be played together.
10. 12 alone
11. 12 + 2. When played in the treble, this makes a kind of accompanied harmony of two stops; then going down to the bass one hears the flute alone ... thus one comes to make a dialogue with the help of the Contrabasse of the Pedal.
12. 11.1 should be played in diminutions; 3 may be added.

Antegnati continued with stop-lists and comments about registration for the nine-stop organ at the church of S Faustino and the Braces, Brescia; S Grata, Bergamo; S Maria del Carmine, Brescia; and S Marco, Milan. Additional advice about registration is summarized as follows:

(*a*) The *ripieno* should be used at the *Deo gratias*, with toccatas, using pedals.
(*b*) For accompanying motets in concertato style: the Principale and Flauto in ottava. For motets with few singers: Principale alone, also with Tremolo, but in that event without diminutions.
(*c*) The Tremolo can be used with the Ottava and Flauto in ottava, or Flauto in ottava alone, but then slowly and without diminutions.
(*d*) The Fiffaro should be played only with the Principale, slowly and legato.
(*e*) For canzonas *alla francese*, a good effect for flourishes is achieved with the Principale, Flauto in duodecima, Ottava and Flauto in ottava, without Tremolo.
(*f*) Finally Antegnati discussed the advantages of split stops for dialogues between the bass and treble ranges, although it should be noted that split stops were never as common in Italy as in the Iberian countries.

Italian organ music was seldom annotated with the composer's instructions for registration. Rare examples are found in the organ part for Monteverdi's *Vespro della Beata Vergine* (see the *Magnificat* settings for six and seven voices); in the titles of organ sonatas by Padre Martini; in Zipoli's *Pastorale*; and in the organ sonatas of Gaetano Valeri, which gives registrations for an organ by Callido. A number of organ builders' registration lists appeared from the mid-17th century until the end of the 19th. These often introduced the innovations of foreign builders, such as Willem Hermans (Como, 1650; Rome, 1666) and Eugen Casparini (Trent, 1687). Although the classic Italian ripieno usually survived intact, these builders often introduced registers and devices unfamiliar to most Italian organists, such as 8′ Flutes, the Tierce, the mounted Cornetto, the Sesquialtera or the Tromboni, and 'toy' stops such as the Rusignoli, Timpano, Zampogna

and Cuccù. The second manual division was meant to function as an echo (*organo piccolo*). In the late 18th century the Swell was introduced as an enclosed *organo piccolo*, without powerful reed stops at first. New mechanical devices included the *tiratutti* (which drew the stops of the plenum) and the *terza mano* (octave coupler).

4. NORTH-WESTERN EUROPE. The impetus for the development of what are now known as the classical French, the Dutch and the north-west European styles of organ building came from the internationally active group of 16th-century Flemish builders. Virtually all the sources dealing with registration in northern countries before the publication of the second volume of Praetorius's *Syntagma musicum* (1618) apply to the basic Flemish style before sharply defined characteristics of national development had been manifested. Sweelinck played on an organ of this type built by Heinrich Niehoff, of 's-Hertogenbosch. No comparable advice for registration exists for the magnificent organs built by the Scherer family, of Hamburg, and their successors in north-west Germany, but contractual documents and the surviving instruments may serve to complement the music composed for them. In the Lüneburg tablatures, for instance (*see* SOURCES OF KEYBOARD MUSIC TO 1660, §2(iii)), there are references to manual changes, to the *Rückpositiv* for florid melodic passages (a standard application throughout the Baroque period), or to the *Hauptwerk* as an echo. Some doubt arises about the authenticity of certain hints found in the organ works of Buxtehude, but Georg Friedrich Kauffmann, in his *Harmonische Seelenlust* (1733–6), left careful recommendations for specific stops for each piece, and registrations occasionally appear in the works of J.G. Walther. There is, unfortunately, no record of the vast possibilities for registration on the greatest instruments built in the 17th century, such as those in St Katharina, Hamburg, where Heinrich Scheidemann was organist from 1625 to 1663, or the Jacobikirche, where his pupil Matthias Weckmann played from 1655 to 1674.

A valuable indication of registration in a related tradition comes from Samuel Scheidt, who played a Compenius organ in Halle, and published the following instructions in his *Tabulatura nova* (1624):

To Organists

Every organist who has an organ with two manuals and pedal can play these *Magnificat* settings and hymns, as well as some of the psalms found in parts i and ii; the chorale melody might be played with a penetrating stop on the *Rückpositiv* (in order to bring it more clearly into relief), particularly when it appears in the soprano or tenor. When it is a bicinium, and the chorale is in the soprano, the chorale is played on the upper manual or *Werck* with the right hand, and the second part with the left hand on the *Rückpositiv*. If the chorale is in the soprano of a four-part verse, it is then played on the *Rückpositiv* with the right hand, the alto and tenor with the left hand on the upper manual or *Werck*, and the bass on the pedal. If the chorale is in the tenor, the chorale is played with the left hand on the *Rückpositiv* and the other parts with the right hand on the upper manual or *Werck*, the bass on the pedal.

In a four-part verse the alto may also be played specifically on the *Rückpositiv*, but the soprano must be played with the right hand on the upper keyboard, with both the tenor and bass voices together on the pedal; it must be specially composed, however, so that the tenor is no higher than C [*c'*], since one seldom finds D [*d'*] in the pedals, and also so that these parts are not spaced too widely apart, only an octave, 5th or 3rd, since one cannot span a larger distance well with the feet.

But ... [it is] most beautiful and far more comfortable to play the alto on the pedal. But the advantage of this way depends upon the stops and particular voices in the organ, which must have been disposed knowledgeably in terms of 4′ and 8′ pitch levels. The *Positiv* must always be based on 8′ pitch; and the Pedal on 4′ pitch. Soprano, alto and tenor should be played on the *Rückpositiv* on an 8′ stop. The alto will be played on the pedal with a 4′ stop. Voices of a sharp 4′ tone in the Pedal: 4′ Oktave and Zimmel, 4′ Gedackt and Zimmel, Cornett (bass) 4′, and so on. When such 4′ stops are drawn the alto sounds in the correct pitch relationship ....

Certain registers or stop divisions to draw when one will play a chorale on two manuals and hear it clearly:

On the Hauptwerk

Gross Gedackt 8′ }
Klein Gedackt 4′ } drawn together

or

Prinzipal 8′ alone and other stops according to preference.

Sharp stops on the *Rückpositiv* to hear the chorale clearly: Quintadena or Gedackt 8′ and the Klein Gedackt or Prinzipal 4′, with the Mixtur or Zimmel or Superoktave; these stops together or others according to preference.

To hear the chorale clearly on the Pedal: Untersatz 16′, Posaune 8′ or 16′, Dulzian 8′ or 16′, Schalmei, Trompete, Bauerflöte, Cornett, and others which are found often enough in small and large organs.

The foregoing I would nevertheless prescribe only to those who do not yet know the style and who would like to do it properly. Other distinguished persons and sensible organists, however, will be left to direct such things after their own inclination.

A theoretical work by Mattheus Hertel (1666) refers to and enlarges on Scheidt's registrations. Hertel wrote that the Tremulant, which was to be used for doleful melodies, 'can be used for preludes, and even for fugues too' – a practice also encountered in France in this period.

In later theoretical works (Werckmeister, 2/1698: Niedt, ed. Mattheson, 1717; Adlung, 1758; Marpurg, 1760) it can be seen that strict rules about the combination of stops of the same pitch were gradually being relaxed. The most important of these limitations to registration had been the exclusion of flute stops from the plenum. Adlung made the point that 'good' wind systems would not cause fluttering when two 8′ stops were drawn together. Registration lists by M. Heinrich Rothe for the Silbermann organ in Fraureuth (1739–42) and by J.G. Schenke (instructions dated 1780) for Silbermann's organ at Gross Hartmannsdorf (1738–41) reveal the growing taste for combinations of fundamental-sounding stops, such as Principals, Flutes and Gambas, as do some of Marpurg's and Adlung's registrations.

Towards the end of the century additional information was supplied by Daniel Türk (*Von den wichtigsten Pflichten eines Organisten*, 1787) and J.H. Knecht (*Vollständige Orgelschule*, 1795), in which early attempts at crescendo registration are documented. The 'tutti' concept, employing virtually all the stops and couplers, was firmly entrenched by this time, and eventually replaced the traditional orientation of the organ's tonal design around the principal-toned plenum.

The purity of national styles of organ building was beginning to break down by the early 18th century, as is shown by the work of several builders who moved from their home countries: Casparini (German) and Hermans (Flemish), who worked in Italy; Riepp (French), working in southern Germany; and the brothers Andreas and Gottfried Silbermann, who moved from Saxony to Alsace (Gottfried Silbermann later returned to Germany with first-hand practical experience of the classical French tradition). Registration lists survive for organs made by these builders: for Casparini's organ at S Maria Maggiore, Trent (1687); Hermans's organ at S Apollinare, Rome

(1666); and for Silbermann's instruments at Fraureuth (1739–42) and Gross Hartmannsdorf (1738–41). Riepp himself wrote four lists for organs in Salem, including a 'gourmet' rendition of the classical French tradition, and hints (which were somewhat tongue-in-cheek) for registrations for particular audiences, such as 'a king', 'an officer', 'a child' or 'an ignoramus' (see Meyer, 1938, pp.167ff). Certain excessive treatments in the construction of organs must have had their effect at least on local habits of registration. For example, Riepp's Trinity organ at Ottobeuren (1757–66) had eight Tremulants – one *fort* and one *doux*, in the French tradition, for each of four manual divisions.

Bach's directions for registration of his organ compositions are comparatively sparse. Names of stops are given in the Concerto in D minor after Vivaldi (BWV596) and the chorale preludes on *Gott, durch deine Güte* (BWV600) and *Ein feste Burg* (BWV720). Pitch levels relating to solo lines are indicated in four of the six 'Schübler' chorale preludes (BWV645–7, 650). *Forte* and *piano*, *Rückpositiv* and *Oberwerk*, and *organo pleno* are indicated in several large chorale works and preludes and fugues. It is said that Walther recorded the names of certain stops Bach had used for playing sections of his chorale prelude on *Ein feste Burg* – Fagotto and Sesquialtera; however, it is obvious that the latter was used with its appropriate foundations, and the Fagotto was probably accompanied by flue stops as well, as is usual in Kauffmann's chorale preludes. More interesting speculation arises from the notes in the first movement of the Concerto in D minor. Here the instructions call for separate Oktave 4′ on *Oberwerk* and *Brustpositiv* with Prinzipal 8′ for the Pedal, changing in the course of the movement to Sub-Bass 32′ in the Pedal and Prinzipal 8′ and Oktave 4′ for the *Oberwerk*. The 4′ opening pitches reflect Vivaldi's original score, but did Bach mean to add 16′ and 32′ in the Pedal? To this sparse information from Bach's hand, as indicated above, may be added C.P.E. Bach's somewhat cryptic statement to Forkel:

> No-one understood registration as well as he [J.S. Bach]. Organ builders were terrified when he sat down to play their organs and drew the stops in his own manner, for they thought that the effect would not be as good as he was planning; then they heard an effect that astounded them.

5. CLASSICAL FRENCH ORGANS. The ultimate refinement in registration for composed music is an achievement of the French, who since the mid-17th century have maintained a precise relationship between the indigenous character of specific registrations and the musical textures to which they best respond. While the Germans have left performers more or less free to choose their own registrations, subject basically to the instrument's natural restrictions, the French have wedded timbre and articulation with the musical score to an exemplary degree. Lebègue (*Premier livre d'orgue*, 1676) enjoined his contemporaries to play according to the exact directions for registration: 'There are several pieces in this book that are not useful to organists whose instruments lack the stops necessary for their execution'. Even the more flexible approach of André Raison (*Livre d'orgue*, 1688) provided free choice in registration only within the limitations of the design of organs generally in favour in his own time: 'As I vary the choice of stops and manuals a great deal, it is not necessary to play all my pieces exactly as marked'. The classical French repertory was neglected during the 19th century because French organs no longer contained the tonal material necessary to articulate that repertory properly.

Among many excellent sources of information on the classical French tradition of organ registration, Gaspard Corrette's preface to his *Messe du 8e ton* (1703) provides the best available clarification of the important relationships between registration, musical texture, and style of performance. The registrations he specified for particular pieces are as follows:

> For the Plein Jeu, couple the manuals. On the *Grand jeu* [i.e. the Grand Orgue], the Bourdon 16′, Bourdon, Montre, Prestant, Doublette, Fourniture and Cymballe. On the *Positif*, the Bourdon, Montre, Prestant, Doublette, Fourniture and Cymballe.
> For the Fugue, couple the manuals. On the *Grand jeu*, the Bourdon, Prestant and Trompette. On the *Positif*, the Bourdon, Prestant or Montre and the Cromhorne.
> For the Trio à deux dessus, the manuals are uncoupled; the right hand playing on the *Positif*, and the left on the *Grand jeu*. On the *Grand jeu*, the Bourdon, Prestant, Montre, Tierce, Grosse Tierce, Nazar and Quarte de nazar. On the *Positif*, the Bourdon, Prestant or Montre, Cromhorne and Tremblant doux.
> The Duo is played with the manuals uncoupled, the right hand on the *Positif*, and the left on the *Grand jeu*. On the *Grand jeu*, the Bourdon 16′, Bourdon, Prestant, Tierce, Grosse Tierce, Nazar and Quarte de nazar. On the *Positif*, the Bourdon, Prestant or Montre, Tierce and Nazar.
> The Recit de Nazar is played on the *Positif*, with the accompaniment on the *Grand jeu*. On the *Grand jeu*, the Bourdon and Montre 4′. On the *Positif*, the Bourdon, Prestant or Montre and the Nazar.
> The Dessus de Petite Tierce is played on the *Positif*, with the accompaniment on the *Grand jeu*. On the *Grand jeu*, the Bourdon and Prestant. On the *Positif*, the Bourdon, Prestant or Montre, Tierce and Nazar.
> For the Basse de Trompette, the manuals are uncoupled. On the *Grand jeu*, the Bourdon, Prestant and Trompette. On the *Positif*, the Bourdon and Prestant or Montre.
> For the Basse de Cromhorne, the manuals are uncoupled. On the *Grand jeu*, the Montre and Bourdon. On the *Positif*, the Prestant or Montre, Nazar, Tierce, Doublette, Larigot and the Cromhorne – not the Bourdon.
> For the Cromhorne en Taille, on the *Grand jeu*, the Montre, Bourdon, and the Pedalle de flûte. On the *Positif*, the Bourdon, Prestant or Montre and the Cromhorne.
> For the Tierce en Taille, on the *Grand jeu*, the Bourdon 16′, Montre, Prestant and the Pedalle de flûte. On the *Positif* the Bourdon, Prestant or Montre, Nazar, Tierce, Doublette and Larigot.
> For the Fond d'orgue, the manuals are coupled. On the *Grand jeu*, the Bourdon 16′, Bourdon, Prestant and Montre. On the *Positif*, the Bourdon and the Prestant or Montre.
> For the Concert de Flûte, the manuals are coupled. On the *Grand jeu*, the Bourdon and Flûte. On the *Positif*, the Bourdon, Flûte and the Tremblant doux.
> For the Dialogue de Voix Humaine, the manuals are not coupled. On the *Grand jeu*, the Bourdon and Flûte. On the *Positif*, the Bourdon, Flûte, the Voix humaine and the Tremblant doux.
> For the Dialogue à deux Choeurs, the manuals are coupled. On the *Grand jeu*, the Bourdon, Prestant, Trompette, Clairon and Cornet. On the *Positif*, the Bourdon, Prestant or Montre and the Cromhorne.
> For the Dialogue à trois Choeurs, the manuals are coupled. On the *Grand jeu*, the Bourdon, Prestant, Trompette, Clairon, Cornet, Nazar, Quarte de nazar and Tierce. On the *Positif*, the Bourdon, Prestant or Montre, Cromhorne, Tierce and Nazar. The third *choeur* is played on the *Clavier d'echo*, and the Tremblant à vent perdu is used.

6. ENGLISH ORGANS. Among the few indications of registration practice before the Restoration (1660) are those suggested by the double voluntaries of Orlando Gibbons and John Lugge. The texture of the music indicates contrasting full Great and Chair divisions, and manual changes are clearly marked. The choruses of such

organs contained principals of pitches up to 1′ and 1⅓′ but no mixtures or reeds. After the Restoration, French (and, to some extent, Dutch) registration practices strongly influenced English organ building and playing. Among the earliest registration indications are those of Christopher Gibbons, some of whose double voluntaries call for solos on the Cornet, Trumpet and Sesquialtera. John Blow's early 18th-century manuscripts also contain some registrations, including 'Cornett' solos, 'the two diapasons' (i.e. open and stopped at 8′ together) and solo 4′ Flute. Thomas Mace (*Musick's Monument*, 1676) commented on the use of reeds in a chamber organ, noting that the 'Hooboy stop ... (together with the Regal) makes the Voice Humane'.

In the 18th century English registration practices became as rigidly codified as the French; these usages continued into the 19th century and are documented as late as 1855 in Hopkins and Rimbault's *The Organ*. They are also found in numerous early 19th-century North American sources. By the mid-18th century such composers as John Stanley routinely gave registration indications in their published voluntaries, and by the late 18th century there were rules for registration in the prefaces to voluntary collections and treatises. Jonas Blewitt (*Complete Treatise on the Organ*, 1795) gave registration hints for particular types of music: the Open Diapason may be used alone for 'slow fugues', but the Stopped Diapason must be added for livelier movements; the Diapasons may be alternated with the Swell; the Flute or Flageolet 'requires airy music'; Trumpet music is 'martial and grand'; the Cremona or Vox humana are suited to Adagio movements; and the Twelfth and Fifteenth are never to be used without the 8′ and 4′ foundations. John Marsh (preface to his *18 Voluntaries*, 1791) warned that the Cornet should be used only for solos, never with full organ, and prescribed five different kinds of full organ:

1. Great up to sesquialtera
2. The furniture added to the sesquialtera
3. The trumpet added instead of the furniture
4. The trumpet and furniture both added
5. The clarion added to the whole

As English organs usually did not contain manual 16′ stops until the second quarter of the 19th century, it follows that all the above combinations are based on the 8′ Open Diapason. Solo and echo effects are frequently found in 18th-century English music, and are in fact so much part of this literature that most chamber organs of the period contain divided stops or half-stops as well as a machine stop, in order to facilitate the playing of such music on a single manual.

7. THE 19TH CENTURY. During the 19th century, technological advances and the introduction of machine tools tended to transform organ building from a hand craft into an industrial pursuit. To assure their commercial success and artistic recognition organ builders competed for prominence by displaying their latest mechanical innovations in the great industrial exhibitions in London or Paris, and by courting favourable comment from the press. The ancient concepts that had previously limited the musical resources of the organ were gradually abandoned. Vastly expanded registrational capability resulted from the application of pneumatic, and later electrical, devices to relieve the stop- and key-action; stable and practically limitless wind supplies were provided by more and more men at the bellows, by steam engines and eventually by electrical blowers which fed into large reservoirs. Because of these 'advances' and the musical demands of the new Romantic aesthetic, organists began to relinquish the architectural 'block dynamic' concepts that had previously governed registration. The *plein jeu* was forsaken in favour of the reed-dominated tutti. Mutations were replaced by more ranks at fundamental pitches: open flutes, harmonic stops and broad strings. Wind pressures rose gradually, but no-one dreamt that in the America of the 1920s organs would be built demanding wind more than ten times as strong as the 19th-century maximum.

To respond to the call for a smooth crescendo from the whisper of soft stops speaking behind closed Venetian shutters to the immense roar of the tutti, pneumatic motors were installed to provide the player with pre-set combinations (St Sulpice, Paris, 1863). A single player could move skilfully about, using all the sounds of a mammoth organ with great ease and speed. Registration, by ventil pedals in France, *Rollschweller* in Germany or electrically operated combinations in England and the USA, was gradually reduced from an art to a formula and composers called for an increasing number of stop changes within a piece.

The essential ingredients for the registration of 19th- or early 20th-century organ music were the building-blocks of the tutti, beginning with enclosed 8′ stops, which were then combined with unenclosed 8′ flue stops in the manuals and 16′ and 8′ stops of the pedal always coupled together. Steps along the way provided for the addition of foundation stops (16′, 8′ and 4′ on all keyboards), followed by reeds and mixtures. The Swell shades were fully opened before the final introduction of the most powerful unenclosed sounds. The *Rollschweller*, or crescendo pedal, did this job efficiently by the gradual 'blind' addition or subtraction of registers in a predetermined order. Solo stops, often imitative, were also an important element in Romantic registration; among those most frequently found were imitative reeds (oboe, clarinet/cromorne, horn) and strong, foundational flutes (harmonic flute, claribel, doppelflöte).

The music of Mendelssohn and Rheinberger was written with post-Classical registration in mind; Mendelssohn, in the introduction to his six sonatas, defined his registrations in terms of dynamic levels. Later, Reger demanded the continuous dynamic alterations inherent in the system described above. Franck, Widor and their successors wrote specifically for Cavaillé-Coll's system of stop-controls, which consisted mainly of mechanical devices for the introduction or blocking-off of wind from sections of the chests (*fonds* and *anches*), and use of the *jeux de combinaison*. Sub-octave coupling was important for the *grand choeur*. In England and America, mechanical and, later, electrical combination actions played a prominent role by facilitating quick stop changes.

See also ORGAN and ORGAN STOP.

8. THE 20TH CENTURY. The technological and tonal developments of the late 19th century in organ construction became more advanced in the early 20th century as electrically controlled actions became less experimental and more reliable, and the electric fan blower superseded earlier attempts at mechanical wind supply involving water, gas and steam. Consequently there was less restriction on size and power, and 'monster' organs

rapidly became status symbols of affluence and musical commitment in churches, colleges, theatres and public halls. Larger organs led to more registration aids, the number of which increased accordingly as electricity became more widely used. Registration practice was, in the early decades of the 20th century, strongly driven by the popularity of transcriptions and the 'symphonic' style of organ composition, in which the ideal was to emulate the colour interplay and dynamic shifts of the symphony orchestra; this demanded fast and frequent stop changes and seamlessly smooth crescendos and decrescendos effected by the adroit use of expression-boxes and combination actions. A plethora of pistons, couplers, reversibles and cut-offs appeared on the consoles of even modestly sized organs to facilitate these functions.

In the tonal area, imitative stops such as the Viole d'orchestre, Orchestral Oboe, French Horn, Waldflöte and Orchestral Flute were highly desirable, as were undulating string stops (Voix céleste, Vox angelica, Unda maris); these were often specified by symphonically orientated composers such as Edwin Lemare. Everett Truette, in his treatise *Organ Registration* (1919), provided stop-lists of 'modern' three- and four-manual organs, along with detailed directions for setting up registrations for a variety of compositions (mostly contemporary) on such organs. There was a heavy reliance on the Doppelflöte, Grossflöte, Cornopean and Vox humaña for solos (in the same period the British indulged a penchant for writing solos for the high-pressure Tuba stop), while massed string stops, sometimes with softer flutes, were indicated for softer passages and accompaniments. The 'Grand Crescendo' pedal was routinely specified for climaxes. Although little music dating from before the late 19th century appeared on early 20th-century recital programmes, inevitably the 'symphonic' style of registration, well suited to contemporary music, was also applied to the organ works of Bach and Mendelssohn, as well as to occasional transcriptions of Baroque music, such as were popularized by W. Lynwood Farnam. Truette noted that in Bach's Toccata and Fugue in D minor BWV565 'some performers change the registration of this Toccata every two or three measures'. Even Albert Schweitzer, often regarded as the founder of the Organ Reform Movement, gave as his opinion that Bach would have appreciated an expressive division, while his teacher, Charles-Marie Widor, confidently asserted that the Romantic organs of Cavaillé-Coll were the ideal vehicle for Bach's music. Such opinions continued well into the 20th century, even as organists began to rediscover the works of composers before Bach and became more concerned about authenticity.

In the 1930s the German *Orgelbewegung* precipitated an anti-Romantic backlash in organ design, composition and registration. Composers such as Hugo Distler, Helmut Walcha, Ernst Pepping and Hermann Schroeder wrote music that was often angular and spare, as befitted the expressionless 'neo-Baroque' organs with their dearth of foundation, overbalance of upperwork, and paucity of registrational aids. In their registrations colour was often achieved by the use of 'gapped' combinations such as a solo of Krummhorn 8′ and Nasard 2⅔′ against an accompaniment of Quintadena 8′ and Blockflöte 2′ (e.g. Walcha: *Nun komm, der Heiden Heiland*). By the middle of the century, however, organ music – and its attendant registrational practices – comprised a strange mixture of features held over from the pre-war 'character-piece' school (especially in English-speaking countries), Germanic and Scandinavian neo-Baroque elements, and the conservative French post-Romantic style (as advocated by Dupré); there was also a growing eclectic movement which was particularly prominent in Britain and the USA. In terms of organ design and registration, this meant that a good organ had to have the resources to fulfil the requirements of a wide variety of contemporary music ranging from Heiller to Howells to Messiaen, as well as works of the 18th and 19th centuries. Terms such as 'clarified ensemble' and 'American classic' were introduced to describe such eclectic instruments, and their inclusive tonal palette began to influence the registrational choices of composers such as Seth Bingham, who had no qualms about pitting a gapped 8′ and 2⅔′ solo against an accompaniment of string and flute stops in a movement of his *Baroques* suite (1943). Many composers simply specified 'generic' registrations such as 'soft strings' or 'solo reed', even in major works, yet when Schoenberg's Variations on a Recitative was first published in the USA in 1947 the organist Carl Weinrich felt it necessary to provide a preface of two pages of detailed registrations, complete with piston settings. As for earlier music, most organists still chose their own registrations and played in a manner according to personal taste, resulting in a wide variation in interpretations. During the last three decades of the 20th century, however, attitudes towards earlier music changed, and fine points of performing practice such as fingering, phrasing, ornamentation and, for organists, registration, became of concern to players, first with regard to music of the 17th and 18th centuries, and later to 19th- and eventually even early 20th-century music. Many of those who had studied this earlier music on historic organs began to be dissatisfied with the 'all-purpose' concept of registration. As a result, a number of organs patterned after a single historical tradition – whether Renaissance, Baroque or Romantic – have been built, which allow music of a particular era to be played and registered authentically. Furthermore, since organists wished to play more than one type of repertory, a new type of 'selective' eclectic organ evolved at the end of the 20th century, incorporating more than one historic element and thereby allowing authentic registrational interpretation of a greater variety of earlier music. However, the 'generic' concept was still employed in many cases by contemporary composers such as Daniel Pinkham, who suggested 'colourful flute ensemble or solo reed 8″' and 'flutes and strings to accompany' for one of the movements of *The Four Winds* (1998). The effect of this new eclecticism in organ design on 21st-century music and its registration remains to be seen.

II. Harpsichord

1. Resources of the instrument. 2. Written evidence. 3. The 20th century.

1. RESOURCES OF THE INSTRUMENT. The resources for modifying the tone-colour and loudness of harpsichord sound are the following: (i) the choice of plectrum material, commonly either quill (or a plastic substitute), hard leather, or soft leather (*peau de buffle*); (ii) variation of the 'plucking point' – the closer to the nut (or keyboard end of the string), the more 'nasal' (brighter and thinner) will be the tone (*see* LUTE STOP); (iii) the combination of different registers at the same or different pitches; and (iv) devices for altering the sound of the vibrating strings or the whole instrument. The most common of these last is the BUFF STOP (or 'harp stop', which presses pads of felt or leather against the very end of the strings at the nut, damping out much of the resonance and giving a pizzicato quality. Other materials, like wires (ARPICHORDUM STOP) or paper (BASSOON STOP), could be brought into contact with the strings to give a buzzing effect. Finally, in some large English harpsichords of the second half of the 18th century, the loudness could be varied by opening or closing a flap in the lid or a 'Venetian swell' by means of a pedal (*see* SWELL, §2).

The utility of these resources depends on how they are controlled by the player. In 16th-century Venetian and 17th-century Flemish instruments the jackslides extended through the cheekpiece (the short, right-hand side of the case), a possible but awkward reach for the player. In many instruments, especially German, the stops could be changed with levers on the wrest plank, although these might be covered by a music rack. More convenient were levers or knobs projecting through the nameboard which

could be operated while one was playing. The most convenient controls of all were operated by the feet or knees, sometimes through mechanisms ('machine stops') that changed registers in groups and permitted the gradual engagement of the plectra so as to produce a smooth crescendo (*see* MACHINE STOP, (1)). The provision of two (very rarely three) keyboards with different registers assigned to each of course allows instantaneous changes as well as playing on more than one registration at the same time. The second keyboard was added originally for transposition by a 4th or 5th (*see* TRANSPOSING KEYBOARD), but iconographical evidence suggests that harpsichords with two manuals at the same pitch (probably rebuilt from transposing ones) appeared in the Low Countries as early as 1618 (Ripin, 1968).

The question of resources for harpsichord registration is greatly complicated by the variety of possible dispositions. If two registers of jacks on different keyboards pluck the same strings, as sometimes happens, especially in instruments with a nasal (lute) register, then these two registers cannot both be 'on', since the dampers of one register will damp the notes that the other register is trying to play. If the same register plays from both manuals with dogleg jacks (as was common in English and Flemish instruments; *see* DOGLEG JACK), then it cannot be 'on' on one manual and 'off' on the other, unless one of the manuals slides out to disengage it (as in some German instruments). A COUPLER (by means of which the keys of one manual move those of the other) and the absence of doglegs provides complete independence between the keyboards. Two registers of jacks plucking the same strings will always produce a slight difference in tone quality because they are necessarily at different places along the strings, but even if they are on the same manual and thus playable together, they do not make a good effect because one pluck 'dirties' the purity of the other.

The earliest surviving harpsichords, dated 1515–16 and 1521 (by Vincentius of Livignano and Hieronymus of Bologna) appear originally to have had only one 8′ register, but as early as 1530 payment was made to William Lewes from the Privy Purse for 'ii payre of Virginalles in one coffer with iiii stoppes'. This description has been variously interpreted, but what is unquestionable is the transfer from the organ to stringed keyboard instruments of the term 'stop', with its implication that registration was already, at least in England, a normal component of the technique of the harpsichord. A high-pitched instrument made in 1537 by Hans Müller of Leipzig had two sets of strings and three registers, one of them a lute stop. Claviorgans were made in most of the harpsichord-manufacturing countries from the 16th century to the 18th, and would have presented still more registrational possibilities (*see* CLAVIORGAN). The harpsichord portion of a one-manual claviorgan made in England in 1579 (by Theeus) appears to have had the earliest example of the disposition 8′, 8′, 4′. Since it also appears to have been fitted with the means of selecting or combining the registers, the player would have had seven harpsichord colours at his disposal, plus whatever possibilities the pipework added.

The concept of registration extended even to virginals in the last two decades of the 16th century: the type known as MUSELAR was usually fitted with an ARPICHORDUM STOP, and 'mother-and-child' virginals consisted of a normal VIRGINAL at 8′ pitch and a smaller one at 4′ which could be stacked on top of its 'mother' so as to be played either by itself or coupled to the mother keyboard. Echo effects, as in Sweelinck's echo fantasias, were obtainable (Van der Meer, 1961) and the hands could play on both keyboards simultaneously.

Ruckers transposing double harpsichords, which were made from the end of the 16th century to the 1640s, had two choirs of strings, 8′ and 4′, plucked (normally but not always) by four ranks of jacks, two for each manual. Since the keyboards sounded at different pitches, they could not be played together. When these instruments were rebuilt in mid-century and later as non-transposing doubles, a variety of dispositions resulted, often including the addition of a second 8′ choir. Koster (1982) described an extraordinary late 16th-century Flemish transposing harpsichord whose normal-pitched manual extended down an extra octave so that the 8′, 4′ registration could be transposed down to give the effect of 16′, 8′. Another double, not transposing, dated 1658, originally had two choirs at 8′ and 4′ with two registers of jacks plucking the 8′ on the lower manual at different points and a third, 'nasal' register plucking the same strings on the upper manual. The 4′ was on the lower manual (Koster, 2000). Praetorius (*Syntagma musicum*, ii, 2/1619) claimed to have seen a harpsichord with four choirs of strings, and Mersenne (*Harmonie universelle*, 1636–7) wrote of harpsichords with 'seven or eight kinds of *jeux* [stops or combinations of stops] and two or three keyboards' which were varied and combined like those of the organ. Mace (*Musick's Monument*, 1676) described a harpsichord by John Haward which he called a 'pedal', and whose registers were controlled by the feet and gave, with the aid of a hand-operated 'theorboe-stop' or buff, 24 'varieties'. Hubbard (1965, p.147) showed that Mace's instrument must have had one manual and four pedal-operated registers, 8′, 8′, 4′ and lute, as in the Müller harpsichord. Mace's description makes it clear that the purpose of this mechanism was to facilitate changes of loudness and tone-colour while one was playing. Documents of the period suggest that such instruments were not rare in late 17th-century England (Lafontaine, 1909).

The introduction of harpsichords with two manuals at the same pitch in the first half of the 17th century in the Low Countries and France (so-called 'contrasting' as opposed to 'transposing' doubles; *see* HARPSICHORD, §3(i)) further increased the registrational possibilities; how much depended on the disposition and the degree to which the two manuals were independent. A letter of 1648 claims the 'invention' of the manual coupler for France and touts its superiority to the Flemish dogleg. It seems likely that French 17th-century doubles were normally disposed I: 8′, 4′; II: 8′, but a current of opinion favours I: 8′, 8′; II: 4′.

Italian harpsichords constituted a curious exception to all this richness. In the 16th century they were most often disposed 8′, 4′ on a single manual with some means of putting the registers on and off (though not while playing). But at some time between 1585 and 1630 a preference developed for 8′, 8′, often and perhaps usually without any means of controlling the registers, except, perhaps, for tuning. Older instruments were modified to conform to this new disposition, which, with a few exceptions, remained the norm until the end of the 18th century. The implication is unavoidable that the Italians lost whatever

taste they may have had in the 16th century for variety in harpsichord colour and were happy to play everything on two 8′s. An analogous puzzle is presented in England by the apparent abandonment of the 'pedal' and its remarkably convenient mechanism for achieving elaborate registration (although Mace did mention its high price).

In the Northern countries, in spite of a seemingly limitless variety in the disposition of individual instruments, a general norm for the disposition (though not the tonal character, which depended upon the measurements and construction) of large harpsichords emerged in the late 17th century and lasted for 100 years: two manuals with 8′ and 4′ on the lower and a second 8′ on the upper. The number of different possible registrations varied according to whether a coupler or dogleg arrangement connected the upper 8′ to the lower manual, as it did also according to whether a buff stop was fitted. In general, the English and Flemish makers used the dogleg, while French builders preferred the coupler, with its additional flexibility in registration. The Germans used either. Whether dogleg or coupler is fitted, the three registers played separately or in combination yield seven colours on the lower manual, one of which duplicates the upper manual 8′. The buff adds two useful effects (buffed 8′ solo or with 4′) and two more of limited value (buffed 8′ with unbuffed 8′, with or without 4′). The superiority of the coupler over the dogleg manifests itself when the hands play on different manuals. With the dogleg it is impossible to silence one of the lower 8′s without silencing the upper manual as well, so without the buff only three different colours are available on the lower manual to contrast with the upper 8′, whereas with the coupler there are six (the seventh would be the upper 8′ coupled down – no contrast). English, Flemish and German makers frequently compensated for the limitations of the dogleg arrangement by the addition of a lute stop to the upper manual, and the Germans sometimes added a fourth choir at 16′. Although few 16′ harpsichords have survived and the 16′ was all but rejected by the most progressive builders of the postwar period, a number of discoveries since the early 1980s, most significantly concerning central Germany during J.S. Bach's Leipzig period (Henkel, 1990), have shown that the 16′ was not uncommon on large instruments and was certainly known to Bach. The anonymous, so-called BACH HARPSICHORD in the Berlin Musikinstrumenten-Museum, recently attributed to the Harrass family of Grossbreitenbach and originally having I: 16′, 4′; II: 8′; coupler, was changed before 1714 to I: 16′, 8′; II: 8′, 4′, which disposition was copied countless times by 20th-century German builders and later roundly discredited by scholars. A harpsichord with the latter disposition was advertised by Zacharias Hildebrandt, who built a lute-harpsichord for Bach (Henkel, 1990). German harpsichords were the least standardized and most extravagant of the mid-18th century, some having 2′ stops as well as 4′, 8′ and 16′, and some having three manuals – in one the top manual had an overhead hammer action. But although C.P.E. Bach (1762) credited Johann Hohlfeld of Berlin with a pedal-operated mechanism for bringing on all the registers of a harpsichord one by one, the Germans do not seem to have taken up such aids to registration.

Study of Spanish and Portuguese harpsichords so far suggests that the play of influences from the Spanish Netherlands and Spanish Naples upon native invention appears to have stimulated a variety of styles and dispositions comparable to that of the Germans, and it would be premature to postulate any Iberian 'type' from which one could infer principles of registration, even for a repertory as circumscribed as the sonatas that Scarlatti wrote for Maria Barbara. By contrast, English builders of the last three-quarters of the 18th century adhered closely to the norm of I: 8′; 4′; dogleg 8′ playing on both I and II; II: lute plucking the same strings as the dogleg; buff and no coupler. Large singles had the same resources although the second 8′ was not, of course, a dogleg; smaller ones omitted the lute and 4′. Having abandoned the 'pedal' mechanism, they used stop knobs conveniently located on the nameboard. Beginning probably in the 1760s, the machine stop and Swell were incorporated into new instruments, both singles and doubles, and fitted to old ones, so that even though the machine could be disengaged to allow hand-registration, its very convenience imposed a narrow range of colour choices – effectively, either full harpsichord on the lower with dogleg 8′ on the upper (pedal up), or lower 8′ with upper lute (pedal down), modifiable by the buff on a handstop. Free play with dynamics was now possible, not only abrupt contrasts but effortless crescendos and diminuendos in the style demanded by the newest compositions.

The 1760s also saw major new developments in France, first the *registre de buffles*, or *peau de buffle*, a row of jacks fitted with plectra of thick, soft buffalo hide, which could substitute for the lower quilled 8′, but more often was an additional register plucking the same strings; and second, a system of *genouillères* (knee levers) controlling all the registers and sometimes the coupler. Credit for both of these developments was claimed by PASCAL TASKIN. As in England, these inventions were as often applied to existing instruments as to new ones. The sound of the *buffles* was gentle, and, unlike quill, they were somewhat sensitive to the stroke of the finger on the key. But under the control of a *genouillère*, a well-regulated *registre de buffles* could produce delicate dynamic shadings and even accents comparable to those of a clavichord. The *genouillères* were little blocks of wood faced with leather that were raised and lowered with the knees, communicating their motion to iron trapwork inside the case, and the mechanical advantage of the foot, ankle and linkage provided easy and very finely graduated control over all the registers that was, moreover, invisible to the audience, since the physical motions were subtle and the levers more or less hidden. The left-most lever, when raised, removed gradually the 4′, 8′ and upper 8′, leaving only the *buffles*, which the other knee could then cause to fade out, yielding a perfectly smooth decrescendo from full harpsichord to silence if the musical texture was fairly thick and active. Releasing the lever made a corresponding crescendo. A harpsichord with a considerably more elaborate version of this mechanism, constructed by Erard in 1779, exists in the Paris Conservatoire museum.

See also CEMBALO ANGELICO.

2. WRITTEN EVIDENCE. An extraordinary disparity exists between the vast palette of effects offered by harpsichords and the written evidence of their use. There is no harpsichord (or piano) music before 1800 that comes anywhere near exploiting the full potential for variety and nuance of the more elaborately equipped harpsichords of the 17th and 18th centuries, and the few discussions of or directions for registration that exist are sparse and

confined to the simplest matters. The use of the most telling effects, the 16′ and the lute stops, is not mentioned at all in connection with specific repertory. Documents of every kind, particularly advertisements and inventors' proposals, extol variety of colour and ease in obtaining it as desirable features of harpsichords. And yet, in an age when rules governed so many aspects of music, no conventions of harpsichord registration were written down, even in countries where the instrument was relatively standardized. In 18th-century Paris, for example, where a two-manual harpsichord nearly always had I: 8′, 4′; II: 8′; coupler, composers who wrote for both organ and harpsichord and gave detailed registration instructions for the former in their prefaces and in the titles of their pieces were silent on the subject of harpsichord registration. Michel Corrette, in the preface to his *Nouveau livre de noëls* (1753) for harpsichord or organ, directed harpsichordists to ignore the registrations provided for the organ and to play always on the same manual, except for two pieces in which the left hand plays on the upper manual and the right on the lower. In spite of this failure, 18th-century French composers occasionally indicated how particular pieces were to be played, and when they did their directions were almost invariably worded so as to imply that the normal way to play was on the lower keyboard with all the registers on and the manuals coupled – in other words, on the full harpsichord. Registers were retired and manuals uncoupled for special effects: *Les bagatelles* from Couperin's second book (1716–17) is to be played with the manuals 'uncoupled' and the octave 'removed'. A passage from the preface to Dandrieu's first book of harpsichord pieces (1724) shows this same 'negative' approach and at the same time seems to suggest that manipulating the registers of a harpsichord was something beyond the ordinary accomplishment of a player and required careful explanation:

> It will not perhaps be unprofitable to speak here of a care which one may take in executing the pieces, which I shall point out, if one wishes to play in the style proper to them. It is this: *Le concert des oiseaux* should be played with both hands on the lower manual, but with the two unisons retired, leaving only the octave [by 'two unisons' he means lower 8′ and coupler; a modern player would put the direction in a positive sense: '... should be played on the solo 4′']. *Le timpanon* also requires one to leave only the octave, but the right hand plays on the upper manual and the left on the lower. For *Les fifres*, it is necessary on the contrary that the left hand should be on the upper manual and the right on the lower, again leaving only the octave. One may, however, play these pieces in the usual way, if the instrument does not permit what I have just indicated to be observed, because these different ways of disposing the stops and placing the hands are only conceived to render the imitation more perfect.

One of two conclusions imposes itself on the reader: either every other piece in the collection is to be played on full harpsichord or the composer cares only about registration as an aid to 'imitation' of the most obvious sort. Builders also evidently thought of full harpsichord as the norm and registration as the subtraction of stops, since with both English and French registration mechanisms the player had to work to achieve a diminuendo (i.e. to remove the registers) and relaxed for a crescendo (an exception is the harpsichord-piano of 1780 by Merlin in the Deutsches Museum, Munich, which requires one to hold a pedal down to keep the 16′ engaged).

The piece by Couperin mentioned above is an example of a PIÈCE CROISÉE, in which the two hands play on different manuals in the same range, crossing freely. Normally they presuppose two similar but independent 8′ stops, as in Couperin, an effect usually unobtainable with dispositions using the dogleg instead of a coupler. However, a *pièce croisée* in John Jones's second book of *Lessons for the Harpsichord* (1761) – presumably for an English harpsichord with dogleg – has the left hand playing *piano* on the upper manual and the right playing the same thing *forte* a semiquaver later on the lower, producing a series of accents off the beat.

Other than registrations for *pièces croisées* and pieces imitating effects in nature, only a few scattered general indications can be gleaned from music of the second half of the Baroque period and other sources. Although there is no suggestion that manuals or registration were changed for the repeats in binary forms, there are enough instances of *petites reprises* being marked with a *p* or some other indication of softening to allow a modern player to do the same even where there is no mark. Echo effects can also be achieved by registration, but the characteristic repetition of short phrases so beloved of mid-18th-century Italian composers, especially Domenico Scarlatti, are not echoes and could not in any case be played as such on Italian harpsichords. When accompanying, the harpsichordist was always enjoined to subordinate himself to the soloist; accompaniment treatises sometimes suggest retiring stops or moving to the upper manual (even adding the buff stop) in concerts with weak-voiced singers. A remark in an English letter of 1712 advises, on the contrary, the use of all three registers of a three-stop instrument only for a 'thoroughbass to a Consort: for Lessons [i.e. solo pieces], any two sets of the three are more proper' (Hubbard, 1965, p.153). Finally, the 'pedal' described by Mace must have been known to Purcell, since one figured among the royal instruments in his charge, and it is therefore impossible to deny to his music the possibility of elaborate registration (though probably on a single manual) on grounds of instrumental limitations.

Coarse and insensitive though it may seem, nearly all the evidence derived from the music itself points to the conclusion that the usual way to begin any Baroque piece was on all the registers together, and that changes during the course of the piece were confined to changes of manual, though even these were rare. The indications were normally *piano* and *forte* or other words for soft and loud, but the French sometimes took over the organists' sign of a double bar the length of two spaces of the staff, meaning 'go to the other manual'. Early examples may be found in two chaconnes in the second harpsichord book by Lebègue (?1687), who was himself primarily an organist, and later ones in collections by E.-G. Damoreau (*La Camille*; 1754) and Gravier (*Tambourin* from Sonata no.1; 1759). One also finds explicit expressions like 'upper row' or *petit clavier* (or abbreviations of these). After the Baroque period, however, harpsichords continued to be built in great numbers, and the situation changed, at least in France with its *genouillères* and England with its machine stops – and in countries to which English harpsichords were exported. Thanks to the wide distribution of these devices, the presence of graduated dynamics in a piece of post-Baroque music does not necessarily indicate a preference for the piano; beginning in the 1770s, most music was published 'for harpsichord or piano' and was played on both instruments, the tendency towards one or the other depending on the country and date of the performance. One piece, a

Simphonie de clavecins for two harpsichords by Armand-Louis Couperin from the early 1770s, makes such elaborate demands that it can be played on no instrument other than a French double with the usual disposition plus a fourth register in *peau de buffle*, and a full complement of *genouillères*. This work is altogether exceptional, however, in excluding the possibility of performance on the piano by its demand for two manuals and a particular harpsichord stop (the *buffles*). A few other works (by Tapray and Balbastre) ask for the *buffles*, but not always two manuals.

Another entirely exceptional work is the manuscript *Sonata per cembalo a due tastature* WQ69 by C.P.E. Bach (1747). Dated six years after the Goldberg Variations and conceivably reflecting an approach to the instrument learnt from the composer's father, this is the only example of harpsichord music before the 20th century with comparably elaborate registration specified in every detail. The disposition required is not unusual for a large German harpsichord, except for the coupler instead of a dogleg and the lack of a 16′, and the organ-stop terminology is found elsewhere in German writings: I: *Flöte* (8′), *Octava* (4′) II: *Cornet* (8′), *Spinet* (lute 8′). The upper 8′s evidently pluck the same strings, there is a buff stop on the upper manual and there is a true manual coupler (*Coppel*), not a dogleg that can be disengaged. Registration within the course of the first two movements is indicated simply by *p* and *f*, but the composition of each level is specified at the beginning. For the first movement, 'das *Forte* unten mit allen Registern, das *Piano* oben', i.e. all stops except the buff, and the manuals coupled (both the upper 8′ and the *spinet* are apparently engaged, in spite of the fact that they pluck the same strings). For the second, 'das *Forte* mit *Octav* u. *Cornet* unten, das *Piano* oben, i.e. the upper 8′ coupled down with the 4′ on the lower. The third movement is a set of variations with a new registration for each, the theme calling for 'das *Forte* unten mit *Flöte*u. *Spinet* u. *Octav*, das *Piano* oben mit *Spinet*'. What is significant in these three registrations is the three different *forte* levels. Evidently for C.P.E. Bach (or his first copyist; there are four copies of this piece, none in the composer's hand, all with registrations agreeing in substance – with one exception noted below – but with differences in wording) *forte* was a relative term and could encompass a variety of colourings and degrees of loudness, so that even if the inference argued above is correct, that in the absence of any indication to the contrary harpsichordists played loud, this did not necessarily imply full harpsichord. The other registrations demonstrate some of the lighter colourings available on this instrument, although they by no means exhaust them:

Variation
1: *spinet* alone;
2: upper 8′;
3: RH on upper 8′ with buff, LH, 4′ with coupler;
4: RH on upper 8′ and lute together, LH on lower 8′ and 4′;
5: LH on upper 8′, RH on lower 8′;
6: RH on lower with solo 4′; LH on upper 8′ with buff;
7: 4′ with upper 8′ coupled;
8: like variation 4 but with hands reversed (one of the sources has the buff added to the upper 8′ and nasal);
9: lower 8′. Except for variations 3, 4, 7 and 9, the left hand accompanies a melody in the right hand in this movement.

It should be noted especially that in this procession of 11 binary structures by the author of *Sechs Sonaten ... mit veränderten Reprisen*, there is no hint that registration should be changed for repeats.

3. The 20th century. The style of registration of performances of early harpsichord music in the 20th century underwent a revolutionary change after World War II, stimulated and to a large extent imposed by the revival of historical harpsichord design and construction. Before and shortly after the war, the approach to registration was determined first of all by the quasi-standard disposition of the largest concert harpsichords of the 1930s, 40s and 50s. In England and France (however different these instruments sounded because of their construction), the most common disposition was that of C.P.E. Bach's instrument discussed above, plus a 16′ on the lower manual; in America, the same minus the lute stop; and in Germany that of the Harrass 'Bach' harpsichord: I: 16′, 8′; II: 8′, 4′ with buffs commonly for the 16′ as well as one or both 8′s. All the modern instruments were set sharply apart from the antiques, however, by their pedals controlling the individual stops and by being fitted with leather plectra instead of quills. The Americans took advantage of the flexibility of leather to provide half-positions for the pedals, giving each stop two dynamic levels. A curious omission of 20th-century builders was their almost total neglect of machine stops, whose smoothly graduated dynamics and rapid contrasts can be duplicated only with the greatest difficulty using individual stop-change pedals.

The characteristic *forte* of these instruments included the 16′, and the 16′ was also much loved as a solo register for its flutey, centre-plucked sound as well as in combination with the 4′ for a colourful 'gapped' effect. The pedals encouraged much variety and nuance, and players took advantage of registrational flexibility to shape the music and clarify its structure as well as to colour it and make it more interesting. They remained essentially uninterested in historical registration styles. Wanda Landowska cared little 'if, to attain the proper effect, I use means that were not exactly available to Bach'. For every piece there was a right registration, and the harpsichordist was to spare no effort to master it, no matter how complex. Her own playing was full of subtle shadings of colour and volume implied by the phraseology of the music. Ralph Kirkpatrick's career straddled the beginning of the classic revival in the 1950s and 60s, and he adapted enthusiastically to the new austerity imposed by antique dispositions and hand stops; but before that his approach to registration, like that of Landowska, was through the music, though with somewhat more rigorous attention to structure and less to colour and the expressive moulding of phrases. The chapters on registration in two postwar harpsichord methods are carefully considered accounts of the subject, the first (Schott, 1971) reflecting the transition from pre-war practice to historical reconstruction and the second (Troeger, 1987) firmly planted in the era of 'authenticity'. Schulenberg (1992, p.14) took a position at the opposite pole to Landowska: 'to insist on an austere approach to registration ... is a way of being faithful to the music itself'.

The registration of harpsichord music composed in the 20th century was sometimes specified in detail for an instrument used in the compositional process, and if the same kind of instrument is available for performance, then of course there is no problem of registration; if not, one has a guide, at least, to the composer's wishes. In

other cases the markings, if any, are simply for dynamics to be realized according to the player's judgment, and should not be taken for a hidden code other than what would be implied by the nationality and period of the instrument that the composer may be assumed to have had in mind.

Regnart [Regnard], **François** (*b* Douai, *c*1540; *d* after 1590). Flemish composer, brother of JACOB REGNART. After studies at the University of Douai, he joined the choir of Tournai Cathedral; according to Fétis he entered the service of Archduke Matthias of Austria about 1573, first as acting and later as deputy choirmaster. The principal source of biographical information is the preface by his brother Augustin, canon of St Pierre, Lille, to a volume of motets by four other Regnart brothers (RISM 1590[10]): 24 by François for four to six voices, ten by Jacob, three by Charles and two by Pascasius. François Regnart earlier published *Cinquante chansons à quatre et cinq parties* (Douai, 1575; repr. Paris, 1579 as *Poésies de P. de Ronsard et autres*). Fétis also referred to a volume of three Masses for four and five voices published in Antwerp in 1582, but this seems to be spurious. In his chansons Regnart favoured the sonnet, but set only portions (single quatrains or sestet). He responded sensitively to the nuances of each line of verse with a varied vocal texture, mingling homophony and deft counterpoint with light word-painting. A similar figuration within a largely diatonic context occurs in his motets (*FétisB*).

FRANK DOBBINS

Regnart, Jacob [Jacques] (*b* Douai, ? between 1540 and 1545; *d* Prague, 16 Oct 1599). Flemish composer, active mainly in Austria and Bohemia. His German secular songs, especially those for three voices, were immensely popular, and he was also a notable composer of church music.

1. Life. 2. Works. 3. Family.

1. LIFE. Regnart probably received his first musical education at Douai. He himself stated that he served the Habsburgs from 1557, no doubt at first as a chorister in the Prague Hofkapelle of Archduke Maximilian, which was directed by Jacobus Vaet. His name first appears in the household lists in 1560 as a tenor, with a monthly salary of seven guilders, which was raised to the standard 12 guilders in 1564, after Maximilian's election as emperor – if not earlier. It was in that year too that music by him first appeared in print. He now worked in Vienna. He studied in Italy from 1568 to October 1570. The first of his own volumes of music to be published, *Il primo libro delle canzone italiane* (1574), was doubtless stimulated by this visit, and it was quickly followed by a number of other volumes, both sacred and secular. His growing reputation as a composer was matched by success in his professional and personal life at the imperial court during this period. On 1 November 1570 he was appointed music teacher to the chapel choristers; in 1571 he was given a coat-of-arms and in 1573 a salary rise. Following the disbanding of Maximilian's household after his death in 1576, the Emperor Rudolf II made Regnart a member of his Hofkapelle, which soon moved to Prague; his monthly salary rose to 15 guilders. By October 1579 he had succeeded Alard Du Gaucquier as vice-Kapellmeister. He continued to publish a good deal of music at this time. In 1580 Lassus recommended him as Antonio Scandello's successor as Kapellmeister to the Saxon court at Dresden, but he chose to remain with the Habsburgs.

Soon, however, Archduke Ferdinand persuaded Regnart to succeed Alexander Utendal as his vice-Kapellmeister, and he arrived at Innsbruck on 9 April 1582. He was now somewhat less prolific, but among his works during this period was music for a moralizing comedy by the archduke himself (1584). On 1 January 1585 he was appointed Kapellmeister. Under his direction music at the Innsbruck court was reorganized and considerably raised in standard, to general admiration; in particular, new Dutch singers were engaged, as well as Italian solo singers and instrumentalists. In 1588 he emphasized his commitment to Catholic reform with his motet collection *Mariale*, and another interesting print from this period is a joint collection of motets by Regnart and three of his brothers (1590: see §3 below). By now he was becoming a rich man: in 1589 he bought himself a house (now 21 Innstrasse) and a plot of land, and in 1597 and 1598 he was even able to lend large sums of money to the Tyrol revenue office. Archduke Ferdinand decided to elevate him to the nobility for his outstanding services; the archduke's death in 1595 frustrated this intention, which was, however, realized by Archduke Matthias in 1596. After Ferdinand's death the Hofkapelle was disbanded,

but Regnart stayed at Innsbruck until at least 27 April 1596. By November of that year he had moved to Prague, where he again entered imperial service as vice-Kapellmeister, under Monte. From 1 January 1598 until his death he received a monthly salary of 20 guilders.

2. Works. Regnart's music continued to be highly regarded after his death and appeared in a number of anthologies up to 1655. It is also listed in several inventories of the 17th century, especially in Germany and Austria. Works by him were admired by Friedrich Weissensee in his *Opus melicum* (1602) and by Michael Praetorius in the third volume of his *Syntagma musicum* (1618, 2/1619), and he is mentioned in Joachim Burmeister's *Hypomnematum musicae poeticae* (1599). Many epigrams were written in his honour by a wide variety of authors. He enjoyed his greatest success as a composer with his *Teutsche Lieder* for three voices. They originally appeared in three volumes over a short period of time (in 1574, 1577 and 1579), the first two being reprinted twice and the third once up to 1580. In 1584 the original publisher, Gerlach of Nuremberg, brought out a complete edition, which was twice reprinted up to 1593. A rival publisher, Berg of Munich, had anticipated Gerlach with a complete edition in 1583, and this went into five editions, the last appearing in 1611. Thus these songs were continually in print for a period of over 35 years; moreover, they appeared in several arrangements too, for example in tablatures by E.N. Ammerbach (1583), Gregor Krengel (1584) and Matthäus Waissel (1592). Leonhard Lechner arranged 21 of them for five voices (1579, 2/1586). Johannes Brassicanus quoted three of them in his quodlibet *Was wölln wir aber heben an?*, Paul Luetkeman published a pavan on *Ohn dich muss* in 1597, and Francesco Rovigo based a *Magnificat* on *Venus, du und dein Kind* (1583). Two much greater composers also turned to this last song: Lassus drew on it in his four-part lied *Die Gnad kombt oben her*, and Schein published in his *Cantional* of 1627 a contrafactum, *Auf meinen lieben Gott*, which later found its way into Protestant hymnbooks, leading in turn to countless arrangements over many years.

These three-part songs were not only phenomenally popular but also highly important for the development of the lied. Regnart announced on all the title-pages that they were 'in the style of *napolitane* or Italian villanellas'. His achievement in these songs lay in bringing the genre, which with other composers still adhered to the imitative style of classical vocal polyphony, closer to the popular style of the villanella. Italian influence is especially evident in the first book, but all of the songs display the essential features of the villanella – dancelike rhythms, moments of homophony, simple harmony and melodies (the latter often confined to the top voice in the texture), as well as parallel 5ths. In his *Opusculum bipartitum* (1624 2/1625) Joachim Thuringus classified them as 'sortisatio', which Johannes Nucius (in his *Musices poeticae*, 1613) described as a combination of 'usus' and 'ars', since it was cultivated by both artisans and the best court musicians. This is a useful indication of how to view these songs, which since their first complete modern edition (Eitner's of 1895) have frequently been condemned, both for their partly erotic content and for their compositional errors; they have also been altered and 'improved' as well as compared unfavourably with the apparently more 'artistic' tricinia of composers such as Ivo de Vento and Leonhard Lechner. Textually, the departure from normal German octosyllabic verse and the almost exclusive use in the first volume (1576) of Italian poetic forms – for example the decasyllabic or hendecasyllabic triplet with the rhyme pattern *AAA*, *ABA*, *ABB*, or else the six-line hexasyllabic or heptasyllabic, divided into three couplets with the rhyme pattern *AA*, *BB*, *CC* – indicate the extent to which Regnart was influenced by his Italian models; this influence is less marked, however, in the second and third books (1577–9). Regnart's success in cultivating this popular genre was far greater than that of his contemporaries, Lassus included. In the preface to his 1576 volume he acknowledged that this was an unpretentious kind of music, and Lechner's madrigalian arrangements for five voices can almost certainly be seen as an attempt to enhance their status in the sphere of art music.

Of Regnart's four-part lieder (1591) only the treble part survives. Its melodic structure suggests that they were similar in style to his tricinia: they were not reprinted, however, indicating that they enjoyed less popularity. The five-part songs (1580), which were reprinted once, are quite different. Osthoff (1938), who rightly called them 'by far the most important monuments of the polyphonic

lied', equally rightly saw them as 'the closest approximation until then of the choral lied to the madrigal'. They are full of the refinement and polyphonic artistry that Regnart deliberately shunned in his three-part pieces. The two volumes of canzone *italiane* (1574–81) can also for the most part be classified as madrigals; the first volume was twice reprinted, and both volumes appeared in German translation in 1595.

Regnart's sacred works have generally received far less attention (but see Mossler, and Pass, 1967). Yet they form the greater part of his extant music, and in them he again displayed his outstanding ability. In particular he made masterly use of the possibilities of musical rhetoric, and skilfully employed music to underline the meaning of his chosen texts; his *Mariale* (1588) in particular is one of the most notable products of the Counter-Reformation.

3. FAMILY. Jacob had four brothers, all of whom were born in Douai at unknown dates; it is not known where and when they died. All worked as musicians within the church: Charles and Pascasius served in the court chapel of Philip II of Spain between 1562 and 1565, the former as a soprano, the latter as a chaplain. Augustin, a canon at St Pierre, Lille, edited *Novae cantiones sacrae* (Douai, 1590[10]), a collection of 40 motets by the brothers; best represented within the anthology, with 24 motets, is FRANÇOIS REGNART, who studied at the University of Douai before securing ecclesiastical and courtly positions at Tournai.

WALTER PASS

Regnault, Pierre. *See* SANDRIN.

Regnes, Nicole (*fl* 1530–51). French editor and composer. He worked in Paris as house editor for Nicolas Du Chemin between 1549 and 1551, instructing the printer in the rudiments of music in return for board and a modest salary. Du Chemin also offered him ten golden crowns for several books of his music, including three collections of new chansons and a book of unpublished four-part motets (though there is no evidence that any of this was ever printed). Regnes was succeeded as house editor by Claude Goudimel.

20 of Regnes' compositions survive: all but one are four-voice chansons. The three-voice *Le berger et la bergere*, to judge from the frequency with which it was reprinted, was his best-known work. A few of his chansons – *A tout jamais vous faire humble service*, for example – demonstrate competence in handling the chordal texture of the typical Parisian chanson. Most of the pieces, however, show the composer's woeful lack of contrapuntal skill. His style suffers from a paucity of harmonic and melodic imagination. The great disparity between Regnes' better work and the more incompetent pieces suggests that there may have been more than one composer involved; the music is attributed variously to Regnes, Rene, Renes, Rennes, Renez, Reveré, Revertz and Revez (generally no forename is given), but there is no consistent correlation between one form of the name and any stylistic traits.

WORKS

1 chanson, 3vv, Attaingnant: Trente et une chansons (1535); ed. L.F. Bernstein, *La couronne et fleur des chansons a troys* (New York, 1984)

19 chansons, 4vv, 2 in 1530[3], 1 in 1531[1], 1536[5], 1538[10], 1543[14], 1546[12], 3 in 1549[24], 1549[25], 1 in 1549[26], 2 in 1550[5], 3 in 1550[7]; 1 ed. in PÄMw, xxiii (1899/*R*), 1 ed. A. Seay, *Thirty Chansons for Three and Four Voices, from Attaingnant Collections* (New Haven, 1960), 1 ed. in SCC, xxviii (1993)

LAWRENCE F. BERNSTEIN

Regnier, Nicolas. *See* RENIER, NICOLAS.

Rego, Pedro Vaz (*b* Campo Maior, Transtagana, bap. 19 March 1673; *d* Évora, 8 April 1736). Portuguese composer. He studied with Diogo Melgaz at Évora Cathedral choir school. After a brief period as deputy *mestre de capela* at Elvas Cathedral, he returned on 12 October 1697 to assist the ailing Melgaz, succeeding him in 1700. Six years later – now rector of the archbishop's college as well as *mestre de capela* at Évora – he published there a *Relação das festas ... 2 de Junho 1706*, composing the music for the festivities himself. His other publications include a defence of Valls's use of unprepared dissonance (undated) and two poems (1733), one praising a *Salve regina* by Domenico Scarlatti's patron and pupil Maria Bárbara, the other containing an extremely useful history of music in the Spanish royal chapel. The latter, entitled *Armonico Lazo*, is dedicated to Torres. During Rego's time as *mestre de capela* of Évora Cathedral a violinist was hired for the first time, in 1723, and in 1731 shawms began to be replaced by oboes.

Among the many masses, psalms, hymns, motets, Lamentations, Passions and vilhancicos credited to him by Barbosa Machado, all that survive are four vilhancicos (*P-EVp*), a four-voice *Missa ad omnem tonum* (*EVc* 8, 1731) and two four-voice psalms, *Beati omnes* and *Credidi* (*EVc* 6). In his mass Rego cited the psalm recitation formula in each of the eight traditional tones, combining all eight in the final virtuoso Agnus (transcribed in Alegria, *História*). Although in Portuguese, his *Amante Deus da minh'alma* (*EVp*) follows the custom much more widespread in Spain of being written a 4th higher than it was to be sung.

ROBERT STEVENSON

Regola dell'ottava (It.: 'rule of the octave'). A term used by certain 18th-century figured bass theorists to refer to a simplified system of harmony in which each note of a diatonic scale (ascending and descending an octave) considered as a bass part can be assumed to have its own chord above. The 'rule' is thus a rough and ready guide, and a figuring such as that in ex.1 (Rameau, 1722) is only

Ex.1

one of several possible. The idea is a practical one, and although the phrase itself occurs late (in Campion's *Traité ... selon la Règle des Octaves*, 1716) and although some writers treated it somewhat theoretically (Mattheson, Heinichen, Schröter, Blankenburg), figured bass players had long been accustomed to thinking that certain bass lines probably indicated certain harmony. Many 17th-century theorists and composers had assumed, for example, that a C♯ rising to a D indicated a particular

progression and could be learnt as a formula; such scales as given by Gasparini (*L'armonico pratico*, 1708/R) merely extended and codified the practice.

PETER WILLIAMS

Regondi, Giulio (*b* Genoa, *c*1822; *d* London, 6 May 1872). Italian guitar and concertina player. He was brought up in Lyons by a foster-father, who recognized and cultivated his musical ability. He was presented in Milan as a child prodigy of the guitar, then in the major capitals of Europe, achieving fame in Paris in 1830 and London in 1831. His family settled in London, the guitar cult being popular there in the 1830s. This gave him the opportunity of meeting Leonhard Schulz the younger, who was publishing Mauro Giuliani's guitar music in London. Here he also met the Polish guitar virtuoso Marek Sokołowski, whose seven-string instrument may have prompted him to go a step further and take up the eight-string guitar. He played this on a concert tour to Vienna, Prague and Leipzig in 1840–41, in the company of the cellist Joseph Lidel. In his maturity Regondi was a distinguished player of the concertina, an invention of Charles Wheatstone's (late 1820s) which he popularized. Bernhard Molique wrote a concerto for concertina and orchestra, op.46 (London, 1853) for him. Regondi himself wrote two such concertos, and about 12 chamber works for concertina and piano, such as the *Introduction and Variations on an Austrian Air* op.1 (1855), and several concert pieces for solo concertina. He also wrote many solo guitar works, including *Reverie nocturne* op.19 and *Fête villageoise* op.20.

THOMAS F. HECK

Regularis concordia. The book of customs and observances, following Benedictine tradition, for the monasteries of England ('anglicae nationis monachorum sanctimonialiumque') drawn up and approved by the Synod of Winchester in about 970; St Dunstan and St Ethelwold contributed to it. The preface acknowledges an indebtedness to the customs of Fleury and Ghent. Of prime importance in the history of liturgical drama are the detailed instructions for the singing of the dialogue QUEM QUERITIS at Easter Matins, ending with the *Te Deum*.

JOHN STEVENS

Rehfuss, Heinz (Julius) (*b* Frankfurt, 25 May 1917; *d* Buffalo, NY, 27 June 1988). Swiss-Jewish bass-baritone of German birth, later active in the USA and Canada. He was brought up in Neuchâtel, and studied singing with his father, Carl Rehfuss, and operatic production with Otto Erhardt. In 1937–8 he made his début as a choral singer and stage designer at the Städtebundtheater in Biel-Solothurn; he sang in 1938–9 in Lucerne and from 1940 to 1952 at the Zürich Opera House, where he undertook more than 80 roles. With his smooth, mellifluous tone he was also an outstanding lieder and oratorio singer, particularly admired as a sensitive interpreter of Christ in Bach's Passions. From 1952 he sang at many European opera houses, notably as Don Giovanni, Boris Godunov and Golaud, and went on concert tours to America (where he later became a naturalized citizen), Asia and Africa. He also made a point of singing 20th-century music, in such roles as Dr Schön in *Lulu*, and gave the first performances of works by composers including Stravinsky, Milhaud, Britten and Nono. Rehfuss taught singing during courses at Dartington Hall and Darmstadt (1947–64); he became professor of music (head of the singing and opera departments) at the State University of New York at Buffalo in 1965, and visiting professor at the Montreal Conservatory in 1961 and at the Eastman School, Rochester, New York, in 1970. In 1962 the city of Zürich awarded him the Hans Georg Nägeli Medal. Rehfuss made many recordings, including Golaud in *Pelléas et Mélisande* with Ansermet, Martin's *Sechs Monologe aus 'Jedermann'* and *Le vin herbé*, and Creon and the Messenger in *Oedipus rex*, conducted by the composer.

JÜRG STENZL

Rehim, Gamal. *See* ABDEL-RAHIM, GAMAL.

Rehkemper, Heinrich (*b* Schwerte, 23 May 1894; *d* Munich, 30 Dec 1949). German baritone. He studied in Hagen, Düsseldorf and Munich, making his début in Kálmán's *Die Faschingsfee* at Coburg in 1919. At Stuttgart (1921–4) he sang over 40 roles and in 1925 he joined the Staatsoper in Munich, where he remained until 1943. He was a popular Papageno but also sang dramatic roles such as Macbeth, Rigoletto, Amfortas and Telramund. In 1931 he appeared in the première of Pfitzner's *Das Herz*. He was also much in demand throughout Germany as a recitalist, admired by Richard Strauss, who was his accompanist on a concert tour of Norway. His recordings reveal a somewhat dry voice with limited appeal, though his singing can be tender and intense in feeling. (J. Dennis, D. Brew and R. Jones: 'Heinrich Rehkemper', *Record Collector*, xxii, 1974–5, pp.267–86).

J.B. STEANE

Rehm, Wolfgang (*b* Munich, 3 Sept 1929). German musicologist and editor. From 1948 to 1952 he studied musicology at Freiburg University under Gurlitt and Zenck while also studying the piano and theory at the Hochschule für Musik. In 1952 he took the doctorate with a dissertation on Binchois' chansons. He then became an unpaid assistant at Breitkopf & Härtel in Wiesbaden; in 1954 he was made editor (1954–71) and subsequently chief editor (1971–82) of Bärenreiter in Kassel. He was also active as an administrator: treasurer of the Association Internationale des Bibliothèques Musicales (1959–84) and RISM, a member (1962–74) and later deputy chairman (1974–86) of the editorial board of the Neue Bach-Gesellschaft, a member of the editorial boards of the new collected editions of Berlioz (1965–88) and Gluck

(1960–71), president of the editorial committee for both series of Documenta Musicologica (1973–89), and chairman of the Internationaler Arbeitskreis für Musik (1974–83). Together with Plath, he was chief editor of the new collected edition of Mozart's works (1960–94), to which he contributed several volumes. He was artistic director of the annual Mozartwochen festival in Salzburg (for which he edited the programme notes), and he has edited numerous Festschriften, conference reports and publications of the International Stiftung Mozarteum whose directorship he joined in 1992. He has received a number of awards, including the Silberne Mozart-Medaille in 1980.

HANS HEINRICH EGGEBRECHT/KONRAD KÜSTER

Rehnqvist, Karin (*b* Stockholm, 21 Aug 1957). Swedish composer. After graduating as a teacher in 1980 from the Swedish Royal Academy of Music, Stockholm, she spent a further four years studying composition with, among others, Bucht and Ferneyhough. In 1976 she became conductor of the amateur choir Stans Kör and was elected a member of the Society of Swedish Composers in 1985. Her work for string orchestra, *Stråk*, drew considerable critical attention after its first performance (in Reykjavík) in 1982, as did *Davids nimm*, for three women's voices, in 1984. She is particularly noted for her thorough knowledge of the voice, and also for her use of folk material, often boldly transformed, as in *Davids nimm*, *Puksånger-lockrop* and the violin concerto *Skrin*.

EVA ÖHRSTRÖM

Reibel, Guy (*b* Strasbourg, 19 July 1936). French composer. After training as a scientist and pursuing his musical studies with Olivier Messiaen and Serge Nigg, he became a member of the Groupe de Recherches Musicales in 1963. He helped with the writing of Pierre Schaeffer's *Traité des objets musicaux*, and did research into the perception of pitch and duration. At the same time, he taught electro-acoustic music (with Pierre Schaeffer) at the Paris Conservatoire and worked on the incorporation of new technologies into composition. He has been the moving spirit behind many radio broadcasts. He founded the Atelier des Choeurs of Radio France in 1976, and from 1986 to 1990 he directed the Groupe Vocal de France, with which he has given first performances or broadcasts of over a hundred contemporary vocal works. He was the musical adviser to the Cité de la Musique at La Villette (1983–9), and with Patrice Moullet set up the *Corps sonores de la Villette*: multi-coloured instrumental sculptures producing and performing electro-acoustic sounds activated by means of gesture. Reibel has written some 50 works, both electro-acoustic and in vocal, orchestral and mixed genres, and has been professor of composition at the Paris Conservatoire since 1976.

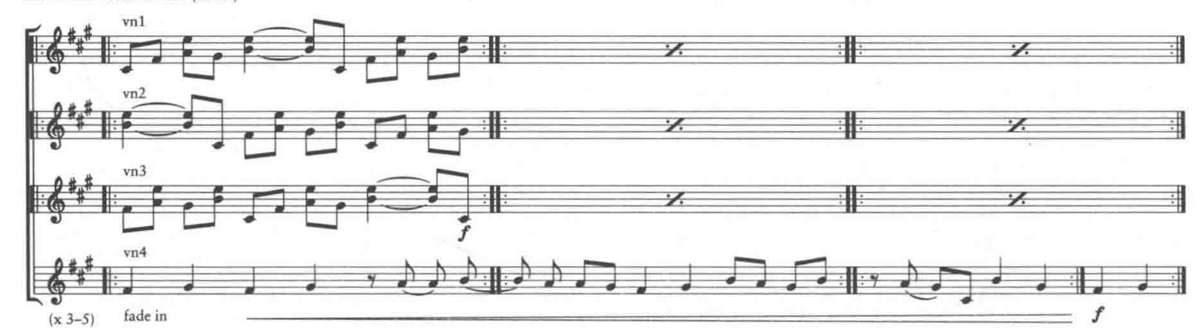
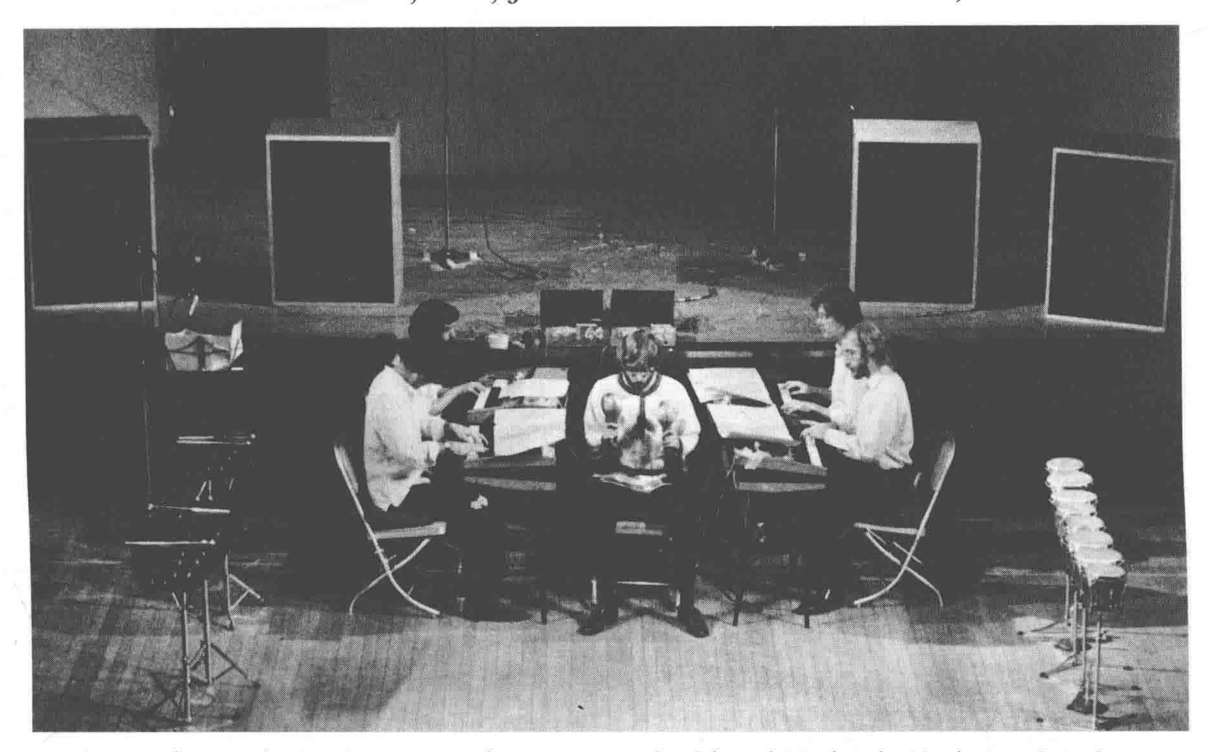
BRUNO GINER

Reibtrommel (Ger.). A FRICTION DRUM. *See* DRUM, §I, 4.

Reich, Steve [Stephen] **(Michael)** (*b* New York, 3 Oct 1936). American composer. One of the first masters of the repetitive music that emerged in New York in the mid-1960s and was soon branded 'minimalism', he has consistently broadened and developed his musical world without compromising the streamlined efficiency and precision of his technique. Repetitive, pulse-driven figures have remained a characteristic, but so have the slips and leaps of a lively mind.



1. To *Drumming*. 2. Orchestras and other ensembles, 1972–87. 3. Speech melody.



1. TO 'DRUMMING'. Following the divorce of his parents, Reich's childhood was divided between New York and California, involving him in long rail journeys which he recalled much later in *Different Trains*. Boyhood piano lessons left little impression; his musical life took off when, at the age of 14, he began studying drumming with Roland Kohloff. At Cornell University (1953–7) his principal study was philosophy, but he also attended William Austin's music course, where he found a congenial view of the subject that jumped from Bach to the 20th century. On returning to New York he devoted himself to composition studies, first privately with Hall Overton (1957–8) and then at the Juilliard School with Bergsma and Persichetti (1958–61). From there he went to Mills College, California, to study for the master's degree in composition with Berio (1961–3).

He remained in San Francisco, where he made the simple discovery that led to his first acknowledged piece, *It's Gonna Rain* (1965), and provided the seed from which his music would grow: that two machines playing identical loops of recorded speech would slowly move out of synchrony with each other. Performing with Terry Riley in *In C* – as well as listening to recordings of John Coltrane and African drumming (which he had also studied in A.M. Jones's book) – had quickened his interest in harmonic stasis and short repeating patterns; he based *It's Gonna Rain* partly on chopping and rearranging elements in a sequence of speech but much more on the new technique of 'phasing', as he called it (because identical elements move in and out of phase; see ex.1 below). Following a definitive return to New York, he composed another tape piece, *Come Out* (1966), based entirely on phasing.

From there he could have gone in any of a number of directions. The two tape pieces show how words can be at once intensified and dislocated by exception from context, disruption of order, repetition and phased superimposition. The pieces also achieve increasing complexity and confusion as layers of recordings (and tape noise) are added. They could, equally, have led to an interest in the effect of room acoustics on the playback of repetitive material, or to a music of political commitment, since the speakers – a preacher and a murder suspect – are both black. But Reich's immediate concerns were otherwise: to test whether phasing could be done with instruments, to integrate himself into existing traditions of music-making (he has repeatedly expressed his respect for a group of masters that always includes Perotinus, J.S. Bach and Stravinsky) and to create audible processes of gradual change (though not without surprises). These concerns led him on to *Piano Phase* for pianos and *Violin Phase* for violins, both written in 1967 and both performed in the concerts he began giving in New York art galleries in the late 1960s, in a thriving milieu where other minimalists – film makers and visual artists as well as musicians – were active. He and his ensemble, Steve Reich and Musicians, also began making records during this period, starting with *Violin Phase* in 1969. Ex.1, a bar from *Violin Phase*, shows how the phasing process works. Here the phase shifting has reached a point where the second violin is two crotchet beats ahead of the first, and the third violin two beats ahead of the second (therefore two behind the first), while the fourth picks out a resulting pattern. However, from the combination of all four violins the listener may deduce other patterns. These – real and imaginary, blooming and going as the phasing process continues – are responsible for some of the liveliness in Reich's music. Also important, throughout his output, is the metrical ambiguity – often, as here, within a 12/8 frame. If ex.1 is heard as one 12/8 bar, and not as three bars in 4/8, where is the first beat? At other points the uncertainty will also be between three- and fourfold divisions of the bar.

Ex.1 from *Violin Phase* (1969)

1. *Performance of Steve Reich's 'Four Organs', New York University, 1972: (from left to right) Reich, Arthur Murphy, James Preiss, Steve Chambers and Russ Hartenberger*

Similar processes of phasing and pattern enhancement are involved in *Phase Patterns* for four electric organs (1970), while in another work for the same combination, written earlier the same year and called simply *Four Organs*, a different sort of process is allowed to run its course: a nine-note chord, jabbed by the organs, has its notes extended one at a time, so that melodic motifs emerge and are then obscured again as the sustained notes grow to fill all the available time. These pieces were included in a concert Reich gave of his music at the Guggenheim Museum in New York in the spring of 1970, after which he left to study drumming for five weeks at the University of Ghana in Accra. On his return to New York he began *Drumming* (1970–71), a synthesis of the processes of the pieces for four organs and also his first big public statement, both in its 90-minute duration (reduced to an hour at revivals from the late 1980s onwards, when the players found themselves taking fewer repeats) and in its scoring for nine percussionists, playing small tuned drums, marimbas and glockenspiels, with two female voices (singing resultant melodies but with the effect of a backing group) and piccolo. *Drumming* was a summation, and at the same time marked a move to music of breadth and sensuousness, perhaps reflecting the success the composer had come to enjoy. In 1971, while composing it, he had gained his first performance in a large concert venue, when *Four Organs* had been included in a Boston SO programme, and he and his ensemble had made their first European tour. They included it on their second tour the next year (fig.1), and in 1974 they recorded it for Deutsche Grammophon. *Drumming* also provided Reich with the sound world, of rippling multiple keyed percussion, that was to become his home.

2. Orchestras and other ensembles, 1972–87. For the exigencies of touring, Reich created a piece that could be rehearsed in a hotel room and used sounds he was increasingly hearing: *Clapping Music* for two pairs of hands (1972). But his main swerve was, on the contrary, towards larger and richer ensembles, and to developing not so much the dynamism and attack of *Drumming* as its chiming sonorities: hence *Six Pianos* (later made a little more practicable, and gentler, as *Six Marimbas*) and *Music for Mallet Instruments, Voices and Organ* (both 1973). These works are based on a technique of repeating a figure and then building up a duplicate, beat by beat, out of phase with the repetitions. The second score, seductively combining warm notes held by the female vocalists and the organ with lustrous rising melodic patterns on marimbas and glockenspiels, has the psychedelic colour of the period while relating also to the gamelan music of Bali. Characteristically, Reich again went to the source, and studied with Balinese teachers in Seattle later in 1973 and in Berkeley the next year.

But *Music for Mallet Instruments* turned out to be only another moment to pass through. Reich's next project was again on the scale of *Drumming*, and it restored his music's keen edge without losing its new-found lustre: *Music for 18 Musicians* (1974–6). The ensemble is rather similar to that of *Music for Mallet Instruments* but a little larger, comprising percussion, female voices and sustaining instruments (pairs of strings and clarinets). The music, though, is sharper in its attacks and more harmonically driven. Emerging out of pulsations – which are regular but constantly feature new notes and colours coming forward, and which continue throughout – the piece moves smoothly through several sections in which repeating patterns are joined by duplications and counterpoints, but in more complex textures and against the background not only of the pulsations but of grand harmonic progressions. A cycle of 11 chords, played slowly in the

opening section, is played even more slowly in those that follow, providing the scaffolding for less glacial harmonic movements as well as for the contrapuntal inventions that had gradually ousted Reich's simple phasing process while keeping its repetitive frame. Typically these inventions start with a repeating figure, to which other figures are added one by one, each figure, including the first, subject to gradual alteration, so that within a context of constant recycling there is constant change. This was to be Reich's essential technique from then on. The work also defined his essential texture, combining up to three tempos: the *allegro molto* of the restless pulsation, the slower feel of the repeating patterns moving to that pulse, and *adagio* waves of notes and harmonies defined by the length of a breath. What results is a radiant wash of sound around fascinating activity. The first recording, which appeared in 1978, found a large audience.

Hitherto Reich had not been eager to have his music played by other ensembles, though he did eventually publish his early ensemble pieces with Universal Edition in the mid-1970s. After *Music for 18 Musicians*, however, the opportunities of commissions became irresistible, and he acquired a new publisher in Boosey & Hawkes. The commissions allowed him to write a new piece – *Eight Lines* (originally Octet, 1979), for Radio Frankfurt – for an ensemble of the size he was used to but reversing the balance between sustaining instruments and percussion; they also gave him chances to compose for bigger forces in *Music for a Large Ensemble* (1978), for the Holland Festival, and Variations for Winds, Strings and Keyboards (1979), for the San Francisco SO.

These works develop the discoveries of *Music for 18 Musicians*, especially in the layering of tempos, the repetitive but changing figuration and the independent handling of melody and harmony, but they also suggest something waiting to happen. Reich's work with Ghanaian and Balinese musicians had caused him to think about what tradition he belonged to, and the result was a period of study in 1976–7 of Hebrew, of the Torah and of cantillation, for which he went to Israel to hear singers from different eastern Sephardi communities. Out of this finally came *Tehillim* (1981), a setting of psalm verses – his first work since the early tape pieces to incorporate words. What he had heard in Israel went into the background, against which he wrote melodies that give his characteristic regular pulses, ambivalent metres and repetitions a quite original freshness and bounce. Generally the three rhythmic layers comprise a quick one of percussive pulsation and a slow one of wind-string harmony, with an intermediate level of vocal activity, sprung against the pulse and the harmony. To the original version, for four women's voices and ensemble, Reich soon added an alternative, with fuller strings.

Next came his first small-scale piece since *Clapping Music* a decade before: *Vermont Counterpoint* for flute and tape (1982), in which the richer textures of his subsequent music are adapted to solo instrumental performance; this was followed by his largest-scale work to date, *The Desert Music* (1982–4), for which he took lines from William Carlos Williams, and in which, as in *Tehillim*, rather few words, through abundant repetition, support extended stretches of music: playing for three-quarters of an hour, *The Desert Music* was his longest work between *Music for 18 Musicians* and *The Cave*, which fills an evening. There are connections with

Ex.2 from *New York Counterpoint* (1985)

cl (live)

cl 1 (recorded)

cl 2 (recorded)

cl 3 (recorded)

Tehillim, especially in the triple-layered tempos and the use of wide intervals and high registers that help give the vocal parts an instrumental feel, but the choral writing is more homophonic and the harmony darker. The work moves from fast to moderately paced to slow and back again, the central slow movement being much the longest. Here the piece changes its nature, from ebullient cantata on music to solemn warning about the dangers of technological advance. At the opening of the finale, K. Robert Schwarz observed,

> the sustained chords are voiced so as to create an immense six-octave span from double-bass to piccolo. As the bustling counterpoint intertwines within these chords, the visual image that arises is of a solitary human running across a vast desolate plain – a desert at once intimidating and exhilarating.

After this massive undertaking, Reich went back to his roots in works exploiting a small percussion ensemble (Sextet, 1984) and recorded superimpositions (*New York Counterpoint*, 1985). Both pieces continue the darkening of harmony and the introduction of more chromatic modes to create a sombreness far removed from the joy of *Music for 18 Musicians* and *Tehillim*. The imitative and polymetrical texture, however, is similar, and the relative simplicity of *New York Counterpoint*, for clarinet and recorded clarinets, permits a compact illustration (ex.2). Here, close to the start of the three linked short movements, not only is the live clarinet doubling one of the recorded voices at the 10th (or 3rd) below, but the other two taped parts are in canon with the first – rather as in the early phasing pieces, except that the displacements are now harmonic as well as rhythmic. One motif in the recorded parts stays the same (G–C–F), while the other emphasizes a different note on each line, so that there is an ambiguity about whether the tonic is A♭, B♭ or E♭, just as there is about whether the main downbeat comes on the first, sixth or ninth quaver. The positioning of these downbeats also makes it uncertain whether the quavers are grouped in fours (lines 1 and 3) or threes (lines 2 and 3). The repeating frame is springy with different tensions, balances and points of repose.

New York Counterpoint was soon joined by a third such virtuoso sonata, *Electric Counterpoint*, for electric guitar and tape (1987). These two pieces perhaps gave the composer some relief at a time when he was committed to orchestral projects, for after *The Desert Music* were soon to come *Three Movements* (1986) and *The Four Sections* (1987), in both of which (and, in the latter, as implied in the title) a characteristic ensemble of marimbas, metallophones (vibraphones with motors off) and keyboard instruments has equal status with the other orchestral departments. *The Four Sections* makes this equivalence its story. After a string-led Adagio, the percussion group dramatically enters to quicken the pace.

2. Steve Reich, 1985

Then comes a wind-centred invention in the manner of *New York Counterpoint*, followed by a tutti movement in which, nevertheless, the different sections are still on their own trajectories, the strings slow and the others faster. However exuberant the rhythmic activity, the effect is of grim inexorability, and there is a melancholy feel, too, in the modality of the opening movement.

3. Speech melody. The darkening of Reich's music through the 1980s has many possible associations – on the material level with his recovery of modes typical of Jewish song and worship, and expressively with his awareness of some of the decade's principal problems: pollution, AIDS, political cynicism and the Israeli–Arab conflict. Another theme emerged in *Different Trains* (1988), though only as a result of a musical formal idea which he had rejected for *The Desert Music* and which was to prove immensely fruitful: that of using recorded speech, as he had two decades before, but now as a source of melody. The theme was to be the rail journeys he had made as a child, and the different trains that were taking other Jewish children at the time to their deaths in Nazi-occupied Europe. Accordingly, Reich collected recordings of train sounds (rattlings of wheels and carriages, whistling) and spoken testimony from his governess, a retired porter and holocaust survivors. Short excerpts he notated as melodies, to be played by live and recorded string quartets. Often the melodies are introduced by the instruments, so that the taped voices seem to be prompted by the instrumental music, rather than the other way around. Near the start, for instance, a motif is introduced

Ex.3 from *Different Trains* (1988)

str
va (live)
+ voice (recorded)
f
vc (recorded)
'from Chi-
mf
mf

by a recorded cello, then repeated by the live viola, being joined by the governess's voice just on the second repetition (ex.3). One nice feature of the piece is how the train metaphor fits elements long present in Reich's music, sustained chords now doubling recorded train whistles and ostinatos the regular mechanical movement. It is also possible for lines to go off on their own rhythmic tracks, as here, where the 'from Chicago' motif is in 7/8 alongside the prevailing 2/4.

Expanding the speech-music technique of *Different Trains*, Reich moved on to his biggest undertaking so far, *The Cave* (1990–93), for which he chose not to return to the orchestra but to go back further, to the sort of compact ensemble of percussion with voices and sustaining instruments (string quartet in this case) that had been characteristic of his music through the decade from *Drumming* to *Tehillim*. This was his world, and in it he created a kind of cave of listening, where the words of interview subjects – Israelis, Palestinians and Americans – echo among the instruments and voices. Again he had found an apt metaphor, for *The Cave* is a cave about a cave: the cave at Hebron that is by tradition the burial place of Abraham (Ibrahim for the Muslims) and Sarah (Sarai). The work, which he created in collaboration with his wife, the video maker Beryl Korot, is a documentary, but one in which the music is at all levels part of the topic.

After *The Cave* Reich and Korot went on to a similar project, *Three Tales* (begun 1997), a set of technological fables based on the crash of the airship *Hindenburg*, atomic bomb testing in the Pacific and animal cloning. But Reich also took the opportunities of commissions to work on more purely musical problems in smaller pieces. *Proverb* (1995), intended for the Proms and the Utrecht Early Music Festival, profits from the experience he had working on *The Cave* with Paul Hillier and with singers who had formed their style in medieval polyphony: based on one melodic thought, it is music of drones and rhythmically insistent counterpoint, close to Perotinus. *Nagoya Marimbas* (1994) is a further study for bouncing lines of one colour – this time short and playful, and again skimming a foreign modal system, that of Japanese music, having been written for the opening of a new hall at the Nagoya Conservatory. *City Life* (1994), commissioned by three leading new-music ensembles in Europe, is a portrait of the composer's home, formed around seeds of actuality in the manner of *Different Trains* and, from much further back, *Livelihood*, which he had based on fragments of speech and noises picked up in the cab he was driving. This time he used spoken phrases along with the noises of slammed car doors, steam hissing in the street, a pile-driver, a foghorn and a fire emergency, avoiding problems of ensemble-tape synchronization by having the recordings played on sampling keyboards. Triple Quartet (1999) is more fully in the world of *Different Trains*, but uses only interlocking harmonies, metres and tempos, along with canonic imitation, to keep the music on track. It also shows, in its modality, the continuing importance to the composer of his Jewish heritage.

PAUL GRIFFITHS

Reich, Willi (*b* Vienna, 27 May 1898; *d* Zürich, 1 May 1980). Swiss music critic and musicologist of Austrian birth. He studied musicology with Lach, Orel and Haas at Vienna University, where he took the doctorate in 1934 with a dissertation on Martini; concurrently he took private lessons in music theory and composition with Berg (1927–35) and Webern (1936–8). From 1920 he worked as a music critic for several Viennese and foreign newspapers. Encouraged by Berg, he edited the journal *23 – eine Wiener Musikzeitschrift* (1932–7), which took vehement issue with the defects of Viennese musical life and supported the new music, particularly that of the Second Viennese School. The journal, which in June 1933 had emphatically criticized National Socialism and whose regular authors included Ploderer, Krenek and Adorno as well as Reich, was banned immediately after the Austrian Anschluss. In 1938 Reich moved to Basle, where he worked as a freelance writer. In 1948 he took up a post on the *Neue Zürcher Zeitung*; he also lectured at the federal Technische Hochschule in Zürich (1959–1970; honorary professor 1958, titular professor 1967).

With Adorno, Erwin Stein and others Reich belonged to a small group of music journalists who had personal contact with the composers of the Second Viennese School and who energetically championed their work against an influential press bound to 'tradition', within and beyond Vienna. Reich's two monographs on Berg and his book on Schoenberg are still considered fundamental to scholarship on the two composers. His numerous other books, many of which attempt to characterize the poets and musicians in their own words, include studies of Wagner (1948) and Bartók (1958).

JÜRG STENZL

Reicha [Rejcha], **Antoine(-Joseph)** [Antonín, Anton] (*b* Prague, 26 Feb 1770; *d* Paris, 28 May 1836). Czech composer, active in France and Austria. Though a prolific composer, he was of particular importance as a theorist and teacher in early 19th-century Paris.

1. 1770–1805. Reicha was only ten months old when his father Simon, an Old Town piper, died at the age of 30. About 1780 he felt that his education was suffering and ran away to his grandfather Václav Rejcha (1717–98) in Klatovy, Bohemia. Then he went to his aunt and uncle, Lucie Certelet and JOSEF REICHA, who adopted him. The fragmentary facts of the first 30 years in the life and works of Reicha often have been confused with those of his uncle, a virtuoso cellist, concert director and composer. Reicha learnt the violin and the piano from his uncle and also received instruction in the flute.

After the family moved to Bonn in 1785, Reicha played the violin and the flute (his main instrument) in the Hofkapelle under his uncle's direction, alongside Beethoven and C.G. Neefe, who may have given both Beethoven and Reicha composition lessons, and introduced them to Bach's keyboard works. At first, he had to study composition secretly, against the wishes of his uncle; he may have read at this time Marpurg's *Abhandlung von der Fuge* and Kirnberger's *Die Kunst des reinen Satzes*. In 1787 he conducted his first symphony and several *scènes italiennes* at Bonn, and in 1789 he entered Bonn University. He met Haydn in the early 1790s at Bonn and again in 1795 in Hamburg (he had moved there at the end of 1794 when the French invaded Bonn). In Hamburg, vowing not to perform any more, he taught the piano, harmony and composition. He also devoted himself to composition, readings in mathematics, philosophy and music, and meditation on the nature of composition and the methods of teaching it. His earliest known opera, *Godefroid de Montfort*, may have received its second private performance in Hamburg in 1796 with the assistance of Pierre Garat and Pierre Rode.

Hoping for operatic success, Reicha went to Paris on 25 September 1799. Despite the well-received performances by his friends (Rode, Garat, Gossec and Devismes) of the symphonies opp.41 and 42 (with thematically connected movements), an overture (probably op.24) and some *scènes italiennes,* Reicha could neither get his Hamburg librettos accepted nor find a suitable new one, even with the influential assistance of Mme St Aubin-Schroeder. On Grétry's recommendation he set Guy's libretto *L'ouragan*, but this met with failure; both the Théâtre Feydeau and the Salle Favart closed in 1801. Distraught, Reicha joined Rode at Montmorency and late that year left for Vienna. His early work had shown the influences of Dalayrac, Grétry and his uncle, Josef Reicha; by op.20, the influences of the Mannheim composers, Gluck, Mozart and Haydn predominated.

In Vienna Reicha first went to visit Haydn, whose recent preoccupation with canons provided common ground for a close friendship. He renewed his friendship with Beethoven and took lessons from Albrechtsberger and Salieri. Prince Lobkowitz had *L'ouragan* performed at his palace *c*1801. Shortly afterwards, Empress Marie Therese commissioned Reicha to write *Argine, regina di Granata*, in which she sang at a private performance at the Imperial Palace. In 1802 Reicha rejected an invitation to become teacher and Kapellmeister to Prince Louis Ferdinand, but during the next two years wrote *L'art de varier* for him. Unified by a large tonal plan, by the common derivation of the 57 variations, and by the occasional recurrence of slightly varied versions of the theme, the work is meant for performance despite its didactic origins.

In Reicha's output some individual works defy classification as purely musical, theoretical or didactic; this resulted, no doubt, from his Hamburg meditations. Like *L'art de varier* and Bach's didactic works, the 36 Fugues (1803, dedicated to Haydn) subsume pedagogical examples within artistic conceptions. No.13 offers modal principles in which cadences are possible on all but the 7th degree of the scale without further alteration; nos.20, 24 and 28 contribute 'combined metre' (e.g. 6/8 + 2/8), while no.30 displays polymetre. Beethoven owned a copy of these fugues; though he wrote of them that 'the fugue is no longer a fugue', changes in his style (e.g. Variations op.35) may derive from Reicha's ideas on variation and fugue. The exchange of ideas between them was probably reciprocal.

The 24 compositions in *Practische Beispiele* (1803) include demonstrations of forms and genres, bitonality and fiendishly difficult sight-reading exercises; the text shows that Reicha foresaw how the art of modulation would pervade the new epoch and it reveals his predilection for mathematics and the philosophy of Kant.

2. 1805–24. In late December 1805 Reicha, acting as interpreter, introduced Baillot and Cherubini (in Napoleon's entourage) to Haydn. Reicha's new cantata *Lenore* could not be performed in occupied Vienna because of Napoleon's censorship of the works of the librettist, Bürger. Reicha therefore went to Leipzig in 1806 to arrange for a performance, stopping en route at Prague to visit his mother for the first time since he had run away. He continued on his way to Leipzig after several days, never to see Prague again. The French army's four-month blockade of Leipzig effectively cancelled his performance. He finally returned to Vienna, but in 1808, when Austria once again prepared for war, he left for Paris, to be welcomed home by Louis Adam and Sébastien Erard.

While in Vienna, Reicha wrote about 50 pieces, mostly chamber works rich in melody and folk elements. Wide-ranging tonal schemes characterize the String Trio in F, while cadentially elided, thematically connected movements shape the String Quartet op.52. The Piano Sonata with violin and cello accompaniment op.47 (1804) approaches the true piano trio (see Newman, 1963); Reicha said of his Six Quartets for flute and strings op.98 (probably before 1815) that they were true quartets, not sonatas or solos for flute with string accompaniment. Haydn's interest in canons and Albrechtsberger's lifelong devotion to writing instrumental fugues apparently reinforced Reicha's predilection, so that many of his chamber works of this period include fugal movements.

Cagliostro (1810) lasted for eight performances, a fate similar to that of Reicha's only other produced operas, *Natalie* (1816) and *Sapho* (1822). The recitatives in *Natalie* and *Sapho* show the influence of Gluck and Spontini. Despite the failure of *Sapho*, Reicha considered it, along with the unproduced *Philoctète*, to be his masterpiece. Berlioz admired a moving duo and several choruses from *Sapho*; Bücken later noted the prominent role of the chorus, the effective orchestration, musical characterization and the use of reminiscence themes, and the well-integrated dances.

Although Reicha's operas failed, his fame increased. By 1817 many of his compositions had been published and were being performed, and the *Traité de mélodie* (1814) was being examined for the Académie by Méhul at the time of his death. Concerned primarily with melodic phraseology, this treatise examines melody apart from its relation to harmony. It distinguishes rhythm from metre, differentiates among cadential goals of unequal strength (using the analogues of 18th-century grammar and rhetoric) and supplies one of the first descriptions of sonata form that emphasizes thematic rather than tonal aspects. Comments on singers' embellishments and the use of national airs to impart local colour round out the treatise.

The Etudes op.97, published several years after the *Traité de mélodie*, are in the 'fugued' genre, and are

preceded by remarks aimed at young composers. With the exception of four of the 34 études, all are fugues, each preceded by a kind of prelude that illustrates in most cases a compositional technique or problem, a form, a texture etc. The prelude to no.3, for example, is a theme and variations in which variations 1, 3, 5 and 7 are in invertible counterpoint, their inversions thus producing variations 2, 4, 6 and 8.

Reicha had had few composition pupils before 1809, but by 1817 the Count de Sèze, recommending Reicha for appointment to the Conservatoire, could point out that eight of Reicha's students – probably his friends Baillot, Bouffil, Dauprat, Garaudé, Guillou, Habeneck, Rode and Vogt – already were professors there. These men, most of them accomplished musicians when they began studying with Reicha, spread his reputation for being precise, logical, efficient and strict. Berlioz recalled that Reicha gave reasons for the rules and that, unlike Cherubini, his respect for tradition was not fetishistic, and that he promptly recognized innovation.

Reicha was appointed professor of counterpoint and fugue at the Conservatoire in 1818. His *Cours de composition musicale, ou Traité ... d'harmonie pratique*, published about 1816–18, replaced Catel's treatise, which had been the official one since 1802. One of the first modern classroom harmony textbooks using examples written expressly for the text, the *Cours de composition* deals with harmony (tempering the proscription against 5ths and octaves), strict and free music, imitation and orchestration. It stresses the point that theory must be justified by practice and that the pupil must learn about contemporary usage, not solely about ancient principles that diametrically opposed what he heard outside the classroom; these 'ancient principles' caused many students to believe wrongly that serious study of composition was useless because free music permitted anything.

On 15 October 1818 Reicha married Virginie Enaust; they had two daughters, Antoinette Virginie (*b* 26 August 1819) and Mathilde Sophie (*b* 13 April 1824). Reicha's autobiography, *Notes sur Antoine Reicha*, perhaps originally dictated about 1824 to his pupil Henri Blanchard, survives in Antoinette Virginie's hand. In these *Notes* Reicha mentioned having had the idea of writing a 'double quartet' (for wind in E minor and strings in G major) which could be played either as two separate works or as an octet. Though mentioned in several lists of works, this understandably seductive idea (which anticipates Milhaud) may never have materialized.

The autobiography comes from a time when Rossini may have become his friend (1823); when Mendelssohn (who had studied with Moscheles, an owner of the 36 Fugues) sought him out (1825); and when Balzac, in *Les employés* (set in 1824), could have one of his characters, Colleville, first clarinettist at the Opéra-Comique, convince a friend to attend a soirée by promising him the excitement of a performance of a new wind quintet by Reicha. Reicha's wind quintets show his refined sense of instrumental colour and have served as models of their genre.

3. 1824–36. The most important of Reicha's treatises, the *Traité de haute composition musicale* (1824–6), was brought out as a sequel to the earlier published treatises and provoked much controversy. For Reicha, counterpoint was almost synonymous with harmony, but it connoted the elevated work of a savant, a profound harmonist, one who was both creator and scientist; 'haute composition', then, extols invertible counterpoint and practical music while belittling simple counterpoint and 'school music'. The text was the first to use the terms exposition and counter-exposition with regard to fugue; it also extended Reicha's earlier modal principles which in turn expanded the tonal frame of the fugue and promoted a periodically phrased fugue. Reicha's 'fugue phrasée' attempts to reconcile polyphonic continuity with homophonic periodicity. The attempt results from his view of history in which the 'incoherent' phraseology of early music progressively evolved to the clear and regular articulations of forms in their mature, Classical state. Fétis claimed that Reicha had unwittingly rediscovered the 17th-century *ricercare di fantasia* by not giving priority to real and tonal fugues on the tonic and dominant, thereby also weakening the tonality. The text presents a more thematically orientated scheme for sonata form than that found in the *Traité de mélodie*, and gives what may be the first clear description of sonata-rondo form. Reicha demonstrated methods for exposing and developing melodic and harmonic ideas and suggested that the study of mathematics helps regulate the feverish imagination. He proposed speaking choruses, quarter-tone notation for declamation and enrichment of the rhythmic language; he formulated a 200-piece orchestra; and included his setting of Kosegarten's *Die Harmonie der Sphären* for string orchestra, double chorus, and four pairs of timpani tuned to eight different pitches.

Baini severely criticized Reicha's approach to counterpoint. The controversy divided the students and faculty of the Conservatoire into adherents of Cherubini, Reicha or Fétis. Antoine Marmontel recalled the courtyard and corridor battles of looks between 'Italy, Bohemia, and the Netherlands' (see Emmanuel, pp.35, 48, 50). Though their criticisms had historical validity, Baini (sometimes labelled an ultra-conservative), Cherubini and Fétis represented the rearguard while Reicha, in this instance at least, seems to have represented the future. Excerpts of this treatise were published in English in 1830. Czerny, in 1832, edited a French–German version of the first three published treatises, entitling them *Vollständiges Lehrbuch*. Within several years English, Italian and Spanish translations of excerpts or complete treatises had appeared in Europe and America.

In 1826 Berlioz and Liszt began studying with Reicha. Berlioz's frequent fugal passages, his reharmonization of melodies on each recurrence, the asymmetric metre of the 'Dance of the Soothsayers' in *L'enfance du Christ*, his general rhythmic flexibility, his concept of the ideal orchestra, his use of the timpani and his emphasis on the wind instruments all reflect Reicha's influence, regardless of Berlioz's silence on that subject. Liszt suggested that his own idiosyncratic use of fugue and his attitudes toward formal and rhythmic experiments might derive from Reicha. Gounod and Onslow also numbered among Reicha's pupils.

Following his naturalization in 1829, Reicha was made a Chevalier of the Légion d'honneur in 1831. In December of that year Chopin, who had wanted to study with Reicha, heard unfavourable comments from some pupils and decided not to work with him. Reicha's health had been failing since about 1828, and a letter to Cherubini from Reicha in July 1832 states that he would welcome his pupils to his home for lessons.

In 1833 *Art du compositeur dramatique*, a manual devoted to the technique of writing opera, appeared. It also describes performing practice at a time when Rossini and Meyerbeer dominated the French musical stage. Typically French, and also typically Czech, is Reicha's attention to declamation. The volume of plates accompanying the manual contains many excerpts in vocal score from *Natalie, Sapho* and *Philoctète*. About 1835 Czerny produced a German translation of this treatise.

Stylistic generalizations about Reicha's late works are difficult to make because the dating of many is not certain; some late Parisian publications with high opus numbers contain works whose manuscripts originate in the Viennese period. But it seems clear that Reicha treated fugue more conservatively in works known to be later ones. The influence of Handel is apparent in large choral works such as *Der neue Psalm* and the *Te Deum*.

Reicha succeeded Boieldieu at the Académie in 1835, one year before his death. In June César Franck became a pupil of Reicha for ten months, a period of study that was to affect Franck's formal and tonal conceptions. Both the brevity of personal contact and the late date at which evidence of Reicha's influence surfaces in Franck's work call into question that influence. Franck's notebook (as well as Antoinette Virginie's) attests to Reicha's thoroughness and speed. Further argument for latent influence lies in the fact that Franck's subsequent teachers, Le Borne and Reicha's friend Benoist, continued to use Reicha's treatises in their instruction. Similarly, Ambroise Thomas's notebook indicates familiarity with Reicha's ideas and texts because he studied with Barbereau, a Reicha student.

Hence Reicha's students and the treatises themselves in their many translations broadcast Reicha's theories beyond Paris and beyond his own time. As early as 1815 Meyerbeer wrote to Gottfried Weber about the *Traité de mélodie*; by 1834 Meyerbeer owned at least two other treatises. Schumann noted that Reicha's 'often peculiar ideas about fugue' should not be ignored; Sechter listed Reicha among the most important theorists of his time; and Smetana knew Reicha's ideas through the Czerny edition used by his teacher Joseph Proksch. Until more is known of Reicha's music the judgment of time on his importance as a composer must tacitly be accepted; his role as a seminal figure, however, seems clear.

For illustrations from *Traité de mélodie*, *see* ANALYSIS, fig.7.

PETER ELIOT STONE

Reicha [Rejcha], **(Matěj) Josef** (*b* Chuděnice, nr Klatovy, 12 Feb 1752; *d* Bonn, 5 March 1795). Czech cellist, composer and conductor, uncle of ANTOINE REICHA. He went to Prague in 1761, became a choirboy there and took cello lessons with Franz Joseph Werner. In 1774 he became first cellist in the Kapelle of Prince (Fürst) Kraft Ernst von Oettingen-Wallerstein in Swabia. The violinist Anton Janitsch also played in this Kapelle, and Reicha went on several concert tours with him, travelling to Frankfurt, Gotha, Leipzig and Vienna among other places. Reicha and Janitsch were guests of Leopold Mozart when they went to Salzburg to give a concert in 1778. Reicha married in 1779; he had no children, but adopted his nephew Antoine and taught him the flute, violin and piano. In 1785 Elector Maximilian Franz of Cologne appointed Reicha director of the court orchestra in Bonn; the members included Beethoven as well as Nikolaus Simrock, who later published several first editions of Reicha's works. Haydn met the Reichas on a visit to Bonn in 1790. From 1789 Reicha was also director of the orchestra of the new national theatre in Bonn, but in 1791 he fell ill with gout and had to give up his musical activities. Leopold Mozart wrote to his son (on 29 January 1778) that Reicha's performance on the cello displayed remarkable facility, sureness of intonation, correct bowing, a fine tone and the highest degree of expression. Another contemporary described him as a 'very good leader of an orchestra'.

Reicha's works, all written in Wallerstein, were influenced by those of his colleagues there: Ignaz von Beecke, Johann Georg Feldmayr, Joseph Fiala, Anton Hutti, Antonio Rosetti and P.A. Wineberger. His virtuoso style makes great demands on the string players, and in writing for the cello he favours difficult passages in high registers. In the letter to his son of 29 January 1778, about one of Reicha's cello concertos, probably op.4 no.1, Leopold Mozart said that it was 'much in your own manner'. Michael Haydn also liked it. Reicha's wind partitas display the pleasant style of the wind music popular in his time. Schiedermair (1925) has cited examples to show that both the partitas and his symphonies influenced Beethoven.

WORKS

Thematic catalogue: C. Reinländer, ed.: *Josef Rejcha: Thematisch-systematisches Werkverzeichnis* (Puchheim, 1992) [incl. full list of modern edns]

Orch: 3 syms., op.5a: no.1 (Bonn, 1803), ed. in The Symphony 1720–1840, ser. C, vi (New York, 1981), nos.2–3 (Bonn, 1806/7); 2 concertantes: 1 for 2 vn/vn, vc, op.1/op.3 (Bonn, 1795), 1 for 2 hn, op.5 (Bonn, 1819/20); 14 concs.: 1 for vn/va/vc, op.2 no.1 (Bonn, 1799); 10 for vc, 1 (Paris, 1784), 2 as op.2 nos.2 and 1/3 (Bonn, 1799), 1 as op.4 no.1 (Bonn, 1803), 1 in *D-Mbs*, 1 in *CZ-Pnm*, 4 listed in Breitkopf catalogue, 1781–7; 2 for fl/ob, 1 in *D-Rtt*, 1 in *Au*, *Rtt*

Doubtful: conc., vc, str, *CZ-Pnm* [probably qnt by A. Reicha]; vc conc., mentioned by Bücken

Chbr: 12 partitas, 6–11 wind insts, *D-Au*; trio, 2 vn, vc, *Mbs*, 9 duos, vn, vc, 6 as op.1 (Bonn, 1795), 3 as op.4 (Bonn, 1802)

Lost: Adagio, written on the death of Empress Maria Theresa, mentioned in Prod'homme

CLAUS REINLÄNDER

Reichard, Heinrich Gottfried (*b* Schleiz, 22 June 1742; *d* Grimma, 22 May 1801). German composer. The son of Johann Georg Reichard, he began his studies in Leipzig in 1761 and graduated in 1768; he was appointed Kantor and *Quartus* in 1769, *Tertius* in 1782 and, in 1799, co-rector of the electoral school of St Augustin at Grimma. In addition to writing numerous literary works, Reichard composed church cantatas (37 survive, two in fragmentary form; some are of considerable proportions), nine Sanctus settings, a secular cantata, an aria and an instrumental symphony (all now in *D-Dl*). The cantatas, of which he wrote the text himself (in free, rhyming verse) show a wide variety of treatment; those composed for the Grimma school festival were celebrated in their time. His music was influenced by that of Johann Friedrich Doles, Kantor of the Thomasschule in Leipzig. Skilful orchestration and elements of the *empfindsamer Stil* on the one hand, and operatic virtuoso and ornamental vocal writing on the other, are the chief characteristics of his somewhat stiff but soundly constructed compositions.

WOLFRAM STEUDE

Reichard, Johann Georg (*b* Oels [now Oleśnica], Silesia, 1710; *d* Schleiz, 2 June 1782). German composer. He studied law at Leipzig where he matriculated on 5 May 1732, then moved to Schleiz where he held various juridical positions and in 1736 was appointed director of the court chapel of the counts of Reuss (in succession to Gottfried Siegmund Liebich). Seven church cantatas and occasional compositions, in part autographs, are in the music collection of the former electoral school at Grimma (now in *D-Dl*). These are almost the sole surviving testimonies of the early musical life of Schleiz to have survived World War II.

For bibliography *see* REICHARD, HEINRICH GOTTFRIED.

WOLFRAM STEUDE

Reichardt, Bernhard (*b* Wolfersdorf, nr Berga an der Elster, 11 March 1840; *d* Waldenburg, Saxony, 22 Feb 1907). German conductor, composer, teacher and organist. He studied music first with his father, the Kantor Ernst Theodor Reichardt, then in Weimar with Chélard, Montag, Sulze and J.G. Töpfer before becoming teacher, Kantor and organist in Werdau, Elsterberg, Adorf and Hohenstein. From 1872 he was senior lecturer at the Waldenburg seminary, where he was appointed royal music director in 1887. He was also a music historian (an expert on organs and bells), liturgist and hymnologist. He founded the Glauchau Diocesan Society for Church Music.

Reichardt's son Ossian (*b* Waldenburg, 31 Dec 1874; *d* Löbau, 18 Dec 1942) studied at the Waldenburg seminary, where he won early recognition as an organist. He taught in Glauchau and wrote and conducted his own orchestral pieces before studying at the Leipzig Conservatory with Bose, Homeyer, Jadassohn, Kretzschmar and Reinecke. His career as a music lecturer took him to Waldenburg, Grimma, Bischofswerda and finally to Löbau. He was also a proficient practical musician and critic.

WALTER HÜTTEL

Reichardt, Johann Friedrich (*b* Königsberg [now Kaliningrad], 25 Nov 1752; *d* Giebichenstein, nr Halle, 27 June 1814). German composer, political writer and writer on music.

1. Life. 2. Music. 3. Writings.

1. LIFE. His father Johann (*c*1720–80) belonged to the last generation of outstanding lutenists. Under his tutelage, Johann Friedrich rapidly became a violin prodigy and, at the same time, a good lutenist and singer to his own lute accompaniment; from about the age of ten he began to develop some reputation in nearby cities as a travelling violinist and keyboard player. His early teachers also included J.F. Hartknoch (a young musician from Riga then learning the publishing trade in Königsberg), a local musician named Krüger, the organist C.G. Richter, who introduced Reichardt to the music of C.P.E. and J.S. Bach, and the violinist F.A. Veichtner, a pupil of Franz Benda. But all these teachers somehow failed to give Reichardt a systematic grounding in composition, and he remained handicapped in some aspects of composition technique all his life.

Reichardt's formal education was similarly fragmented, though he made good use of his considerable intellectual gifts and was accepted into the nearby home of the Count and Countess von Keyserling almost as another son. At 15 he enrolled, with difficulty, at Königsberg University, where he led an undistinguished student life for three years. He later wrote that it was Kant's influence there which enabled him to avoid 'the customary degrading path followed by most artists of our time'.

Like other young artists in the 18th century, Reichardt began his career with years of travel. The first of his journeys began in spring 1771 with a performing tour of north German musical and literary centres; he met J.A.P. Schulz, Ramler, Friedrich Nicolai, Franz Benda, J.A. Hiller, J.G. Naumann, C.P.E. Bach, Lessing, Klopstock and Claudius. During this journey he spent two long periods in Berlin, where he attended performances of Graun and Hasse operas at the declining royal opera and oratorios at public concerts, studied briefly with Kirnberger and was deeply impressed by his first substantial hearing of Handel's music. In Leipzig he began, and quickly terminated, a programme of study at the university, attended Hiller's concerts and immersed himself in the composition of vocal music and Singspiele; in Dresden he studied briefly with Homilius, a former pupil of J.S. Bach. At a concert in Prague he had to play a borrowed violin, having pawned his own. He returned to Königsberg in September 1774 with a sheaf of youthful compositions, a monograph on German comic opera and a large collection of travel notes. The monograph was published in that year as *Über die deutsche comische Oper*; a selection from his travel notes, along with letters written at the same time, was published in two volumes in 1774 and 1776 under the title *Briefe eines aufmerksamen Reisenden die Musik betreffend*.

For about a year Reichardt held a post as a government official. In September 1775, having learnt that Frederick the Great was seeking a Kapellmeister for the royal Berlin opera to succeed J.F. Agricola, he wrote to Frederick, boldly recommending himself as a worthy perpetuator of Graun's style and enclosing the score of his opera *Le feste galanti*, composed in imitation of Graun and Hasse during his stays in Berlin. By the end of the year, his 23rd, the important post was his.

Never having intended to continue his youthful imitation of the old styles beyond *Le feste galanti*, Reichardt nonetheless found himself directing operas by Hasse and Graun, occasionally adding to them under the king's close supervision to suit aging, uncooperative singers; his own more progressive operatic creations were ignored. By way of compensation he devoted more of his energies to writing, and to the composition of dramatic works as much unlike the old Italian operas as possible. In 1777 he wrote a melodrama *Cephalus und Prokris* intended for the flourishing new German theatre (although the first performance was in Hamburg). He was able to leave Berlin for long periods, and spent time in Hamburg, Dessau, Weimar and Königsberg. He married Juliane Benda, Franz Benda's daughter, in 1776, and remarried soon after she died in 1783. During these years he avidly pursued friendships with such illustrious contemporaries as C.F. Nicolai, Hamann, Klopstock, Herder, Lavater, Moses Mendelssohn and Goethe. His home was a meeting-place for artists and intellectuals; as a boy Ludwig Tieck was a playmate of his stepson and was strongly influenced by the cultural atmosphere of the Reichardt home.

A journey on operatic business in 1783 led to a personal acquaintanceship with Lavater, and allowed Reichardt to meet Galuppi in Venice, and Gluck and the Emperor Joseph II in Vienna. In Italy he was strongly affected by the newly rediscovered works of Palestrina; in Vienna he listened devotedly to the aging Gluck's personal demonstrations of poetic vocal declamation. In 1783 he founded the Berlin Concert Spirituel in imitation of the Paris institution of that name, featuring his own music and that

1. Johann Friedrich Reichardt: engraving by Riedel, 1814, after a painting by Anton Graff, 1794

of such composers as Haydn and Handel. Another leave of absence in 1785 took him to England and France. In Paris he had begun to compose on commission two operas, *Tamerlan* and *Panthée*, when he had to return to Berlin in October 1785. Further leave was granted, and he returned to Paris in early 1786, finishing *Tamerlan* on the way; but contract difficulties delayed the production, and he soon realized that the fickle Parisians had lost interest in him during his absence. He gave vent to his disappointment and indignation in an indictment addressed 'to the musical public' which went far to earn him a reputation for arrogance.

With the death of Frederick the Great in 1786 the new king, Friedrich Wilhelm II, gave Reichardt full authority as Kapellmeister, raised his salary, hired new musicians, renovated the opera house and allowed Reichardt's music to be heard at last. Reichardt became more closely associated with members of the *Sturm und Drang* movement. He collaborated with Goethe on the Singspiel *Claudine von Villa Bella* (1789); it was the first German opera successfully presented to the Prussian court by its own Kapellmeister, and for Reichardt it represented his dual position as conductor of the Italian court opera and as composer of German Singspiel and lied.

But this era, the highpoint of his career, ended prematurely. During another trip to Italy in the summer of 1790 a substitute Kapellmeister was appointed, and resentment and jealousy broke out among the musicians. At the beginning of 1791, after a serious illness, he was granted a three-year leave of absence, with light duties and a full salary. He acquired a country estate in Giebichenstein, near Halle, and set out early in 1792 on a journey of enquiry through Revolutionary France; on his return he published, under the pseudonym 'J. Frei', a book sympathetic to the Revolution (*Vertraute Briefe über Frankreich*). In 1794, he was denounced to the king as a Republican, and Reichardt was finally dismissed in October of that year without pension. By 1796 he had also alienated both Schiller and Goethe by his criticism of the journal *Die Horen*, which Schiller edited.

From the end of 1794 until the accession of Friedrich Wilhelm III in 1797, Reichardt lived in Hamburg and Giebichenstein, active as a political journalist, and editing the journals *Frankreich* and *Deutschland*. In 1796 he was appointed director of the Halle salt mines, a position which gave him leisure to pursue his own interests. Giebichenstein became a 'hostel of Romanticism' for such artists and intellectuals as von Arnim, the brothers Grimm, Jean Paul, Schleiermacher, Novalis, Schlegel and J.H. Voss. It was a centre of intellectual Republicanism, of lieder and romantic poetry, folksong and folk art.

In 1806 Napoleon's troops occupied parts of Prussia, and also Halle and Giebichenstein. Reichardt and his family fled to north Germany, and returned in October 1807 to find the estate in Giebichenstein in ruins. Within a few months the now destitute Reichardt was brought to Kassel by Jérôme Buonaparte as *Directeur général des théâtres et de son orchestre*. He faced his work there with little enthusiasm, and by autumn 1808 he had once again set out on travels, supposedly to hire new singers for the opera; but he was held in disfavour by his new patron – who offered the post, in vain, to Beethoven at about this time – and never returned to Kassel. He spent several months in Vienna, where he visited the great names of his acquaintance and was entertained as a famous musician. At this time he wrote one of his most substantial travel diaries, the *Vertraute Briefe geschrieben auf einer Reise nach Wien*, an account of Vienna's music at the height of its most celebrated era. Returning to Giebichenstein in July 1809 with barely enough money to support his family, he had to depend on income from writing and composing until 1811, when he was given a small pension. He made several more journeys, to Berlin, Leipzig and Breslau, but his brilliant reputation had gone. He died largely forgotten.

2. Music. In at least two categories Reichardt's abandonment of the typically limited outlook of the German Kapellmeister proved beneficial: his songs departed from the rigid plainness of the 'Berlin School' odes towards the folk styles and dramatic gestures of early Romanticism; and his stage works, instead of centring on older styles of *opera seria*, favoured forward-looking Italian opera, French opera (the works of Gluck), Singspiel and other German theatrical forms.

The songs – he composed about 1500 of them, on texts by some 125 poets – cover a range of styles probably unsurpassed until Schubert, whom he influenced considerably. One extreme of this range is represented by the *Lieder für Kinder aus Campes Kinderbibliothek*, settings of edifying or pious verses by such poets as Gleim, Claudius, Hölty and Kleist. Uniformly strophic, seldom harmonized in more than two or three parts (with the voice doubling the upper part), and with melodies so folklike that some are still sung in German schools, this set shows Reichardt as one of the most sincere and effective composer-propagandists in the early history of modern music education. At the other extreme are songs known as 'declamations', which present free lyrical reflections or dramatic scenes: among his Goethe settings, for instance, *Prometheus* contains declamations against static harmonies, quick-changing dynamic indications

and sudden alterations of tempo; the *Monolog des Tasso* is through-composed like an operatic scena; the rondo-like form of *Johanna Sebus* is determined by alternate representations of a flood and a child's attempt to rescue its mother. (Goethe was to write of Reichardt as 'the first to make my lyrical works known to the general public through music, in a serious and steady manner'.) Reichardt's songs of all sorts show their composer's preference for the song 'as a correct, complete whole, its real value consisting in the unity of the song', and for a style of text-setting whose clarity is probably still unsurpassed, a deference to the spirit and structure of the poem, and an idealistic adherence to the dignified simplicity that he admired in folk art (fig.2).

Reichardt broke away from *opera seria* in 1785–6 with *Tamerlan* and *Panthée*, both composed in imitation of Gluck. *Andromeda* (1787) was a fortunate attempt to combine the best of the French (Gluckian) and Italian styles. Of *Brenno*, performed before the new king with great success in 1789, the composer wrote: 'more than any other [of my operas], it was conceived and worked out according to my own taste, with confidence in my own powers and with faith in a great new epoch of noble musical theatre'. Richly scored and staged, celebrating military heroism with bravura arias and an impressive triumphal procession, and demanding vocal virtuosity in the old bel canto style while prefiguring the pomposity of Spontini, *Brenno* was obviously designed to please the public in general, and the Prussian court in particular. With *Claudine von Villa Bella* (1789, libretto by Goethe) the court gave its approval in principle to opera in German, and Reichardt was confirmed in his belief that the future lay in German works. Goethe still held a high opinion of the work in 1829 but thought that the instrumentation ought to be reinforced. A more successful Reichardt-Goethe collaboration was the Singspiel *Jery und Bätely*, first performed in 1801. Goethe's text was shortened against his will by the composer, who allegedly 'set the naive Goethe verses to several unaltered Swiss and French folk melodies'. Reichardt's aptitude for Singspiel lay in his peculiar ability to evoke folk melody in simple yet not banal songs, though he was equally capable of larger effects (as in the orchestral 'storm scene' of *Die Geisterinsel*, his most successful Singspiel). His invention of the LIEDERSPIEL, a kind of mirror reflection of the vaudeville in which already existing poems are set to new music, proved to be a dead end, as did his experimentation with melodrama. The incidental music for plays fared better; the 'Hexenscenen' for *Macbeth*, very popular until well into the 19th century, sets the outburst of the witches against a large orchestra with rushing string figures and chromatic harmonies, foreshadowing the mood of *Der Freischütz*.

2. *Opening of Reichardt's setting of 'Erlkönig' from 'Göthe's lyrische Gedichte' (Berlin, 1794)*

Although Reichardt was deeply impressed by the newly discovered music of Palestrina and believed with the Cecilians of the 19th century that church music should return to the *a cappella* ideal, his own sacred works were composed mainly for large chorus and orchestra and presented in non-denominational public performances; at times they even adopt operatic style. He remained a relative stranger to fugue and other contrapuntal devices even in the most conservative of these works.

The virtuoso violinist and much admired keyboard player in Reichardt was overshadowed by the *littérateur*. In accordance with the north German Protestant cultural tradition founded on 'the word', he believed that his epoch would produce ever more valid combinations of music and literature, and that pure instrumental music would take second place. His instrumental works suffer in general from flippancy and haste, and in particular from his curiously doctrinaire adherence to the old notion – an inheritance from *Affektenlehre* – that contrasting moods do not belong in a single movement. The Classical principles of contrast, balance, development and restatement remained virtually foreign to him. His symphonies, chamber music and keyboard pieces are mainly retrospective; his concertos are not as progressive as those of C.P.E. Bach.

3. WRITINGS. Reichardt's importance as a writer and a cosmopolitan was probably equal to his importance as a composer. While much of his writing exhibits the worst along with the best characteristics of reportage – ephemeral value and immediacy, disorganization and freedom, vagueness and ardour – he must nevertheless be listed with Burney and Forkel as a pioneer of modern music journalism. His programme notes for the Berlin Concert Spirituel are among the first essays in audience instruction. The *Briefe eines aufmerksamen Reisenden* (intended, at Nicolai's suggestion, to counteract Burney's uncomplimentary remarks on German music in *The Present State of Music in Germany*) show his characteristic eschewal of scholarly pretension: 'Do not look for organization in these letters, but instead take pleasure in the stream from my overflowing heart'. The 'intimate letter' was an ideal vehicle for such communication, one he never abandoned, though some found it offensive: in the *Vertraute Briefe* of 1808–9 the mere pleasure-seeker and flatterer was so much in evidence that the work was called a 'scrawl' by Beethoven and held in contempt by von Arnim, Brentano and Goethe.

In his work as a writer for and editor of journals Reichardt rose to a higher level. The *Musikalisches*

Kunstmagazin, a mixture of aesthetic theory, musicography and newly printed music, is still regarded as an epoch-making work; it was unusual in being addressed to the connoisseur rather than the amateur, and was still being read with interest by Schumann and his generation. It shows Reichardt as one of the journalist creators of the Romantic folk ideal in the lied, and as a music critic devoted to a new objective of the Enlightenment and of the Revolution: the improvement of the public's taste.

WORKS

DRAMATIC

Hänschen und Gretchen, 1771–2 (Operette, 1, J.C. Bock, after M.-J. Sedaine: *Rose et Colas*), unperf., ov. *A-Wgm*, vs (Riga, 1773 [pubd with Amors Guckkasten])

Amors Guckkasten (La lanterne magique de l'amour), 1772 (Operette, 1, J.B. Michaelis), unperf., vs (Riga, 1773 [pubd with Hänschen und Gretchen])

EUGENE HELM/GÜNTER HARTUNG

Reichardt, Juliane. *See* BENDA FAMILY, (11).

Reichardt, Louise (*b* Berlin, 11 April 1779; *d* Hamburg, 17 Nov 1826). German composer and singing teacher. The daughter of J.F. Reichardt and his first wife, Juliane (née Benda), Louise Reichardt was virtually self-taught. She acquired an informal education from her father and the philosophers and poets who frequented her home in Giebichenstein (near Halle). Such literary figures of the German Romantic era as the Grimm brothers, Ludwig Tieck, Novalis (F.L. von Hardenberg), Joseph von Eichendorff, Clemens Brentano and Ludwig von Arnim were family friends and admired her singing and song settings. In 1809 she settled in Hamburg, where she supported herself as a singing teacher and composer. She also organized and directed a women's chorus which became the nucleus of the Hamburg Singverein. Reichardt was known for her untiring efforts in the production of Handel choral works; she translated the texts and prepared the choruses for performances conducted by her male colleagues. She composed more than 75 songs and choruses, both sacred and secular, which were popular throughout the 19th century and appear in many anthologies; a number have achieved the status of folksongs. Reichardt's

German songs have unusually graceful and lyrical vocal lines with deliberately unobtrusive piano accompaniments. Among her best – and best-known – songs are *Hoffnung* ('Wenn die Rosen blühen', F.G. Wetzel), *Unruhiger Schlaf* (Arnim), and *Nach Sevilla* (Brentano). Her Italian canzoni, on texts by Metastasio, are eloquent examples of the early 19th-century dramatic Italian song.

NANCY B. REICH

Reiche, Gottfried (*b* Weissenfels, 5 Feb 1667; *d* Leipzig, 6 Oct 1734). German trumpeter and composer. Nothing is known about his early training, except that he trained as a *Stadtpfeifer* with one Becker, but it should be noted that the Weissenfels court produced many good trumpeters, among them the Altenburgs, father and son, and J.S. Bach's second father-in-law, J.C. Wülcken. Reiche arrived in Leipzig in 1688, as journeyman to the local *Stadtpfeifer*. In 1700 he was named *Kunstgeiger*, in 1706 city piper, and in 1719 senior city piper. Between 1723, the date of J.S. Bach's arrival in Leipzig, and his own death in 1734, Reiche played all Bach's first trumpet parts, and presumably those for horn, cornett and perhaps soprano trombone as well. He was the composer of *Vier und zwantzig neue Quatricinia* (1696; modern edition 1927, rev. 3/1958; ed. H. Eichhorn, 4/forthcoming), as well as many five-part sonatas and other pieces now lost. On his death he left a horn and a slide trumpet.

His importance for the city of Leipzig was such that as early as 1694 the city council paid him a sum of money to prevent him from seeking employment elsewhere during a period of mourning. It was probably on his 60th birthday that the council engaged Elias Gottlob Haussmann, an artist who later painted a portrait of Bach, to do an oil portrait of Reiche; in that year an engraving was made from it by Johann Friedrich Rosbach (see illustration).

Gottfried Reiche: engraving by Johann Friedrich Rosbach after Elias Gottlob Haussmann, 1727

Although Reiche was certainly a great trumpeter, modern scholars have tended to overrate his historical importance, as regards both the coiled trumpet he displays in the portrait and his alleged influence on Bach. Even if it should be shown that Reiche favoured the coiled trumpet in performance, other trumpeters using the natural trumpet in its common long form, notably Heinisch in Vienna, greatly surpassed Reiche in the use of the high register; and Bach had written technically demanding, idiomatic trumpet parts before coming to Leipzig.

EDWARD H. TARR

Reichenau. Benedictine monastery on the island of the same name in Lake Constance. Founded in 724, it was a prominent centre of intellectual life until the 10th century. According to tradition, Charles Martel made the island over to the missionary Pirmin after defeating the Alemanni in 722. Charlemagne, another early patron, made the monastery independent of the diocese of Konstanz. In 815 Reichenau received the privilege of immunity and freedom to elect its own abbot. From 846 to 849 the connections of the monastery reached as far as St Denis,

Corvey and Fulda in the north and Rome in the south; but by the mid-9th century Reichenau was already beginning to take second place to St Gallen.

The Reichenau monastery school, modelled on that of Tours, was set up under Abbot Waldo (786–806) in accordance with the aims of Carolingian educational reform. Of interest to historians of medieval music theory are a number of liturgical, mathematical and musical writings produced by men associated with this school, including Abbot BERNO OF REICHENAU (1008–48) and his pupil HERMANNUS CONTRACTUS (1013–54), containing important information on the introduction and propagation of Roman plainchant, as well as methods of instruction and performance.

The school ensured the reputation and influence of the monastery, and so also did the library, which was one of the largest of the Carolingian era. The library's organization began under Abbot Petrus (782–6); in 821, 415 volumes were listed, including 58 sacramentaries, 12 lectionaries, 10 antiphoners, 50 psalters and 7 books with special Offices. This stock was considerably increased under Abbot Friedrich von Wartenburg (1427–53); but only about a quarter was still to hand after the secularization of the monastery in 1802–3. A few manuscripts dating from the 10th–15th centuries, some of which certainly belonged to Reichenau, survive in the Staatsbibliothek in Bamberg, the Freiburg archiepiscopal archives, the Universitätsbibliothek in Heidelberg and, above all, the Badische Landesbibliothek in Karlsruhe. Most are fragments of a few pages, although *D-BAs* Lit.5 (written in 1001), containing tropes, sequences, offertory verses and a tonary, is a notable exception. The identification of Reichenau manuscript fragments rests on the presence of festivals of saints whose relics were acquired by Reichenau in the 9th century (Pirmin, Genesius, Valens (Marcus), Januarius, Fortunata, Pelagia and Meinrad) and of the feasts of the Virgin, the feast of the Precious Blood and the feasts of the patron saints of the churches (Peter, Paul, Mark and George).

KARL-HEINZ SCHLAGER

Reichenberg. *See* LIBEREC.

Reichenberg, David (*b* Cedar Falls, IA, 13 July 1950; *d* London, 10 June 1987). American oboist. After studying with Jerry Sirucek at Indiana University, Reichenberg continued his studies at the Mozarteum in Salzburg. The contact he established with Nikolaus Harnoncourt, and Baroque oboe pioneers Jürg Schaeftlein and Paul Hailperin led to his involvement in the Concentus Musicus, Vienna. In 1977 he formed the Munich-based early music ensemble Florilegium Musicum; subsequently the English Concert invited him to play as first oboist in recordings of Bach's Brandenburg Concertos and Orchestral Suites. He also performed and recorded with the Taverner Players, London Baroque and London Classical Players. He taught at the GSM in London and, from 1986, the Vienna Music Academy. Before his tragically premature death from AIDS-related illnesses, Reichenberg brought a degree of professionalism to Baroque oboe playing which had rarely been encountered before in the 20th century.

GEOFFREY BURGESS

Reicher-Kindermann, Hedwig (*b* Munich, 15 July 1853; *d* Trieste, 2 June 1883). German dramatic soprano. A daughter of the baritone August Kindermann, she studied with her father, and in 1870 sang in the chorus of the Munich Hofoper. The following year she was engaged at Karlsruhe and in 1874 sang in Berlin as Pamina in *Die Zauberflöte* and Agathe in *Der Freischütz*. Returning to Munich, she appeared at the Gärtnerplatztheater as Mlle Lange in Lecocq's *La fille de Mme Angot*, in Offenbach's *Die Schwätzerin von Saragossa* (*Les bavards*) and as Orlofsky in the first Munich performance of *Die Fledermaus* (10 July 1875). She sang Grimgerde, one of the Valkyries, in the first complete *Ring* cycle at Bayreuth in 1876 and took over the part of Erda in *Das Rheingold* and *Siegfried* for the second cycle. In 1877 she sang at Hamburg, making her début there as Orpheus in Gluck's *Orfeo ed Eurydice*, and the following year appeared in Vienna.

Engaged by Angelo Neumann for his company at Leipzig from 1880, she sang Fricka in Neumann's production of the complete *Ring* at the Viktoria-Theater, Berlin (1881), Isolde in the first Leipzig performance of *Tristan und Isolde* (1882), Ortrud in *Lohengrin* and Eglantine in Weber's *Euryanthe*. When Neumann's company gave the first complete performances of the *Ring* in London, at Her Majesty's Theatre in May 1882, she sang Fricka and Waltraute in the first cycle, and Brünnhilde in the second and third. She accompanied Neumann's Wagner tour through Europe, singing Brünnhilde at the opening performances in Breslau during September. Forced to leave the company for a time because of illness, she rejoined it for the Italian part of the tour, which began in Venice in April 1883 with *Das Rheingold*, in which she sang Erda. After performances of the *Ring* in Bologna, Rome and Turin, she sang Leonore in *Fidelio* at Milan and Erda in *Das Rheingold* at Trieste and, though too ill to appear in *Die Walküre* or *Siegfried*, she appeared as Brünnhilde in *Götterdämmerung* on 21 May. 12 days later she died, aged only 29.

Her passionate intensity, dramatic abandon and glorious voice, so Neumann wrote in a letter to Wagner after a performance she had given of Isolde, combined to make her the outstanding operatic artist of her generation. Her untimely death, only a few months after the composer's own, occasioned the remark that 'Wagner has summoned his Valkyrie to Valhalla'.

ELIZABETH FORBES

Reichert, Georg (Nikolaus) (*b* Šupljaja, 1 Dec 1910; *d* Würzburg, 15 March 1966). German musicologist of Yugoslav birth. After attending German, Hungarian and Yugoslav schools he studied at the Vienna Academy of Music and Performing Arts and with Haas, Lach, Ficker, Orel and Wellesz at Vienna University, where he took the doctorate in 1935 with a dissertation on Viennese settings of the mass in the first half of the 18th century. In 1936 he became musicological assistant to Ernst Fritz Schmid and then Carl Leonhardt (1937) at Tübingen University, where he helped to establish the Swabian music archive and completed his *Habilitation* in 1940 with a study of the Swabian composer Erasmus Widmann. After war service he was a lecturer and assistant professor there (1946–60), and was then appointed to the newly established chair of musicology at the University of Würzburg (1960–66); he also served as acting professor at Tübingen (1951–2, 1958–9) and visiting professor at Munich (1954–6). His research was mainly concerned with sacred music (an interest which led him to consider the relationship between words and music in medieval music), tonality, dance and the music of Swabia.

□

Reichmann, Theodor (*b* Rostock, 15 March 1849; *d* Marbach, 22 May 1903). German baritone. He studied in Berlin, Prague and with Lamperti in Milan, making his début in 1869 at Magdeburg as Ottokar in *Der Freischütz*. After singing at Rotterdam, Strasbourg and Hamburg, he appeared for the first time in Munich in May 1874 in *Guillaume Tell*, and the following year began a permanent engagement there with Marschner's *Hans Heiling* (1875). He sang Amonasro in *Aida* (1877), the Wanderer in *Siegfried* (1878) and the title role of Nessler's *Der Rattenfänger von Hameln* (1881), all first Munich performances. He sang Amfortas at all 16 performances of *Parsifal* at Bayreuth in 1882, returning to the festival in that role regularly until 1902, as Hans Sachs in 1888–9 and as Wolfram in *Tannhäuser* in 1891. He made his London début in 1882, when he substituted for Emil Scaria as Wotan in the second and third complete *Ring* cycles presented by Angelo Neumann at Her Majesty's Theatre. He first sang at Covent Garden in 1884, appearing as Telramund in *Lohengrin*, as the Dutchman and as Hans Sachs and returned in 1892 to sing Wotan (*Die Walküre* and *Siegfried*) in the *Ring* cycles conducted by Mahler. From 1883 to 1889, and again from 1893 until his death, he was engaged at the Vienna Hofoper, where he sang Iago in the first Vienna performance of Verdi's *Otello* (1888). He made his New York début at the Metropolitan in 1889 as the Dutchman, and during his two seasons there he sang 16 parts, which included Don Giovanni, Count di Luna in *Il trovatore*, Renato in *Un ballo in maschera*, Solomon in *Die Königin von Saba*, Amonasro, Werner in *Der Trompeter von Säckingen*, Nélusko in *L'Africaine* and Escamillo in *Carmen*, as well as his Wagner roles. His final appearance in Munich was at the Prinzregententheater as Hans Sachs on 11 August 1902, when the resonance of his magnificently warm and even voice was said to have been as powerful as at the beginning of his career, 30 years earlier.

ELIZABETH FORBES

Reichsmusikkammer. German musical organization. Established in November 1933, the Reichsmusikkammer (Reich Music Chamber) was one of the seven sub-chambers of the Reichskulturkammer (Reich Chamber of Culture), founded and operated by Joseph Goebbels. Like the other sub-chambers for theatre, visual arts, film, literature, journalism and radio, the Reichsmusikkammer was the official organization of the Third Reich coordinating all facets of the music industry, with departments for composition, soloists, orchestras, entertainment music, music education, choral music, church music, concert agencies, copyright issues, music and instrument vendors, and financial and legal matters. It set wages for professional musicians, regulated professional certification,

introduced exams and training courses for private music instructors and provided a pension plan for artists. Membership was required of all music professionals, who had to furnish proof of 'Aryan' lineage to join; thus the Reichsmusikkammer served as an effective mechanism to exclude Jews from German musical life. Richard Strauss served as the first president of the Reichsmusikkammer but was compelled to resign with the discovery of his defiance to the regime in insisting on working with the Jewish librettist Stefan Zweig. The first vice-president, the conductor Wilhelm Furtwängler, stepped down following his controversial defence of Hindemith. Strauss was succeeded by the conductor and musicologist Peter Raabe, and Furtwängler was succeeded by the composer Paul Graener.

PAMELA M. POTTER

Reid, John (*b* Straloch, Perthshire, 13 Feb 1721; *d* London, 6 Feb 1807). Scottish composer, flautist and musical benefactor. He studied law at Edinburgh University and in 1745 joined the British army as a lieutenant; he was active in Scotland in the Jacobite Rebellion (1745–6), in Flanders (1747–8) and in North America (1756–67). In 1770 he retired from the army, intending to settle in New York State, but this plan was upset by the War of Independence; he returned to the army in 1780 and was promoted to the rank of general in his old age.

Reid's flute-playing was renowned in Edinburgh and London salons. He wrote 12 flute sonatas, the melodic invention and security of construction of which are remarkable for a part-time composer. Some are English in style (e.g. no.3 of the 1762 set, which ends with a fast 3/4 air similar to some of Purcell's theatre songs), others Scottish (e.g. no.2 of the same set, the slow movement of which has gapped-scale melodies and Scotch snaps, and which ends with a 6/8 jig). His use of different regional styles was probably learnt from James Oswald, who, as well as being a prominent composer, was Reid's publisher. Reid's marches, dedicated to various army regiments, are vividly coloured by Scottish idioms. The most famous is the *March for the 42nd or Old Highland Regiment*, also known as *In the Garb of Old Gaul* (from its words, by Sir Henry Erskine of Alva).

A splendid painting of Reid was made in about 1803 (reproduced in Purser). His most lasting legacy, however, has been his endowment of the chair of music at Edinburgh University. This came into effect in 1839 after the death of Reid's daughter, and forms the basis of the university's present Faculty of Music.

DAVID JOHNSON

Reid Orchestra. Orchestra founded in EDINBURGH in 1917.

Reigenlied (Ger.). Medieval round-dance song. It played an important role in the texts of Neidhart von Reuental's summer songs and was also one of the structural constituents of songs by, among others, Gottfried von Neifen and Ulrich von Lichtenstein (known as *tanzwîsen*: 'dance-tunes') in the 13th century.

The Reigenlied is not a form, in the conventional sense of that word, but rather a conceptual mould for performance – a model for oral realization. For this reason it survives only very rarely in direct musical sources. However, the choice of this manner of realization by such authors as der Harder and Michel Beheim for their Meisterlieder makes it possible to establish its characteristics. Musically it is characterized by ternary rhythm, the use of repeated notes and an unusual amount of melodic phrase-repetition. Poetically, its stanzas are marked by the cumulative effect of a single monosyllabic rhyming sound, and by a preference for lines containing four stresses. The result is a uniformity which corresponds appropriately with the regular movement of the round-dance.

How this conceptual mould for performance related to existing practice in the singing of songs remains an open question in view of the scarcity of primary source-material. The cries of 'He' or 'Hei' which occur in *Ich spring an disem ringe* (Lochamer Liederbuch, no.42), for example, and also stamping and clapping, belonged to the actual presentation of a Reigenlied. They reflect its basic function as a means of expressing *joie de vivre* in springtime.

The use of *reien* (*Reigen*) as a model in performance was a test of versatility for authors of Meisterlieder. In a number of songs it clearly relates to the content of the poem. These include songs whose texts celebrate joy at the Redemption, at the Virgin, or even at mortal woman. Particularly instructive is an anonymous Meisterlied *Die dryzehen reyen* in the Colmar Liederhandschrift (Runge, no.57), in which God's plan for salvation is cast as an initial *reien* which is then followed by a series of *reien* from the fall of Lucifer through the Redemption to the Last Judgment. The characteristics listed above are particularly clear in this example.

CHRISTOPH PETZSCH

Reihe (Ger.). *See* SERIES.

Reihungsform (Ger.). A form that relies on proportion and symmetry. *See* ANALYSIS, §I, 3.

Reil. Dutch firm of organ builders. The firm, based in Heerde, was founded by the German-born Johann Reil (*b* Munich, 6 April 1907; *d* Zwolle, 5 May 1960). Inspired by the *Orgelbewegung* Johann built mainly mechanical organs and undertook the restoration of several old instruments. Subsequently the firm was taken over by Johann's sons, Johann (Han) Ludwig Reil (*b* Heerde, 21 April 1939) and Wicher Albertus (Albert) Reil (*b* Heerde, 16 July 1942).

The celebrations held in Groningen in 1969 on the 250th anniversary of the death of Arp Schnitger caused Han and Albert to rethink entirely their firm's approach to organ building. They resolved to build organs in accordance with historical practice, and set about learning how to do so by making copies of three organs: the 1701 Schnitger organ of Uithuizen (1973, Princess Juliana Church, Scheveningen); the 1734 Bielfeldt organ of Osterholz-Scharmbeck (1979, Tokyo College of Music); and, most importantly, the 1764 Steevens/Hinsch organ of Tzum (1981, Dutch Reform church, Ermelo; an independent pedal was added to the copy, however).

In the light of this experience the firm has undertaken numerous restorations and built many new organs in disparate locations including Canada, Japan, Austria, Germany and Norway. Their most important restorations include the 1634 Butz organ of the Premonstratensian collegiate church at Schlägl (Austria; 1983), the 1643/1814 Bader/Timpe organ of the St Walburgskerk, Zutphen (1996), as well as the Schnitger organ in the Aa-kerk of Groningen (to be completed around 2001). Beyond their seminal contribution to the revival of historically-informed building methods, this firm has also made a significant contribution to the revival of domestic, school and small church organs. In 1995 they absorbed the ailing Leeflang (Keizer) firm.

ADRI DE GROOT

Reilich, Gabriel (*b* St Georgen [now Sângeorzu-Nou], Bistriţa Năsăud, *c*1640; *d* Hermannstadt [now Sibiu], 12 Nov 1677). Transylvanian composer and organist of Saxon descent. He studied the organ with various Transylvanian teachers at St Georgen and Bistriţa and was organist of Protestant churches at St Georgen (1664–5), Bistriţa (1665) and Hermannstadt (1665–7). He continued to live at Hermannstadt, where he was active as a composer. His fame was assured by the *Geistlich-musicalischer Blum- und Rosenwald*, which appeared in numerous editions. It is in effect a practical demonstration of the art of composition; in the preface Reilich set out his views about the role of the composer in musical life and insisted on the necessity for rigorous technical training. He was primarily a composer of sacred vocal concertos, which are coloured by melodic elements from Transylvanian folk music. Yet they are firmly grounded in more universal Baroque practices and illustrate the distinct stylistic unity of 17th-century Transylvanian church music.

VIOREL COSMA

Reilly, Edward R(andolph) (*b* Newport News, VA, 10 Sept 1929). American musicologist. He was educated at the University of Michigan, where he studied with Louise Cuyler and Hans David; he took the BM in 1949, the MM in 1952 and the PhD in musicology in 1958. He taught at Converse College from 1957 to 1962. During summer 1962 he was visiting professor at San Francisco State College, and in autumn that year he joined the faculty of the University of Georgia, where he remained until 1972. While working at Georgia he organized and prepared an inventory of the papers of Guido Adler. For the academic year 1970–71 he was a visiting professor at Vassar College; he was appointed professor there in 1972 and has been responsible for the reorganization and cataloguing of the collection of historical instruments at the college.

Reilly's scholarly interests range from 18th-century theory and performing practice to such 19th- and 20th-century figures as Musorgsky, Mahler and Adler. His principal contributions have been the first complete English translation of Quantz's *Versuch* and a companion volume in which he investigates Quantz as a composer, traces the later history of the treatise and considers several of its more neglected or misinterpreted areas.

PAULA MORGAN

Reilly, Tommy [Thomas] **(Rundle)** (*b* Guelph, ON, 21 Aug 1919). British harmonica player of Canadian birth. He first studied the violin but soon became interested in the harmonica. In 1935 he settled in England and the next year toured both there and abroad. Among the finest harmonica players in the world, he played with many of the leading European orchestras and encouraged composers to write for the instrument: Michael Spivakovsky's Harmonica Concerto (1951) was the first such concerto to be broadcast in England; Reilly also gave the première of Robert Farnon's Prelude and Dance for harmonica and orchestra in Oslo (1966). Other composers to have written works for him include Seiber (Old Scottish Airs for harmonica, strings and harp), Richard Rodney Bennett (Suite for harmonica and piano) and James Moody. In 1967 the world's first silver concert harmonica was made in London to a specification by Reilly. An eminent teacher, he has written books on harmonica playing and has composed short harmonica pieces, incidental music for radio and television and film scores.

IVOR BEYNON/R

Reimann, Aribert (*b* Berlin, 4 March 1936). German composer and pianist. He attended the Berlin Hochschule für Musik, where his father was head of church music and his mother a teacher of singing, studying composition with Blacher, counterpoint with Pepping and the piano with Otto Rausch. In the late 1950s he began to establish a reputation as a distinguished Lieder accompanist, appearing with soloists such as Dietrich Fischer-Dieskau, Ernst Haefliger, Elisabeth Grümmer and Barry McDaniel. He has also served as professor of composition at the Hochschule der Künste, Berlin. His honours include membership in the Academy of the Arts, Berlin (1971), the Bavarian Academy of Fine Arts, Munich (1976) and the Free Academy of the Arts, Hamburg (1965). He was awarded the Grand Cross of Merit of the Verdienstorden, Federal German Republic (1985), the composition prize of the Prince Pierre Foundation, Monaco (1986) and the Frankfurt music prize (1991). In 1993 he was appointed to the German order Pour le Mérite.

Reimann's stylistic language, influenced by the music of Webern, inclines towards complexity, strict organization and tight concentration. Seemingly flexible structures, first present in the song cycle *Engführung* (1967), also appear, created through the use of unmetred segments of material and figurative, ornamental formulations that produce the illusion of spontaneity. Drawn to the music dramas of Wagner and the theatrical works of Weill, Hindemith and Debussy from an early age, he developed his strongest affinity for Berg's stage works. His first opera, *Ein Traumspiel*, was completed in 1965. Later in *Lear* (1978) he contrasted powerful orchestral eruptions, made up of tone clusters, and sonorities and gestures derived from jazz, with 12-note writing for string quartet or delicate instrumental dialogue. In both his vocal and instrumental writing, highly complex lyricism and virtuosity are combined with subtly differentiated tone colours. *Nightpiece* (1992) for soprano and piano juxtaposes tone clusters, plucked notes of a metallic timbre and figurative passages in high registers.

WORKS
(*selective list*)

OPERAS

Ein Traumspiel (1, C. Henius, after A. Strindberg), 1965, Kiel, Städtische Bühnen, 20 June 1965
Melusine (4, C.H. Henneberg, after Y. Goll), 1970, Schwetzingen, Schwetzinger Festspiele, 29 April 1971
Lear (2 pts, Henneberg, after W. Shakespeare), 1978, Munich, National, 9 July 1978
Die Gespenstersonate (1, Reimann and U. Schendel, after Strindberg), 1983, Berlin, Hebbel, 25 Sept 1984
Troades (1, G. Albrecht and Reimann, after Euripides), 1985, Munich, Staatsoper, 7 July 1986
Das Schloss (2, Reimann, after M. Brod and F. Kafka), 1992, Berlin, Deutsche Oper, 2 Sept 1992

WOLFGANG BURDE

Reimann, Heinrich (*b* Rengersdorf, nr Glatz, Silesia [now Kłodzko, Poland], 14 March 1850; *d* Berlin, 24 May 1906). German organist, teacher, writer on music and composer. He was the son and pupil of Ignaz Reimann (1820–85), a teacher and church musician, and began conducting orchestras and choirs as a schoolboy. At his father's wish he studied classical philology in Breslau from 1870 to 1874, during which period he also studied the organ with Moritz Brosig and directed the choral society Leopoldina. He graduated with the dissertation *Quaestiones metricae* in 1875 and spent the next nine years as a teacher in Strehlen, Wohlau, Ratibor and Berlin, becoming headmaster of the Gleiwitz grammar school in 1885. Following an argument with the authorities he changed both his profession and his religion, and after living privately in Leipzig for a year he went again to Berlin in 1887.

During his first stay in Berlin, Reimann had become well known as a writer (under the pseudonym Erich Reinhardt) in the *Schlesische Zeitung* and other publications, and in Ratibor he had founded a choral society. He now began to expand his musical activities, working as an organist (of the Berlin PO and in solo recitals), composer, music critic of the *Allgemeine Musikzeitung* (until 1895), at the Berlin Königliche Bibliothek, where he was curator from 1893 until his death, and in 1893–4 as organ and theory teacher at the Klindworth-Scharwenka Conservatory. In 1895 he was appointed organist of the newly built Kaiser-Wilhelm-Gedächtnis-Kirche and from 1898 to 1902 he directed the church's choir. From 1896 he gave weekly organ concerts, and in 1898 he founded the Bachverein, whose performances he also conducted. For his many services to the musical life of Berlin, he was awarded the title of professor by the emperor in 1897.

Reimann's musical aesthetics, expanded in his critical and analytical writings (he also wrote programme notes for the Berlin PO's concerts), were strongly influenced by his studies of Bach, but he also supported the music of Wagner, Brahms and Reger. Although most of his writings were intended for the general public, his scholarly ability equipped him to edit a volume in the third edition of Ambros's music history and to produce some valuable work on Byzantine music. He edited a series of monographs on composers (Berühmte Musiker), for which he wrote the volumes on Bach and Brahms. With his best-known edition, a collection of international folksongs, he became the first compiler of such a volume to present the texts in their original language. In his organ teaching he passed on Brosig's approach to the playing of Bach, with its subjective emphasis on musical expression; his most famous pupil was Karl Straube. As a composer he shared with Reger a concentration on formal principles grounded in a thorough study of Bach's music.

HORST LEUCHTMANN

Reimann, Matthias. *See* REYMANN, MATTHIAS.

Reimar von Hagenouwe. *See* REINMAR VON HAGENAU.

Reims (Ger. Rheims). City in northern France. It was long France's ecclesiastical capital, and a city of prime political importance while royal power depended heavily on church support. It was less significant musically, probably because it was never a royal residence. Reims achieved episcopal status towards the end of the 3rd century under St Sixtus. It was an event of crucial importance in European history when St Remi (Remigius) baptized the Frankish King Clovis in Reims Cathedral on Christmas Day, 496. The political importance of the city increased steadily in the Carolingian era, and Pope Silvester II (999–1003, formerly

Coronation of Louis XIV in Reims Cathedral, 1654: engraving by Jean Le Pautre

Gerbert d'Aurillac, archbishop of Reims 991–5) published a bull recognizing the right of the archbishops of Reims to crown the kings of France. The sacred ampulla of balm used in this ceremony was kept at the monastery of St Remi and brought to the cathedral for the occasion. The Bibliothèque Municipale in Reims contains many manuscripts concerned with the ceremony. The details of the ceremonial for the coronation of Charles V in 1365 (*F-RSc*, 1489) may be compared with those of a formulary in a British Museum manuscript (Cotton Tiberius B VIII), which bears Charles's own signature (see Dewick). Although it was natural enough that Machaut's rise to fame should culminate in a canonicate at Reims, there is no evidence for the assertion that his *Messe de Nostre Dame* was composed for this coronation. It was probably written for performance each Saturday in honour of the Blessed Virgin Mary at the 'Rouelle' altar of Reims Cathedral (Leech-Wilkinson; Robertson). Another splendid coronation was that of Louis XIV in 1654 (see illustration).

The Carolingian cathedral, built through the zeal and munificence of Hincmar and dedicated in about 860, was destroyed in 1210. Notre Dame Cathedral was built between 1211 and 1311; the chapter took over the choir in 1241. At the time of Gerbert, Reims was the first of the great cosmopolitan medieval schools. Gerbert gave the cathedral an organ in 992, and there was an organ on the screen in the 13th century. In 1469 a larger two-manual instrument was built in the north transept by Etienne Enoque and restored after the fire of 1481 by Oudin Hêtre. Further rebuildings took place in 1570 (Denys Collet of Reims), 1619 (Nicolas Hocquet of Nancy), 1647

and 1765 (Péronard). Between 1845 and 1849 John Abbey built an instrument of 53 stops, with three manuals and pedals. Plans for further rebuilding by Mutin, a pupil of Cavaillé-Coll, were stopped by World War I, and it was not until 1938 that Gonzalez of Châtillon-sous-Bagneux, advised by the cathedral organist L. Lartilleux, Marcel Dupré and Norbert Dufourcq, constructed an 87-stop instrument, with the biggest Pedal organ in France (20 stops).

Although the office may have been established earlier, the first recorded *maître de chapelle* was Jean Petit, who was sent to Cambrai for training in 1465 and made master of the choristers on his return. The Clicquot family of organ builders and Pascal Collasse, Lully's assistant, came from Reims, and Nicolas de Grigny was organist of the cathedral from 1697 to his death in 1703. In 1749 Henri Hardouin, *maître* from that year, formed a music society which performed ballets, symphonies, motets and other works in the Grande Salle Basse of the Hôtel de Ville; in 1752 the society became the Académie de Musique de Reims, and Hardouin directed its activities for nearly 20 years. A Grand Théâtre was opened in 1777. For the coronation of Charles X in 1824 Cherubini composed a setting of the mass for three-part choir and orchestra, a motet, *Confirma hoc Deus*, and a *Marche religieuse* played during the communion. Louis Fanart, *maître de chapelle* of the cathedral, founded the Société Philharmonique in 1833. In 1873 a new Grand Théâtre was built; it was used for opera and operetta, sometimes with stars from the Paris Opéra. In 1902 the new church of Ste Clotilde was made a basilica by Pope Leo XIII, who granted to France a national jubilee and composed for it a Latin 'Ode to France', which inspired Théodore Dubois' oratorio *Le baptême de Clovis*. In 1913 an Ecole Municipale de Musique was founded, which became the Ecole Nationale de Musique de Reims in 1951. The Grand Théâtre, damaged during World War I, was rebuilt in 1931 and has an annual season of opera and operetta.

DAVID HILEY

Rein [Rain], **Conrad** [Cunz] (*b* ?Arnstadt, *c*1475; *d* before 3 Dec 1522). German composer. On 21 September 1502 he became rector of the Lateinschule at the Heilig-Geist-Spital, Nuremberg, where two of his pupils were Hans Sachs and Hektor Poemer, a patrician and trained musician who later became prior of St Lorenz. Rein was in charge of choral and polyphonic music at Heilig-Geist and occasionally helped with the music at the parish churches of St Sebaldus and St Lorenz. On August 1507 he was ordained priest and received a movable prebend, which he resigned in 1511; on 9 October 1513 he was made a life prebend. In 1515 he relinquished his posts. In 1519 he went to Copenhagen where he had obtained the post of bass singer in King Christian II's hofkapelle. He held this post until his death.

About 20 works are now considered to be by Rein, all of them sacred with Latin texts, in the Netherlandish-German tradition. They are transmitted mainly in sources from the Thuringia-Saxon and Nuremberg areas. Perhaps his most important work is the five-voice *Missa 'Accessit'*, whose movements are linked by the tenor cantus firmus and by a head-motif. Unusually, it has two settings of the Sanctus (the second with a Te Deum trope); the Agnus Dei has only four voices and it is possible that a five-voice version has been lost. The alternation of motet-like polyphony and chordal sections, use of number symbolism and theological-didactic 'troping' of the cantus firmus (a respond on Mary Magdalen's washing of Jesus's feet) are all indicative of Rein's engagement with both older traditions and new ideas, also notable in his motets. Ornithoparchus in his *Musicae activae micrologus* (1517/*R*) numbered Rein with Ockeghem, Obrecht, Josquin, La Rue, Isaac, Heinrich Finck and others as a composer whose works realized an 'ideal balance between *sensus* and *ratio*'.

FRANZ KRAUTWURST/CLYTUS GOTTWALD/R

Rein, Walter (*b* Stotternheim, nr Erfurt, 10 Dec 1893; *d* Berlin, 18 June 1955). German composer and teacher. He turned from teaching to composition studies in 1920 with Erwin Lendvai. He was subsequently a pupil of Wetz at Weimar (1922–3) and of von Baussnern at the Berlin Akademie für Kirchen- und Schulmusik (1923–4). While in Berlin Rein became associated with Jöde, and during the 1920s was increasingly involved with the youth movement in music, ultimately emerging as a leading composer of the group. Returning to Weimar in 1925 he assumed responsibilities as director and organizer of the Thüringen Musikantengilde. From 1930 he taught at the Pädagogische Akademien of Kassel, Frankfurt and Weilburg, and from 1935 at the Hochschule für Musik-Erziehung in Berlin. He left teaching in 1945 to devote himself exclusively to composition. Tribute was paid to his pedagogical influence after his death by the founding of Walter Rein choirs in Stotternheim and in Erlangen, where a Walter-Rein-Archiv was also established. A large part of Rein's compositional activity was devoted to folksong arrangements for chorus, many of which were published in Jöde's *Musikant* and in the *Lobeda-Chorbuch*. Even in works not directly dependent upon folksong, its influence can often be detected.

JOHN MORGAN

Reina, Sisto (*b* Saronno, nr Milan; *d* ?Modena, after 1664). Italian composer and organist. A Minorite monk, from 1648 until at least 1653 he was organist of the sanctuary of the Madonna dei Miracoli, Saronno. In 1656 he was at S Francesco, Milan, and in 1660 he was *maestro di cappella* of S Francesco, Piacenza. From 1662 he worked at Modena, at first both as organist of S Bartolomeo and as *maestro di cappella* of S Francesco, but from 1664 he retained only the first of these positions. His fairly extensive output of sacred music was no doubt intended for performance at these and the other churches at which he worked: five of his collections – of which op.2 is lost – appeared while he was employed at Saronno. This music is typical of that produced at the time for churches where only small forces were available, and shows that he was isolated from the influence of Assisi and Padua. The sonatas show that, unlike his contemporaries who were writing solo and trio sonatas in a lighter style, he preferred more solid contrapuntal textures and the weightier forces of four violins and continuo.

WORKS

Novelli fiori: ecclesiastici concertati nell'organo all'uso moderno ... messa, salmi, motetti, Magnificat et letanie, 8vv, op.1 (Milan, 1648)
Armonicae cantiones, 1–5vv, cum missa, Magnificat, litaniis BVM, 5vv, bc (org), op.3 (Milan, 1651) [also called Il secondo libro de concerti at the foot of p.3]
Marsyae et Apollinis de musices principatu certantibus triumphus quartus, 2–5vv, bc (org) [op.4] (Milan, 1653)
Armonia ecclesiastica, 2–5vv, bc, op.5 (Milan, 1653)
Rose de' concertati odori: germoglio VI [i.e. op.6] (Milan, 1656), inc.
Fiorita corona di melodia celeste, 1–4vv, insts, op.7 (Milan, 1660)
La pace de numeri, pubblicata con l'armonia di 5vv, bc, nel Vespro del Signore, nel Tantum ergo e nell'hinno delle grazie, vns, op.8 (Venice, 1662)

NONA PYRON

Reinach, Théodore (*b* St-Germain-en-Laye, 3 July 1860; *d* Paris, 30 Oct 1928). French historian, archaeologist and musicologist. He was educated in Paris and worked as editor-in-chief of the *Revue des études grecques* (1888–1907), director of the *Gazette des beaux-arts* and a professor of numismatics at the Collège de France. In 1928 he was elected president of the Société Française de Musicologie, and he was also a member of the Institut de France. His writings contain virtually all contemporary knowledge of Greek music, and his account of classical music theory and transcriptions in modern notation in *La musique grecque* (1926) have retained their value. In his surveys of Greek notation, modes and the rhythmic relations of Greek poetry and music he emphasized his belief in the moral value of music and its influence on the development of human character, and his view of Athens as a leading centre of art in ancient Greece. His publications include the librettos for Roussel's *La naissance de la lyre* (1922–4, after Sophocles), and Maurice Emmanuel's *Salamine* (1929, after Aeschylus's *Persae*).

□

Reina Codex (*F-Pn* n.a.fr.6771). *See* SOURCES, MS, §VIII, 2 and SOURCES OF KEYBOARD MUSIC TO 1660, §2(i).

Reinagle. English family of musicians of Austrian descent.

(1) Joseph Reinagle (i) (*b* nr Vienna; *d* after *c*1775). Trumpet player. He is said to have served in the Hungarian army. By the mid-18th century he had settled at

Portsmouth, where most of his children were born. Through the influence of the Earl of Kelly he was appointed trumpeter to the king in 1762, and he appears to have moved to Edinburgh about 1763. In 1774 his daughter was married there to the cellist Johann Schetky.

(2) Alexander Reinagle (*b* Portsmouth, bap. 23 April 1756; *d* Baltimore, 21 Sept 1809). Composer, pianist and teacher, son of (1) Joseph Reinagle (i). He was a pupil of his father and of Raynor Taylor, musical director of the Theatre Royal in Edinburgh where Reinagle made his first known public appearance on 9 April 1770, playing a harpsichord sonata. By 1778 he was teaching the harpsichord in Glasgow, and his interest in keyboard teaching is reflected in his first publications, two sets of 24 'short and easy' pieces. About 1782 he brought out *A Collection of ... Scots Tunes with Variations* for harpsichord. His six sonatas for piano or harpsichord with violin accompaniment (London, 1783), resemble the styles of Clementi and J.C. Bach while occasionally exhibiting surprising originality. Reinagle visited C.P.E. Bach in Hamburg (*c*1784), and a brief correspondence between the two ensued. He accompanied his brother (4) Hugh Reinagle to Portugal, arriving in Lisbon on 23 October 1784 (his memorandum of the journey is in *US-Wc*); on 8 January 1785 he appeared in a public concert and a week later performed for the royal family. After Hugh's death Alexander returned to England and became a member of the Royal Society of Musicians in London.

In late spring 1786 Reinagle arrived in New York, advertising himself as a teacher of the piano, harpsichord and violin; he gave a concert there on 20 July 1786. Two months later he was in Philadelphia, where on 21 September 1786 he took part in a concert given by the cellist Henri Capron. Reinagle settled there and revived the defunct City Concerts with a series of 12 evenings during the 1786–7 season. The programmes listed orchestral works by European composers of the time and works by Reinagle himself. He was in demand as a music teacher to Philadelphia's upper class (George Washington engaged him to teach his adopted daughter, Nelly Custis) and brought out in rapid succession four publications probably intended for use in teaching: a smaller edition of his *Scots Tunes* variations, two collections of song arrangements, and a collection of instrumental pieces arranged for keyboard. He gave many concerts, appearing not only in Philadelphia but also in New York (1788–9), Baltimore (1791) and Boston (1792).

From 1790 or 1791 Reinagle was a partner with the English actor Thomas Wignell (*d* 1803) and Wignell's successors in a theatrical company operating in Philadelphia and Baltimore. The New Company, as it was called, erected theatres in Philadelphia (the New Theatre in Chestnut Street, February 1793) and Baltimore (Holliday Street Theater, September 1794). The company's repertory was divided equally between spoken and musical works, the latter usually English light opera or ballet. In his 15 years with the company Reinagle composed or arranged music for hundreds of productions, the extent of his responsibility ranging from a single incidental song to a completely new score, or the orchestration of an existing score. Nearly all this music perished in the fire that destroyed the Philadelphia New Theatre on 2 April 1820. The largest surviving fragment of any of Reinagle's stage works is a collection of 14 songs from *The Volunteers*, printed in a piano reduction in 1795. Typical of ballad opera numbers, they are mostly strophic and written to a binary pattern framed by an instrumental introduction and coda.

Reinagle's most significant extant works are four piano sonatas written in Philadelphia about 1790, bearing traits of C.P.E. Bach's *empfindsamer Stil*. They have been called 'the finest surviving American instrumental productions of the eighteenth century' (Krohn, *DAB*), and are the first American works composed specifically for the piano. Reinagle's *Scots Tunes* variations were the first solely secular musical publication in the USA, and he was the first in America to replace the harpsichord with the piano in the orchestra pit.

WORKS

printed works published in Philadelphia unless otherwise stated

STAGE

first performed at Philadelphia, New Theatre; music mostly lost, unless otherwise stated

pan – *pantomime*

The Sailor's Landlady, or Jack in Distress (pan), 3 March 1794
Slaves in Algiers, or a Struggle for Freedom (incid music, 3, S.H. Rowson), 30 June 1794
The Volunteers (comic op, 2, Rowson), 21 Jan 1795, vs (1795)
Harlequin's Invasion (speaking pan, 3, D. Garrick), 12 June 1795, ov.; str. parts in *US-PHu*
The Warrior's Welcome Home (pan, W. Francis), 10 Feb 1796
The Witches of the Rock, or Harlequin Everywhere (pan, C. Milbourne and W. Francis), 26 Feb 1796
The Recruit, or Domestic Folly (musical interlude, J.D. Turnbull), Charleston, 12 March 1796
The Shamrock, or St. Patrick's Day in the Morning (pan, W. Francis), 18 March 1796
The Temple of Liberty, or The Warrior's Welcome Home (ballet), 28 March 1796
Pierre de Provence and La Belle Maguelone, or The Rival Knights (ballet, 3), 2 May 1796
Columbus, or The Discovery of America (incid music, 5 in 3, T. Morton), collab. J. Hewitt and P.A. van Hagen, 30 Jan 1797, selection (1797)
The Savoyard, or The Repentent Seducer (musical farce, 2), 12 July 1797
The Gentle Shepherd (pan), 16 April 1798
The Constellation, or A Wreath for American Tars (dramatic sketch), 20 March 1799, selection arr. pf in Mr Francis's Ballroom Assistant (*c*1802)
The Arabs of the Desert, or Harlequin's Flight from Egypt (pan), 13 April 1799
The Secret, or Partnership Dissolved (incid music, 5, E. Morris), 30 Dec 1799
Peru Avenged, or The Death of Pizarro (incid music, 5, A. Murphy, after A. von Kotzebue), collab V. Pelissier, 2 March 1801
Edwy and Elgiva (incid music, 5, C.J. Ingersoll jr), 2 April 1801
Harlequin Restored, or The Gift of the Seasons (pan, from Harlequin's Almanac), 26 Dec 1803
The Sailor's Daughter (incid music, 5, R. Cumberland), 14 Nov 1804
Mary, Queen of Scots (incid music, 5, J. St John), 15 Jan 1806
The Black Castle, or the Spectre of the Forest (melodrama, 2, M.G. Lewis after C.F. Barrett or J.H. Amherst), collab. J. Hewitt, 20 March 1807

Contribs to: Selima and Azor, or The Power of Enchantment, 1787; Macbeth, 1790; Harlequin Shipwreck'd, or The Grateful Lion, 1791; Don Juan, or The Libertine Destroyed, 1792; Robin Hood, or Sherwood Forest, 1793; The Grateful Lion, or Harlequin Shipwreck'd, 1793; St Patrick's Day, or The Scheming Lieutenant, 1794; La forêt noire, or The Robber's Cave, 1794; The Spanish Barber, or The Fruitless Precaution, 1794; The Purse, or The Benevolent Tar, 1795; The Mountaineers, or Love and Madness, 1795; Auld Robin Gray, 1795; The Sicilian Romance, or The Apparition of the Cliffs, 1795; The Lucky Escape, or The Ploughman Turned Sailor, 1796; The Italian Monk, 1798; Castle Spectre, or The Secrets of Conway Castle, 1798; The Stranger, or Misanthropy and Repentence, 1798; The Double Disguise, or The Irish Chambermaid, 1800; Harlequin Freemason, 1800; The Naval Pillar, or The American Sailor's Garland, 1800; Pizarro, or

The Spaniards in Peru, 1800; Joanna of Montfaucon, 1800; Paul and Virginia, 1801; (Boston) The Theatrical Candidates, or The Election, 1801; Il Bondocani, or The Caliph Robber, 1801; The Review, or The Wags of Windsor, 1802; Raymond and Agnes, or The Bleeding Nun, 1802; The Veteran Tar, or American Tars on an English Shore, 1802; The Sixty-Third Letter, 1803; The Voice of Nature, 1803; (New York) A Tale of Mystery, or The Dumb Man of Arpenay, 1803; Harlequin's Almanac, or The Four Seasons, 1803; La Pérouse, or The Desolate Island, 1803; A House to Be Sold, 1803; A Tale of Terror, or A Tale of Pleasure, 1803; The Hero of the North, or Gustavus Vasa, 1804; The Wife of Two Husbands, 1804; Love Laughs at Locksmiths, or The Guardian Outwitted, 1804; The Paragraph, or A Recipe for the Nervous, 1804; Valentine and Orson, 1805; The Lady of the Rock, 1805; Too Many Cooks, 1805; We Fly by Night, or Long Stories, 1806; The Travellers, or Music's Fascination, 1807

OTHER VOCAL

Choral: Chorus Sung before Gen. Washington, 3vv, pf/hpd (1789); Monody on the Death of Washington, 4 solo vv, chorus, ?orch, Philadelphia, 23 Dec 1799, collab. R. Taylor, lost; Masonic Ode, 1803, lost; orat (J. Milton) inc., lost

Songs (1v, pf): A Collection of [22] Favorite Songs, 2 vols. (?1789), partly arr.; A Collection of [32] Favorite Songs, 2 vols (?1789), partly arr.; patriotic, theatrical etc songs (some pubd, some lost), incl. America, Commerce and Freedom, The Bleeding Nun, Claudine, Dear Anna, First Baltimore Hussars, Hunting Song, I Have a Silent Sorrow Here, Notes of the Linnet, Rosa, The Tars of Columbia (Columbia Triumphant; Perry's Victory), Winter; arr. songs by S. Arnold, M. Kelly, C. Dibdin, W. Shield, N. Piccinni, W. Reeve, others, some pubd, some lost

INSTRUMENTAL

Orch (all lost): Pf Conc., 1794; Occasional Ov., 1794; others

Chbr (pf/hpd unless otherwise stated): 24 Short and Easy Pieces, op.1 (London, *c*1780, 2/*c*1815, repr. *c*1823); A Second Set of 24 Short and Easy Lessons, op.2 (London, *c*1781); A Collection of . . . Scots Tunes with Variations (London, *c*1782; abridged 2/1787 as A Selection of the Most Favorite Scots Tunes with Variations); 6 sonatas, pf/hpd, vn (London, 1783); 12 Favorite Pieces (?1789), partly arr.; 4 sonatas, pf, *c*1790, *US-Wc*, ed. R. Hopkins, *Alexander Reinagle: the Philadelphia Sonatas*, *RRAM*, v (Madison, WI, 1978); La Chasse (1794); Preludes, in Three Classes (1794); Mrs Madison's Minuet (*c*1796); Mr Francis's Ballroom Assistant (*c*1802), partly arr.; marches (mostly pubd), incl. Faederal March, Jefferson's March, Madison's March; others, mostly pubd, some lost

(3) **Hugh Reinagle** (*b* Portsmouth, 1759; *d* Lisbon, 19 March 1785). Cellist, son of (1) Joseph Reinagle (i). He was a pupil of his brother-in-law, Johann Schetky, and became a proficient player. After making his London début in 1779, he appeared at increasingly important concerts up until 1784, when he was sent to Portugal for reasons of health, accompanied by his brother (2) Alexander Reinagle. Some of his cello music, often misattributed to (4) Joseph Reinagle (ii), was published posthumously.

(4) **Joseph Reinagle (ii)** (*b* Portsmouth, 1762; *d* Oxford, 12 Nov 1825). String player and composer, son of (1) Joseph Reinagle (i). He was at first intended for the navy; after the family moved to Edinburgh he was apprenticed to a jeweller there, but decided to concentrate on music. He learnt the horn and trumpet from his father and the cello from his brother-in-law, Johann Schetky, becoming a noted player at Edinburgh concerts. He abandoned the cello because he considered his brother (3) Hugh Reinagle to be a more skilful player, though he resumed after Hugh's death. He became a violin and viola player and the leader of the orchestra at St Cecilia's Hall, Edinburgh. Some time before 1784 he went to London, where he played at the Handel Commemoration that year; he then went to Dublin, playing at the concerts there under the patronage of the Earl of Westmorland. He stated in a letter (*GB-Ge*) that he stayed in Ireland for two years; in 1787 he was back in London as a cellist and subsequently played at Salomon's Haydn concerts. He noted that he enjoyed Haydn's intimate acquaintance and 'received many serviceable hints on composition from that great master'. In the 1790s he moved to Oxford where, according to Crotch, 'J[ohn] Mahon was clarinet of the 1st band & Reinagle one of the horns . . . Thus we kept away Bonaparte'. On the advice of Lord Abingdon and other musical amateurs he decided to remain in Oxford.

WORKS

printed works published in London unless otherwise stated

6 Easy Duetts, 2 vc (1795), ed. O. Huttenbach: Moeck's Kammermusik, xlviii-xlix (Celle, *c*1955); 3 Duetts, vn, vc, op.3 (1799); New Grand Medley Overture, pf (1799); March [for the Oxford University Volunteers] (*c*1800); A Concise Introduction to the Art of Playing the Violoncello, [incl.] 30 Progressive Lessons (*c*1800); Sonata, pf, vn acc. (*c*1802); 3 solos, vc, bc (*c*1805); 12 Progressive Duetts, 2 vc, op.2 (*c*1805); 3 Quartetts, 2 vn, va, vc (*c*1805); Duetto, vn, vc (?1806); Duett, vn, vc (*c*1808); Dumfries Races, other tunes, in *Gow's Fifth Collection of Strathspey Reels* (Dunkeld, 1809); A Second Sett of 3 Duetts, vn, vc (*c*1821); vn concs., vc concs., lost

(5) **Alexander Robert Reinagle** (*b* Brighton, 21 Aug 1799; *d* Kidlington, nr Oxford, 6 April 1877). Organist, son of (4) Joseph Reinagle (ii). He studied music with his father at Oxford, where he became a teacher, organist and well-known figure in musical circles. He was organist of the church of St Peter in the East from 1822 to 1853. Under the early influence of the Oxford Movement the church was restored in 1836, the musical conduct of the services substantially reformed, and Reinagle was encouraged to cooperate with the Rev. W.K. Hamilton in compiling and arranging collections of psalms and hymns.

Reinagle composed organ works and other church music, including the enduring hymn tune 'St Peter'. He wrote at least one piano sonata (London, 1825). He also wrote and compiled many teaching manuals for the violin and cello.

(6) **Caroline Reinagle** [née Orger] (*b* London, 1818; *d* Tiverton, Devon, 11 March 1892). Pianist and composer, wife of (5) Alexander Robert Reinagle. Daughter of the actor and writer Mary Ann Orger (1788–1849), Reinagle first came to public attention during the 1840s, when she performed her own Piano Concerto at Hanover Square Rooms (1843) and several of her chamber works were performed in London, often at concerts given by the Society of British Musicians. None of these works, including a piano trio, two piano quartets and a cello sonata, appears to have survived. In 1846 she married the organist and teacher Alexander Robert Reinagle and settled in Oxford, where she worked as a piano teacher and continued to compose, publishing piano pieces and songs as well as a pedagogical essay, *A Few Words on Pianoforte Playing* (1855), which was serialized in the *Musical Times* in 1862.

The only work published under her maiden name is a lively and dramatic Tarantella for the pianoforte. Her most substantial surviving work is the Piano Sonata in A major (?1850), a difficult and well-structured work in four movements. Her published songs, including three settings of Adelaide Procter and four of Robert Browning, are fluent and inventive with frequently intricate piano accompaniments. *Brown-StrattonBMB; FullerPG*

Reinberger, Jiří (*b* Brno, 14 April 1914; *d* Prague, 28 May 1977). Czech organist and composer. At the Brno Conservatory he studied the organ with Tregler (graduating in 1932) and composition with Petrželka (graduating in 1938). He continued his composition studies with Novák in Prague (1938–40), and had organ lessons with Wiedermann, and in Leipzig with Ramin and Straube who acquainted him with the traditional style of Bach interpretation. He taught at the Brno Conservatory (1945), then at the Prague Conservatory, and from 1951 at the Academy of Musical Arts in Prague. From 1932 he gave concerts and from 1945 toured in most European countries. As well as Bach, whose works he recorded, he promoted early and contemporary Czech music. He was a member of the juries at international organ competitions, and gave masterclasses in Prague and Zürich. He was also co-designer of organs for Moscow, Leningrad (St Petersburg), Cairo, Beirut and Toronto. Reinberger's playing combined strict German registration and articulation with Czech vigour of expression, intellectual reasoning and an equal measure of feeling and fantasy. He prepared for publication the anthology of organ works *Čeští klasikové* ('Czech Classicists') (MAB, xii, 1953) and the collection *Musica bohemica per organo* (Prague, 1954–7). Reinberger also made a series of recordings using historical organs in Bohemia, Moravia and Slovakia. In 1964 he was named Artist of Merit. The most important of his compositions are three organ concertos (1940, 1956, 1960), two symphonies (1938, 1958) and a cello concerto (1962).

ALENA NĚMCOVÁ

Reincken [Reinken, Reinkinck, Reincke, Reinicke, Reinike], **Johann Adam** [Jan Adams, Jean Adam] (*b* Deventer, bap. ?10 Dec 1643; *d* Hamburg, 24 Nov 1722). Dutch composer and organist of German descent.

1. Life. On the title-page of his *Hortus musicus* Reincken gave his birthplace as the Dutch Hanseatic city of Deventer, but no entry in the Deventer church registers has been found to support the date, 27 April 1623, given by Mattheson (1722) for Reincken's birth. The year 1623 does not accord well with other events in Reincken's life, for example his beginning his musical training only in 1650 at the age of 27. A certain 'Jan Reinse' was baptized in Deventer on 10 December 1643. This date, too, is problematic, but it is at least consistent with the baptismal records of Adam Reincken's other children in 1639, 1640 and 1641. Reincken's real first name was Jan; the later addition of 'Adams' simply indicates, as was traditional in the Netherlands, that he was the son of Adam. Through German usage the double first name came about, and this persisted in later generations. It is by no means certain that the 1643 baptismal register refers to the Reincken who was later organist of the Catherinenkirche in Hamburg (indeed by making him younger by 20 years it raises numerous other questions), but there are various reasons for believing that Reincken belongs to the Buxtehude generation rather than to that of Weckmann and Bernhard.

Reincken's parents, Adam Reincken and Anneken Tijmonsen, can be traced in Deventer from 12 August 1637, when the landlord 'Adam Reincken van Wilshuisen' was entered in the burgesses' register. The much discussed question of whether 'Wilshuisen' refers to Wilshausen in Alsace or to Wildeshausen near Bremen can be resolved in favour of the latter town, where the Reincken family can be traced. In Deventer the young Jan Adams was trained in vocal and instrumental music from 1650 to 1654 by Lucas van Lennick, organist of the Grotekerk (Lebuinuskerk). His lessons were paid for from an endowment from the Boedeker family. On 12 November 1654 Reincken went to study in Hamburg with Heinrich Scheidemann, remaining there for almost three years. In 1657 he returned to Deventer to take up an appointment as town musician and organist at the Bergkerk on 11 March. According to his own account, he returned to the Catharinenkirche in Hamburg late in 1658 to become Heinrich Scheidemann's assistant. When Scheidemann died, on 26 September 1663, Reincken was appointed his

successor as organist and church clerk, but received a full organist's salary only from the Easter quartet of 1665.

On 23 June 1665 Reincken's name was entered in the burgesses' register in Hamburg, and on the following day he married one of the Scheidemann's daughters. On 5 April 1668 their only child, Margaretha-Maria, was born; she married Andreas Kneller, organist of the Hamburg Petrikirche, in 1686. In 1666 Reincken gave up the duties of church clerk, since this was not his 'chosen profession'. Instead of a reduction in salary, as might be expected, he managed to secure an increase to 1445 marks, a considerable sum. The fact that Reincken could make these demands shows that he was already held in high esteem. In 1671 he supervised a substantial rebuilding of the organ in the Catharinenkirche which took three years, during which both the 32′ registers (Principal and Posaune) later praised by J.S. Bach were built by Friedrich Besser of Brunswick. Reincken's expertise in organ building and maintenance (which, as he often emphasized, he was able to pass on to his successor H. Uthmöller) enabled him to preserve the instrument in good condition almost to the end of his life. Like his teacher Scheidemann, Reincken was often called upon as an organ expert, and together with Buxtehude was known as an authority on the instrument during the last third of the 17th century and the beginning of the 18th. An oil painting by Johannes Voorhout shows the two men together in 1674.

Early in 1678 Reincken, together with the city fathers Gerhard Schott and J. Lütjens, founded the Hamburg opera, which divided the church authorities into two factions. Among its supporters was Reincken's colleague at the Catharinenkirche, Pastor Heinrich Elmenhorst, who wrote a book on the opera, *Dramatologia antiquo-hodierna* (Hamburg, 1688) and was also librettist for the opera. Reincken was involved in the management of the opera only during its initial period (1678–85), but he maintained a lively interest in it after that. In 1694 Schott guaranteed him two free seats for life.

On 1 January 1685, three years and three months after the death of his first wife, Reincken married Anna Wagener; she died on 30 September 1713. On 17 April 1705 some of the church elders wanted to appoint Johann Mattheson as Reincken's successor, but he successfully defended himself against this move. (Here and at several other times there is evidence of antagonism between Reincken and Mattheson, which the latter may have instigated by frequent unflattering and untrue remarks about Reincken.) In 1718 Reincken approached the church fathers at the Catharinenkirche to suggest the appointment of his pupil Uthmöller as his deputy. A dispute with the church about who should pay Uthmöller's salary led to Reincken's altering his will of 1720, in which he had left his large estate to the church as sole beneficiary. In his will of 1722 everything went to the niece of his second wife. In contrast with most of his organist colleagues, he died a rich man. On 7 December 1722 he was buried in the Catharinenkirche, where in 1707 he had bought a grave and presented an oil painting of the Resurrection. Both the tombstone and the painting survive.

2. WORKS. Despite his fame and longevity, only a few of Reincken's compositions survive. The number of works specifically for the organ (two chorale settings) is particularly surprising, and no vocal music seems to survive (the cantata attributed to Reincken, *Es erhub sich ein Streit*, is of doubtful authenticity; see Krummacher, 1965, p.407), although the accounts at the Catharinenkirche show that Reincken wrote some small sacred concertos for performance 'on the organ' (so-called *Organistenmusik*). The foreword to *Hortus musicus* suggests that Reincken was not really interested in publicizing his works. Apart from *Hortus musicus*, keyboard music forms the largest part of his output; except for an unauthorised print by Roger, this is entirely in manuscript, and almost entirely in Scandinavian and central German sources (there are none in north Germany!). Eight suites and three variation sets are clearly intended for the harpsichord; the two toccatas and the fugues are usually played on the organ, but some of them seem better suited to the harpsichord. Reincken was also active as a theorist; his writings cover the whole range of speculative music from elementary treatises to the most complicated techniques of multiple counterpoint.

It is no coincidence that both of Reincken's surviving choral settings take the form of the chorale fantasia, which developed at the beginning of the 17th century as an important genre for composers with an interest in developing the profession of organist. Here, the link with the liturgy – as in cycles of chorale settings – could be broken. Reincken was also the first to make the transition from church servant to artistic personality when, in 1666, he declined the additional duty of church clerk in Hamburg in order to concentrate on his real 'profession' as an organist. In this context he referred to himself (on the title-page of *Hortus musicus*) as 'Directore organi', making a conscious comparison with the 'Director musices', or city Kantor. With his setting of the chorale *An Wasser Flüssen Babylon* Reincken also demonstrated musically, not only to the 'Amsterdam' doubter (*WaltherL*, 'Scheidemann'), that this self-confidence was justified by his exceptional compositional ability. He described this work as his portrait, a kind of musical 'self-portrait of the artist'. To demonstrate his artistic skill he chose not the type of chorale setting closely tied to a cantus firmus verse by verse, but the 'true north German large form "on" a cantus firmus', the chorale fantasia (Breig, 1967). In the other fantasia, on *Was kann uns kommen an für Noth*, Reincken tried even harder to use every facet of his compositional ability, resulting in the longest known chorale fantasia (327 bars, lasting about 20 minutes). Both works show Reincken to have been a pupil of Scheidemann, particularly in the way that the cadences of individual sections are emphasized by increasing the number of voices, with the assistance of double pedals. Bach seems to have known Reincken's *An Wasser Flüssen Babylon* well, and his improvisation on the chorale in the style of the Hamburg organists in 1720 greatly impressed Reincken and exceeded the duration of its model. In both the chorale fantasias many compositional and contrapuntal techniques are used which are found again in Reincken's own works or in works he copied out. As well as imitative passages, he placed particular emphasis on virtuoso solo passages in the *stylus fantasticus* in *An Wasser Flüssen Babylon* and, through the interchange of these styles, a charming contrast is achieved between contrapuntal strength and playful virtuosity.

We can conclude from Reincken's Latin foreword to *Hortus musicus* that he wanted to make an example of his critics with his first work by showing them proof of

his high artistic prowess, holding it up as a mirror (*speculum proposui*) to reflect their own inabilities. He wanted to drive bad composers out of the sacred garden of music ('divinae Musices horto'). This garden and other items described in the foreword are shown as allegories on the lavish and costly title-page, and links can be perceived between the arrangement of the garden and that of movements in the individual sonatas and suites. With some small divergences, these follow the same basic plan: sonata (slow introduction, fugue, violin solo, viola da gamba solo) and suite (allemande, courante, sarabande, gigue). A clear analogy can be made between a monumental building with a crowning 'Soli Deo Gloria' on top and the well-constructed fugues of the sonatas; both are based on the proportions of *trias harmonica* (unison, 1:1; octave 2:1; 5th 3:2; see Grapenthin, 1991). The permutation fugues in particular, with their two themes worked out in double counterpoint and without episodes, seem to have pleased Bach, who arranged three of the fugues and a few other movements for harpsichord (BWV954, 965 and 966). The gigues in *Hortus musicus* are also permutation fugues with sometimes one, sometimes two themes which appear in the second part in invertible counterpoint. In the gigue fugues with two themes Reincken varied the second part by inverting the second theme or inventing a new one, or through free counterpoint.

Reincken's eight harpsichord suites follow without exception the classical order of movements. In this and other ways they are similar to the suites in *Hortus musicus*. The usual harmonic and melodic connections can be seen between allemande and courante, and sometimes between other movements also. In addition, in both the *Hortus* and the harpsichord suites Reincken occasionally used the less common technique of bass variations, described in the second part of F.E. Niedt's *Musicalische Handleitung* (Hamburg, 1706) as the derivation of a melodic structure from the bass line of the previous movement (see Hill). A further homogeneous group of works is the three sets of harpsichord variations, of which *Schweiget mir vom Weibernehmen* is the most notable, not just because of its large scope. Reincken wrote twice as many variations as Froberger had written in his piece of the same title in 1649, and this, together with other details, shows that he knew Froberger's work well. Reincken's variations (Bach owned a manuscript copy and his elder brother Johann Christoph copied them into the so-called *Andreas Bach Buch*) had a distinct influence, together with Buxtehude's variations on *La Capricciosa*, on Bach's Goldberg Variations. In all three sets Reincken frequently used dance models as a basis for individual variations, as did Froberger in his last three variations on *Schweiget*.

The most problematic of Reincken's keyboard works, because of the small number surviving, are the two toccatas and the Fugue in G minor. The Toccata in G major fits into the overall picture of his works without any problem, but there is some doubt as to the authenticity of the other two works. While the fugues in the second and fourth sections of the G major piece are in many ways similar to those in *Hortus musicus* and the harpsichord suites, the two toccatas show little in common in their structural layout and fugal treatment. Despite that, there are reasons not to discount Reincken's authorship of the G minor toccata. The G minor Fugue shows certain features typical of Reincken, including a long theme in running semiquavers, but also some unusual episodes and modulations. These do not, however, necessarily point to another composer. Reincken might in fact have developed these features further, but there are no comparable pieces on which to base a judgment.

ULF GRAPENTHIN

Reindl, Constantin (*b* Jettenhofen, Upper Palatinate, 29 June 1738; *d* Lucerne, 25 March 1799). German composer, active in Switzerland. The son of an official in the service of the Prince-Bishop of Eichstätt, he entered the novitiate of the Jesuit order in Landsberg in 1756. He studied philosophy and theology in Ingolstadt, Dillingen and Freiburg and was ordained priest in 1769. In 1770 he became a teacher at the college in Freiburg, and in 1772 was transferred to a teaching post at the Gymnasium in Lucerne; he succeeded Abbé Joseph Bullinger (known for his association with the Mozart family) as the city's director of music (*Musikpräfekt*). Reindl continued in these posts even after the dissolution of the Jesuit order in 1773. From 1775 to 1777 he also worked at the seminary in St Urban. The peak of Reindl's creative output consists of stage works – Singspiele and comic operettas in a light *buffo* style (generally without overtures) – which became the characteristic repertory of the Lucerne school theatre in its heyday.

WORKS

Stage (mostly Spl., first perf. in Lucerne): Die Sempacherschlacht, 1779, *CH-Lz*; Der Dorfschulmeister, 1784, *Lz*; Das Donnerwetter, oder Der Bettelstudent, 1787, *Lmg, Lz*; Der Dorfhirt, 1789, *Lmg, Lz*; Arlequino in verschiedenen Ständen (pantomime), 1790, *Lz*; Der betrogene Dieb, 1791, *Lz*; Der eingebildete Kranke, 1792, *Lz*; Lebet wohl, 1795, *Lz*; Das neugierige Frauenzimmer, 1796, *Lmg*; Abraham und Isaack, frag. *Lmg*; Pantomimische Oper, *Lz*; 9 others, lost

WILHELM JERGER

Reinecke, Carl (Heinrich Carsten) (*b* Altona, 23 June 1824; *d* Leipzig, 10 March 1910). German composer, teacher, administrator, pianist and conductor. He was given a thorough musical education by his father, J.P. Rudolf Reinecke (*b* Hamburg, 22 Nov 1795; *d* Segeberg, 14 Aug 1883), a respected music theoretician and author of several textbooks. From 1845 Reinecke travelled through Europe, from Danzig to Riga; in Copenhagen he was appointed court pianist in 1846, where his duties included accompanying the violinist H.W. Ernst as well as giving solo recitals. He was given a particularly friendly reception in Leipzig by Mendelssohn and the Schumanns, and Liszt, whose daughter was later taught by Reinecke in Paris, spoke of his 'beautiful, gentle, legato and lyrical touch'. In 1851 he moved to Cologne, where he taught counterpoint and the piano at Hiller's conservatory. He also gave concerts with Hiller, who recommended him to Barmen. There as musical director and the conductor of several musical societies between 1854 and 1859, he significantly raised the standard of the town's musical life. He then spent ten months in Breslau as director of music at the university and conductor of the Singakademie.

By 1860 his growing reputation brought him an appointment to teach at the Leipzig Conservatory, where he became the director in 1897. By selecting capable teachers who shared his conservative views and by improving the facilities and the syllabus, Reinecke transformed the conservatory into one of the most renowned in Europe. Grieg, Kretzschmar, Kwast, Muck, Riemann, Sinding, Svendsen, Sullivan and Weingartner were all pupils there; and to this distinguished list could be added many other names of equal repute, showing how exaggerated was the reproach, made particularly in north Germany, that Leipzig was a hotbed of reaction (although

this criticism had some justification after 1880). But it cannot be denied that Reinecke considered it his responsibility as director to perpetuate the example of the Classical composers; he was very conscious of his position as a representative and guardian of tradition, and also made it his business to foster the music of the pre-Classical composers, particularly Bach, even exploring as far back as Palestrina. He was a sympathetic teacher who firmly believed in the necessity of a thorough grounding. In Leipzig, he was also the conductor of the Gewandhaus Orchestra until 1895 (when Nikisch succeeded him); a stern disciplinarian, he achieved a high standard of virtuosity from his players by his insistence on clarity of execution. Reinecke became a member of the Berlin Academy in 1875, received the honorary doctorate in 1884 and became a professor in 1885. He retired in 1902, though his creative work continued until the end of his life.

As a composer Reinecke was best known for his numerous piano compositions, representing virtually every musical form of the time and, despite being influenced by Mendelssohn's melodic style, was stylistically nearer to Schumann. The exercises for young pianists and the piano sonatinas have become classics because of their charming melodies, as have the canons and nursery rhymes which are highly inventive and totally free from bourgeois sentimentality. Reinecke was a master of the so-called 'Hausmusik' and of the simpler forms popular at the time. His chamber music is distinguished and, in the later works in particular, attains a Brahmsian majesty and warmth within a variety of forms. His sonata for flute and piano, *Undine*, is his most frequently performed work. His most successful concertos are those for flute and for harp, and the first and third for piano, which well display his pleasant melodic sense and his admirable ear for orchestration; the piano concertos avoid grand soloistic mannerisms, and his own style of playing, with hands still and fingers curved, reflected his belief in classical practice. Of his three symphonies, the first employs small forces, while the second is a cyclically organized work on a grand scale. His operas, despite their Wagnerian trappings, were not successful; his better-known musical fairy tales, based in part on his own texts (written under the name Heinrich Carsten), were composed in a tasteful folk-style. Gifted in many fields, he was also a talented painter and poet. His lucidly written books and essays contain many observations still of interest.

Carl Reinecke: photograph by Georg Brokesch

WORKS

printed works published in Leipzig unless otherwise stated

STAGE

Der vierjährige Posten (operetta, 1, after T. Körner), op.45, Barmen, 1855, vs (1856)

König Manfred (grosse Oper, 5, F. Röber), op.93, Wiesbaden, 26 July 1867 (?1870)

Kathleen und Charlie (Liederspiel, H. Grans), Leipzig, 12 Nov 1870; rev. as Ein Abenteuer Händels, oder Die Macht des Liedes (Spl, 1, W. te Grove), op.104, Schwerin, 18 March 1874 (1874)

Glückskind und Pechvogel (Märchenoper für Kinder, 2, H. Carsten and R. Leander), op.117, unperf. (1883)

Auf hohen Befehl (komische Oper), op.184, Hamburg, Stadt, 1 Oct 1886, vs (*c*1886)

Der Gouverneur von Tours (komische Oper, 3, E. Bormann), Schwerin, 22 Nov 1891 (1891)

Incid music to Schiller's Wilhelm Tell, op.102 (1871)

VOCAL

6 musical fairy tales, incl. Schneewittchen (Grove), S, A, female vv, pf, reciter, op.133 (1876); Dornröschen (Carsten), S, A, Bar, female vv, pf, reciter, op.139 (1876); Aschenbrödel (Carsten), S, Mez, female vv, pf, reciter, op.150 (1878)

Other works, incl. Ein geistliches Abendlied, T, chorus, orch, op.50 (*c*1857); Belsazar (orat, Röber), solo vv, chorus, orch, op.73 (?1865); Almansor, aria (H. Heine), Bar, orch, op.124 (1874); Die Flucht der heiligen Familie (J. von Eichendorff), male vv, orch, op.131 (1874); Hakon Jarl (cant., Carsten), A, T, B, male vv, orch, op.142 (1877); Das Hindumädchen, aria (Carsten), A/Mez, orch, op.151 (1879); Sommertagsbilder, chorus, orch, op.161 (1881); other works for male, female or mixed chorus, pf acc. or a cappella; songs

ORCHESTRAL

Syms.: no.1, A, op.79 (?1870); no.2 'Hakon Jarl', c, op.134 (1875); no.3, g, op.227 (*c*1895)

Ovs.: Dame Kobold, op.51 (*c*1857); Alladin, op.70 (*c*1865); Friedensfeier, op.105 (1871); Fest-Ouvertüre, op.148 (1878); Zur Jubelfeier, op.166 (1882); Zur Reformationsfeier, op.191 (1887) [variations on Luther's Ein' feste Burg]; Zenobia, op.193 (1887); Ov., op.218 (*c*1892); Prologus solemnis, op.223 (*c*1895)

Pf concs.: e, op.120 (1873); C, op.144 (1878); f♯, op.72 (1879); b, op.254 (*c*1900)

Other concs.: vc, d, op.82 (Mainz, 1866); vn, g, op.141 (1877); hp, e, op.182 (1885); fl, D, op.283 (*c*1908)

Other works, incl. In memoriam: Introduktion und Fuge mit Choral, op.128 (1874); Trauermarsch auf den Tod des Kaisers Wilhelm I, op.200 (*c*1890)

CHAMBER

Pf, wind: Trio, A, pf, ob, hn, op.188 (1887); Undine, sonata, fl, pf, op.167 (1882) [also arr. vn/cl, pf]; Trio, B♭, pf, cl, hn, op.274 (*c*1905)

REINHOLD SIETZ/R

Reiner, Adam. *See* RENER, ADAM.

Reiner, Ambrosius (*b* Altdorf, nr Weingarten, Württemberg, bap. 7 Dec 1604; *d* Innsbruck, 4 July 1672). German composer and organist. The son of Jacob Reiner, he was given a trial appointment in the archducal Kapelle at Innsbruck on 15 July 1630 and was confirmed as second court organist and teacher of the choirboys there in 1631. In 1635 he was promoted to first court organist. On 1 July 1648 he was appointed court Kapellmeister in succession to Stadlmayr (whose daughter Maria Katharina had become his second wife in 1642). Reiner became imperial director of music at Innsbruck in 1666, following the disbandment of the archducal Kapelle in 1665; he held the post until his death. His works consist exclusively of sacred vocal music. They have not yet been studied in detail, but they appear to show the influence of Stadlmayr. (*SennMT*)

WORKS
published in Innsbruck

Sacrae cantiones, bk 1, 2–4vv (1643)
Sacrarum cantionum, bk 2, 4–6vv, 2 vn, vle (1647)
Sacrarum cantionum, bk 3, 8vv (1648)

[5] Missae, bk 5, 5vv, 3 insts obbl., 3 insts ad lib (1655)
Litaniae BMV, bk 6, 5–6vv, 2 insts ad lib, 3 insts obbl., cum antiphonis, 1–5vv, insts (1656)
4 sacred odes, 1638[2]

HELLMUT FEDERHOFER

Reiner [Reinert], **Felix.** *See* RHEINER, FELIX.

Reiner, Fritz (*b* Budapest, 19 Dec 1888; *d* New York, 15 Nov 1963). American conductor of Hungarian birth. Even before he had completed his musical training at the Liszt Academy, Budapest (where he studied the piano with Bartók), Reiner worked as répétiteur at the Vigopera, where he made his conducting début in *Carmen* at the age of 19. He conducted opera in Laibach (now Ljubljana) and at the Népopera in Budapest (1910–14) until his engagement as one of two principal Kapellmeister at the Hofoper (later Staatsoper) in Dresden (1914–21). There he formed a lifelong friendship with Richard Strauss, who was, together with Nikisch, an important artistic influence. While at Dresden he conducted the first German production of *Die Frau ohne Schatten* in 1919. With the Cincinnati SO (1922–31), the Pittsburgh SO (1938–48) and the Chicago SO (1953–63), Reiner developed a formidable reputation as an orchestra builder. Under him the Chicago SO became, in Stravinsky's opinion, 'the most precise and flexible orchestra in the world'. He appeared frequently as a guest conductor with the New York Philharmonic SO and the Philadelphia Orchestra; his guest appearances in Europe included Budapest, Stockholm, Vienna and several orchestras in Italy. He was also guest conductor of opera in Halle (1921), Rome (1921), Barcelona (1922), Buenos Aires and Budapest (1926), Philadelphia (1931–2), Covent Garden (1936–7), San Francisco (1936–8) and Vienna (1955). He was engaged at the Metropolitan Opera from 1948 to 1953, and conducted the first American production of *The Rake's Progress* there in 1953; he was preparing his return to the Metropolitan with *Götterdämmerung* when he died. He taught conducting at the Curtis Institute of Music in Philadelphia (1931–41) where his pupils included Bernstein and Lukas Foss.

In an obituary in the *New York Times* Harold C. Schonberg wrote: 'As a musical intellect, as an incomparable technician, as a possessor of an ear virtually unparalleled in his field, Reiner held a unique spot in 20th-century musical life and thought'. Like Nikisch, Reiner conducted with great economy and precision, balancing expressivity with fidelity to the score; both were renowned for 'conducting with their eyes'. He embraced a wide orchestral and operatic repertory, ranging from Bach, Haydn and Mozart to Bartók, Stravinsky and Webern; although grounded in the Austro-German tradition he was especially effective in the French and Russian repertory, and was noted for his dedication to contemporary music, including that of his adopted homeland. But unlike Nikisch, Reiner was an ill-tempered and demanding taskmaster with his players, imposing strict discipline on their performance.

Reiner's posthumous celebrity has been enhanced by the brilliant series of recordings he made in Chicago for RCA Victor (1954–63), which reproduce the sound of his great orchestra vividly and confirm his artistic intellect, exceptionally keen ear for detail and penetrating musicianship. Particularly memorable are his interpretations of Bartók's Concerto for Orchestra and Music for Strings, Percussion and Celesta, Spanish-influenced music by Debussy and Ravel, Rimsky-Korsakov's *Sheherazade* and

Ravel's orchestration of *Pictures at an Exhibition*. With less impressive sound but covering a broader repertory are a variety of 'underground' recordings from radio broadcasts with the NBC SO (including Copland's Clarinet Concerto with Benny Goodman), Chicago SO, New York PO and Metropolitan Opera; his 1936 Covent Garden *Tristan und Isolde* with Flagstad (in her London début) and Melchior has also been issued on CD.

PHILIP HART

Reiner [Rainer], **Jacob** (*b* Altdorf, nr Weingarten, Württemberg, before 1560; *d* Weingarten, 12 Aug 1606). German composer. According to the dedication of his *Liber cantionum sacrarum* (1579) he was educated as a boy at the abbey of Weingarten. He continued his studies under Lassus in Munich in 1574–5, and on completing them returned to the abbey, where he spent the rest of his life, without, however, taking holy orders. Here he enjoyed high esteem as Kapellmeister, teacher of music and composer.

His numerous workmanlike compositions, nearly all of them sacred, became known beyond the immediate vicinity of Weingarten. They show the influence of Lassus and also of Venetian composers; with the more important Leonhard Lechner and Eccard, Reiner belongs to the German school of Lassus. Compared with Lassus's penitential psalms, his three-part settings of the same texts have a positively ascetic simplicity. Expressive restraint of this and similar kinds, such as the avoidance of chromaticism, is probably connected with the greater liturgical severity practised at the abbey after a visitation in 1579. But Reiner did use secular models in some of his masses. His secular German songs, compounded of elements of madrigal, villanella and chanson, are weaker examples of the products of the Lassus circle.

WORKS

Liber cantionum sacrarum, 5–6vv (Munich, 1579); ed. O. Dressler (Stuttgart, 1875); ed. in Eitner

Schöne newe teutsche Lieder, 4–5vv, sambt 2 … lateinischen Liedlein (Munich, 1581)

HELLMUT FEDERHOFER

Reiner, Karel (*b* Žatec, 27 June 1910; *d* Prague, 17 Oct 1979). Czech composer, pianist and administrator. He first studied music with his father, cantor of Žatec, then law at the German University, Prague, where he graduated in 1933, and musicology at Prague University. He also attended the conservatory as a student in Suk's master classes (1931) and in A. Hába's microtone department (1934–5). During the years 1934–8 he was active as a pianist and composer in Burian's theatre D 34 and for the Esta gramophone company. After imprisonment in concentration camps during the German occupation he returned to Prague to prepare the first Czech performance of Hába's opera *Matka* ('The Mother') at the Grand Opera of the Fifth of May (1945–7). From 1931 he had been active in promoting new music as a pianist, and after World War II he took part in organizing a new pattern of musical life in Prague. He contributed articles to *Rytmus* (1935–8, 1945–7) and to foreign periodicals. As a composer he closely identified himself at first with Hába, but later he followed a more independent path. In the 1960s he achieved a successful combination of ideas taken from Hába with new post-war techniques.

WORKS

JOSEF BEK

Reingot, Gilles (*fl* early 16th century). South Netherlandish singer and composer. He was a member of the chapel of Philip the Handsome in the early 16th century; his name first appears in a payment list of 11 October 1506 in which Queen Juana of Castille (Philip's widow) authorized payment to the singers who had accompanied her husband to Spain. In 1509 Reingot was a singer in the chapel of Philip's and Juana's son, Charles (later Emperor Charles V) and he remained in that organization until at least 1530. He composed a four-voice *Salve Regina* setting (*D-Mbs* 34) and made a contribution to the complex of over 30 pieces that draw on Ockeghem's rondeau *Fors seulement*; the superius of the Ockeghem chanson is used as the tenor in Reingot's four-voice setting (1504[3]), surrounded by three fast-moving contrapuntal voices.

RICHARD SHERR

Reinhard, Andreas (*b* ?Schneeberg, nr Zwickau; *d* before 1614). German theorist, composer and organist. He is known to have lived at Schneeberg. He is mentioned by Abraham Bartolus in 1614 as being already dead. In his *Monochordum* he described a clavichord with 36 keys and 12 pairs of strings. To this instrument he applied a tuning system whose semitones are derived from the just intervals by means of arithmetical division. His use of these intervals in terms of string lengths based on 48 units makes him the first post-Renaissance writer to exploit fully these developments derived from the monochord. His tuning was used by Bartolus a decade later.

WRITINGS

CECIL ADKINS

Reinhard, Kurt (*b* Giessen, 27 Aug 1914; *d* Giessen, 18 July 1979). German ethnomusicologist and composer. He studied musicology and composition (under Hermann Unger) at Cologne (1933–5) and musicology and ethnology at Leipzig under Husmann and subsequently at Munich under Ficker, Kurt Huber and Heinrich Ubbelohde-Doering (1935–8). In 1938 he took his doctorate at Munich with a dissertation on Burmese music. From 1939 to 1945 he worked for the Staatliche Musikinstrumentensammlung, Berlin and from 1948 to 1968 he was director of the Berliner Phonogramm-Archiv, which became part of the ethnomusicology department of the Museum für Völkerkunde in 1963. He was also made head of the department of private music teaching at the Petersen Conservatory (1947–52). In 1948 he obtained a teaching post at the Free University, Berlin, where he completed his *Habilitation* on musical instruments in 1950; he was subsequently (1957) appointed professor and head of the department of comparative musicology. His chief interests were organology, the traditional music of China and Turkey and ethnomusicology in music education; he also composed songs, chamber and orchestral music under the pseudonym Georg Beydemüller. He was senior editor of Beiträge zur Ethnomusikologie and in charge of a recording series for the Museum für Völkerkunde, Berlin. In 1973 Reinhard was honoured by the Turkish government for his outstanding academic contributions.

HANS HEINRICH EGGEBRECHT

Reinhardt [Rheinhardt, Reinhard]. Austrian family of musicians.

(1) **Kilian Reinhardt** (*b* 1653–4; *d* Vienna, 25 March 1729). Musical administrator. He does not seem to have been a practical musician, and was never employed in that capacity. In 1683 he was given the job of librarian and copyist to the imperial court orchestra in Vienna. Since the musicians tended to treat him as a servant, he petitioned Leopold I for an official title; his request was granted in 1699, and he was thenceforward known as 'Konzertmeister'. In 1712 Charles VI recognized his long service by including him on a commission to consider the reform of the court chapel. He married twice, the second time comparatively late in life.

In 1727 Reinhardt wrote a treatise on the musical customs of the court chapel, *Rubriche generali per le funzioni ecclesiastiche musicali di tutto l'anno, con un appendice in fine dell'essenziale ad uso, e servizio dell'Augustissima Imperiale Capella* (*A-Wn*). It is a valuable source of information on the history of the chapel music in the late 17th and early 18th centuries, dealing particularly with liturgical customs (especially the relative importance of different Sundays and feast days, and the kind of music appropriate for them), and also containing information on performing practice.

(2) **Johann Georg Reinhardt** (*b* 1676–7; *d* Vienna, 6 Jan 1742). Organist and composer, nephew of (1) Kilian Reinhardt. By his uncle's intercession he obtained a post in the imperial chapel. In October 1701 he was appointed assistant to the organists. From 1710 to 1712 he himself was organist, though after the reorganization of the chapel music in 1712 he took second place to the elder Georg Reutter. He became first organist on the latter's retirement in 1728, and also worked as Kapellmeister at the Stephansdom from 1727 to 1742. Church music was not his only interest, however, for he was involved with the production of Fux's *Costanza e Fortezza* in 1723, and in 1734 he was appointed court composer with special responsibility for serenades and ballets. He had a number of pupils, though none achieved any great fame, and was a member of the council of the Caecilienbrüderschaft, founded in 1725.

He was an extremely prolific composer, and though the bulk of his output consists of church music – after Fux and Caldara he was the most significant composer of church music in Vienna at the time – he also produced operas and oratorios. His masses, vesper psalms and litanies are almost all for four voices and orchestra, while the antiphons and motets are for various combinations of solo voices and orchestra. His style resembles that of Fux. His church music was extremely popular, being performed not only in Vienna, but also in parish churches and monasteries all over Austria and Bohemia and at the Saxon court at Dresden, and continuing in use until long after his death. He also wrote a number of motets in the polyphonic style taught by Fux, and some German arias whose melodic lines show the influence of German folksong.

WORKS

OPERAS

all performed in Vienna for imperial name days

9 Ger. arias, incl. 1 for B, vn, org, *A-GÖ, WIL*, 6 lost
Miscellaneous works: *GÖ, Wgm, Wn*

(3) **Joseph Franz Reinhardt** (*b* 1684–5; *d* Vienna, 27 Sept 1727). Violinist, son of (1) Kilian Reinhardt by his first marriage. He was a violinist in the court orchestra, which he joined in 1706, and at the Stephansdom. His reputation as a violinist was very high (Fux described him as a 'distinguished virtuoso') and he seems also to have been a good teacher. It is not likely that he was a composer; though there exists a *Salve regina* ascribed to him, it is more probably by his cousin (2) Johann Georg Reinhardt.

(4) **Karl Mathias Reinhardt** (*b* Vienna, 1710–11; *d* Vienna, 31 Jan 1767). Organist and composer, son of (1) Kilian Reinhardt by his second marriage. He was a pupil of his cousin and guardian (2) Johann Georg Reinhardt. He became court organist on 6 February 1739, retaining the post until his retirement in 1762. He was active as a composer as well as an organist; though only two compositions can be definitely ascribed to him, a litany and a requiem (both in *A-KR*), it is possible that some of the works signed merely 'Rheinhardt', ascribed to his cousin, may in fact be by him. His litany and requiem are in a smooth melodious style characteristic of much mid-18th-century Viennese church music.

(5) **Johann Franz Reinhardt** (*b* Vienna, 1713–14; *d* Vienna, 21 April 1761). Violinist, son and pupil of (3) Joseph Franz Reinhardt. He was a sufficiently good violinist to be given a place in the court orchestra in 1730; in 1740 he added to this the position of violinist at the Stephansdom. Dittersdorf was much impressed by his virtuosity as a soloist.

ELIZABETH ROCHE

Reinhardt, Delia (*b* Elberfeld, 27 April 1892; *d* Arlesheim, 3 Oct 1974). German soprano. She studied in Frankfurt with Strakosch and Hedwig Schako and made her début at Breslau in 1913. Three years later she was engaged by the Munich Hofoper, where she remained until 1923, being especially admired in the Mozart repertory. From Munich she went to the Berlin Staatsoper, where she appeared regularly until 1938, singing more than 60 roles

including Octavian, the Empress (*Die Frau ohne Schatten*), the Composer, Christine (*Intermezzo*), Elsa, Elisabeth (*Tannhäuser*) and Eva, as well as roles in works by Milhaud, Schreker and Weill. She appeared at Covent Garden between 1924 and 1929 and sang Octavian in the famous performances of *Der Rosenkavalier* under Bruno Walter, with Lotte Lehmann, Elisabeth Schumann and Richard Mayr. In London she also sang Cherubino, Freia, Gutrune, Micaëla, Mimì and Butterfly. She appeared at the Metropolitan Opera for two seasons, 1922–4. Recordings of her best roles show her to have been an ardent interpreter with a warm, lyrical tone.

HAROLD ROSENTHAL/ALAN BLYTH

Reinhardt, Django [Jean Baptiste] (*b* Liberchies, nr Luttre, Belgium, 23 Jan 1910; *d* Fontainebleau, 16 May 1953). French jazz guitarist. The son of a travelling entertainer, he grew up in a Gypsy settlement outside Paris. He first played the violin and later took up the guitar, and began working professionally in 1922 with the accordionist Guérino. In 1928 he was badly burnt in a caravan fire; the resulting mutilation of his left hand, which deprived him of the use of two fingers, led him to devise a unique fingering method to overcome his handicap. After a period of convalescence he worked in cafés in Paris and in a duo with the singer Jean Sablon. In 1934 he was a founding member, with Stephane Grappelli, of the ensemble that became known as the Quintette du Hot Club de France; in the years before World War II the group gained considerable renown through its numerous recordings, and Reinhardt became an international celebrity. He appeared throughout Europe and recorded with many important American musicians who visited the Continent. During the war, while Grappelli lived in Britain, Reinhardt remained in France. He led a big band, then achieved considerable success as the leader of a new quintet in which the clarinettist Hubert Rostaing took Grappelli's place; he also became interested in composition and, with André Hodeir, arranged the music for the film *Le village de la colère* (1946). In 1946 he visited England and Switzerland, toured the USA as a soloist with Duke Ellington's band (playing an amplified guitar for the first time) and worked in New York. After his return to France he lived in Samois and toured and recorded with his quintet, which sometimes again included Grappelli.

Reinhardt's grasp of harmony, remarkable technique and trenchant rhythmic sense made him an excellent accompanist; his incisive support is heard to advantage on *Stardust* (1935, HMV), recorded with Coleman Hawkins. He later developed into a soloist of unique character, creating a deeply personal style out of his own cultural patrimony. By 1937, when he recorded *Chicago* for the Swing label with the Quintette, he was established as the first outstanding European jazz musician, a stylist with great melodic resourcefulness and a mastery of inflection. He was a gifted composer of short evocative pieces and had a flair for pacing a performance so that the maximum variety could be wrung from it without compromising its homogeneity; an excellent example is *St Louis Blues* (1937, Swing). Endowed with remarkable sensitivity, Reinhardt could work with visiting American performers without forsaking his own essentially romantic style. In the 1940s he changed to the electric guitar, but without coarsening his playing, as he used its power with discretion. The rhythmic content of his work became more varied, as in *Minor Swing* (1947, Swing), and his improvised lines more flexible. The asymmetrical, occasionally violent playing heard in some of his later performances shows the continual widening of his expressive scope.

MICHAEL JAMES

Reinhardt, Heinrich (*b* Pressburg [now Bratislava], 13 April 1865; *d* Vienna, 31 Jan 1922). Austrian composer. The son of a jeweller, he went to Vienna to study at the conservatory of the Gesellschaft der Musikfreunde where he was one of Bruckner's pupils. He became an accomplished pianist and organist, and his familiarity with several other instruments later served him well as orchestrator of his own works and those of others. Between 1890 and 1900 he published numerous songs, piano and salon pieces, as well as an opera *Die Minnekönigin* (1895). He also wrote music reports for the *Neue freie Presse*, *Neues Wiener Journal* and *Die Zeit*, but abandoned this after the tremendous success of his first operetta *Das süsse Mädel* (Carltheater, 25 October 1901). It opened a new phase for Viennese operetta, being more overtly in the song and dance musical comedy style. However, Reinhardt's dozen later works were eclipsed by those of Eysler, Lehár, Straus and Fall. For list of operettas see *GroveO*.

ANDREW LAMB

Reinhardt [Goldmann], **Max** (*b* Baden bei Wien, 9 Sept 1873; *d* New York, 31 Oct 1943). Austrian director. He began as an actor in Salzburg, but by 1903 he was devoting himself exclusively to production, responding with enthusiasm and taste to the new theatrical ideas and methods then evolving. He is generally associated with stage spectacle, having effectively mounted many scenic extravaganzas with huge casts, such as *Oedipus rex* (1910) in a Vienna circus, *The Miracle* at Olympia, London (1911), and the annual Salzburg Festival presentations of the morality *Jedermann* in the Domplatz. Like Diaghilev he was a remarkable entrepreneur with a talent

for choosing the ideal actors, designers, choreographers and musicians for each production. Music played a substantial part in all his productions, and he supervised the choice of music. He carefully stage-managed musicians, concealing them, costuming them to mix with actors, or leaving them in the orchestra pit, as required. He worked closely with the composers he commissioned, who included Humperdinck for *The Miracle* and *Twelfth Night*; Weill for Werfel's *The Eternal Road*; Leo Blech for *The Taming of the Shrew*; Pfitzner for Kleist's *Kätchen von Heilbronn*; and Einar Nilson, his musical director and staff composer for over 15 years.

One of Reinhardt's most popular productions was *Orphée aux enfers*, which he first staged with singing actors at the Neues Theater, Berlin, in 1906; Klemperer, then a student, was first choirmaster and then conductor. In 1911 he produced Offenbach's *La belle Hélène* in Venice, and in 1930 the first of several revivals of *Die Fledermaus*. He is best remembered on the opera stage, however, for directing the première of *Der Rosenkavalier*, with sets and costumes by Alfred Roller (1911, Dresden); he also staged the première of the original version of *Ariadne auf Naxos* in Stuttgart (1912), with designs by Ernst Stern. His influence on Strauss and Hofmannsthal was considerable; both *Salome* and *Elektra* were directly inspired by his productions of dramatic versions. In 1920 Strauss, Hofmannsthal and Reinhardt united to create the Salzburg Festival. The idea for the festival, its location and its emphases (Mozart and the Austrian dramatic tradition) were his, and he remained active in it until forced into exile in America in 1937. Among his accomplishments there were the annual productions of *Jedermann* and *Faust*, and his last new opera production, Offenbach's *Les contes d'Hoffmann* (1931). His letters and other writings were published as *Ausgewählte Briefe, Reden, Schriften und Szenen aus Regiebüchern* (ed. F. Hadamowsky; Vienna, 1963) and *Leben für das Theater: Briefe, Reden, Aufsätze, Interviews, Gespräche, Auszüge aus Regiebüchern* (ed. H. Fetting; Berlin, 1989).

PAUL SHEREN

Reinhold, Frederick Charles (*b* London, 11 Feb 1741; *d* Somers Town, London, 28 Sept 1815). English bass and organist, son of HENRY THEODORE REINHOLD. He was a boy chorister at St Paul's under William Savage, and as 'Master Reinhold' he sang on stage from 1752, creating Oberon in J.C. Smith's *The Fairies* in February 1755. He was a bass in the chorus for the Foundling Hospital *Messiah* in 1758 and that summer scored a success at Marylebone Gardens in an English version of Pergolesi's *La serva padrona*, also playing an organ concerto at his benefit. For two years he had small roles at Drury Lane and returned to Marylebone in the summer to sing in burletta operas. He went with the Gardens burletta company to Norwich in autumn 1760, and that November became organist of St Peter's Church, Colchester, advertising himself as a teacher of harpsichord, guitar, violin and singing. He performed in the summer season at the Haymarket Theatre, London, in 1761, but then sang only occasionally in the capital before he was engaged at Covent Garden in 1769. There he sang traditional bass parts such as Hecate in *Macbeth*, but also Hawthorn in Arne's pasticcio *Love in a Village* and Giles in *The Maid of the Mill*, with music arranged by Samuel Arnold. His performance of the traitor Artabarnes in Arne's *Artaxerxes* was much admired. He sang in oratorios in London and the provinces and was a principal bass in the 1784 Handel Commemoration concerts. Boaden called him 'a fine manly singer and excellent musician' and Dibdin wrote that he was 'really possessed of a voice' but felt that he spoiled it by too much falsetto. Reinhold became organist of St George the Martyr, Bloomsbury, in 1783 and left the Covent Garden company the following year. He continued to sing in oratorio concerts until March 1798, when 'The trumpet shall sound' was his final solo.

OLIVE BALDWIN, THELMA WILSON

Reinhold, Henry Theodore (*d* London, 14 May 1751). English bass of German descent. His origins are obscure; he named his second son Theodore Chriestlieb and may well have been related to the Dresden organist and composer Theodor Christlieb Reinhold. He was second bass in Handel's *Atalanta* in May 1736 and the sole bass the following season, when he sang in the premières of *Arminio*, *Giustino* and *Berenice*. Later in 1737 he created the comic role of the Dragon in Lampe's *The Dragon of Wantley*, which received 68 performances in its first season. His other English stage roles included Sir Trusty in Arne's *Rosamond* and the Lion in Lampe's *Pyramus and Thisbe*. In Handel's two seasons at Lincoln's Inn Fields Theatre (1739–41) he sang Polyphemus in *Acis and Galatea* ('O ruddier than the cherry' became a song he performed at theatre benefits) and created the bass parts in *L'Allegro* and Handel's last two operas, *Imeneo* and *Deidamia*. While continuing to sing English stage music, he became the composer's principal oratorio bass from 1743, when he created the role of Harapha in *Samson* and sang in the first London performance of *Messiah*. Between 1744 and Reinhold's death Handel wrote parts for him in *Semele*, *Joseph and his Brethren*, *Hercules*, *Belshazzar*, the *Occasional Oratorio*, *Judas Maccabaeus*, *Joshua*, *Alexander Balus*, *Susanna*, *Solomon* and *Theodora*. He was one of the 'good Set of Singers' Handel wrote of having for *Belshazzar*, and the composer entrusted him with substantial roles and a wide range of characterizations. The compass of most of his oratorio parts is from G to *e*′.

Reinhold died between the two Foundling Hospital performances of *Messiah* in 1751, and Drury Lane put on a benefit for his 'Wife and four small Children in great

Distress'. His first name has sometimes been given as Thomas, but he is Theodore Reinhold in the records of the Royal Society of Musicians, of which he was a founder member, and his name appears in his children's baptismal records as Henry or Henry Theodore.

OLIVE BALDWIN, THELMA WILSON

Reinhold, Theodor Christlieb (*b* Eppendorf, Saxony, 13 Sept 1682; *d* Dresden, 24 March 1755). German organist and composer. He came from an old family of clergy, and was registered in the third class of the Dresden Kreuzschule on 20 May 1694. In 1706 he became organist of the Dresden Annenkirche and 'schoolmaster of the girls at Wilssdorf gate'. He was Kantor of the Dreikönigskirche from 1707 until 1720 when he was appointed Kantor of the Kreuzkirche, a post he held until his death. In the same year Reinhold also took over direction of music at the Sophienkirche, Dresden's civic church, and was appointed fifth teacher at the Kreuzschule. As a result of his promotion to fourth teacher at the Kreuzschule on 28 April 1725 Reinhold took charge of sacred music at the new Frauenkirche, writing cantatas to mark the laying of the foundation stone of the church (1726) and its consecration (1734); like most of his works, they are now lost. In 1741 he took over the direction of a newly founded collegium musicum, mainly for the performance of cantatas and serenades; he had earlier been concerned with a collegium musicum connected with the Kreuzkirche. He was promoted to third teacher at the Kreuzschule on 5 May 1752. His successor was Bach's pupil G.A. Homilius.

Reinhold was Kantor of the Dresden Kreuzkirche at the time that Bach was Kantor of the Thomaskirche in Leipzig. Reinhold's choir comprised 34 pupils and at least 22 'Kurrendaner' (members who were engaged for special occasions). He also recruited volunteer singers to reinforce the choir for performances of his large-scale festive cantatas. At the service consecrating the new Silbermann organ in the Frauenkirche in 1736 Reinhold was the first to employ the effect, subsequently used repeatedly, of positioning choral groups in different places so as to cause a 'well-composed echo to [resound] from the uppermost dome of the church'. He was the leader of the German forces that resisted the increasing foreign influence in Dresden musical life, especially during the Hasse period; he was also an outstanding bass singer. Of his many pupils, J.A. Hiller, C.G. Tag and Christian Wolf later became well known. Hiller is particularly important; he dedicated his *Abhandlung über die Nachahmung der Natur in der Musik* (reprinted in Marpurg's *Historisch-kritische Beyträge*, i, 1754) to Reinhold, and printed two four-part motets by him, Reinhold's only surviving works.

WORKS

Herr, gehe nicht ins Gericht, motet, 4vv, in J.A. Hiller, Vierstimmige Motetten ... von verschiedenen Componisten, i (Leipzig, 1776)
Alle eure Sorgen werfet auf den Herrn, motet, 4vv, in J.A. Hiller, Vierstimmige Motetten ... von verschiedenen Componisten, iv (Leipzig, 1780)
O Herr hilf! O Herr lass alles wohl gelingen!, cant., 26 Aug 1726, lost
Ode, on the death of King August, 1733, lost
Ich freue mich diss, dass mir geredt ist, dass wir werden ins Hauss des Herrn gehen, cant., 28 Feb 1734, lost
Music for the dedication of the Silbermann organ, 25 Nov 1736, lost

DIETER HÄRTWIG/HANS JOHN

Reinicke [Reinike], **Johann Adam.** *See* REINCKEN, JOHANN ADAM.

Reining, Maria (*b* Vienna, 7 Aug 1903; *d* Vienna, 11 March 1991). Austrian soprano. She studied in Vienna, making her début in 1931 at the Staatsoper as a soubrette and remaining for two seasons. After appearances in Darmstadt (1933–5) she joined the Staatsoper in Munich. She returned to Vienna in 1937, singing there with distinction until 1958. She appeared at Salzburg from 1937 to 1941, as Eva, Euryanthe, Elisabeth (*Tannhäuser*), Countess Almaviva and Pamina, and returned as Arabella (1947) and the Marschallin (1949 and 1953). In 1938 she sang Elsa to acclaim at Covent Garden and Eva and Butterfly at Chicago; in 1949, the Marschallin at the Paris Opéra and the Marschallin and Ariadne at the New York City Opera. She had a radiant, well-schooled voice and an elegant and aristocratic stage presence. There remain complete recordings of her Marschallin in Erich Kleiber's notable account of 1954, Ariadne (1944, Vienna) and Arabella (1947, Salzburg), as well as extracts from other roles and operetta. All evince her lovely tone and careful characterization.

HAROLD ROSENTHAL/ALAN BLYTH

Reinitz, Béla (*b* Budapest, 15 Nov 1878; *d* Budapest, 27 Oct 1943). Hungarian composer, critic and administrator. In accordance with his parents' wishes he studied law in Kolozsvár and Budapest, taking his diploma in 1907. He never attended a music college, though he took piano lessons with Ödön Farkas in Kolozsvár and was a composition pupil of A. Siklós in Budapest. His careers as critic and composer began almost simultaneously: in 1908 he published his first criticism in the Budapest newspaper *Népszava*, and his first compositions were settings of Endre Ady's *Vér és arany* ('Blood and Gold'), published in the same year. He worked for *Népszava* until 1914 and then for *Világ* (1917–19) and he was one of the first to recognize the value of the work of Bartók and Kodály. Nonetheless, his most important contribution was his own songs: he worked almost exclusively in that genre, producing more than 500. His songs were first heard at literary gatherings in cafés during the period 1910–20. There he associated with Ady, and Reinitz's songs were partly responsible for bringing Ady's poetry to a wider audience. However, after the first publications (1910–11) a conflict broke out between poet and composer and

Reinitz published no more Ady songs until after the poet's death in 1919. His settings of Ady have an improvisatory quality, with the declamatory vocal part taking the leading role, reflecting Ady's manner of delivery. The accompaniments are ill suited to piano or orchestra but, as Kodály suggested, Reinitz's songs were perhaps a necessary step on the way to those of Bartók, who dedicated his own Ady set to Reinitz. During the same period Reinitz wrote cabaret songs for the first Hungarian cabaret theatre, opened in 1907.

Reinitz had always been politically active, and he took a leading part in musical life at the time of the 1919 proletarian revolution. On the fall of the new republic he was forced into exile and lived in Vienna and Germany until 1931. He continued to compose songs to poetry by Ady and others, and from 1925 he was also active in producing left-wing political numbers to texts by Brecht, Mühsam, Herwegh and Tucholsky; his workers' songs had a great impact on their intended audience. In 1931 he returned to Hungary. A Béla Reinitz evening was held on 13 February 1932: the first occasion on which his songs were performed in a concert hall by professional musicians. He gained wider acceptance than he had had before World War I, but he was unable to find again the stimulating atmosphere of those times. Increasingly isolated, he died in an almshouse.

WORKS
(selective list)

songs unless otherwise stated

Reinken [Reinkinck], **Johann Adam.** *See* REINCKEN, JOHANN ADAM.

Reinmann, Matthias. *See* REYMANN, MATTHIAS.

Reinmar [Wochinz], **Hans** (*b* Vienna, 11 April 1895; *d* Berlin, 7 Feb 1961). Austrian baritone. He studied in Vienna and Milan, making his début at Olomouc in 1919. Nuremberg, Zürich, Dresden and Hamburg claimed him in turn, until in 1928 he sang at the Staatsoper in Berlin where, apart from a break in the 1940s, he remained until 1944, joining the Komische Oper in 1952 and singing there for the last time in Kurka's *The Good Soldier Schweik* two days before his death. At Bayreuth his roles included Gunther and Amfortas, and at Salzburg in 1942 he sang an admired Mandryka. He was also a guest artist at La Scala and in Vienna, Paris and Rome. His Italian training helped him to play a leading part in the Verdi revivals, such as those of *Simon Boccanegra* and *Don Carlos* in Berlin. The crowning achievement of his career was his Boris Godunov, sung in the original version at Berlin and Munich. His many recordings cover both the Italian and the German parts of his repertory, showing a voice of considerable power and beauty, used expressively and with care for evenness of production.

J.B. STEANE

Reinmar von Brennenberg [der Brenneberger, der Brannenburger, der Bremberger] (*d* Regensburg, ? before 1276). German Minnesinger. His identity is uncertain, but it is possible that he came from a Bavarian noble family and was in the service of the Bishop of Regensburg. He died in a local feud at Regensburg; his posthumous fame was enhanced by the rumour that he had paid for an act of courtly homage to a lady with his life. In terms of content and form his Minnelieder and *Sprüche* (*see* SPRUCH), rich in imagery and fantasy, belong among the work of those 13th-century Minnesinger connected with the courtly traditions. His work is close to that of Ulrich von Singenberg, REINMAR VON HAGENAU, HEINRICH VON MORUNGEN and WALTHER VON DER VOGELWEIDE. His output includes four *Kanzonen* (*see* BAR FORM) as well as the *Spruchton* (*Ton* IV) with at least 12 strophes. The *Spruchton* was used by other Minnesinger in the 13th century and was also used in the 14th century for Latin *cantiones*. The manuscript tradition for his poems is unconvincing and contains several errors of form as well as a stylistic diversity that casts doubt on some of the ascriptions. There is no evidence to support his authorship for the 'Brennenberger' Ton in Meistergesang sources, but one melody in the Colmar manuscript (*D-Mbs* Cgm 4997, f.672) has the name 'In dem Brannenberger' and may be his even though it survives only with a later text, *In dyser zyt*; the correct text is probably *Wol mich des tages*.

BURKHARD KIPPENBERG/LORENZ WELKER

Reinmar [Reimar] **(der Alte) von Hagenau** [Hagenouwe] (*fl* 1185–1205; *d* *c*1205). German Minnesinger. He was

possibly a member of the family of imperial ministerial rank from Hagenau in Alsace, but it is not known whether 'von Hagenau' is a reference to a place (of birth or of activity) or is simply a family name. He is not attested in documents of the time: the manuscripts refer to him as 'Reinmar' or 'Reinmar der Alte', and Gotfrid von Strassburg described him as 'die nahtegal von Hagenouwe'. He may have participated in Leopold VI's crusade of 1197–8. Reinmar was one of the leading representatives of Hoher Minnesang, the form of which he raised to classic perfection. It was presumably he who brought this art form from his western homeland to Austria, where he was possibly employed in the Babenberg court in 1195. The character of his poetry is original and reveals hardly any influences of Friedrich von Hûsen's Rhenish school of poetry, which was orientated towards the Provençal lyric; all that can be discerned is the adoption of motifs and themes from the Danube school.

Reinmar's virtuosity had a far-reaching effect on contemporary poetry and poets, such as Ulrich von Lichtenstein, Neidhart von Reuental, and above all Walther von der Vogelweide, who may have been his pupil but was later his rival. The Meistersinger later regarded him as one of the 12 *alte Meister*. The characteristic features of his style are sensitivity, veiled circumlocutions and affected turns of phrase. His poetry combines themes of glorification of chivalrous virtue and of the lady of courtly society with reflection, self-analysis and autobiographical remarks.

Reinmar's considerable influence on other poets and a problematic manuscript tradition make it difficult to separate the authentic strophes from the inauthentic. Von Kraus and others believed that only about half of the 60 'Reinmar' poems were by the poet, but current thought considers all of them to be authentic. About 86 *Töne* with 340 strophes are transmitted in the manuscripts. It is possible to construct some kind of chronological order for his poems from the literary dispute between Reinmar and Walther von der Vogelweide (which is documented in several poems by both men) and from references made in his own poems.

BURKHARD KIPPENBERG/LORENZ WELKER

Reinmar von Zweter [Reymar von Zwetel, Reymar von Zweten, Römer von Zwickau, Ehrenbote] (*b c*1200; *d c*1260). German poet. The only biographical clues are contained in his poetry, according to which he was born of a noble family from Rhenish Franconia and was an itinerant musician. He grew up in Austria and spent time during his later travels at the courts of the Babenbergs in Vienna and of King Wenceslas I in Prague; he also spent periods in Cologne, Mainz and probably in Meissen. He composed *Sprüche* (*see* SPRUCH) with a variety of themes – religious, instructive, ethical and political.

Together with Bruder Wernher, Reinmar von Zweter is the most important *Spruch* poet of the later, less talented generation of poets after Walther von der Vogelweide. The content, style and form of his poetry is based on that of Walther. Nevertheless he is mentioned in the dedication of the Wartburgkrieg, and the later Meistersinger honoured him as one of the 12 old masters, perhaps on the basis of his 'Frauen-Ehren-Ton' for which he himself wrote over 200 *Spruch* stanzas and which formed the basis of many Meistersinger poems until the time of Hans Sachs. His surviving poetry comprises one *Leich* with 234 lines, several *spruch*-like lieder on courtly-love themes, and almost 300 authentic *Spruch* stanzas. The surviving musical evidence is small and confusing. The famous 'Frauen-Ehren-Ton' appears with three different melodies: one is in the Colmar and Donaueschingen manuscripts (ed. in Runge, 155; Taylor, i, 71 with facs.), another is in the lost manuscript of Adam Puschman (ed. in Münzer, no.69) and yet another is in *D-Bsb* ms.fol.25. His one *Leich*, entitled *Got unt dîn eben êwikeit*, appears with music only in the Wiener Leichhandschrift (*A-Wn* 2701, ed. in Rietsch, 62; Taylor, i, 72). There is considerable doubt about the authenticity of the 'Sangweise' (*D-DO* 120, ed. in Runge, 184), the 'Schallweise' (*D-Mbs* Cgm 4997, ed. in Runge, 184 and Taylor, i, 148) and the 'Spiegelweise' (*D-Mbs* Cgm 4997,

ed. in Runge, 161 and Taylor, i, 72; a different melody is in *D-Bsb* ms.fol.25).

Reinoso [Reynoso], **Joseph María** (*b* Seville, ?1740s–50s; *d* Salamanca, 23 May 1802). Spanish tenor and composer. In 1765, after competing with ten other candidates, and as a result of his exceptional quality as a tenor soloist, he was awarded a prebend at Salamanca Cathedral; he had previously sung at Seville Cathedral. Although his appointment did not involve compositional duties, it seems that he was made responsible for the Latin liturgical compositions in the last years during which Juan Martín was *maestro de capilla* (he retired in 1781) and the early period of his successor, M.J. Doyagüe. Most of Reinoso's compositions are written in concertato style with obbligato instruments, though he also wrote some interesting pieces which are *a cappella* or with continuo accompaniment. His three *Magnificat* settings show original harmonic experimentation that was quite uncommon in Spain at that time, and which is absent in his compositions for larger ensembles. (J. Artero: 'Oposiciones al magisterio de capilla en España durante el siglo XVIII', *AnM*, ii, 1947, pp.191–202)

WORKS

MSS in E-SA unless otherwise stated

Lat. works: 12 masses; 48 motets, 1 in *E-Sc*; 19 ants; 3 Mag, ed. J. Artero, *TSM*, xxxviii (1955), music suppl., 9–17; 18 pss; 2 hymns; 2 Lamentations; 1 off; 1 Response for the Dead; 5 seqs
Sp. works: 10 cants. and arias; 3 villancicos; 6 liturgical compositions

ÁLVARO TORRENTE

Reinspeck, Michael. *See* KEINSPECK, MICHAEL.

Reinthaler, Karl (Martin) (*b* Erfurt, 13 Oct 1822; *d* Bremen, 13 Feb 1896). German conductor and composer. He had early training in music from A.G. Ritter and then studied theology in Berlin, but after passing his state examination devoted himself entirely to music and studied with A.B. Marx. His first attempts at composition attracted the attention of Friedrich Wilhelm IV and procured him a travelling grant. He visited Paris, Milan, Rome and Naples, taking singing lessons from Geraldi and Bordogni. On his return to Germany in 1853 he obtained a post at the Cologne Conservatory and in 1858 became organist in Bremen Cathedral and conductor of the Singakademie. He had already composed an oratorio, *Jephtha* (performed in London in 1856 by Hullah), and in 1875 his opera *Edda* was successfully produced at Bremen, Hanover and elsewhere. His *Bismarckhymne* obtained the prize at Dortmund, and he composed a symphony and a large number of part-songs. His cantata *In der Wüste* was highly successful and his opera *Käthchen von Heilbronn*, based on Kleist's drama, was chosen by competition for the opening in 1881 of the new opera house at Frankfurt. Reinthaler was a member of the Berlin Academy from 1882 and became Royal Professor in 1888. He retired from the Singakademie in 1890.

Reinthaler is today remembered for his friendship with Brahms; in 1868 he and the Singakademie prepared the first performance of the *German Requiem*, which was conducted by Brahms himself on 10 April. As a composer Reinthaler wrote in a lucid, moderately Romantic style modelled on Mendelssohn and Moritz Hauptmann, concentrating on sacred vocal music.

FRANZ GEHRING/BERND WIECHERT

Reis, Jakub. *See* REYS, JAKUB.

Reisch, Gregor [Reischius, Georgium] (*b* Balingen, nr Tübingen, *c*1465–70; *d* Freiburg, 9 May 1525). German scholar and music theorist. He studied at Freiburg University, becoming *magister* in 1489, and at Ingolstadt University, and then entered the Carthusian order. He was prior of the monasteries of Klein-Basel (1500–02) and Freiburg (1503–25). He was in close contact with the best humanists of his time, was one of Johannes Eck's teachers, and was considered one of Germany's most learned men; Erasmus referred to him as an 'oracle' among the Germans.

Reisch's *Margarita philosophica* (Freiburg, 1503) was an enormously popular Latin dialogue textbook and was frequently reissued; its last edition appeared in 1600. (It is unlikely that there was an edition produced at Heidelberg in 1496; contrary to *MGG1*, the textbook is not the same as S. Hawes's *The Passetime of Pleasure*, London, 1509.) The fifth book is divided into two parts, concerning the 'principles' and 'practice' of music, and cites such authorities as Pythagoras, Plato, Augustine, Boethius and al-Fārābī. On the whole it is a typical Renaissance didactic treatise, dealing with definitions and origins of music, divisions into *musica mundana*, *humana* and *instrumentalis*, classification of consonances and dissonances, use of the monochord, medieval church modes and hexachord solmization. Of special interest are the relatively extensive music examples, which in the first

edition are written in *Hufnagelschrift*. The 1512 edition incorporates a part of Nicolaus Wollick's *Opus aureum musicae* (1501) to serve as a section on *musica figurata*.

T. HERMAN KEAHEY

Reise, Jay (*b* New York, 9 Feb 1950). American composer. He studied at Hamilton College and McGill University before completing the MA degree at the University of Pennsylvania, where his teachers included Crumb and Wernick. He has taught at Hamilton and Kirkland colleges and at the University of Pennsylvania. His honours include awards from the Fromm, Guggenheim and Rockefeller foundations.

Reise's two-act opera *Rasputin*, commissioned by the New York City Opera, is imaginatively scored for large orchestra. Although predominantly atonal, the music for the Romanovs employs a lush, early 20th-century tonal style. Such a juxtaposition of lyricism and dissonance is characteristic of many of Reise's works. Later projects include a choreographic tone poem based on Oscar Wilde's *The Selfish Giant*, commissioned by the Philharmonia Orchestra, and a film based on Raymond Radiguet's *Le diable du corps*, commissioned by Operamovies Ltd., London. Deeply influenced by Carnatic and world music rhythms, Reise has also developed his own rhythmic system, a signature element of his music after 1990. The chamber concerto *Chesapeake Rhythms* and the *Six Preludes for Piano* have been recorded.

JAMES FREEMAN

Reisen, Mark. *See* REYZEN, MARK.

Reisenauer, Alfred (*b* Königsberg, 1 Nov 1863; *d* Libau, 3 Oct 1907). German pianist and composer. A child prodigy, he studied music first with his mother and then with L. Köhler. When he was 12 his parents took him to Weimar for an audition with Liszt, whose favourite pupil he soon became and with whom he made his début at Rome in 1881. After a period spent studying law in Leipzig, and after playing in London and throughout much of Germany, he undertook extended tours of Russia, Siberia and China; he settled in 1900 as a teacher at the Leipzig Conservatory. Among his pupils were Sergei Bortkiewicz, Bruno Hinze-Reinhold and Sigfrid Karg-Elert. He continued to give concerts (over 2000 altogether), and died during another Russian tour. His piano playing was highly praised by Niemann, especially his interpretation of Romantic music; as a composer he was noted for many fine songs and the *Reisebilder* op.14 for piano.

CHARLES HOPKINS

Reisenberg (Sherman), Nadia (*b* Vilnius, 14 July 1904; *d* New York, 10 June 1983). American pianist of Russian birth. She studied with Leonid Nikolayev at the St Petersburg (later Petrograd) Conservatory. Leaving the USSR in 1920, she toured in Poland, Latvia, Lithuania and Germany before going to the USA, where, after further studies with Alexander Lambert and Hofmann, she made her New York début in 1922, playing Paderewski's *Fantaisie polonaise* in the composer's presence. She made international tours as a soloist and recitalist in the 1930s and played chamber music with the Budapest Quartet. In 1939 she performed a Mozart concerto cycle on radio conducted by Wallenstein. She gave the American premières of works by Shostakovich, Stravinsky, Schoenberg and several young Soviet composers. Reisenberg taught at the Curtis Institute, the Mannes College, Queens College, CUNY and the Juilliard School; her students included Richard Goode and Myung-Whun Chung. Reisenberg's facile technique and strong musical values made her popular among her professional colleagues as well as with audiences. Her sister was the theremin player Clara Rockmore (*b* Vilnius, 9 March 1911; *d* New York, 10 May 1998).

Reisinger, Barbara. *See* GERL family.

Reiss, Józef (Władysław) [Dembina, Jan] (*b* Dębica, 4 Aug 1879; *d* Kraków, 22 Feb 1956). Polish musicologist. He studied history at Kraków University and musicology with Adler at Vienna University. In addition to his activities as a secondary school teacher, from 1901 he lectured on theoretical subjects at the Kraków Conservatory. In 1910 he took the doctorate in Vienna with a dissertation on Gomółka's psalm tunes (1580) and in 1922 he completed the *Habilitation* at Kraków with a work on the Polish polyphonic hymn in the 16th century; he worked in the musicology department until 1939. After the war he resumed his post at Kraków; he was appointed professor in 1949, and retired as professor emeritus in 1953.

Reiss united scholarly interests with activities as a popularizer. He published a series of valuable articles on the history of early Polish music as well as discussions of aesthetic and sociological questions, books on acoustics and instruments, monographs on Beethoven and Wieniawski, and numerous popular articles on Polish and

foreign composers of the 19th and 20th centuries. He also wrote textbooks on harmony, music history and musical forms for music schools. His publications played a great part in promoting general music education in Poland.

ZOFIA HELMAN

Reiss, Thelma (*b* Plymouth, 2 July 1906; *d* Aldeburgh, 17 Sept 1991). English cellist. She studied with Ivor James at the RCM and made her London début at the Wigmore Hall with the pianist Joan Black in 1930, after which Sir Henry Wood invited her to play the Elgar Cello Concerto at a Promenade Concert. From this time she pursued an international career and was recognized as one of the foremost British cellists of the day. She appeared with most of the world's leading orchestras and conductors, gave many recitals with Myra Hess and broadcast frequently for the BBC. She gave the première of George Dyson's Fantasy at the 1936 Three Choirs Festival in Hereford. In 1936 and 1938 she toured Poland and the Baltic states, and during World War II gave concerts at factories and hospitals throughout the United Kingdom. From 1945 she appeared in a number of the National Gallery concerts with Myra Hess. Her repertory ranged from Bach to Debussy, and included all the standard concertos. Reiss's playing was stylish and brilliantly executed, but it was her expressive warmth which captivated her audiences. A debilitating illness forced her to retire from the concert platform in 1955.

MARGARET CAMPBELL

Reissiger, Carl Gottlieb (*b* Belzig, 31 Jan 1798; *d* Dresden, 7 Nov 1859). German composer, conductor and teacher. He was the eldest son of Christian Gottlieb Reissiger, organist and choirmaster at Belzig, and had his first violin and piano lessons from his father. At the age of ten he was giving public piano recitals and accompanying community hymn-singing on the organ. From 1811 to 1818 he was a pupil at the Thomasschule in Leipzig, where he studied the piano and composition with Schicht, the musical director, as well as taking classes in the violin, viola and singing. He began studying theology at the University of Leipzig; in the same year Schicht advised him to abandon these studies in favour of a musical career, and two years later awarded him a bursary to further his musical studies elsewhere. In 1821 Reissiger left Leipzig for Vienna, where he took theory lessons from Salieri, and in 1822 he moved to Munich to study composition and singing with Winter. By that time his songs and piano pieces were gaining public favour, though he failed in his attempts to gain municipal posts at Leipzig in 1822 and Dresden in 1824. However, his first performed opera, *Didone abbandonata*, was given in Dresden in 1824 under the direction of Weber with moderate success, and Reissiger was given 500 thalers by the King of Prussia to study the methods of musical education in France and Italy and to advise on its reorganization in Berlin. In Rome he studied the music of the old masters with Baini, the greatest authority of his time on Palestrina. On his return to Berlin in 1825 he taught composition until invited in the following year to succeed Weber as director of the Hofoper in Dresden. As a champion of German opera, he was at first harassed by pro-Italian factions, but his excellent performances of *Oberon* and *Euryanthe* won him approval, and in 1828 he was appointed Hofkapellmeister with responsibility for sacred music, chamber music and the music for the court theatre, a post he held until his death. Besides his activities as Kapellmeister, his contract also obliged him to compose a mass annually for no extra fee. The records show that in all he composed 12 Latin masses and a Requiem during his term of office in Dresden. Under his direction the Dresden Opera became acknowledged as the best in Germany; in 1842 he gave the first performance of Wagner's *Rienzi* and in 1843 welcomed its composer as second Kapellmeister. Relations between the two men deteriorated when Reissiger declined to set Wagner's libretto *Die hohe Braut*, after which Wagner portrayed him, apparently quite falsely, as a philistine opponent of his progressive artistic views. Wagner was probably entirely responsible for this deterioration in the relationship between the two musicians; in fact in 1852, three

years after Wagner's flight from Dresden, Reissiger was planning to revive *Tannhäuser* there. Moreover, a textual analysis of Reissiger's sole oratorio, *David*, has revealed that the Bible texts were altered to form a tribute to the King of Saxony – something guaranteed to set the revolutionary Wagner against Reissiger. Reissiger was noted as a gifted conductor – in 1851 he was appointed principal Kapellmeister in recognition of his achievements, and in 1854 Berlioz wrote of the high standard of the Dresden orchestra – and he was also regularly called upon to direct music festivals, adjudicate at competitions and advise on musical education. Clara Schumann was one of his theory pupils, and Gustav Merkel and Joachim Raff also studied with him.

Although Reissiger was extremely busy not only as musical director of the Opera, the symphony concerts and church music for the Catholic Hofkirche, but also as a coach and as a pianist at the society soirées of Dresden, he wrote a surprisingly large number of compositions. Two autograph dates show how fast he worked: the Kyrie of the eighth Mass in B minor (now in *D-Mbs*), is dated 30 May 1848, and the Gloria from the same mass (in *D-Dl*) was completed on 8 June in the same year; both the Kyrie and the Gloria are fully scored (for soloists, chorus and orchestra). Although Reissiger must have written most of his works for use in Dresden, his operas were performed in Prague, Copenhagen, Leipzig and Weimar; his overtures were widely played, and his masses were sung in Erfurt and Vienna. The *Allgemeine Wiener Musikzeitung* mentions performances of the fifth and third masses in Vienna in 1843. His other works include 80 or so published piano solos and 70 or 80 collections of songs and duets. It is noteworthy that, independently of the development of the genre by Schubert and his circle of friends in Vienna, Reissiger too composed chamber music songs with an obbligato melodic instrument in addition to the singing voice and the piano; in all he wrote six works for voice, horn and piano, as well as a song for soprano, horn and harp, obviously inspired by his great admiration for Louis Spohr, whose wife was a harpist. Besides his 12 masses, he wrote around 90 sacred shorter choral works, some with orchestra, some *a cappella* (for up to eight voices), as well as works with only organ accompaniment (German figural masses, interesting in respect of the history of the liturgy) or *a cappella* with extra wind band accompaniment added later (for the song festival of the Ost-Erzgebirge Männergesangverein in Annaberg in 1949). His compositions also include 27 piano trios and other chamber music, and eight operas, of which only *Die Felsenmühle* (1831) was successful outside Dresden. His melodrama *Yelva* (1827) enjoyed widespread popularity, as did the fifth of his *Danses brillantes pour le pianoforte* (1822), known as 'Webers letzter Gedanke'. He wrote several male-voice choruses for the Liedertafel.

Despite the considerable war damage to Dresden, by far the largest part of Reissiger's work has been preserved. However, only a tiny fragment (from the Credo) survives from the Mass he dedicated to the Leipzig town council in 1819. Research has led to the conclusion that he gave away many of his works, to A.F. Santini in Rome, Fétis in Brussels, Berlioz in Paris and Aloys Fuchs in Vienna. There are some 90 printed works in the Bayerische Staatsbibliothek, Munich, about 150 in the Österreichische Nationalbibliothek, Vienna, and a smaller number in the Staatsbibliothek Preussischer Kulturbesitz, Berlin.

Reissiger embodied the dying tradition of the Kapellmeister-composer, and despite sound craftsmanship (Schumann described the construction of his piano trios as 'exemplary') his music has largely been forgotten, no doubt because of lack of individuality. His chamber music, like that of Spohr and Onslow, remains within the limits of the tradition of Mozart and Beethoven; his solo and choral songs recall those of Weber and Marschner, and his piano music is indebted to the 'brilliant' style of Herz and Hünten. Weak librettos, insufficient dramatic tension and his proximity to Weber have consigned his operas to oblivion. Probably Reissiger's most rewarding music lies in the masses and the oratorio *David*, which although often retrospective in style (especially in their frequent recourse to strict counterpoint) often reveal considerable harmonic imagination.

Reissiger's younger brother Friedrich August (*b* Belzig, 26 July 1809; *d* Fredrikshald, Norway, 2 March 1883) was also intended for a theological career but turned to music, settled in Christiania (now Oslo) and gained a modest reputation there as a conductor, military bandmaster, composer and teacher; his works include lieder, sacred works, choral and piano pieces and four operas.

WORKS

STAGE

first performed at the Hofoper, Dresden, unless otherwise stated

Das Rockenweibchen (op), 1821, unperf., ov. pubd
Nero (incid music), 1822, ov. pubd
Didone abbandonata (os, 2, P. Metastasio), 31 Jan 1824
Der Ahnenschatz (op, G. Döring), 1825, inc., unperf.
Yelva (melodrama, 2, T. Hell, after E. Scribe), 21 Oct 1828
Libella (grosse Oper, 2, Theophania), 4 Jan 1829
Die Felsenmühle zu Etalières (romantische Oper, 2, B. von Miltitz), 10 April 1831
Turandot (grosse Oper, 2, C. Gozzi), 22 Jan 1835
Adèle de Foix (grosse Oper, 4, R. Blum), 26 Nov 1841
Der Schiffbruch der Medusa (op, 4, after Brothers Cogniard), 16 Aug 1846

VOCAL

David (orat), 1v, chorus, orch
Requiem, 12 masses, 6 Ger. masses, motets, hymns, pss, grads, offs, Miserere settings, chorale settings, sacred songs
8 bks of Liedertafel songs, male vv; other partsongs, 1 bk for mixed chorus, 1 bk for male vv; *c*10 bks of duets, 2vv, pf; *c*60 bks of songs, 1v, pf; 1 bk of songs, 1v, hn, pf; individual partsongs and solo songs

INSTRUMENTAL

Orch: Sym.; many ovs.; Fl Concertino; Cl Concertino; Fantasia, cl, orch; Elegie and Rondo, hn, orch
Chbr: 3 pf qnts; Qnt, 2 vn, va, 2 vc; 7 pf qts; 8 str qts; 27 pf trios; 5 sonatas, vn, pf; 2 sonatas, vc, pf; other works: vn solo; vn, pf; vc, pf; cl, pf; hn, pf; v, hn, pf; S, hn, hp
Pf solo: numerous rondos; sonatas, variation sets, marches, ovs., other works

JOHN RUTTER/MANFRED FENSTERER

Reissmann, August (Friedrich Wilhelm) (*b* Frankenstein, Silesia, 14 Nov 1825; *d* Berlin, 13 July 1903). German writer on music and composer. In Breslau from 1843 he studied principally with Mosewius and E.L. Richter. In 1850 he settled in Weimar, and from 1863 to 1880 lived in Berlin, where he remained (apart from short stays in Wiesbaden and Leipzig) for the rest of his life, teaching at the Stern Conservatory from 1866 to 1874. As a conservatively biassed writer on music he was especially active between 1861 and 1893, but most of his work consists of superficial essays. In his books he showed a preference for musical analysis rather than research and the presentation of biographical facts, but the *Musikalisches Conversations-Lexikon*, which he edited after the death of its previous editor Hermann Mendel, is still useful as a wide-ranging reference book for 19th-century music. Though he never won a reputation as a composer, Reissmann wrote three operas: *Gudrun* (Leipzig, 1871), based on a German poem, and *Die Bürgermeisterin von Schorndorf* (Leipzig, 1880) and *Das Gralspiel* (Düsseldorf, 1895), both based on historical events. He also composed choral works, a symphony, a violin concerto, music for violin and piano, piano pieces and songs.

MARTIN ELSTE

Reiter, Franz de Paula von. *See* ROSER, FRANZ DE PAULA.

Reiter, Josef (*b* Braunau, 19 Jan 1862; *d* Bad Reichenhall, 2 June 1939). Austrian composer. After studying music with his father in Braunau, in 1886 he went to Vienna, where he worked as a music teacher and conductor. From 1908 to 1911 he was director of the Mozarteum in Salzburg, and in 1917–18 Kapellmeister at the Hofburgtheater in Vienna. Primarily a composer of lieder and choral music, Reiter also wrote sacred works and chamber music, as well as a number of operas in a neo-Wagnerian style, none of which achieved any lasting success. *Der Bundschuh* (1897) was given by Mahler at the Hofoper in Vienna in 1901, but withdrawn after five performances. When in 1904 Reiter submitted his next opera, *Der Totentanz*, for performance in Vienna, it was rejected by Mahler. *Der Tell* fared little better and was never revived.

Reiter became a staunch supporter of the Nazis during the 1920s, and in 1931 dedicated his *Goethe Symphony* to Hitler. His loyalty was rewarded with revivals of both *Der Bundschuh* and *Der Totentanz* at the Deutsches Opernhaus in Berlin in 1938. The same year Universal Edition reissued his *Festgesang an einem Friedensfürsten* under the new title of *Festgesang an den Führer des deutschen Volkes* in celebration of the *Anschluss*.

WORKS

Stage: Fritjof, 1884–5, unperf.; Klopstock in Zürich (1, M. Morold), Linz, 12 April 1893; Der Bundschuh (1, Morold), Troppau, 18 March 1897, vs (Leipzig, 1901); Der Totentanz (3, Morold), Dessau, 5 Nov 1905, vs (Vienna, 1905); Der Tell (3, Morold), Vienna, Volksoper, 3 Nov 1917, vs (Leipzig and Zürich, 1917); incidental music to Der Bauer als Millionär (F. Raimund), Vienna, Hofburgtheater, 15 Feb 1918
Vocal: Festgesang an einem Friedensfürsten (Milow), cant., op.40, 1899, rev. as Festgesang an den Führer des deutschen Volkes (1938); Requiem, op.60, 1903; Te Deum (von Schenkendorf), op.112, 1915; Weinachtsmesse, op.120, 1917/18; Ostermesse, op.137, 1921; numerous lieder and a cappella works

ERIK LEVI

Reiz, Jakub de. *See* REYS, JAKUB.

Reizen, Mark. *See* REYZEN, MARK.

Reizenstein, Franz (Theodor) (*b* Nuremberg, 7 June 1911; *d* London, 15 Oct 1968). English composer and pianist of German birth. He came of an artistic and musical family; in 1930 he went to the Berlin State Academy, where he studied composition with Hindemith and the piano with Leonid Kreutzer. Unable to remain in Germany when the Nazis came to power, he left for London in 1934. There he studied composition with Vaughan Williams at the RCM, and took piano lessons privately

with Solomon. Interned as an alien at the beginning of the war, he was later released on the advocacy of Vaughan Williams (he worked until the end of the war as a railway clerk, also performing at many wartime concerts). Reizenstein was a professor of piano at the RAM (1958–68) and at the RMCM (1962–8). He formed his own piano trio, and often appeared as a soloist in concertos and recitals, playing his own works, those of Hindemith and many lesser known concertos.

Reizenstein's compositional style evinces a synthesis of the contrapuntal vigour and terse motivic process of Hindemith with the lyrical expansiveness of Vaughan Williams and the English tradition. His output may be divided into three periods. The first, from 1936 to 1945, includes the early Piano Concerto and First Piano Sonata in which vigorous motivic development, rhythmic energy and a predilection for fugato textures is foremost, balanced by eloquent lyricisim. The second phase of composition, from 1947 to 1959, contains some of his finest works, from the Scherzo op.21 to the Second Piano Concerto. In the masterly Piano Quintet there is a more elegiac, rounded melodic and expressive power reminiscent at times of Shostakovich; this is particularly so in the dramatic Adagio or the dazzling Scherzo, of which Hans Keller wrote 'The texture proves to be immaculate ... so that one is left with the impression that this movement may be the best, if not indeed the only, truly pianoquintettish piece ever written'. The virtuoso 12 Preludes and Fugues for piano (1955), one of Reizenstein's finest works, exemplifies his harmonic idiom: frequently based on 4ths and semitones, it explores modality and polytonality, with a translucent consonance often more like Bartók than Hindemith. Inspired by Hindemith's *Ludas tonalis* and based on the 'series I' for its key sequence, each prelude is connected thematically to its fugue, with a brilliant and sustained fugue as a climax to the cycle.

In the 1950s Reizenstein wrote a number of film scores and two of the most witty and successful pastiche works ever performed at Gerard Hoffnung's musical entertainments. His works for orchestra are relatively few, and the symphony at which he was working in his later years was never completed. Though there was no sharp break with earlier practices, his later style contains more genial, romantic and expressive elements and freer types of thematic development and transformation. The noble Elizabeth Browning Sonnets display his subtle and perceptive word-setting.

WORKS

ORCHESTRAL

Vc Conc, op.8, 1936, rev. 1948; Capriccio, 1938; Ballet Suite, op.15, 1940; Pf Conc. no.1, op.16, 1941; Cyrano de Bergerac, ov., op.28, 1951; Serenade, F, op.29, wind, 1951, arr. as op.29a, orch, 1951; A Jolly Ov., 1952; Vn Conc., op.31, 1953; Conc. popolare, 1958 [for Hoffnung concert]; Pf Conc. no.2, op.37, 1959; Conc., op.43, str, 1967; film music

VOCAL

HUGO COLE/MALCOLM MILLER

Rejcha, Anton [Antonín]. *See* REICHA, ANTOINE.

Rejcha, Josef. *See* REICHA, JOSEF.

Rejdovák, rejdovačka (Cz.). A pair of Czech folkdances that became known by the German term REDOWA.

Réjouissance (Fr.). A 17th-century term for a public festivity to mark an important event such as a royal birth. The *réjouissance* to celebrate the erection of the statue of Louis XIV in the Place Vendôme in 1699 included music performed in barges on the Seine and a display of fireworks. The term was later applied to movements of a lively and joyous character in 18th-century orchestral suites in the French style, where the mood of rejoicing can be enhanced by brass and woodwind instruments (e.g. J.S. Bach's Orchestral Suite no.4 in D, in the character of a polonaise); the style may also be an expressive point of reference ('Et resurrexit' of the B minor Mass). Telemann's suites (TWV55) contain a total of 18 *réjouissances* in a variety of time signatures, some in minor keys. Timpani contribute further to this joyous effect in 'La réjouissance', appropriately included by Handel in his Royal Fireworks music written to celebrate the Peace of Aix-la-Chapelle in 1749.

DAVID LEDBETTER

Relative key (Ger. *Paralleltonart*). A key with the same key signature as another: C major is the relative major of A minor; E minor is the relative minor of G major. *See also* KEY (i) and TONALITY.

Relish. A term used to denote particular ornaments. *See* ORNAMENTS, §6.

Rellstab, Johann Carl Friedrich (*b* Berlin, 27 Feb 1759; *d* Berlin, 19 Aug 1813). German music publisher and composer. From 1768 to 1775 he performed in student concerts at the Joachimsthal Gymnasium, playing keyboard concertos by J.S. and C.P.E. Bach. He studied with

J.F. Agricola from 1773 (mainly the keyboard) and with C.F.C. Fasch in 1776–8 (mainly composition). In 1779 his father, who had acquired Berlin's oldest printing firm, had a stroke, and Rellstab was forced to step into the business and to abandon plans for study with C.P.E. Bach. Soon he enlarged the business, adding a new printing press, a publishing firm and a music shop where keyboard (both English and German), string and wind instruments, musical clocks and tuning forks were sold, and where from 1792, harpsichords, pianos, harps and violin bows were manufactured. In 1783 he established a music lending library, and his firm issued music prints at least as early as 1785. In 1787 he acquired G.L. Winter's publishing firm and in the same year instituted a series of weekly public subscription 'Concerts for Connoisseurs and Amateurs' at the English House, a series he was forced by financial necessity in 1788 to continue as private fortnightly concerts at members' homes. The concerts were often attended by Fasch, Reichardt, Zelter and others, and included both sacred and secular works such as Bach's *Magnificat* and Gluck's *Alceste*. Unfortunate political conditions forced the temporary cancellation of the concerts in 1806 and the sales of many instruments in 1808; in 1812 the lending library almost ceased to function, and the press was permanently shut down. Rellstab continued selling some music and wind instruments, giving lessons in singing, declamation, composition and continuo realization. In his views on theory, he backed Marpurg over Kirnberger and hence maintained a close adherence to the tenets of Rameau regarding chord generation. From 1808 to 1813 he was critic for the *Vossische Zeitung*, for which he wrote 155 reviews and 155 other articles.

Recent scholarship has again drawn attention to the dispute between Rellstab and C.P.E. Bach in 1785. Rellstab claimed to have acquired the rights to Bach's keyboard sonatas 'with altered repeats' W50 (H126, 136–40; 1760) from G.L. Winter's widow. Bach, who had invested money with G.L. Winter in a joint venture for their sales, had later at least partially settled with Winter's widow and received some of the unsold copies. He claimed that the sonatas could not be republished without his release and offered his copies to Rellstab at a low price. Rellstab declined, infuriating Bach by replying that he planned to print 300 copies by September and that Bach could become a partner if he advanced a printing fee. To punish Rellstab, Bach sent his copies to Breitkopf, urging the Leipzig publisher to issue them as soon as possible. Breitkopf's edition (?October) followed closely on the heels of Rellstab's and must have deprived the younger man of anticipated profits, although after Bach's death, Rellstab still professed great admiration for the master.

Rellstab's eldest daughter, Caroline Rellstab (*b* Berlin, 18 April 1793; *d* Breslau, 17 Feb 1813), was a singer noted for her extraordinary range extending to *f'''*. She sang at Breslau from 1811, and was particularly well known for her role as the Queen of Night in Mozart's *Die Zauberflöte*. His son LUDWIG RELLSTAB was a poet and an important music critic.

WORKS

printed works published by Rellstab in Berlin; complete list in Guttmann; op. nos. are those of the publisher unless otherwise stated

VOCAL

Stage: Die Apotheke (Spl, 2, J.J. Engel), unperf., 1 selection as op.16 in Clavier-Magazin für Kenner und Liebhaber (1787), 2 selections as op.28 in Melodie und Harmonie (1788), 5 selections as op.111 (Rellstab op.8) in Lieder und Gesänge verschiedener Art (1791)

Cants., Odes: Zum Geburtstag eines Greises, Zu einer Hochzeitsfeyer, Am Geburtstag einer Mutter, in Lieder und Gesänge verschiedener Art (1791); An die Freude (F. von Schiller), in 14 Compositionen zu Schillers Ode an die Freude (Hamburg, 1799–1800); 4 others, lost

Songs (some 4vv or more): 9, in Clavier-Magazin für Kenner und Liebhaber (1787); 11, in Melodie und Harmonie (1788); 18, in Lieder und Gesänge verschiedener Art (1791); 6, in Winterblumen am Clavier (1793–5); 3 as opp.290, 311, in Blumenkranz dem neuen Jahrhundert geflochten (1800–01); 4 as opp.320, 329, 330, in Frohe und gesellige Lieder (1802–3)

Lost works: TeD, mass, other frags.

INSTRUMENTAL

6 character pieces, pf, op.16, in Clavier-Magazin für Kenner und Liebhaber (1787); Sonata, org/hpd, op.39 (Rellstab op.5), in Melodie und Harmonie (1788); 12 marches, pf, op.79 (Rellstab op.12), in Neue Olla Potrida (1790); 6 solfeggi, kbd, in Neue Olla Potrida (1790); Sonatine, pf, fl, in Neue Olla Potrida (1790); Fantasia, glass harmonica (n.d.)

Lost works: Sym., 2 orchs, 1806; 5 syms., 2 ovs., before 1790; 12 marches, pf, arr. orch without strs; 24 short pieces, 2 vn, b

WRITINGS

Versuch über die Vereinigung der musikalischen und oratorischen Declamation, hauptsächlich für Musiker und Componisten mit erläuternden Beyspielen, op.7 (Rellstab op.1) (Berlin, 1786)

Über die Bemerkungen eines Reisenden, die Berlinischen Kirchenmusiken, Concerte, Oper und königliche Kammermusik betreffend (Berlin, 1789)

Anleitung für Clavierspieler, den Gebrauch der Bachschen Fingersetzung, die Manieren und den Vortrag betreffend, op.62 (Rellstab op.4) (Berlin, 1790)

SHELLEY DAVIS

Rellstab, (Heinrich Friedrich) Ludwig (*b* Berlin, 13 April 1799; *d* Berlin, 27 Nov 1860). German music critic, poet, librettist and novelist, son of JOHANN CARL FRIEDRICH RELLSTAB. As a child he excelled in keyboard performances of Bach and Mozart. In 1816, while a mathematics instructor in the Prussian army, he studied keyboard with Ludwig Berger and theory with Bernhard Klein, and with both of them helped to found the Jüngere Liedertafel in 1819. In 1822 his first published set of poems appeared,

and in 1823 he completed the libretto for Klein's *Dido*. The following year he became a regular contributor to the Berlin *Allgemeine musikalische Zeitung*.

In 1825 Rellstab travelled to Dresden, Prague and Vienna, where in March he met Beethoven; although Beethoven expressed interest in having an opera libretto by Rellstab, no further progress was made. Beethoven never set the poems Rellstab later sent him, but they may have fallen into Schubert's hands and have been among ten Rellstab texts Schubert composed in 1828, including the seven in *Schwanengesang*. In 1826 Rellstab became the critic for the *Vossische Zeitung*, for which he wrote until 1848.

As an outspoken proponent of Weber and Germanic opera, Rellstab in 1826 produced a booklet which satirized not only the singer Henriette Sontag, who had created a vogue for Rossini, but also many of her Berlin admirers. The situation became highly politicized, and Rellstab was held under arrest at Spandau in 1827. He was severely critical of Spontini, the personal favourite of King Friedrich Wilhelm III, and was again imprisoned in 1836. His attitude towards Meyerbeer was also initially unfavourable, and he reported negatively on the Berlin presentation of *Les Huguenots* in 1842; but a reconciliation was effected with the help of Liszt, and Rellstab was entrusted with the German versification of Scribe's adjusted scenario for Meyerbeer's *Ein Feldlager in Schlesien*. He also made German translations of numerous works including the librettos to Halévy's *Le val d'Andorre* and *Le Juif errant*, and Meyerbeer's *Le prophète* and *L'étoile du nord*.

In 1827 Rellstab's *Gedichte* were published, but he gradually turned to writing historical novels. Besides many independently published works, Rellstab wrote articles and reviews for numerous periodicals, edited the periodical *Berlin und Athen* (1836) and in 1830 founded *Iris im Gebiete der Tonkunst*, aimed at sophisticated readers and issued weekly until 1841.

Rellstab's importance today, aside from being the author of poems for a handful of Schubert songs, lies in his music criticism, generally a conservative foil to more progressive voices. The composers he most admired were Berger, Klein, Cherubini, Spohr, Weber and Mendelssohn. He sometimes expressed views against the new Romanticism of Schumann, and he considered that Chopin emphasized difficulty for its own sake in the Piano Concerto op.11, comparing it unfavourably with Mendelssohn's Piano Concerto in G minor. He had some praise for Liszt (who set several of his texts). According to Wilhelm von Lenz, Rellstab was the first to refer to Beethoven's Piano Sonata op.27 no.2 in terms of moonlight: 'a boat visiting, by moonlight, the primitive landscapes of Vierwaldstättersee in Switzerland'.

WORKS SET TO MUSIC

Libs: Dido (op, 3), music B. Klein (Berlin, 1823); Festmusik zum Fest der Naturforscher (cant.), music Mendelssohn, 1827; Irene (op, 3, ballets E. Hoguet), music C. Arnold and Klein, 1832; Festspiel zur hundertjährigen Feier der Einweihung des Opernhauses (Berlin, 1842); Ein Feldlager in Schlesien (Spl, 3, after E. Scribe), music Meyerbeer, 1844; Die Sündfluth (orat, 3), music H. Dam, 1849

Song texts: 10 set by Schubert 1828: Auf dem Strom, Herbst, Lebensmut (frag.), nos.1–7 of Schwanengesang (Liebesbotschaft, Kriegers Ahnung, Frühlingbotschaft, Ständchen, Aufenthalt, In der Ferne, Abschied); 3 set by Liszt: Es rauschen die Winde, *c*1845, Wo weilt er?, *c*1845, Nimm einen Strahl der Sonne (Ihr Auge), 1856

SHELLEY DAVIS/RUFUS HALLMARK

R.E.M. American alternative rock group. Formed in 1980, it consisted of [John] Michael Stipe (*b* Decatur, GA 4 Jan 1960; vocals), Peter Buck (*b* Berkeley, CA, 6 Dec 1956; guitar), Mike Mills (*b* Orange County, CA 17 Dec 1958; bass) and Bill Berry (*b* Duluth, MN 31 July 1958; drums). Berry retired from performing in 1997. They gradually developed large college audiences in the early 1980s as one of the first 'alternative' bands; by the early 90s, they had become one of the most influential and popular bands in the world. Musically, they revived the jangly folk- and country-influenced sound of the Byrds and mixed it with aspects of post-punk rock. Stipe's mumbled enunciation often made his cryptic lyrics hard to decipher, giving the impression of mysterious intensity (and allowing fans to piece together meanings through interpretation and debate). Intensity and ambiguity are hallmarks not only of their lyrics but also their album cover art and aspects of their performances. Ambiguity extended from Stipe's performances into questions of his sexual orientation, which he eventually acknowledged as bisexual. The band began winning critics' awards as early as 1981, and enjoyed critical acclaim throughout its career. The members of the band endorsed a range of leftist political causes, going so far as to invite Greenpeace to set up booths at their shows. (M. Gray: *It Crawled from the South: an R.E.M. Companion*, New York, 1993, 2/1997)

ROBERT WALSER

Remacha (Villar), Fernando (*b* Tudela, 15 Dec 1898; *d* Tudela, 21 Feb 1984). Spanish composer. He studied the violin privately with José del Hierro and at the Real Conservatorio, Madrid, with del Campo, among others, also in Rome with Malipiero (Spanish Rome Prize, 1923). During the 1930s he worked as an arranger and composer for Filmófono and Cinematiraje Riera. After a temporary halt to his musical career following the Spanish Civil War, he gradually resumed his place in musical life during the 1940s. In 1957 he was appointed director of the newly founded Conservatorio Pablo Sarasate in Pamplona, where, until his retirement in 1973, he devoted himself chiefly to music education. His many honours include three National Prizes for Music (1933, 1938, 1980), the Tomás Luis de Victoria Prize (1963), appointment as Hijo Predilecto de Tudela (1973) and the Pablo Iglesias Prize (1981).

Although his studies abroad and his fondness for sacred music distinguished Remacha from other members of the Grupo de los Ocho de Madrid (also known as the Generación del 27), he shared their wish to bring European ideas to Spanish music. Although his early works show occasional nationalistic (*La maja vestida*, 1919), impressionistic (*3 piezas* for the piano, 1920–?23) and atonal (*Alba*, 1922) influences, he adopted a neo-classical style from the middle of the 1920s (*Quam pulchri sunt*, 1925; Suite for Violin and Piano, 1929). During the 1940s and 50s he composed primarily occasional compositions with strong local colour, but also a number of works of considerable artistic value (*Elegía sin palabras*, 1953; Guitar Concerto, 1956) in a predominantly diatonic idiom. Later works are sometimes enriched with atonal elements (*Epitafio*, 1959). Some of his most important compositions, including the expressive cantata *Jesucristo en la cruz* (1963) based on 12-note series, were composed during the 1960s.

WORKS
(*selective list*)

Dramatic: La maja vestida (ballet, M. Bacarisse), 1919, Paris, 1937; film scores

Choral: Cant. (Bible: *Psalms*), T, B, SATB, orch, 1923; In festa concepciones de beate Marie, SATB, orch, 1923–4, lost; Motet 'O vos omnes', SATB 4/8vv, orch, 1923; Quam pulchri sunt, S, A, B, SATB, orch, 1925; Vísperas de San Fermín, A, B, SATB 4/8vv, orch, org, 1951; Jesucristo en la cruz, S, T, SATB, orch, 1963; La bajada del angel, A, SATB, orch, 1973; Epitafio, SATB, orch, 1973; Elegía sin palabras in memoriam de Jesús García Leoz, SSAA, org, orch, 1975; many unacc. works

Other vocal: Veni sponsa Christi, S, Mez, hmn, 1950; 6 canciones vascas, S, pf, 1951; 2 cantares y un cantarcillo, S, pf, 1953; Elegía sin palabras in memoriam de Jesús García Leoz, S, pf, 1953; Misa en honor a la Virgen del Rosario, 2 female vv, org, 1953; Canción romántica, Mez, pf, 1954; Himno en honor a San Agustín, SSAA, org, 1955; Nouturnio, Mez, pf, 1958; El domingo del sol, S, pf (1995); Venid Jesús mío, S, Mez, hmn (1995)

Orch: Alba, sym. poem, 1922; Sinfonía a tres tiempos, 1925; Suite 'Homenaje a Góngora', 1927; Suite, 1931, lost; Prelude 'Homenaje a Arbós', 1934; Gui Conc., 1956; Rapsodia de Estella, 1958

Chbr and solo inst: 3 piezas, pf, 1920–?23; Str Qt, 1924; Suite, vn, pf, 1929; Pf Qt, 1933; Invención, pf, 1942; Prelude and Fugue, pf, 1945; Cartel de fiestas, pf, 1946; Romanza, vn, pf, 1954; Epitafio 'A la memoria de Juan Crisóstomo Arriaga', pf, 1959; works for 2 pf

Arrs. of works by Falla, Gaztambide, Salinas and others

CHRISTIANE HEINE

Rembang, I Nyoman (*b* Sesetan Tengah, Denpasar, 15 Dec 1930). Balinese musician and musicologist. He began his musical career conventionally, as a performer and composer, and taught Balinese music in Java during the 1950s. He helped found the Balinese KOKAR (Konservatori Karawitan) in Denpasar in 1960 and remained on the faculty until his retirement. Throughout his career Rembang has been an avid student and advocate of archaic and sacred gamelan repertories and has played an important role in their documentation and preservation. His district of birth had an exceedingly high concentration of gamelan types and repertories owing to the former strength of royal courts in the area. Two in particular, the *gamelan gambuh* ensemble of Pedungan village and the *gamelan gong* of Geladag village, became the subject of monographs in 1973 and 1984.

MICHAEL TENZER

Rembt [Remd, Rempt], **Johann Ernst** (*b* Suhl, 26 Aug 1749; *d* Suhl, 26 Feb 1810). German organist and composer. He studied under J.P. Kellner and in 1768 presented himself in Holland and France as an organ virtuoso in the tradition of Bach. From 1772 until his death he was the organist in Suhl. As a performer he specialized in Bach's music, but he also collected and performed earlier organ music, which (according to his obituary in *AMZ*) he succeeded in popularizing in a style freely altered to fit late 18th-century taste.

Rembt based his compositions on Bach's chorale settings and devoted himself to preserving the 'Bach style'. Most of his output consists of simple chorale harmonizations, fughettas and organ trios, in rather free forms characterized by pronounced melody and simple part-writing. Rembt knew C.P.E. Bach and J.A. Hiller and was influenced by their stylistic advances; his smaller organ works show something of the increasingly prominent keyboard character-piece. The fughettas combine contrapuntal and harmonic elements in the spirit of the organ *versetti*; their brevity conforms to the requirements of church services and they seek above all to simplify pedal technique. The piano and organ pieces (1774), trios (1787), fughettas (1791) and chorale-preludes (1797) are character-pieces in contrapuntal style, with clearly articulated small forms and a lyrical melodic style symptomatic of the increased vocality of late 18th-century music. This particular genre of short organ pieces for use in church has continued to the present day, both in new works and in reprintings of Rembt's own pieces, some of which retain a permanent place in the organ teacher's repertory.

WORKS
for organ unless otherwise stated

Edition: *Rembt-Album*, ed. K. Becker (Wolfenbüttel, n.d.)

Sammlung kleiner Clavier- und Singstücke, i–ii (Leipzig, 1774); VI [12] Trios (Dresden and Leipzig, 1787); 50 vierstimmige Fughetten (Leipzig, 1791); 18 vierstimmige Fughetten (Leipzig, n.d.); XII leichte triomässige Choralvorspiele, i–ii (Leipzig, 1797); XII leichte triomässige Choralvorspiele (Leipzig, n.d.); VI fugierte vierstimmige Choralvorspiele (Leipzig, n.d.); Vorspiel (n.p., n.d.); others

KARL GUSTAV FELLERER

Remedios, Alberto (Telisforo) (*b* Liverpool, 27 Feb 1935). English tenor. He studied at the RCM and made his début at Sadler's Wells in 1957 as Tinca (*Tabarro*). Other roles for Sadler's Wells were Don Ottavio, Tamino, Alfredo, Jake (*Aufstieg und Fall der Stadt Mahagonny*), Bacchus, Erik, Max, Florestan and Samson. He made his Covent Garden début in 1965 as Dmitry, followed by Erik, and Mark (*The Midsummer Marriage*), which he recorded. In 1968 he sang a memorable Walther at Sadler's Wells and was then engaged for two seasons at Frankfurt. His roles for the ENO included Berlioz's Faust, Don Alvaro, Siegmund, Siegfried, Lohengrin and Tristan. In 1973 Remedios made his American début at San Francisco as Dmitry, then sang Don Carlos. In 1975 he sang Otello for the WNO and in 1976 made his Metropolitan début as Bacchus. For Scottish Opera he sang Aeneas (*Les Troyens*), Stravinsky's Oedipus and Laca. His strong yet lyrical voice and care for line are displayed on live recordings of the famous Goodall *Ring* cycle at the ENO. He was made a CBE in 1981.

ALAN BLYTH

Remenkov, Stefan (*b* Silistra, 30 April 1923; *d* Sofia, 30 Oct 1988). Bulgarian composer. While on active service in World War II he established and conducted a choir on the front lines. He then started writing marches, many of which became very popular – the *March of the First Bulgarian Army* was broadcast daily by Sofia radio. In 1946 he started studying civil engineering and also entered the State Academy of Music where he studied the piano with Dimitar Nenov and composition with Stoyanov and Vladigerov. He graduated from the faculty of music theory in 1950 but continued to work there until 1956 as a teaching assistant. He then took a postgraduate course with Aram Khachaturian at the Moscow Conservatory (1956–7). His works were subsequently performed by all leading Bulgarian ensembles and soloists. Characteristic features of his compositions – which are mostly instrumental – include a melodic brightness derived from folk sources, rhythmic inventiveness, emotional immediacy and clear formal procedure. His orchestral works are notable for their dynamic vitality and complex combinations of folk rhythms.

ANDA PALIEVA

Reményi [Hoffmann], **Ede** [Eduard] (*b* Miskolc, 17 Jan 1828; *d* San Francisco, 15 May 1898). Hungarian violinist. After studying in Eger he attended the Vienna Conservatory, where he was taught by Joseph Böhm (1842–5). He made his début in Pest in 1846 and played in Paris in 1847 and London in 1848. In that year he was involved in the Hungarian uprising against Austria, as a result of which he was exiled and left for the USA, where he resumed his career as a virtuoso. In 1852 he toured Germany with Brahms, with whom he visited Liszt in Weimar the following year. Liszt at once recognized his genius and became his artistic guide and friend; he composed an *Epithalam* for Reményi's wedding and began writing a concerto for him. In 1854 Reményi again visited London, where he was appointed solo violinist to Queen Victoria, a post he held until 1859. In 1855 he was in the USA, and in 1860 obtained an amnesty and returned to Hungary, where he was subsequently appointed to a court position by the Austrian emperor. After his return he seems to have retired for a time to his estate; however, in 1865 he made a sensational appearance in Paris and made further tours through Germany and the Netherlands. In 1875 he settled temporarily in Paris. Two years later he went again to London, where he appeared only once in public, though he was greatly acclaimed in private circles. The next year he returned to play at the Promenade Concerts on his way to the USA, where he took up residence. In 1887 he undertook a world tour, returning to Hungary for the last time in 1891. He died while playing at a concert in San Francisco.

Reményi's playing combined technical mastery with a strongly pronounced individuality and was soulful and fiery, not least as a result of his strong nationalistic feelings. However, like Liszt, he confused true Magyar music with gypsy music (consequently Brahms's Hungarian Dances, strongly influenced by Reményi's playing, are indebted to the gypsy tradition). Reményi's compositions include three books of Hungarian melodies and *csárdás* for piano (sometimes mistaken for genuine Hungarian popular melodies), a violin concerto and numerous solos and transcriptions for violin.

Remick, Jerome H. (*b* Detroit, MI, 15 Nov 1868; *d* Grosse Pointe Farms, MI, 15 July 1931). American publisher. He worked initially for his family's logging firm, one of the largest in Michigan. In 1898 he purchased an interest in the Whitney-Warner Publishing Co., which moved to New York in 1904 and was reorganized as Shapiro, Remick & Co. (later Jerome H. Remick & Co.). Remick was one of the largest and most powerful firms of Tin Pan Alley, publishing such popular songs as *Hiawatha*, *In the shade of the old apple tree*, *Smiles*, *Pretty Baby*, *Sweet Georgia Brown* and *Shine on, harvest moon*. George Gershwin was employed at the age of 15 by Remick as a song plugger and had an early rag published by the firm. Remick also issued songs by Richard A. Whiting, Harry Akst, Gus Kahn, J. Fred Coots and Walter Donaldson. In the 1920s Remick returned to Detroit, where he became active in many local businesses. The firm was acquired by Warner Bros. in 1930 as part of the Music Publishers Holding Corporation.

SAM BRYLAWSKI

Remigio de' Girolami [Remigius Florentinus] (*b* Florence, *c*1245; *d* Florence, 1319). Italian philosopher and theorist. He was a Dominican friar and studied at Paris, perhaps under Thomas Aquinas. He taught at Florence, at S Maria Novella, and perhaps had Dante as a pupil. Music is discussed in two chapters of two of his works, the *Divisio scientie* and *Contra falsos ecclesie professores* (extract ed. E. Panella, *Per lo studio di Fra Remigio dei Girolami*, Pistoia, 1979). In the former, music is considered as one of the sciences of the Quadrivium; the chapter in question is a compilation of passages from Isidore of Seville, Boethius, Papias and Aristotle. In the latter, the author attempted to demonstrate that all the human sciences were represented in the church; the musical element, or *modulatio*, corresponded to the chants of the liturgy, preaching, and a well-regulated church order.

F. ALBERTO GALLO

Remigius Florentinus. *See* REMIGIO DE' GIROLAMI.

Remigius [Remy] **of Auxerre** [Remigius Autissiodorensis] (*fl* 862–*c*900). Latin writer and teacher. He was the author of a commentary on the *De nuptiis Philologiae et Mercurii* of Martianus Capella, the ninth book of which deals with music. In 861–2 Remigius was at the monastery of St Germain in Auxerre as a pupil of Heiric of Auxerre. In 876 he succeeded Heiric as master of the school, and in 883 (893, according to some) was given the task of reorganizing the school at Reims. In the period just before his death he taught in Paris where, for example, he instructed Odo of Cluny in dialectic and music.

The commentary on Martianus Capella was but one among many commentaries on Latin grammarians and poets (e.g. Donatus, Priscian, Juvenal, Cato) by Remigius. He also wrote biblical commentaries and several works on religious subjects, including an essay on the ceremonies of the Mass sometimes ascribed to Alcuin. This last work is of some interest for the early history of plainchant (*PL*, ci, 1246–71).

Remigius's treatment of Martianus's book 9 is by far the fullest extant commentary, surpassing even the length of the original. Yet much of the expansion derives from Remigius's pedantic tendency to present grammatical excursions at every opportunity; in the tradition of Carolingian commentaries, he provides synonyms for individual words or short phrases at points where Martianus's vocabulary is unusual or difficult, and only rarely does he refer to the musical world of his own time. There is an interesting and early use of the term 'vidula' to designate a musical instrument, and a brief observation on differences between the singing of Goths and Germans. One point of particular interest long went unrecognized, owing to the inadequacy of Gerbert's old edition: Remigius employs neumatic notation in about a dozen cases, to demonstrate intervals and to explain obscure terms such as 'anesis' and 'paracterica'.

The extent to which the glosses on music may have become common knowledge in later centuries is unclear. Still, the commentary on Martianus as a whole seems to have been a standard and widely distributed work during the Middle Ages, serving also as the main vehicle by which Martianus was known to the intellectuals of this age.

LAWRENCE GUSHEE/BRADLEY JON TUCKER

Remington, Emory (*b* Rochester, NY, 22 Dec 1891; *d* Rochester, 11 Dec 1971). American trombonist. He was taught by Gardell Simons (first trombone, Philadelphia Orchestra), Edward Llewellyn (first trumpet, Chicago SO) and Ernest Williams (first trumpet, Philadelphia Orchestra). In 1922 he joined the faculty of the Eastman School of Music, where he taught until his death; he also played first trombone in the Rochester PO, 1923–49. Remington was perhaps the most influential teacher of his time, taking a prominent role in the worldwide revolution in playing technique caused by the abandonment of the so-called 'peashooter' small-bore trombone and the adoption of a larger-bore instrument with F-valve attachment. He emphasized a vocal approach to the instrument and complete relaxation while playing.

EDWARD H. TARR

Remix. A recording produced by combining sections of existing recorded tracks in new patterns and with new material. Remixes are found in many different types of popular music, but are most usually associated with club dance music. In their most basic form, remix records loop elements of an original dance track to create a longer

version: usually the remix emphasizes percussive elements to suit club use. Most dance records released in the 1980s and 90s contained one or more remixes. They were released as 45 r.p.m. 12-inch rather than 7-inch singles: the extra playing time of the format suited both the extended remix versions and the needs of DJs looking to mix tracks in clubs.

A remix can also be a radical reworking of an original track, leaving little of the original recording. The most famous of such release is producer Andy Weatherall's 1990 remix of Primal Scream's *I'm Losing More than I'll Ever Have*, which, when retitled *Loaded*, bucked the trend in the UK for dance remixes of indie records and led to the situation in the late 1990s when the majority of singles released in the UK, in genres from rock to jazz, came with at least one mundane remix on the B-side.

WILL FULFORD-JONES

Remmer. *See* RÖMER family.

Remouchamps [Remouchant], **Henri** [Henricus] **de** (*b* before 1580; *d* before 18 Feb 1639). Flemish composer, choirmaster and organist. He may have been the choirboy who was presented to the chapter of St Jean l'Evangéliste, Liège, in 1595. In 1597 he received the tonsure and in 1612 he became choirmaster at the collegiate church of Our Lady, Tongeren. He left Tongeren before 2 May 1616 and from 1617 to 1620 he was perhaps an adult *duodenus* choirboy at St Lambert's Cathedral, Liège. From 1625 he was second organist, and then choirmaster at St Paul's in the same city. His only extant work is the motet *Salve matrona nobillissima Anna* (*B-Lc*, ed. J. Quitin, *Choix d'oeuvres de l'ancienne collégiale Saint-Paul à Liège, de Jean Guyot de Châtelet à Henri Moreau, 1549–1787* (Werbomont, 1986), 29–35) for eight voices and continuo. It shows his skilful craftsmanship in the Venetian double-choir tradition, with a leaning towards counterpoint and rhetoric, and is similar in style to the compositions of Lambert Coolen for Liège Cathedral. An inventory for the collegiate church of Borgloon cites a requiem for eight voices and continuo by Remouchamps (now lost).

Renaissance. In the conventional periodization of Western music history, a term denoting the era from about 1430 to about 1600; this period coincides with the later phases of the broad historical development in Western culture, society, art and technology (*c*1300–1600) for which the French term 'Renaissance' has been in use since Michelet (1855), who coined it for general history.

1. DEFINITIONS AND SCOPE. The perspective adopted by Michelet was given worldwide currency by Burckhardt (1860), whose influential essay portrayed Italy as the source of a vast cultural transformation that began in the 14th century, gradually spread new forms of thought to northern Europe after 1500 and marked the emergence of a period of civilization that extended in some spheres until the later 17th century.

That the term literally means 'rebirth' is not an anachronistic exaggeration but is justified by the tendency of influential thinkers and writers in the period 1400–1600 openly to repudiate the 'Middle Ages' (a term not then invented) and to venerate antiquity as a model. In view of divergent approaches to the problem it is useful to distinguish two meanings that historians often attach to the term 'Renaissance': a narrow view that holds that it was primarily a movement which aimed to restore the philosophical and artistic values of classical antiquity; and a broader view – that it can effectively denote an era of fresh beliefs and attitudes in individuals and ultimately in society, an age of discovery and accelerated change, in which innovations were justified by an appeal to their affinity with a 'golden age' of the past.

Although there are controversies over the degree to which the developments stressed by Burckhardt and other Renaissance historians were literally epoch-making, few have denied their importance. Among them are the rise of secular HUMANISM as an educational programme emphasizing rhetoric, grammar and moral philosophy, in opposition to the metaphysical scholasticism of the Middle Ages; the growth of historical thought and the recovery and criticism of ancient texts as a basis for the 'new learning'; the spread of literacy and alteration of patterns of thought signalled by the invention of printing (*see* PRINTING AND PUBLISHING OF MUSIC); the break with traditional spatial concepts in cosmology and geography through the discovery of the New World and the Copernican revolution; the upheaval of the formerly stable though complex world of medieval Christianity through the definitive break embodied in the Protestant Reformation; and in the visual arts a new interest in classical principles of form and in the expression of immediately perceptible human situations and feelings, as opposed to the more spiritual, abstract and attenuated expressive modes of medieval art.

2. MUSIC HISTORIOGRAPHY AND THE RENAISSANCE. The spell cast by Burckhardt on mid-19th-century intellectuals soon captured music historians as well as others and led to pursuit of the problem of the 'Renaissance' in music. That users of the term then and now have often failed to distinguish the broad and narrow meanings mentioned above is not peculiar to music history but is an inevitable consequence of the rapid popularization, and eventual decline in force, of Burckhardt's original concept, which soon came to be applied to virtually any phenomenon that fell within the accepted chronological limits. As early as 1868 Ambros conceived the 15th and 16th centuries as a substantially unified period, a view adopted by many later writers, including Pirro (1940), whether or not they

'Music': detail from the 'Seven Liberal Arts' by Bernardino Pinturicchio, fresco, 1492–4 (Sala delle Arti Liberali, Vatican Palace, Rome). A typical high Renaissance painting, it portrays by traditional means several aspects of music: the personification of 'Music', playing a viol; a group of instruments opposite a group of singers (perhaps representing the Three Ages of Man); and Pythagoras, representing the natural laws of harmony

employed the term 'Renaissance' (for a survey see Blume). The divergent thoughts on periodization in the generations after Ambros are illustrated by Riemann's proposal to set the 'Early Renaissance' as far back as 1300–1500, and by Edward J. Dent, who (in *Alessandro Scarlatti*, 1905) identified the 'Renaissance' with the rise of monody about 1600. However, with the subsequent borrowing of the term 'Baroque' from the history of art (especially by Curt Sachs in 1919) the rise of opera and its concomitant developments came to be seen as the opening of a new era, while the end of the Renaissance was set in the first decades of the 17th century. Attempts have been made (e.g. by Wellesz, *Der Beginn des musikalischen Barock*, 1922; Eng. trans., 1950) to date the beginnings of the Baroque period as far back as about 1540. Other scholars have tried to interpose a distinctive period of 'Mannerism' (yet another term borrowed from art history) between the Renaissance and Baroque periods, but this proposal has met with wide opposition and is far from being generally accepted. It now seems to be agreed that in music a period marked by substantial unity of outlook and language came into being in the second half of the 15th century and that its principles were not definitively displaced until about 1625. It is also agreed that this period can be called the 'Renaissance', yet often for no better reason than that it falls within the later phases of the Renaissance in the broad sense; this neutral approach, which is no more than an assertion of chronological coincidence, is tacitly adopted by Reese in his *Music in the Renaissance* (1954). More recently, Strohm (1993) has proposed a larger view of the musical developments from about 1380 to 1500 that is based on the idea of progress and growth in musical practice, yet which also adopts a pessimistic view of the applicability of the term 'Renaissance' to justify these changes. Nevertheless, there is still a strong historiographic basis for the traditional belief that the 'Renaissance' in the narrow sense – the revival of antiquity – did have a perceptible influence on musical thought and, to some extent, practice, and that certain aspects of the cult of classicism affected music, though inevitably less directly than in art and architecture.

3. MUSIC AND THE CONCEPT OF REBIRTH. In literature and the visual arts the idea of 'rebirth' gained ground much earlier than in music. From the mid-14th century, Italian and especially Florentine writers often claimed that a single extraordinary artist or writer had recalled to life an art that had been neglected during the 'dark ages' that had intervened since ancient times. Thus about 1350 Boccaccio (*Decameron*, vi.5) said of Giotto that he 'brought back to light that art which for many centuries had lain buried under errors', and in 1400 the Florentine historian Filippo Villani wrote of Dante that he 'recalled poetry as from an abyss of shadows into the light'. In the 16th century this idea was widely repeated, receiving its most authoritative formulation from Vasari in the preface

to his *Lives of the Painters* (1550). For him the earlier history of painting had been marked by utter decline in the period of the 'barbarian' invasions of Italy and by rebirth in the 13th century, beginning with Cimabue and Giotto, followed by later stages of improvement leading to its summit of perfection, exemplified by Raphael and Michelangelo, in his own time. (For a full account of the growth of this idea see Ferguson, 1948.)

Among writers on music the first to reflect something of this view was Tinctoris, though his linked treatises (written *c*1472–81) still seem largely medieval in approach and form a kind of summa of the musical knowledge of his time. Yet they also reveal his considerable inclination towards humanist learning, probably reflecting the environment of late 15th-century Naples, in which they were written. In the preface to his *Proportionale* (*c*1472–5) he cited Plato as an authority for the Greek view that the science of music was 'the mightiest of all' and that no one ignorant of music could be considered truly educated. He mused on the fabled power of music to move 'gods, ancestral spirits, unclean demons, animals without reason, and even things insensate' and observed that in recent times, specifically around 1440, thanks to Dunstaple and his generation, there had been a marvellous increase in the possibilities of music. In the preface to his counterpoint treatise (1477) Tinctoris stated flatly that in the opinion of the learned no music composed before about 40 years earlier was worth hearing. The music of Dunstaple, as followed by Du Fay, Binchois and later masters, began a 'new art'.

In the 16th century the notion of rebirth borrowed more heavily from literary and artistic sources, presumably as musicians came to know and appreciate them better. The Florentine academician Cosimo Bartoli, in a heavily eclectic passage (published in 1567, though the fictitious date of the dialogue is 1543), said of Ockeghem that he 'rediscovered' music, which had virtually died out, and compared him with Donatello as the rediscoverer of sculpture; Bartoli then compared Josquin and Michelangelo as 'prodigies of nature' who followed in the paths of the pioneers and excelled all others in their respective arts. In 1558 Zarlino, evidently following Vasari not only in general line of argument but perhaps more specifically as well, fully embraced the anti-medieval position. He described the music of the ancients as representing a 'height of perfection' and medieval music as reaching the 'lowest depths' and portrayed Willaert, his own teacher at Venice, as a 'new Pythagoras' who had sought out new possibilities and brought music to its flourishing state.

More significant than these claims and comparisons is the actual contribution of the humanist movement to the gradual recovery of the ancient texts on which modern writers could base their knowledge of Greek music. Thin and inaccurate as such knowledge inevitably was, in the absence of practical monuments of ancient music itself, the writers of the period nevertheless did acquire or make available the greater part of the entire literature of ancient theory or commentary, so much so that by the end of the 16th century they knew about as much of this literature as is now known. Until about 1470 the central authority for knowledge of ancient music was Boethius. In the last third of the 15th century, however, the new printing of pedagogical and encyclopedic works brought into circulation the writings of Isidore of Seville and Quintilian, published in 1470; the latter was specially important for Renaissance theories of education. By 1500 Plato's complete works were available for the first time in Latin in the translation by Marsilio Ficino, along with the *Poetics* of Aristotle. While the influence on scholasticism of Aristotle's methods had long been felt in medieval music theory, his *Poetics* had not been known; in the 16th century his views of music were rivalled in importance by those of Plato, which, however, were less visible in tradition-bound music theory than in writings by literary men and were only later adopted directly by musicians. By 1518 Gaffurius had arranged for the translation of the surviving treatises on music by Baccheus, Ptolemy and Aristides Quintilianus. By 1588 Zarlino could claim (in his *Sopplimenti musicali*) to have read these men, as well as Euclid, Nicomachus and a number of others; in 1562 the first translation of Aristoxenus's *Harmonics* had been brought out at his instigation. Salinas in 1577 was able to produce an elaborate discussion of Greek theory, and in 1581 Vincenzo Galilei's *Dialogo della musica antica et della moderna* was the first to publish three Greek compositions – the hymns of Mesomedes, known through the Byzantine tradition.

The 'classicizing' trend is also visible in numerous other treatises of the period, though less as antiquarianism than as justification for innovation. One is Glarean's *Dodecachordon* (1547), the broadest attempt of the period to modify the traditional modal system by extending the Boethian eight-mode system to 12 modes, identifying the names of these with the so-called ancient modes insofar as these could be understood. Nicola Vicentino's treatise *L'antica musica ridotta alla moderna prattica* (1555) is a more radical work, an attempt to demonstrate the validity not only of the diatonic tone system but of the chromatic and enharmonic genera of the ancients and to show how these could be used in contemporary polyphony. The spirit of classical revival is still strong in the series of writings on the nature and ethos of ancient music produced by Girolamo Mei, Vincenzo Galilei, Giovanni de' Bardi and others connected with the Florentine Camerata, which gave intellectual substance and authority to the experiments in expressive settings of dramatic poetry that led to the emergence of opera in the 1590s.

4. Conditions and trends. As prevailing concepts of music were gradually transformed in the late 15th century and early 16th, they were also affected by a vital change in the technological basis of the production and transmission of music from composer to public. The beginnings of music printing as a commercial activity (1501), with Venice as the initial and leading centre but with rapidly growing competition elsewhere in Europe, not only brought more music into circulation but ensured its distribution more widely, more rapidly and in more uniform texts than before. Printers often produced editions of substantial size (press runs of 500 to 2000 copies are documented throughout the 16th century), and the scope of consumption must have increased enormously. A new and vast bourgeois public was rising, made up largely of performing amateurs for whom music was essentially a higher form of recreation, and it was served by a tide of polyphonic collections, principally of secular music. This trend is visible in successive stages in Italy, France and Germany, and, late in the century, in England, during the latter part of Elizabeth I's reign and much of James I's (roughly 1588–1620), when the aesthetic and technical traditions of the Italian madrigal

were imported wholesale into England to meet the demands of a newly curious and cultivated public. Side by side with this secular development went the increasing publication of sacred music in all its forms and varieties, both Catholic and Protestant, devotional and liturgical, Latin and vernacular. Though the social conditions for the performance of sacred polyphony are less well understood than those governing secular music, it must be assumed that many amateurs who sang madrigals and chansons also sang motets and that the flow of publications was in part designed for the use of religious institutions of all kinds, in part for laymen aware of the heightened role of music in the intensified religious atmosphere engendered by the wars of religion that racked the century. By the mid-16th century, then, music had shed its former theoretical status as a pure science of relationships, in the medieval sense, and had settled into the European consciousness as a form of expression closely allied to poetry and religion and suitable for ritual and festive occasions, and as a form of pleasurable leisure activity normally carried on in the home or academy. There naturally followed an increasing market for handbooks that would teach amateurs the rudiments of music; in the Elizabethan period, which was in some ways a microcosm of the age as a whole, the chief example is Morley's aptly named *Plaine and Easie Introduction to Practicall Musicke* (1597).

This social role was matched by a new view of the function of music, beginning in the late 15th century and taking firm hold in the 16th – that the main aim of music was to heighten the meaning of a text. For this the central classical authority was Plato, chiefly *The Republic*, book 3, in which the thesis is laid down that 'the *harmonia* and the rhythm must follow the sense of the words'. At least some 16th-century writers were aware that this was inherent in the Greek view of music as including not only melody and the characteristic *harmoniae* of various regional idioms, such as 'Dorian' or 'Phrygian', but also the text and even the physical gestures of mime or dance that accompanied the recitation of lyric or dramatic poetry. As Isobel Henderson put it, 'Greek music was mimetic or representative – a direct photography (as it were) of mental objects formed by the ethos and pathos of the soul' (*NOHM*, i, 1957, p.385). The union of poetry and music was seized upon as an ideal by Renaissance musicians and by many poets (e.g. Ronsard), and Plato's words were cited by many musicians, including Zarlino (see *StrunkSR1*, 256), Bardi (ibid., 295) and G.C. Monteverdi (ibid., 407). That this view emerged from the humanist revival of Plato is evident from its appearance as early as 1506 in a passage by Vincenzo Calmeta (cited by Pirrotta, Eng. trans., 1982, p.36), and it was soon given much wider currency by Sir Thomas More (*Utopia*, 1516) in a passage stressing the capacity of music to express the inner meaning of words. That not only bookish musicians but seasoned practitioners with few literary pretensions subscribed to it is shown by much evidence, including a letter written by Palestrina to the Duke of Mantua (on 3 March 1570) praising a motet composed by the duke both for its 'beautiful workmanship' and for the 'vital impulse that it gives to its words, according to their meaning'.

Related to this was the notion that it is through text expression that music has power to move the soul and to reproduce the marvellous effects attributed to it by the ancients, in the arousal and subduing of the passions. An oft-told tale was one in which Alexander the Great was said to have been unwittingly aroused by music from his banquet table to arm himself for war and was then restored to the banquet when the musician changed his 'tune' and manner of performance; still more pervasive were the legends of Orpheus, the favoured mythical musician. While Zarlino and other moderate critics believed that music of their time, if properly allied to words, could move the souls of its hearers, others denied that polyphony could accomplish anything of the sort, citing principally the relative unintelligibility of the text resulting from overlapping declamation caused by contrapuntal imitation.

This complaint came from many sides, including (in 1549) the Italian Bishop Cirillo Franco, who argued that in the Mass 'when one voice says "Sanctus" another says "Sabaoth" so that they more nearly resemble cats in January than flowers in May', and Galilei expressed similar views in 1581. In sacred music solutions of various types are found, the most drastic of which was the writing of extended or entire sections or movements in a strict or slightly modified chordal style; this approach was explicitly attempted by certain north Italian composers (e.g. Vincenzo Ruffo) working in the aftermath of the Council of Trent. The famous *Missa Papae Marcelli* by Palestrina was evidently intended as an attempt to reconcile the claims of text intelligibility with those of inherent musical interest, and the perhaps apocryphal tales of its success in persuading churchmen at Trent not to abolish polyphony can be taken as a special instance of the general belief in the power of music when properly adjusted to words. A more drastic solution was the complete break with polyphony implied by the Florentine Camerata, whose spokesmen also rejected the efforts of even the most expressive-minded madrigalists to achieve rhetorical effects through word-painting, as in the later madrigal in Italy and in England. The monodists, on the other hand, sought to convey the expressive meaning of a text as a whole. What is actually involved is two opposed aesthetic positions: the word-painting of the madrigalists, whether Marenzio or Weelkes, may seem excessively preoccupied with the single word only if it is not seen as a means of obtaining maximum variety of tempo, harmonic content and texture within a normal framework of five or six voices; while the expressive purposes in monody, lacking all possibility of textural variety, are achieved through means that make the most of the nuances of the solo voice.

It is increasingly clear that solo singing with instrumental accompaniment, far from being a 'discovery' at the end of the 16th century, had long been practised and indeed had never been completely displaced by polyphony. The varied methods of performing polyphony regularly included the singing of a principal vocal part (at times the tenor but more often the soprano) of a chanson or madrigal to the accompaniment of a lute or other instruments. The tradition in Italian secular music for this type of performance not only went back to the frottola but predated the coalescence of that mixed genre into a semi-polyphonic literature, and it was above all in Italy that it continued to flourish. What Einstein called 'pseudo-monody' was 'pseudo-' only in the sense that it was not regularly written out and was rarely published in this form, though there are important exceptions, such as

Willaert's arrangement of madrigals by Verdelot for solo voice and lute (1536). How important solo singing was may also be judged from the writings of such observers as Paolo Cortese (1510) and the famous words of Castiglione (*Il cortegiano*, 1528): polyphony is good but 'to sing to the lute is much better, because all the sweetness consisteth in one alone and a man ... understands the better the feat manner and the air or vein of it when the ears are not busied in hearing any more than one voice ...' (trans. T. Hoby, *The Book of the Courtier*, 1561). The new monody around 1600 can thus be seen partly as a change in the norms of representing music – for now the melodic line and the harmonic progressions of its accompaniment were fixed in notation for the first time – and partly as the raising of a long-established tradition to a higher level of dramatic intensity, adapted to dramatic poetry. Thus the roots of 'Baroque' music can be discovered to be buried deep in the 16th century. However, even if the overlapping of polyphonic and monodic tendencies can be seen to have endured much longer than is commonly thought, the full decline of polyphony as a form of expression did not set in before the early 17th century, and the 'Renaissance' can thus be justified as a period extending to about that time. A factor that is still poorly understood is the presumed change in social conditions for music that may have accompanied the decline of vocal polyphony; but this would doubtless have to be studied on a regional basis, as it differed sharply from one country to another.

While the 16th century witnessed a vast growth of solo and ensemble instrumental music for keyboard, string and wind instruments, this kind of music had little place in the aesthetic notions associated with the 'Renaissance', even though justification could have been found in ancient texts for admitting some degree of ethical power to instrumental music. On the whole, instrumental music remained subordinated to vocal music, and much of its repertory was in varying ways derived from, or dependent on, vocal models. Nevertheless the continued cultivation of accompanied solo singing tended from early in the period to glorify the virtuoso instrumentalist as well as singer, whether or not these were embodied in the same person, as in the case of such virtuosos as the lutenist-singer Pietrobono of Ferrara. His followers in the 16th century were similarly admired, though most of them specialized as singers, lutenists or keyboard players. By 1536 it was conventional rhetoric, yet characteristic of the time, when the renowned vihuelist Luis de Milán was compared in the preface to his *Libro de vihuela* with 'el grande Orpheo'.

5. Recent developments in Renaissance musicology. The last 20 years of the 20th century witnessed an impressive expansion of knowledge of Renaissance music and its contexts along traditional lines of enquiry, coupled with new approaches in several important fields. For convenience they are grouped here into three categories.

(i) Scholarly editions and primary sources. Score editions of polyphonic and other forms of music of the Renaissance have continued to proliferate, both in collected editions of the works of individual composers and in series devoted to works of various genres, including Italian madrigals, French chansons, Latin motets and masses, and instrumental music of many kinds. Some of these have benefited from the advent of computer technology, by virtue of which the separate parts and partbooks in which music was published in the 16th century no longer have to be transcribed by hand but can be scanned and read by electronic means, then published directly in score. The many series inaugurated by Garland Press are among the most extensive of these, and the result is that many publications by lesser but interesting composers have come to light for the first time. These include editions of Renaissance sources in facsimile, as edited by Brown, D'Accone and Owens, as well as the series of facsmilies edited by Margaret Bent and John Nádas. In addition, new editions of the earlier collected works of major composers (including, for example, Josquin, Obrecht, Lassus and Monteverdi) have been begun, now based on much wider knowledge of sources than was the case in the earlier 20th century.

Such editions benefit directly from a vast expansion of bibliographic knowledge of the manuscript and printed sources of the period. There have been many important recent studies of individual manuscripts or groups of manuscripts, which often appear in a much clearer historical context than had been possible before. This research has been brought together in the *Census-Catalogue of Manuscript Sources of Polyphonic Music, 1400–1550*, an important resource that enables scholars to find their way more readily into the vast domain of the music manuscripts of the 15th and 16th centuries and to gain knowledge of the scholarly work already completed on them. Of parallel importance are recent comprehensive bibliographic studies of some of the great printing houses of the Renaissance; those of Italy include major studies of the Venetian publishers Antonio Gardano by Mary S. Lewis (*Antonio Gardano, Venetian Music Printer*, 1988–9), and of the family Scotto by Jane Bernstein (*Music Printing in Renaissance Venice: the Scotto Press, 1539–1572*, 1998). Other helpful bibliographic resources include the first attempts at thematic catalogues of major genres, such as the printed 16th-century madrigal and printed Latin motet, both compiled by Harry Lincoln (*The Italian Madrigal and Related Repertories: Indexes to Printed Collections*, 1988; *The Latin Motet: Indexes to Printed Collections*, 1993).

(ii) New approaches to analysis. The enduring problem of creating analytical approaches to the structural and compositional aspects of early polyphony has been given renewed vigour by recent scholarship. One approach was developed by Harold Powers in his studies of tonal types and modal categories in Renaissance polyphony, by which new typologies based on cleffing, range and related features were developed. Another substantial advance has been made by Jessie Ann Owens (1996) in her study of the procedures by which Renaissance masters worked out their compositions. Through her work we now know much more than before about the widespread use of erasable slate tablets, or *tabula compositoria*, about the practice of composing part-music with or without scores, and about the processes of revision of musical ideas in works by representative composers from Isaac to Palestrina. In addition, continued work on the analysis and interpretation of the multivalent relationships between music and text dominates much Renaissance musicology, a subject ever appropriate to an age that saw in secular music the rise of great vernacular poetry in each major language, interwoven with the vast work of many textually sensitive musicians seeking to reflect poetic structure and meanings in their works. The same is true for the great sacred repertories, both in Latin and in the

vernacular languages, set to music by musicians seeking to represent varieties of religious experience through musical means.

(iii) Study of theory and commentary. The quickened pace of musical life in the 15th century and, especially, in the 16th, brought on an avalanche of writing on music by commentators of many kinds. Music printing and the growth of music education in many countries (especially the Germany of the Reformation) also spurred the production of printed tracts on music-theoretical subjects of every kind and every level, ranging from elementary textbooks for choirboys to erudite treatises and commentaries. In recent decades scholarship has furnished new perspectives on a number of important sectors of this field, significantly in the work of Claude Palisca (1985) on humanism in its relationship to Italian musical thought of the 16th century. Important, too, are studies by Karol Berger on *musica ficta* (1987) and by Don Harrán (1986) on the monumental problem of word-tone relationships, both in the light of contemporary commentary and as a field of study in our time. Valuable sources have also been brought to light, among them a significant body of 16th-century music-theoretical correspondence by Giovanni Spataro, Pietro Aron and others (Blackburn, Lowinsky and Miller, eds., 1991). Still broader viewpoints are visible in cross-cultural studies, for example by Gary Tomlinson (1993) on the connections between music and magic in the Renaissance.

6. Current views of the Renaissance as a period. Even among scholars whose views coincide on the basic musical developments of the period, there is frequent disagreement on the relative importance of the various technical and aesthetic features that are cast into relief and thus on the resulting historical profile of the entire era. Reese saw in Renaissance music essentially a series of significant further advances upon the conquests of the Middle Ages, among them, in the later period, 'a rhythmic fluidity and complexity that part-music has never surpassed', the fuller realization of the potentialities of the triad, the regulation of dissonance and thus the rationalization of intervallic content, the expansion of tonal range and the growing homogeneity of voices through contrapuntal imitation. He saw the Renaissance as a period of matchless cultural unification in music, a period in which composers throughout Europe in the 16th century 'spoke one musical language'.

To this gradualist and evolutionary thesis can be contrasted a theory of the Renaissance that stresses its departure from the Middle Ages and its revolutionary importance as an era, a view that has been advanced chiefly by Edward Lowinsky in a number of articles (most comprehensively in 1954). He saw the age as not merely embodying a decisive array of transformations that set it off definitively from the period of medieval scholasticism but also as a period in which musicians desired 'to arrive at a musical expression free from all shackles'. He submitted the following 'theses' in justification of the use of the term and concept 'Renaissance' for the later 15th century and the 16th: (1) that in the 15th century there was a steady growth and reorganization of musical institutions related to the migration of northern composers to Italy and the interaction of northern and southern traditions; (2) that music of the period was characterized by a broad 'emancipation' from medieval constraints, including the *formes fixes* of poetry, rhythmic modes, isorhythm, the cantus firmus principle and Pythagorean tuning; (3) the criticism of medieval aesthetics; (4) 'emancipation' from the older modal system, and the development of harmony – *musica ficta* and the introduction of chromaticism and modulation; (5) a transition from a 'successive' to a 'simultaneous' conception of part-music; (6) the enlargement of tonal space; (7) the rise of expressivity and a new relationship between words and music; (8) the development of vocal and instrumental virtuosity; (9) the increasing autonomy of instrumental music; and (10) a repudiation of authority on the part of musicians.

While some of these 'theses' refer to broadly identifiable properties of music of the period, others are exaggerated and inflated, for the question of whether they were absolutely new or were only newly developed phases of formerly existing tendencies requires substantially greater evidence than is presented for them, and in some cases evidence for continuity is simply omitted. For example, while the cantus firmus principle undoubtedly receded in importance as a compositional device in the 16th century compared with the 15th, it not only maintained a role of some substance in both sacred and secular polyphony but if anything grew in importance as a didactic device and in instrumental music. Further, the sharp distinction that Lowinsky drew between the 'successive' and 'simultaneous' conception of parts is a conceptual distortion, since it is not really clear what 'simultaneous' could literally mean in the actual work of composition. Moreover, the insistent use of words such as 'shackles' and 'emancipation' is tendentious and one-sided; it fails to allow for the possibility that the Renaissance can be distinguished from the Middle Ages by other means than as a period of alleged 'freedom' in contradistinction to – the contrast is inevitable – 'tyranny'. A more fruitful way of treating the evidence may be to suggest that a new era came into being through the exposure of music and musicians to a new set of prevailing aesthetic and philosophical impulses, combined with a new set of social and technological conditions and with steady developments in the autonomous aspects of musical technique.

In a major book on the main developments in musical styles and practices in the 15th century, Reinhard Strohm (1993) has provided a vastly enlarged cultural and geographical context, extending from traditionally studied western Europe to newly discerned central and eastern European musical centres, as well as to the patronage of institutions of many kinds. Strohm paints an impressive picture of the growth of musical life and expression on a broad scale, at the same time de-emphasizing or denying that the intellectual and artistic viewpoints associated with the concepts of humanism and the Renaissance had much if any effect on the whole development, except in Italy and Spain (ibid., 542). If we look at the broad picture primarily in terms of inner changes in style and external changes in musical life, such a view may be justified. If, however, we attempt to see in what ways music as thought, expression and practice was influenced by the dominating ideologies of the period, then we will be hard put to deny the strength of the humanistic viewpoint upon music as a major form of artistic expression. This means emphasizing the revival of the expressive aesthetic for music characteristic of ancient times, through the recovery and publication of ancient texts on music, ranging from the dialogues of Plato to the theories of Aristoxenus and

other ancient writers. It also brings an emphasis, appropriate to the period, on the rise of rhetoric as a model of verbal and then musical expression, exemplified in the writings of Quintilian, and the belief that in seeking the ever-closer interdependence of music and text lay the right path to new ranges of musical expression, which would restore to music the great power ascribed to it in ancient times. This is the meaning implicit in Vicentino's treatise *L'antica musica ridotta alla moderna prattica* (1555; see §3 above) in which the ancient intervallic genera of the diatonic, chromatic and enharmonic are advanced as the newest of the new music, while at the same time they are defended as having the authority of ancient times.

In sum, there is no reason to claim that the Renaissance was a 'better' age than its predecessor, yet it does appear to have been sufficiently new to warrant a separate historical identity, in part carrying forward certain tendencies of the Middle Ages, in part breaking with them. The refinement of these perceptions, together with the creation of new knowledge on which they may be based, is a major task of further research.

LEWIS LOCKWOOD

Renaldi, Giulio [Renaldis, Giulio de] (*d* before 2 Aug 1576). Italian composer and organist. He was a priest at Padua Cathedral, where on 11 November 1570 he was chosen to succeed Sperindio Bertoldo as organist. His initial three-year contract was renewed in 1573 and again in 1575. He died during the summer of 1576, and on 2 August the canons nominated his successor. As a madrigalist he seems to have enjoyed considerable repute; a few of his compositions were popular enough to be printed after his death. Among his madrigals is a curious piece (1569) described as composed 'twice for four voices; and one can add any voice whatsoever from one piece to the other, or else sing all eight voices at once'.

WORKS

Il primo libro de madrigali, 4–6vv, con 2 dialoghi, 7vv (Venice, 1567)
Il primo libro de madrigali, 4vv (Venice, 1569)
Madregali et canzoni alla napolitana, 5vv (Venice, 1576), 1 intabulated for lute in 1599[19]
2 greghesche, 1564[16], ed. S. Cisilino, Celebri raccolte musicali Venete del Cinquecento, i (Padua, 1974); 1 madrigal, 5vv, 1568[16]; Magnificat, 5vv, 1576[7]; 1 madrigal, 12vv, 1584[4]; 2 madrigals, 3vv, 1587[7]; motet intabulated for lute, 1593[11]

KLAUS SPEER, JAMES HAAR/FABIO FERRACCIOLI

Renanot, Institute for Jewish Music. Israeli institution dedicated to the research and propagation of liturgical and para-liturgical Jewish music. It was founded in Jerusalem in 1957 as the Israel Institute for Sacred Music by Avigdor Herzog, a former student of Kodály and Szabolcsi, to study and preserve the musical traditions of the Jewish communities that converged on Israel during the mass immigrations of the 1950s. Herzog, the centre's first director, wanted to preserve these disparate traditions before they were diluted in the melting-pot of modern Israel and so developed the institute on ethnomusicological and educational lines. He recorded the sacred songs of various communities and, under the title *Renanot*, periodically published leaflets of selected transcriptions, based on Bartók's methods. Working alongside Herzog were Yehoshua Leib Neeman, who published books and records on biblical cantillation and liturgical chants according to eastern European tradition, Meir Shimíon Geshuri, who investigated Hasidic music and Uri Sharvit, who researched Yemenite chants. The institute organized an annual musicological conference and, from 1959 onwards, published the proceedings in its journal *Dukhan*. In 1963 Herzog became director of the newly founded National Music Archives at the Jewish National and University Library; his collection of recordings was transferred there with him. From this point the institute changed its outlook to become a body concerned primarily with public education and with the wide dissemination of Jewish music. Since 1985 the institute, by then known as Renanot, Institute for Jewish Music, has been led by Ezra Barnea, who has emphasized its practical contribution to musical culture. It now houses a collection of prayer and song books and an extensive recording collection out of which instructional cassettes and books are published. Renanot sponsors a yearly study-conference for cantors of various traditions, and another for researchers.

ELIYAHU SCHLEIFER

Renard, Rosita (*b* Santiago, 8 Feb 1894; *d* Santiago, 24 May 1949). Chilean pianist. She became a pupil of Krause at the Stern Conservatory in Berlin in 1910, but was unable to pursue a European career because of the outbreak of World War I, at which time she returned to Chile. She took up a teaching post at the DKG Institute of Musical Art, Rochester, New York, in 1917 and shortly afterwards made a successful New York début. Perhaps unwisely, Renard made her base in Germany from 1921 to 1925. Failing to establish herself there, she went back to the USA and then in 1930 decided to settle in Chile and to restrict her playing mainly to South America. She was also active in teaching at the Santiago Conservatory. A brief revival in her career took place after 1945, and early in 1949 she gave her only Carnegie Hall recital, which made a considerable impact and was recorded. Shortly afterwards, however, she succumbed to an incurable form of sleeping sickness. Renard's nervous tension on the concert platform lent an urgency to her playing that, together with a stupendous technique and sensitive musicality, made her a particularly striking artist. Especially admired in Mozart, Chopin and Liszt, she was certainly one of the great keyboard talents of her generation and the possessor of a natural eloquence that, in more favourable circumstances, might have enabled her to become a major artist.

JAMES METHUEN-CAMPBELL

Renaud [Croneau], **Maurice (Arnold)** (*b* Bordeaux, 24 July 1860; *d* Paris, 16 Oct 1933). French baritone. He made his début in 1883 at La Monnaie, where he later sang in the premières of Reyer's *Sigurd* (1884) and *Salammbô* (1890) in addition to singing a wide variety of French, Italian and Wagnerian roles. From 1890 to 1891 he appeared with the Opéra-Comique and from 1891 to 1902 he was a member of the Opéra, returning frequently until 1914. He sang at Monte Carlo, 1891–1907, and at New Orleans in 1893. His Covent Garden début was in 1897; he returned for the next two seasons and again (1902–4) as, among others, Don Giovanni, Wolfram, Nevers (*Les Huguenots*), Escamillo, Rigoletto and Lescaut

Maurice Renaud as Herod in Massenet's 'Hérodiade'

(*Manon*). He appeared with the Manhattan Opera (1906–7, 1909–10), at the Metropolitan (1910–12), in Boston and in Chicago, where he sang Rigoletto, Athanaël, Rance (*La fanciulla del West*) and Coppélius, Dapertutto and Dr Miracle (*Les contes d'Hoffmann*). Renaud had a warm, expressive voice and was considered one of the most versatile singing actors of his day.

HAROLD BARNES

Renbourn, John (William Mark) (*b* Marylebone, London, 8 Aug 1944). English folk guitarist. He studied music in Guildford and classical guitar at the GSM. While at Kingston College of Art, he became fascinated with composers for classical guitar such as Francisco Tarrego, and with Early Music and the blues. His first album, *There You Go* (1965), a collaboration with the black American singer Dorris Henderson, was followed in the same year by his first solo album, which was heavily influenced by the music of Big Bill Broonzy. During the 1960s and 70s Renbourn became famous not just for his treatment of blues and traditional material, but for an eclectic 'folk baroque' style that embraced jazz, classical and medieval material. Influenced by BERT JANSCH and Davy Graham, he released with Jansch the acoustic guitar duet album *Bert and John* (1966), which mixed elements of folk, jazz and blues. This led in 1968 to the formation of PENTANGLE.

Renbourn continued to record as a soloist during Pentangle's five-year career, with albums such as *The Lady and the Unicorn*. From the mid-1970s he toured and recorded with the American guitarist Stefan Grossman and formed the John Renbourn Group, recording British folk-based material. In 1979 he studied orchestration and composition at Dartington College. During the 1980s he formed Ship of Fools with the singer Maggie Boyle, and recorded *Run River* (1989); during the 90s he toured with the Celtic harpist Robin Williamson with whom he released *Wheel of Fortune* (1993). Both the John Renbourn Group and 'Renbourn-Williamson' collaborations received Grammy Award nominations.

Rendano, Alfonso (*b* Carolei, nr Cosenza, 5 April 1853; *d* Rome, 10 Sept 1931). Italian pianist and composer. He had his first musical education in Caserta, and in 1863 entered the Naples Conservatory (for only six months). He made his début as a pianist at the age of 11, but in 1866 resumed studying with Thalberg, who had become very much attached to him and who at that time lived in Naples. In 1867 he went to Paris to establish himself as a virtuoso, and there he took lessons with Georges Mathias, to whom he was introduced by Rossini; in the same year he performed in London. He took other advanced courses in 1868 at the Leipzig Conservatory under Reinecke and Richter. From then on he won success as a concert artist on tours to all the major cities of Italy. He also performed at the Leipzig Gewandhaus (8 February 1872), the Musical Union (30 April 1872), the New Philharmonic Society (9 March 1873), the Crystal Palace and elsewhere in London, including at court and in private circles. Further appearances followed in Paris and Budapest.

In 1874 he returned to Italy, but continued his brilliant activity abroad at regular intervals. During this period he became friendly with Bülow and Liszt in Vienna, benefiting greatly from a stay with the latter for about two months. He returned to Vienna to play there in 1882. In 1883 he was called upon to teach the piano at the Naples Conservatory, but, eager to reform the method of teaching, he soon tendered his resignation over disagreements with the committee at the conservatory. Immediately afterwards, he founded and directed (for three years) his own school of piano in Naples, and established his personal method of teaching. Finally he settled in Rome, where he continued to teach privately. Rendano's compositions include the lyric drama *Consuelo*, based on a novel by George Sand. It was successfully performed at Turin in 1902 and at Stuttgart (in German) in 1903. The libretto was considered untheatrical by such critics as Torchi, because its succession of scenes lacked coherence and hence dramatic power. The lengthy score includes arias, songs, dances and ensembles, and makes some use of leitmotifs. The style tends towards the terse elegance of Gounod and Saint-Saëns, but the music is unoriginal and pianistic, and the essentially syllabic declamation is overshadowed by the orchestral writing.

Rendano introduced a modification to piano construction with the *pedale indipendente*, also called the *pedale Rendano*, which is a third pedal that makes it possible to prolong the vibrations of a given sound or a particular chord. A celebrated interpreter of Scarlatti, Bach, Beethoven, Weber, Schumann, Chopin, Mendelssohn, Liszt,

Rubinstein (who also had a liking for Rendano) and others, Rendano was among the best Italian pianists of the period because of his technical skill, and above all because of his exquisite and delicate touch. He was, moreover, a diligent propagator of culture and musical education in the 19th-century revival of instrumental music in Italy.

WORKS
(*selective list*)

Consuelo (op, F. Cimmino, after G. Sand), Turin, Vittorio Emanuele, 25 May 1902

Inst: pf conc.; pf qnt; piano works, incl. Feuillets d'album, Alla gavotta, Chant du paysan, Valse-Caprice, Marche des souris contre les grenouilles, Montanaro calabro, Rondoletto

Vocal: chamber ensembles, incl. Serenata in gondola, solo v, small chorus, vn, pf

FRANCESCO BUSSI

Rener [Reiner], **Adam** (*b* Liège, *c*1485; *d* Altenburg, *c*1520). South Netherlandish composer and singer. In 1498 he was a boy chorister at the court of Emperor Maximilian. In 1500, probably after his voice broke, he went to Burgundy to study, but was at the Habsburg court again by 1503 as a composer. He was a singer and composer at the court of the Saxon Elector in Torgau from 1507, apparently succeeding Adam von Fulda, who died in 1505. Records of Rener's tenure in Torgau stop in 1517, and the last documented evidence of his life is the appearance of his name in the Altenburg court records of 1520.

Rener is historically important because, like his contemporary Isaac, he took the spirit of Netherlandish music into Germany soon after 1500. Under his direction the Saxon chapel became an important musical centre, its up-to-date repertory clearly shown by the music in the so-called Jena choirbooks, some of which Rener may have helped to edit. His compositions sometimes show a tendency to depart from strict cantus firmus in favour of freer construction, following the tendencies of the time. This is especially apparent in his settings of the Ordinary of the Mass and the *Magnificat*, but less so in his settings of the Proper, which were probably closer to specifically German traditions of Proper settings. His extant works include nine Mass Ordinaries, a *Magnificat* cycle, three German secular songs and over 30 motets, some of which are cycles for the Proper. They all represent a considerable contribution to the 16th-century Netherlandish and German repertory and can stand alongside the larger body of work by Isaac, with which, in many technical aspects, they are comparable.

WORKS
for 4 voices unless otherwise stated

Edition: *Adam Rener*: Gesamtausgabe/Collected Works, ii/1–2, ed. R.L. Parker (Brooklyn, NY, 1964–76) [P i–ii]

Masses and mass movts (principal sources *D-Ju* 33 and 36, 1541[1]: Adieu mes amours, Alma Redemptoris mater, Carminum, ed. in Cw, ci (1965), De Beata Virgine, Dominicalis maius, Octavi toni, Paschalis, Sine nomine I–II; Credo, inc.

Mass Proper cycles: 3 for Nativity, 1 for Epiphany: all P i

3 introits: Nos autem gloriari, Puer natus est, Suscepimus Deus: all P i

3 versus alleluiatici: Felix es sacra virgo, Maria Dei genitrix, O beate Roche: all P i

4 sequences: Ave praeclara maris stella, 4–6vv, Grates nunc omnes, Rochi patris ob honorem, 4–5vv, Victimae paschali laudes: all P i

Qui totum subdit, responsory, 1540[5], P i, also ed. H.J. Moser, *Georg Rhau: Musikdrucke*, iv (Kassel, 1960)

2 hymns: A solis ortus cardine, 3vv, P i; Veni creator Spiritus, P i, also ed. in EDM, 1st ser., xxi (1942/*R*), possibly by Isaac

4 psalms (all in falsobordone): Ad Dominum cum tribularer, Lauda Hierusalem Dominum, Laudate Dominum quoniam, Laetatus sum in his: all 1540[5], ed. H.J. Moser, *Georg Rhau: Musikdrucke*, iv (Kassel, 1960)

8 Magnificat, 1st-8th tones, 1544[4], P ii, also ed. P. Bunjes, *Georg Rhau: Musikdrucke*, v (Kassel, 1970)

3 songs: Ach ainigs ain, *A-Wn* 18810; Jetzt hat vollbracht, Mein höchste Frucht: both ed. in PÄMw, ix (1880)

MARTIN STAEHELIN/CLYTUS GOTTWALD

Renier [Regnier], **Nicolas** (*d* ? Paris, *c*1731). French composer. He was active in Paris during the first half of the 18th century. Renier's reputation as a composer rested upon his large output of *airs* and his eight cantatas, two of which (*Le jugement de Paris* and *L'Amour aveuglé par la folie*) were performed at Philidor's concerts at the Tuileries in 1729, the year after their publication. On these occasions (January 5 and 22) the two soloists were well-known singers, Mlles Le Maure and Bourbonnais. In the previous year the same series of concerts included a divertissement by Renier (performed 7 February, repeated 9 February) but its title was not given by the *Mercure de France* when it reported these concerts. No divertissement by Renier survives. Of his cantatas, *Ulisse et Pénélope* is perhaps the most attractive; its seven movements are fused into one, after the manner of an operatic scena. The inclusion of *airs* by Renier in various collections published posthumously confirms their popularity. A retrospective catalogue issued by the publisher J.-P. Le Clerc in 1742 lists two 'concerts' of sonatas for two flutes by Renier but they are lost. An opera *Thésée* was attributed to him by Eitner but doubts have been cast on its authorship.

WORKS
printed works published in Paris

Collected cants. (1728): Le jugement de Paris; L'indifférence punie; L'Amour aveuglé par la folie; Ulisse et Pénélope, S, B, bc

Separate cants.: Sémélé (1719), La communauté bachique (lost), Les hommes (lost), Mars et Vénus (parody, lost)

20 recueils d'airs sérieux et à boire (1714–33); airs in Ballard's Recueils (1708–18) and other collections

Divertissement (*c*1728, lost); Laudate Domine (lost); 2 concerts, 2 fl (lost)

DAVID TUNLEY

Renieri, Giovanni Simone. *See* RANIERI, GIOVANNI SIMONE.

Renn, Samuel (*b* Kedleston, Derbys., 10 June 1786; *d* Manchester, 11 Jan 1845). English organ builder. In 1799 Renn was apprenticed to his uncle, James Davis, a successful London organ builder who had migrated from Preston, Lancashire, about 1790. In 1808 Renn became Davis's foreman and supervised organ installations and maintenance in London and Lancashire; he was working on Davis's largest organ, in Stockport parish church, when Davis retired on inheriting his brother David's wealth made in partnership with Clementi. Renn, with John Boston, took over Davis's Lancashire contracts and traded as Renn & Boston, first in Stockport (1822–5) and then in Manchester; Boston left the partnership about 1835. Renn's nephew James Kirtland had joined the firm as apprentice in 1826; after Renn's death Kirtland continued trading and was joined in 1846 by Frederick Wincott Jardine. The name Kirtland & Jardine was used until 1867, when the title Jardine & Co. was adopted; this firm flourished in Manchester until 1976.

Renn adapted the Lancashire factory system to organ building, using standardized dimensions for pipes, soundboards, consoles and cases; in this way he reduced the cost of organs to £30 a stop, 12% less than London prices, while evolving artistic designs from a range of modules. At least 100 organs were built by Renn (1822–45) and critics have always praised their musical qualities. F.W. Jardine refused to modify Renn's Chester Cathedral organ of 1829 and organ builders have persistently re-used Renn material in spite of changing taste in organ design. The closure of urban churches has resulted in the loss of many Renn organs; the best surviving example is in St Philip's, Salford.

MICHAEL SAYER

Renner, Felix. *See* RHEINER, FELIX.

Rennert, Günther (*b* Essen, 1 April 1911; *d* Salzburg, 31 July 1978). German director and administrator. He studied law, music, drama and film in Munich, Berlin and Halle. He began his career in 1933 as a film director, but soon moved towards the theatre, encouraged by Walter Felsenstein, whose assistant he became at the Frankfurt opera house. In 1939 he was appointed resident director at the theatre in Königsberg (now Kaliningrad) where he remained until 1942, when he took up a similar post at the Berlin Städtische (now Deutsche) Oper. At the end of the war he was back in Munich to open the 1945 opera season there with *Fidelio*. In 1946 he was appointed Intendant of the Hamburg Staatsoper, where in addition to strengthening the contemporary repertory he also spearheaded a revival of interest in Rossini's comedies. His productions of *Il barbiere di Siviglia* in Hamburg and *Il turco in Italia* in Stuttgart were regarded as landmarks. In 1959 he staged *Fidelio* at Glyndebourne and the following year was appointed joint artistic director with Vittorio Gui. His productions there included *La pietra del paragone*, *Jephtha*, *Capriccio*, *Elegy for Young Lovers* and *Don Giovanni*. With Raymond Leppard he inaugurated Glyndebourne's series of pre-Classical operas with *L'incoronazione di Poppea* (1962) and Cavalli's *Ormindo* (1967). In 1967 he was appointed Staatsintendant of the Bayerische Staatsoper in Munich, where he remained until 1977, concentrating on the standard German repertory with particular emphasis on the works of Mozart, Wagner and Strauss. His Munich productions of *Die schweigsame Frau* and *Ariadne auf Naxos* were seen at Covent Garden in 1972.

His brother, Wolfgang Rennert (*b* Cologne, 1 April 1922), was appointed Generalmusikdirektor of the Mannheim Opera in 1980. He studied at the Salzburg Mozarteum under Clemens Krauss and made his conducting début (1947) with *Un ballo in maschera* at Düsseldorf in 1947. From 1971 to 1980 he was a Kapellmeister at the Berlin Staatsoper; he specializes in the German repertory and frequently conducts Strauss operas as a guest in the principal German houses. His book *Opernarbeit: Inszenierungen 1963–1973* was published in Kassel and Munich in 1974.

HUGH CANNING

Rennes. Composer, possibly identifiable with NICOLE REGNES.

Rennes, Catharina van (*b* Utrecht, 2 Aug 1858; *d* Amsterdam, 23 Nov 1940). Dutch music educator and composer. After studying theory, singing and composition with Richard Hol and completing her vocal studies with Johan Messchaert, she began her career as a soloist, appearing in operas and oratorios. In 1887 she founded her own music school in Utrecht, teaching singing, music theory and Dalcroze rhythmical gymnastics. For the coronation of Queen Wilhelmina in 1898 she conducted her *Oranje-Nassau-Cantate* op.33, with a choir of 1800 children; she also conducted a large chorus in her own music at the opening of the fourth international congress of the International Woman Suffrage Alliance at the Amsterdam Concertgebouw in 1908.

Van Rennes wrote more than 150 songs and duets for children, which captivated their enthusiasm and were highly regarded by critics for their freshness. She also composed some 50 songs in a German Romantic style influenced by Schumann and Brahms, as well as French songs. Her unpretentious *Kleengedichtjes* op.52 well expressed the texts of Guido Gezelle, and were reprinted 72 times. Many of her partsongs and cantatas were written for her own women's chorus. For over 40 years she inspired a love of music in both young and old, and together with Hendrika van Tussenbroek (1854–1943) she created a new genre for children which remained viable in the Netherlands up to the 1960s. Van Rennes was knighted by the Order of Oranje-Nassau in 1927; her archive is in the Gemeentemuseum in The Hague.

WORKS
(*selective list*)

Stage: Lentebloemen (lyrical drama for children), *c*1920

Choral: Kerstcantate, children's vv, pf, op.9; De schoonste feestdag, cant., S, children's vv, pf, op.18 (1898); 3 Quartette (E. Claar), (S,

HELEN METZELAAR

Renosto, Paolo (*b* Florence, 10 Oct 1935; *d* 10 Feb 1988). Italian composer. He studied at the Florence Conservatory with P.R. Nardi (piano) and R. Lupi (composition) gaining diplomas in 1956 and 1962 respectively. After studying orchestration with Dallapiccola, he then studied conducting with Maderna at the Salzburg Mozarteum.

Renosto's first compositions date from the mid-1950s; pieces such as *Five Little Pieces* (1954) for piano, the *Variazioni* (1955) for string quartet and *Due studi su Cesare Pavese* (1958) for soprano and nine instruments tend towards Viennese expressionism and 12-note technique, filtered through Dallapiccola's teaching. In the 1960s he became receptive to avant-garde trends partly through the influence of Cage and partly through his relationship as a student and friend of Maderna which started in 1965. He experimented with improvisatory and aleatory techniques in *Dissolvenza* (1964) for nine instruments, *Scops* (1965–6) for viola and orchestra, and in *Players* (1967) for any instrument or chamber instrumental group. With *Forma 7* (1968) for orchestra, of which Maderna gave the first performance at the Venice Festival the following year, and *Nacht* (1968) for two orchestras, which he co-conducted in Rome in 1969 with Maderna, he achieved a new balance between experimentation and craftsmanship.

The 1970s saw his first foray into opera with *La camera degli sposi* (1971), based on the theme of marital crisis. In his following opera, *Le campanule* (1980), on a surreal plot of an old man and a young girl swapping places, Renosto returned to a more conventional theatrical manner and revived closed forms. His last instrumental works show a return to a style in which avant-garde manners appear to have been abandoned.

WORKS
(*selective list*)

RAFFAELE POZZI

Renotte, Hubert (*b* Liège, bap. 24 Feb 1704; *d* Liège, before 24 June 1745). Flemish composer and keyboard player. He was organist at the collegiate church of Onze-Lieve-Vrouwekerk, Maastricht, from January 1729 to April 1731, and on 27 February 1730 he succeeded Jahovin as *phonascus* at the church of St Martin, Liège. In 1733 he advised on the organ for the parish of St-Martin-en-Ile. He was appointed organist of the Cathedral of St Lambert in March 1735, combining this post with that of organist at the seminary from 1739 until his death. A beneficial canon of the cathedral, Renotte was sheltered from need from 1740 onwards; despite this, he died relatively young. His first set of sonatas was dedicated to the cathedral authorities and is mentioned in the archives with the date 6 April 1740.

Renotte's music falls between the French art of Couperin and Rameau and the Franco-Italian *galant* style; his most interesting work is the manuscript *Pièces de clavecin*, in which – without exhausting the expressive or technical resources of the harpsichord, and in spite of weak passages – he achieved a happy blend of the French and Italian tastes.

WORKS

Vespers, 4vv, org, 1733, Gemmentarchief, Maastricht; Magnificat, 4vv, 2vn, org, *B-Lc*

Mass, 4vv; Mass, double chorus, 1733: both lost

PHILIPPE VENDRIX

Rentia, Anna. *See* RENZI, ANNA.

Rentius de Ponte Curvo [Laurentius Nicolai de Cartono de Pontecurvo] (*b* ?Pontecorvo, *fl* 1407–10). Italian composer. He is known from a fragmentary two-voice Gloria (ed. in PMFC, xiii, 1987, p.230) in the manuscript *I-CF* 63. The Gloria's tenor is based on the responsory *Descendit angelus Domini*, for the Nativity of St John the Baptist. Another fragmentary Gloria has been found in the manuscript *I-uDas* 22. The composer is documented as a priest active in Cividale del Friuli in 1407 and 1408, and was in the service of Pope Gregory XII in 1410, receiving several benefices from him.

GIANLUCA D'AGOSTINO

Ren Tongxiang (*b* Jiaxian county, Shandong, 1926). Chinese SUONA (shawm) player. Like several renowned wind players such as Yuan Ziwen and Wei Yongtang, he was brought up in the intensely musical life of shawm-and-percussion bands in south-western Shandong. After the founding of the People's Republic of China, Ren was 'discovered' in 1953 at one of the many regional arts festivals then being organized by the new regime. He went on to make foreign tours, becoming soloist with the Shanghai Opera Academy (Shanghai gejuyuan).

The style of his arrangements of traditional (often Shandong) melodies, and his own compositions, illustrate the grafting of more modern concepts on to the traditional music of his home, conforming to the values of a modernizing cultural policy. Of his arrangements of traditional Shandong *suona* pieces, best known is *Bainiao chaofeng* ('All Birds Pay Homage to the Phoenix'). Ren is also an influential *suona* teacher for the younger generation of members of professional troupes.

See also CHINA, §IV, 4(i).

STEPHEN JONES

Renvoisy [Renvoysy], **Richard de** (*b* Nancy, *c*1520; *d* Dijon, 6 March 1586). French composer and lutenist. From February 1545 he served as a musician at Besançon Cathedral; in 1554 he was appointed 'maître des enfans de choeur' at the Ste Chapelle, Dijon, where he remained until his death. He must have taken holy orders for he was a canon from 1559 and a chaplain from 1573. On 13 February 1586 he was arrested on the charge of committing sodomy with his young choirboys and was burnt at the stake three weeks later. The circumstances of his death were related in a manuscript journal by Pépin, a fellow 'chanoine musical' at the Ste Chapelle from January 1571; Pépin described his colleague as a clever music master and one of the finest lutenists of his day – a view supported in some Latin verses by Philibert Colin.

Renvoisy's only surviving music, *Quelques odes d'Anacréon poète ancien, nouvellement mise en françoys après le grec … et depuis mises en musique* (Paris, 1559), is a collection of settings of 13 odes ascribed to Anacreon (but probably by later Greek lyric poets), and a canon. The preface, though defensively moralistic, betrays the hedonism of both the composer and the Greek poet who sought 'not to instruct but to entertain'. The French translation of the odes may be by Renvoisy himself, though it was attributed in the 18th century to Jean Bégat, president of the Dijon Parlement until 1572; it lacks the style of Belleau's version of 1556 but its unpretentious language, subtle metre and varied rhyme schemes recapture the spirit of the Greek lyric poet. Renvoisy made no attempt to imitate anacreontic or other classical metres in his settings, but he exploited with great ingenuity the rhythmic innovations of the polyphonic chanson and homophonic *voix de ville*; not only does a dance-like triple metre alternate with the more conventional duple, but compound metres are introduced (e.g. *Mignarde colombelle*) sometimes alternating with simple metres (e.g. *Attendu que suis*). The odes vary greatly in length and Renvoisy adopted the formal scheme of dividing the longer odes into two, three or four sections or *membres*, all set in the same mode, including some for three or five voices in contrast to the normal four-part settings; this technique was common in the mass but had only recently affected the more extended types of Italian and French secular vocal music. The shorter pieces and the sections of longer ones are generally through-composed with the conventional repeat of the last line; in several pieces the initial strain is repeated for the second couplet, and the three pieces in *voix de ville* style have extra strophes not set to music. Apart from a few consistently homophonic pieces (e.g. *Mignarde colombelle* and *Vulcan fondz*) and one four-voice canon at the end of the contratenor partbook, most of the odes are in the style of the four-voice chansons of Sermisy and Sandrin; they are suave and generally homophonic with rare imitative entries and precadential melismas. In some of them variety is achieved by setting lines in rapid syllabic counterpoint in the manner of Janequin's and Passereau's narrative chansons; in others the more dance-like metrical, treble-dominated style of Arcadelt, Clereau and the new *voix de ville* is evident, and elsewhere all three styles alternate. Also characteristic of the mid-century chanson is the frequent choice of the Ionian mode (often transposed), but Renvoisy showed a predilection for chords on the flattened 7th degree; only five odes are in the minor mode.

The collection was issued in a revised edition entitled *Les odes mises en musique à quatre parties* (Paris, 1573). The order of the pieces was altered, perhaps to follow a sequence according to mode, the rhythm and orthography were occasionally modified and the preface was omitted. Fétis referred to *Psalmi Davidici* for four voices by Renvoisy published in 1573, but no trace of it has been found.

FRANK DOBBINS

Renzi [Rentia, Renzini], **Anna** (*b* Rome, *c*1620; *d* after 1661). Italian soprano. Her career on the operatic stage spanned at least 17 years, and she was the most celebrated singer in Venice during the 1640s. According to contemporary sources, her study of human personalities enabled her to bring the characters she played to life, and she could perform for many nights in succession without loss of dramatic or vocal quality (see Strozzi). As a young woman she sang at the French embassy in Rome, probably in Ottaviano Castelli's *La sincerità trionfante, overo L'Erculeo ardire* (1639, music by Angelo Cecchini), but certainly in the same author's *Il favorito del principe* (1640, music by Filiberto Laurenzi), in which she sang the role of Lucinda.

In 1640 Renzi arrived in Venice, accompanied by her teacher, Laurenzi, to play Deidamia in Francesco Sacrati's *La finta pazza*, which inaugurated Venice's newest theatre, the Novissimo, the following year. Her next roles were Archimene in Sacrati's *Il Bellerofonte* (1642, Novissimo), Aretusa in *La finta savia* (1643, Teatro SS Giovanni e Paolo, music largely by Laurenzi), Ottavia in *L'incoronazione di Poppea* (1643, SS Giovanni e Paolo, music probably largely by Monteverdi) and the title part in *La Deidamia* (1644, Novissimo, prologue and *intermedi* probably by Laurenzi; composer otherwise unknown). A contract with the impresario Geronimo Lappoli for *La Deidamia* reveals that Renzi earned 750 ducats for her performances, a large sum for that period. These roles were commemorated by Strozzi and others in *Le glorie della signora Anna Renzi romana* (1644), which included a portrait of the singer (see illustration). Renzi was singled out in other publications by members of the influential Accademia degli Incogniti (G.F. Loredan, for example, published a tale of her exclusion from Parnassus by Apollo so as not to make the Muses jealous), and Orazio Tarditi's *Canzonette amorose* (1642) is dedicated to her. In 1645 John Evelyn heard her sing in Rovetta's *Ercole in Lidia* at the Teatro Novissimo. That same year Renzi signed an agreement to marry Ruberto Sabbatini – possibly the Roman violinist who served at the Innsbruck court during the mid-1650s and was employed at the Neuburg Hofkapelle in 1662 – but there is no evidence that the nuptials took place (the assertion that she married the composer Alessandro Leardini seems unlikely; see *Notes and Queries*).

In the late 1640s Renzi returned to the Teatro SS Giovanni e Paolo (because of the war over Crete the theatres had evidently been closed for two seasons), where

Anna Renzi: engraving from G. Strozzi's 'Le glorie della signora Anna Renzi romana' (Venice, 1644)

she played the title roles in *Torilda* (1648) and *Argiope* (dedicated to her in 1645 but not performed until 1649), the libretto of which was partly by G.B. Fusconi (a member of the Incogniti), whom she named as one of her executors in a will of 1652. In December 1649 she joined in a partnership with the dancer and choreographer G.B. Balbi to mount an opera, *Deidamia*, in Florence. Although Renzi lived in Venice during 1652 and part of 1653, no performances by her are documented there. In the latter year she probably sang in Genoa in *Torilda* and *Cesare amante*. From October 1653 to August 1654, and again from August to December 1655, she was at the Innsbruck court. She sang the title role in Cesti's *Cleopatra* during her first soujourn, and during her second played Dorisbe in his *Argia*, performed for the visit of Queen Christina of Sweden. Between those two visits she sang in Venice at the Teatro S Apollinare in P.A. Ziani's *Eupatra* (1655). Renzi's last known performances took place at the same theatre in 1657, when she was Damira in Ziani's *Le fortune di Rodope e Damira*. She left Venice in 1659 but returned in 1662 with the intention of getting married; no later references to her have come to light.

THOMAS WALKER/BETH L. GLIXON

Repeat (Fr. *reprise*; Ger. *Wiederholung*; It. *replica*; Lat. *repetitio*). The restatement of a portion of a musical composition of any length from a single bar to a whole section, or occasionally the whole piece. Since the Classical period, repeated passages have not usually been written out; instead they are enclosed within the signs ||: and :||, although the first is generally omitted if the repeat is to be made from the beginning of a movement. Repeats commonly indicated include those made of both sections of a binary movement, that made of the first section of an *ABA* movement such as the minuet and trio (usually indicated by the words 'da capo'), the refrain of a rondeau on its initial appearance, and one or both halves of a movement in sonata form. The evolution of the notation, its exact interpretation and the practice of making repeats nevertheless raise certain problems, not all of which have obvious solutions.

In medieval and Renaissance music, repeats are often required even though no specific instructions to this effect are given. In a medieval chanson the performers must generally deduce the pattern of repeats needed from the poetic form of the text. Repeats are rare in Renaissance vocal music, but when they occur in bicinia or in pieces with, for example, two soprano parts, an interchange of the equal parts is sometimes called for in the repetition; as a result an element of variation is introduced into it. This may well have been accompanied by the addition of further embellishments during the repeat, a practice which became universal during the Baroque period, when the da capo of an aria would be lavishly ornamented and repeats in dance music were often elaborately varied, as François Couperin's numerous versions of pieces 'plus orné' and the *doubles* to some of J.S. Bach's sarabandes and courantes show. For C.P.E. Bach the variation of repeats was mandatory, and he showed how this should be done in his *Sonaten ... mit veränderten Reprisen* (1760). Composers resisted such decoration during the 19th century, at any rate in more serious compositions such as sonatas, and they showed any modifications that they required by a special direction (e.g. Beethoven's direction that the minuet in his Quartet in C minor op.18 no.4 be played faster when it returns after the trio) or by completely rewriting the passage in question.

The notation of repeats was very imprecise up to the 17th century and in certain respects remained so even into the 18th century. In virginal music repeats are often implied even when no indication is given. The double bar, with or without dots, may imply repeats but may on the other hand merely be a calligraphical ornament (see Ferguson).

Georg Muffat stated in 1701 that a Grave should never be repeated but that lively movements could be repeated in their entirety two or three times if necessary. Handel actually specified this in some of the quick dances in the Water Music, and the last movement of Corelli's Sonata op.1 no.4, which is in one continuous section, has a terminal repeat sign that suggests a similar treatment.

Although both halves of 18th-century sonata form movements are marked to be repeated, following the pattern of the binary structure from which they derived, there is evidence that such repeats were soon regarded as vestigial survivals not necessarily to be strictly observed. Grétry took exception to the automatic observation of these signs, and Hüllmandel and Guénin suppressed them altogether in certain works. By 1800, with few exceptions, the repeat of the second half was no longer indicated, and even that of the first half was sometimes not observed, though up to this date composers often continued to make provision for it. Beethoven's requirements are not always clear, for example as to whether or not the opening Grave is to be included in the repeated section at the beginning of the *Sonate pathétique* op.13. But the extraordinary repeat of the second half only of the finale of the 'Appassionata' Sonata op.57 cannot simply be dismissed as an absurdity; and his deliberate modification of the first movement of the 'Eroica' Symphony to include the usual repeat of the exposition suggests intention, not convention.

Clearly the observation of repeats and the possibility of ornamentation within them are problems of importance in interpretation. The requirements of structure – tonal balance and the lengths of sections – must always be observed. In variations where 'conventional' repeats may blossom into written-out double variations in the course of the work, failure to observe them in the theme results in a certain distortion. The practice of making only the first repeats in each movement of Bach's Goldberg Variations set is patently absurd. Before suppressing a composer's written indications in a sonata form movement the performer must consider whether the proportions of the movement will suffer as a result, whether significant material from first-time bars will be discarded or interesting changes in the course of harmonic events will be lost, and whether a meaningful juxtaposition of material between the close and the opening of the exposition may be sacrificed.

In 18th-century terminology a repeat (presumably a modification of the earlier REPORTS) also denotes an entry of the subject in a fugue or other imitative piece.

MICHAEL TILMOUTH/R

Repeating. *See* BREAKING BACK.

Répertoire International de Littérature Musicale [RILM; International Repertory of Music Literature; Internationales Repertorium der Musikliteratur]. An international bibliography of scholarly writings on music. It covers both current and older literature, provides abstracts for each entry, and has been published in three formats: printed volumes (updated annually), CD-Rom (quarterly) and online (monthly). It is the second of three such

bibliographical ventures in music, the first being Répertoire International des Sources Musicales (RISM), founded in 1952, and the third Répertoire International d'Iconographie Musicale (RIdIM), founded in 1971.

RILM was established in 1966 under the joint sponsorship of the International Musicological Society and the International Association of Music Libraries; Barry Brook, Harald Heckmann and François Lesur were co-founders. It was the pilot project of the interdisciplinary Bibliographic Center planned by the American Council of Learned Societies; similar methods are used in other disciplines, notably Répertoire International de la Littérature de l'art (RILA). RILM's Commission Internationale Mixte is made up of distinguished scholars and librarians who represent the sponsoring organizations. The position of Editor-in-Chief has been held by Barry Brook (1966–88), Terence Ford (1989–91), Adam O'Connor (1991–6) and Barbara Dobbs Mackenzie (1996–). The Graduate School and University Center of the City University of New York has provided an institutional context for the central office, called the International RILM Center.

Most of the material is supplied by some 60 national committees located on six continents. Composed of musicologists and librarians, the committees are typically based at major universities, national libraries and research institutes. Each committee is responsible for sending citations and abstracts to the International RILM Center of all significant writings on music published in their countries. All published scholarly works are included as well as videos, films and ethnographic recordings.

RILM is indexed for persons, places and topics covered in each entry which convey the focus of the publication. A thesaurus is available as a guide to headwords and indexing policies, and an international thesaurus gives translations of RILM's headwords in some 20 languages. The cumulative indexes offer five-year accumulations of RILM indexing in printed volumes.

RILM has experienced unprecedented growth and development in recent years, the number of records per volume has increased from 2532 in volume i (1967) to 17,223 in volume xix (1995). Interactive forms on the web site allow easy and quick submission of materials by scholars worldwide; retrieved records are in a tagged format that can be automatically uploaded into the database. From 1997 RILM included citations for the most recent articles in several hundred major music journals, later replaced with fully abstracted and indexed records.

BARRY S. BROOK/BARBARA DOBBS MACKENZIE

Répertoire International des Sources Musicales [RISM; International Inventory of Musical Sources; Internationales Quellenlexikon der Musik]. The inventory, generally known as RISM from its French title, is a publication project jointly sponsored by the International Musicological Society (IMS) and the International Association of Music Libraries (IAML). The sources catalogued include manuscript and printed music and writings about music, divided into two categories, Series A and B. Series C includes a directory of the libraries whose material is listed in Series A and B.

The project had its beginnings in Robert Eitner's fundamental publications for the location of musical source material: *Bibliographie der Musik-Sammelwerke des XVI. und XVII. Jahrhunderts* (Berlin, 1877/*R*) and *Biographisch-bibliographisches Quellen-Lexikon der Musiker und Musikgelehrten der christlichen Zeitrechnung bis zur Mitte des neunzehnten Jahrhunderts* (Leipzig, 1900–04, 2/1959). These had become less useful because of their incompleteness and their errors (multiplied by the devastation of two world wars). A revision had been discussed in the inter-war years, but a committee to consider the possibility was formed only after Hans Albrecht presented a paper on the subject at the first post-World War II Congress of the IMS (Basle, 1949). Independently, the subject was discussed at a first international meeting of music librarians in Florence in October 1949, and in 1951 the IMS and the newly formed IAML agreed to undertake the project jointly. The first joint committee consisted of Higini Anglès, Friedrich Blume, Vladimir Fédorov, Richard S. Hill, A. Hyatt King, Leopold Nowak, Nino Pirrotta and Albert Smijers; their initial planning session was held in 1952 under the auspices of the International Music Council, and the following year a secretariat directed by François Lesure was established in Paris. In 1960 a second secretariat was founded in Kassel for collecting, organizing and editing the material for Series A; Friedrich W. Riedel was director of this office until 1968, when Karlheinz Schlager was appointed. The Paris secretariat has since been disbanded.

The first joint committee soon decided to abandon Eitner and plan an entirely new inventory (which would however retain Eitner's general scheme of two sets of publications as the basis for the RISM Series A and B). For practical reasons, the committee accepted various limits and compromises: biographical information, even composers' dates, is excluded; many areas of non-Western music have been abandoned because of the difficulty of finding the required experts and locating sources.

The research, bibliographical, organizational and financial aspects of planning and executing the project on the international level are administered by a joint committee which receives support from 26 autonomous national groups who gather and submit material from their respective countries. Some governments and private foundations have supported the appointment of music cataloguers to visit selected libraries in order to make their uncatalogued backlogs available for inclusion in RISM.

Series A (published by Bärenreiter in Kassel) is devoted to works that appeared under the name of a single composer; it is subdivided into printed (A/I) and manuscript

(A/II) sources, with the volumes of each arranged in alphabetical sequence by composers' names. The printed works are restricted to those published between 1500 and 1800, although composers whose most productive period fell before 1800 have their post-1800 publications included; this extends coverage to Haydn, but excludes Beethoven (extension to a cut-off date of 1830 would have increased the length of Series A/I by another 50–100%). About 200,000 works by about 8000 composers, in over 1100 libraries in 29 countries, are listed in nine volumes (and supplementary volumes). Series A/II lists manuscripts from between 1600 and 1800. This project was still in progress at the beginning of the 21st century, but is available on CD-ROM, with annual updates.

Series B (published by Henle in Munich and Duisburg) consists of catalogues of various self-contained groups of source material, each published independently. Apart from four volumes of Series B, edited by François Lesure at the first RISM secretariat in Paris, the volumes of Series B have been prepared by outside specialists, and include volumes on a variety of topics including Arabic music, lute and guitar tablatures, and printed writings about music up to 1800. Some of these volumes are still in preparation.

Series C, the libraries directory, was initiated by the Commission of Research Libraries of IAML and edited by Rita Benton. The first three volumes were issued in a preliminary version (R. Benton, ed.: *Directory of Music Research Libraries*, Iowa City, IA, 1967–75, 2/1979–85). This was taken over by Bärenreiter in 1976 and at the same time officially made a part of RISM Series C.

While RISM offers great advantages over Eitner in terms of accuracy and the number of libraries surveyed and works catalogued, it is by reason of its boundaries an incomplete work. But even with the present limitations, RISM could be described (by King in 1959) as 'one of the boldest pieces of long-term planning ever undertaken for the source material of any subject in the humanistic field'.

RITA BENTON/R

Répertoire International d'Iconographie Musicale [RIdIM; International Repertory of Musical Iconography; Internationales Repertorium der Musikikonographie]. An international project, founded at a meeting of the International Association of Music Librarians (1971), on the initiative of Barry S. Brook with the assistance of Geneviève Thibault and Harald Heckmann. Its aim is to develop methods, means and research centres for the

classification, cataloguing, reproduction and study of iconographical material relating to music. It is designed to assist performers, historians, librarians, students, instrument makers, record manufacturers and book publishers to make the fullest use of visual materials for scholarly and practical purposes.

The cataloguing of musico-iconographic documents was until the early 1970s largely a private, uncoordinated affair, and was poorly equipped with methodology and research tools. Several systems of cataloguing visual materials have been proposed, but RIdIM appears to have become firmly established for two reasons: because it uses new technologies that facilitate the cataloguing and reproduction of vast numbers of sources; and because RIdIM could follow RISM (1952) and RILM (1966) as the third important international cooperative bibliographical venture in music. Like them, RIdIM is sponsored by the International Musicological Society and the IAML, as well as the International Council of Museums, and it is supported by an international advisory commission of art historians, museum directors, musicologists, iconologists and private collectors. It is governed by a Commission Internationale Mixte, appointed by the executive boards of its three sponsoring societies.

RIdIM seeks to establish musical iconography as a discipline in its own right; this requires an internationally agreed approach to cataloguing and classification, an organized body of source material, a tested and proven methodology, bibliographical controls, training schools and inexpensive methods for the reproduction and exchange of documents.

RIdIM functions through national committees and active individuals or working groups and works on two research project series: an inventory of Western art with musical subjects from 1300 to the present (with subseries on paintings, drawings, prints etc.), and specific topics (Greek vases, medieval wall paintings, the viol family, musical inscriptions, drums and drummers, Caravaggists, portraits, the meeting of Eastern and Western instrumentaria, 18th-century ensembles, and iconographical sources in the periodical *L'illustration*). Other specialized publications are sponsored by RIdIM.

The oldest and by far the largest national centre is the Centre d'Iconographie Musicale in Paris, founded in 1967 by the Countess of Chambure (Geneviève Thibault); since 1992 it has been located at the Musée National des Arts et Tradition Populaires. The Research Center for Musical Iconography, established in 1972 at the City University of New York, serves as both the American national centre and RIdIM international headquarters; it has a photographic archive and RIdIM Master Catalogue. The Swedish national committee was established in 1975 and is sponsored by the Svenskt Musikhistoriskt Arkiv in Stockholm. The German national centre, sponsored by RISM-Germany, was established at the Bayerische Staatsbibliothek, Munich, in 1976. The Italian centre, Catalogo Italiano di Iconografia Musicale, founded in 1987, is housed at the library of the Milan Conservatory. National centres have also been established in Canada, the Czech Republic, Hungary, Japan, the Netherlands and Poland. Besides national centres, cataloguing of iconographic sources is done in a number of local research institutions and universities.

In addition to congresses on iconography, RIdIM organizes its regular meetings held during the IAML annual conferences. RIdIM has published the *RIdIM/RCMI Newsletter*, edited by Zdravko Blažeković, since 1975 and the *Inventory of Music Iconography* since 1986. The yearbook *Imago musicae*, edited by Tilman Seebass and Tilden Russell, has been published since 1984 under the auspices of RIdIM.

BARRY S. BROOK/ZDRAVKO BLAŽEKOVIĆ

Repertory [repertoire]. A stock of musical materials for a particular use (from Lat. *reperire*: 'to find', hence *repertorium*: 'storehouse', 'repository').

1. Definitions. 2. Issues. 3. Lexicographical usage.

1. DEFINITIONS. (1)(*a*) The stock of works that an artist or group of artists (ensemble, orchestra, company etc.) has in readiness to perform at a given time; (*b*) the stock of roles or parts that a singer (e.g. in opera) or instrumentalist (e.g. concerto soloist) has in readiness to perform, the scores that a conductor has in readiness to conduct, or the operas or ballets that a director or choreographer is in a position to realize; (*c*) more loosely, the sum total of works, roles or parts that an artist has in readiness for performance throughout his or her career (not all of which are necessarily available for performance at any given time).

(2) All the items that are available for performance in a given locality (e.g. all the folksongs known to the inhabitants of one village or region; all the plainchants in use at a given church or religious house).

(3) The totality of works, roles or parts known to have been written (or at least available in print or for hire) for a given instrument, voice-type or ensemble (e.g. 'violin repertory': *see* VIOLIN, §I, 3–5).

(4) The total compositional output of a given time and place (e.g. Renaissance Ferrara; 18th-century Mannheim; the Second Viennese School).

(5) A subset of some larger repertory (*a*) having a particular function (e.g. lamentation) or character (e.g. an older stratum, such as *dhrupad* compositions within the North Indian singer's repertory, or the earliest layer within the 13th-century French motet repertory; 'light' songs and 'serious' songs), or (*b*) extant in sources of a

particular type (e.g. 12th- and 13th-century Parisian polyphony as against the total performance repertory at Notre Dame, Paris (including plainchant), of that period).

(6) The term 'standard repertory' describes the collection of works commonly found in the programmes of Western-style orchestras, choirs and opera companies (and to a lesser extent ensembles and recital artists), containing selected works of the period roughly from Haydn to Richard Strauss and Debussy.

(7) In opera (as in the theatre generally), a particular manner of organizing programme-planning based on holding a relatively large number of productions in preparation at the same time (as opposed to the stagione system, where only one or two operas are kept in readiness for performance, in short seasons, at any particular moment). The repertory system, generally favoured in German opera houses, is particularly appropriate for a resident company with a regular opera-going public but is not suitable for most international opera houses, where casts are drawn from a widespread community of singers.

2. ISSUES. The concept of repertory entails a fundamental sense of 'otherness', of difference. Hypothetically, all the music of a given, culturally isolated community would not constitute, for the members of that community, a repertory, but rather all the music it knows – its musical 'universe'. Only to an outsider (e.g. an early folksong collector, a modern ethnomusicological field-worker), by reference to his or her larger universe, would that music constitute a repertory. Thus 'my/our' repertory implies an awareness of 'his/her/their/your' repertory.

Repertoriality is governed principally by four factors: function, capacity, market and manipulation.

(i) Function. At the heart of repertory definition is the notion that particular types of music serve, or lend themselves to, particular social functions. Music for funerals may be typologically different from that for coming-of-age ceremonies or weddings, music for jubilation different from that for confession. Music for the private domain may differ from that for the public, and music for the concert from that for a dramatic context. Acoustics and types of space constitute an environmental function: thus, music for outdoors may differ from that for indoors, music for reverberant cathedral or hall from that for courtly chamber, and both of these from that for domestic parlour. These distinctions may determine such musical elements as mode, type of rhythm, tempo, type of texture, choice of instruments and/or voices, dynamic levels, style of performance and so on.

(ii) Capacity. In the strictest sense of (1) above, repertory is broadly related to the human capacity of an individual or group to encompass works, roles or parts physically and mentally, to master them technically, present them publicly and in certain cases memorize them (*see* MEMORY, MEMORIZING and PERFORMANCE). Integral to these are personal physique (lung capacity, arm strength, length of fingers etc.), age and state of health. As such, the factor of human capacity could be said to be relatively 'value-free'. However, other determinants, such as the musician's personal preferences, independence of mind, imaginative faculty and sense of enterprise are in practice likely to 'colour' the selection of a repertory. In parallel with human capacity, the repertory of a given instrument or ensemble is governed by its instrumental capacity; hence the repertories for solo flute, oboe and clarinet are conditioned by their very different acoustics and mechanics; likewise the repertories for string quintet and brass quintet and so on.

(iii) Market. Composition and performance exist in a constant dialectical relationship with listener response. The 12th-century minstrel must have fashioned a repertory in accordance with the known tastes of the courts he expected to visit, and the requirements of the ceremonies and festivities (sacred and secular) in which he took part. The Renaissance church composer was governed by the exigencies of church liturgy, and the demands of the prelates for whom he worked; the 18th-century court musician by the commands of the king, prince or duke whom he served; the 19th-century musician by the commissions he or she received, the sales of published sheet music, the requests of the salons entertained, or the box-office receipts of concert halls. The modern artistic organization is subject to the same forces. In a reverse market sense, the repertory of a given court, town, city or church, may be determined in part by the type and calibre of singers and players available to it, hence the music that it can tackle, or that its composers are at liberty to write.

(iv) Manipulation. Repertory can be manipulated, consciously and unconsciously, in a variety of ways. The personal likes and dislikes of a prince or duke will prescribe and proscribe certain kinds of music at his court. That is, they will dictate the repertory experienced by all the other members of the court, and will determine the historical record, namely the contents of the surviving scores and partbooks from that court. An organization can manipulate audience receptivity by certain kinds of advertising, marketing and programme-building. Public education can change perceptions and thus influence the body of music that audiences will tolerate. CENSORSHIP is a pervasive means of manipulating a repertory accessible to a state or country. The religious and political beliefs of a society, or of that society's most powerful leaders, may forbid some kinds of music and promote others, as occurred in Nazi Germany (*see* NAZISM and ENTARTETE MUSIK) and in the Soviet Union (*see* MARXISM and SOCIALIST REALISM). In this sense, repertory is subject to prevailing ideology. When such forces as ideology and influence are largely hidden, they can give rise to the formation of a canon that is a paradigmatic set of works deemed to represent the 'greatest' products of a given society (*see* CANON (iii)).

3. LEXICOGRAPHICAL USAGE. Repertory is also perceived and used largely as a lexicographic entity, notably in senses of definitions (3) and (4) above. Catalogues claim to give information about, and collected editions to present in notation, 'all the items known to survive from *x*'. That was the spirit of Friedrich Ludwig's *catalogue raisonné* of 1910 entitled *Repertorium organorum recentioris et motetorum vetustissimi stili . . .* ('Repertory of organa of more recent style and motets of earliest style . . .'), and the spirit likewise of the post-1960 enterprise *Répertoire international des sources musicales* (RISM), which aims to catalogue all sources, printed and manuscript, up to 1801. Both are actualizations of definitions (3) and (4) above. Similarly, Constantin Brăiloiu's *Vie musicale d'un village: recherches sur le répertoire de Drăguş (Romanie), 1929–32* (1960) is a realization of definition (2); and Israel Adler's *Oeuvres du répertoire de la communauté portugaise d'Amsterdam* (1965), part of

the series Early Hebrew Music, instances the body of synagogue music for voices and instruments belonging to a community within a larger community.

The term 'corpus' ('body') has been used with similar intent in scholarly publications, as in the American Institute of Musicology's Corpus Mensurabilis Musicae series (CMM) and Alexis Chottin's *Corpus de musique marocaine* (1931–3). There may be subtle differences of intention among these titles, some implying comprehensiveness, others representative selection, others merely magnitude. Two further terms clearly disown comprehensiveness: 'Collection of . . .' and the German *Denkmäler der* . . . ('Monuments of . . .'). Wherever selection is involved, questions of criteria ensue which may uncover preference or bias of the sort raised in (*iv*) above.

Although 'repertory' is a distinctively Western term, the concept of repertoriality exists in many other cultures, and has existed over a great span of time, embodied in other terms and phrases. In China at the Tang court (CE 618–907), for example, 'The term *têng ko* . . . had been applied from Han times [206 BCE–CE 220] onwards to a repertory of pieces performed in a raised and roofed hall on ritual ceremonial occasions and at festal banquets' (Picken). Likewise, the *mbira* players of the Shona people 'have repertories of composed pieces . . . which have been passed down orally and aurally from generation to generation . . .. Some virtuosi report that they know as many as a hundred pieces' (Berliner). Both usages are akin to definition (1) above. Indeed, the concept of repertoriality is a universal, marking self-awareness at a personal or group level; that is, the sense of totality (the contents of a repertory) entails consciousness that something else exists that does not belong to the repertory.

IAN D. BENT, STEPHEN BLUM

Repetendum (Lat.: 'to be repeated'). In Western chant, a section to be repeated, such as the refrain in hymns or the last part of the respond of a responsory, which is repeated after the psalm verse. In *Ordo romanus I* (second half of the 8th century) and later, the term 'versus ad repetendum' designated extra psalm verses added as needed to the Mass introit and communion. According to Husmann, the words 'ad repetendum' were also used in the Middle Ages for additional tropes to the introit antiphon.

RICHARD SHERR

Rephuhn, Paul. *See* REBHUHN, PAUL.

Repiano (It.). Variant spelling of 'ripieno', used in band music to denote players (particularly clarinettists and cornet players in military bands) not at the leading desk. *See* RIPIENO (ii).

Repicco (It.). *See* ORNAMENTS, §4.

Repin, Vadim (*b* Novosibirsk, 31 Aug 1971). Russian violinist. He studied in his home town with Zakhar Bron, gave a performance with orchestra when he was seven and at 11 won the Wieniawski Competition in Poznań. That same year he made his St Petersburg recital début. His international career began in Britain – where he has made his home – and Japan. In 1988 he won the Tibor Varga Competition at Sion and in 1989 the Queen Elisabeth Competition in Brussels. Repin's name is often bracketed with that of Maksim Vengerov because of their similar backgrounds but, unlike Vengerov, he displays no mannerisms. This does not mean he is a less interesting musician; indeed, he ranks as one of the most outstanding violinistic talents to emerge from Russia in the second half of the 20th century. A strong player who easily encompasses the demands of the large-scale concertos, he readily refines his style for chamber music, of which he plays a good deal with such partners as Bella Davidovich, Aleksandr Mel'nikov, Aleksandr Markevich, Boris Berezovsky and Dmitry Yablonsky. He can also be an exciting exponent of bravura music, some of which he has arranged himself. As a teenager he was most secure in the Russian repertory but he has steadily deepened his interpretations of the mainstream Classical and Romantic literature. His recordings include concertos by Mozart, Tchaikovsky, Sibelius, Prokofiev and Shostakovich, trios by Tchaikovsky and Shostakovich (with Berezovsky and Yablonsky) and outstanding accounts of the Prokofiev sonatas (with Berezovsky). He plays the 'Ruby' Stradivari of 1708.

TULLY POTTER

Reports. A term formerly used in England and Scotland to mean points of imitation or imitative entries (it seems not to have been used in the singular). There are, however, eight examples of reports in the Scottish Psalter of 1635 where the word appears to have been used in a more general sense for settings in which the parts move in free polyphony rather than in strictly imitative style. In Purcell's revision of the treatise that appears in the third part of Playford's *Introduction to the Skill of Musick* (12/1694) the term is mentioned as being synonymous with imitation, without further explanation.

See also PSALMS, METRICAL, §IV, 1.

M. BURDEN

Reprise. Repetition. In 17th- and 18th-century French usage the term could refer to any strain of a composition that was normally repeated, such as both sections of binary forms or the recurring and intervening couplets of a rondeau (*see* RONDEAU (ii)). In notated binary dances, however, 'Reprise' or simply 'R' was often written at the beginning of the second strain as a visual aid to finding the place to begin the repetition, and thus the term was also used to refer only to the second strain. When the last phrase of a strain was repeated a third time it was called a *petite reprise*. In Germany, C.P.E. Bach used the term 'Reprise' for varied repetitions that were written out, and subsequently it was used to refer to the RECAPITULATION section of a sonata form.

In stage works such as operettas and musical comedies, the repetition of a musical number, usually abbreviated and after intervening material, is called a reprise. The

term also refers to the revival of a production of such works.

BRUCE GUSTAFSON

Reproaches [Improperia]. A series of chants sung on Good Friday during the Veneration of the Cross, the texts of which tell of God's generosity to his chosen people and man's faithlessness. The low Latin word 'improperia' originally meant vulgar insults, but in this context signifies reproaches. It is possible to distinguish three different series of Reproaches in the manuscripts; these may be designated the greater, the lesser and the Aquitanian.

The greater Reproaches begin with the verse 'Popule meus, quid feci tibi? aut in quo contristavi te? responde mihi' set to a 1st-mode melody in neumatic style in which there are four balanced phrases, with a melodic climax reached in the third of them. There are three more sections, beginning 'Quia eduxi te de terra Aegypti', 'Quia eduxi te per desertum' and 'Quid ultra debui facere tibi'. The first of these immediately follows 'Popule meus'; in it, the two halves of the 'Popule meus' melody are slightly modified, and stated in the form *ABB′*. The next begins again with *A* and *B*, then new material is introduced (to accommodate the longer text); but the ending is the same as before, in both words and music: 'Parasti crucem Salvatori tuo'. In the last section, the character of the earlier melody is preserved but there is less literal borrowing from it. It is customary for the greater Reproaches to be sung in alternation with the Trisagion ('thrice holy'), a chant of Byzantine origin, here most likely borrowed from the Gallican or Mozarabic liturgies. In modern liturgical books (for example the *Liber usualis*, Tournai, 1950, pp.704–6) and some medieval manuscripts, the Trisagion is sung in full, in both Greek and Latin, after the second, third and last sections of the Reproaches. In other manuscripts, it is also sung before 'Popule meus'.

The greater and lesser Reproaches have separate histories and, most likely, separate origins, the greater Reproaches having been a kind of preparation for the lesser. The main sources for the lesser Reproaches are Italian manuscripts from the first half of the 11th century onwards, but it is possible, given the scarcity of Italian manuscripts from before this period, that these Reproaches were already in use at an earlier date. Medieval manuscripts include up to a dozen lesser Reproaches, of which nine are found in modern books. Each begins with the word 'ego' and tells of one instance of God's generosity and, in parallel terms, of man's ungrateful response: for example, 'I give you a royal sceptre, and you place on my head a crown of thorns'. The melody, an irregular psalm tone (described in PalMus, 1st ser., xiv, 1931, p.318), is constant throughout. Drumbl has proposed a Roman origin for one relatively simple tone, and origin in southern Italy for a second, somewhat more ornate tradition; it is therefore possible, but by no means certain, that the lesser Reproaches were disseminated from Rome. The 'Popule meus' verse is usually sung as a refrain after each Reproach.

The Aquitanian Reproaches resemble the greater Reproaches in style, form and character. There are three sections, beginning 'Popule meus' (with a somewhat different melody), 'Dic mihi' and 'Vinea mea', all ending with the same words and music, 'Parasti crucem Salvatori tuo'. In place of the Trisagion between sections, a refrain beginning 'Vae nobis' is sung. The Aquitanian Reproaches are found in *F-Pn* lat.903, f.70 (PalMus, 1st.ser., xiii, 1925/*R*, p.139), where they are apparently an optional substitute for the greater Reproaches. In *Pn* lat.1240 (see PalMus, 1st ser., i, 1889, fig.XXVII) the Aquitanian Reproaches are given immediately after the Trisagion, but only in a series of incipits, while the greater Reproaches, which follow them, are written in full. There is a possible historical connection between the Aquitanian Reproaches and the *Indulgentia* (Remission of Sins), a ceremony in the Mozarabic liturgy celebrated until the 11th century; significantly, this ceremony was occasionally described as the 'Mystery of the Cross'.

A striking parallel in text and in liturgical use exists between the Reproaches and a certain Byzantine troparion, which appears in some Beneventan sources faulty both in transliteration – 'Otin to stauron' (instead of 'Otan tō staurō') – and translation ('O quando in cruce'). Interesting evidence concerning this troparion is found in the missal *I-Lc* 606 (beginning of the 11th century), where the liturgy for Good Friday is described in some detail (see PalMus, xiv, pp.300, 304, 308 and pls.XLI–XLIII). The lessons (including the Passion according to St John) and the chants of the Mass of the Presanctified are preceded by one ceremony of the Veneration of the Cross, and followed by another. In the first ceremony, the action is stylized and the rubrics read almost like stage directions: the chants are the antiphon *Ecce lignum* and the psalm *Deus misereatur*, the Trisagion, and the greater and lesser Reproaches. In the second ceremony, in which everyone participates (the rubric reads 'et omnes adorent ipsam crucem'), there are three antiphons with psalms. 'O quando in cruce' follows them, sung before the Cross, and a fourth antiphon. The service continues with the Lord's Prayer and Communion.

In some manuscript graduals, the Reproaches appear between the Mass chants for Good Friday and Holy Saturday. This is true, for example, in the 11th-century Toulouse Gradual (*GB-Lbl* Harl.4951). In it (ff.207*v*–208*v*) the Reproaches are presented in an unusual order: first, the Trisagion, in Greek and Latin; two of the greater Reproaches, with the Greek Trisagion as refrain; one of the lesser Reproaches, with 'Popule meus' as refrain; another of the lesser Reproaches, with 'Quia eduxi' as refrain; the third of the greater Reproaches and the Greek Trisagion; six more of the lesser Reproaches, each followed by one of three refrains, 'Parasti', 'Popule meus' and 'Quia eduxi'. There follow the refrain of the Aquitanian Reproaches, 'Vae nobis', and the second and third of the Aquitanian Reproaches, 'Dic nobis' and 'Vinea mea'. In the Aquitanian Reproaches refrains are borrowed from the greater Reproaches, in addition to 'Vae nobis'. The mixture of different traditions in this source is quite remarkable.

The Reproaches are sometimes also found in tropers, among the processional chants; an example is the St Martial troper *F-Pn* lat.909, ff.145*v*–146*v*. It is rare to find two manuscripts of the 10th or 11th century in agreement on the number and order of Reproaches or their precise liturgical use; for example, *GB-Lbl* Harl.4951 prescribes the Veneration of the Cross to take place only after the Reproaches have been sung.

Polyphonic settings of the Reproaches, both the lesser and the greater, are known particularly from Rome. In the Cappella Sistina of the 16th century, the polyphonic settings attributed to Palestrina seem to codify an earlier

tradition of singing the texts in *falsobordone*. Further settings of the Reproaches, such as those by Victoria, Anerio, Ingegneri and Bernabei, are found among collections of polyphony for Holy Week.

RUTH STEINER/KEITH FALCONER

Reproducing piano. A development of the ordinary player piano which, with special reproducing music rolls, can re-enact the original touch and expression of the recording pianist.

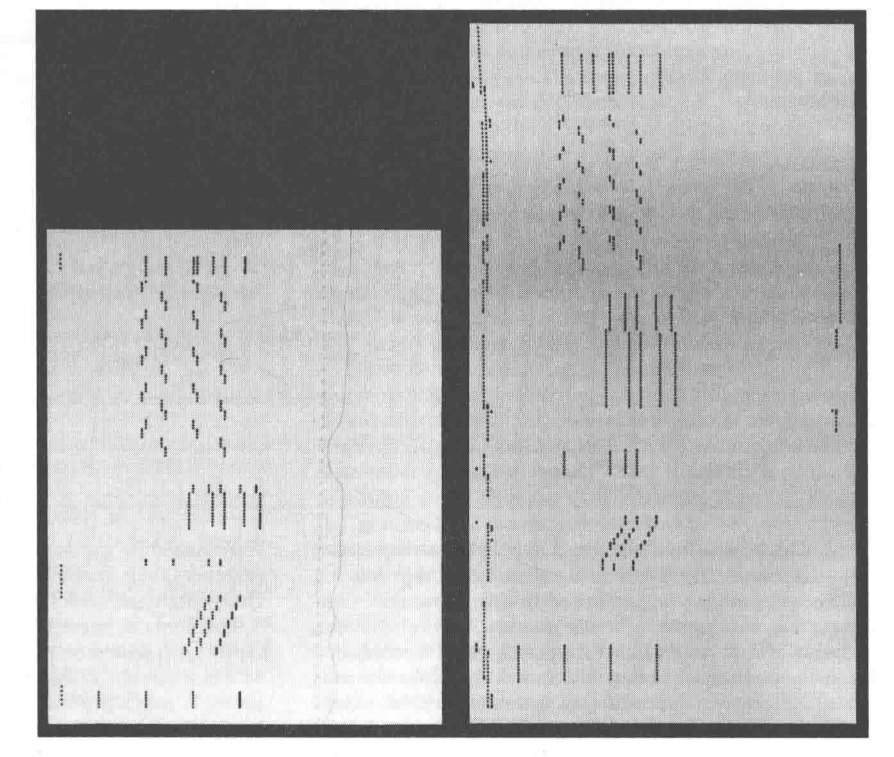
1. History and technical development. 2. Recording artists and repertory.

1. HISTORY AND TECHNICAL DEVELOPMENT. Early player pianos generally sounded artificial because only the coarsest variations in tone between bass and treble were possible, and early piano rolls were 'metrically cut' (meaning in strict time) by the roll manufacturer. The success of the instrument was dependent on the realism attainable by the performer working the treadles and hand controls (*see* PLAYER PIANO). As early as 1895 both mechanical and pneumatic piano players were provided with a rudimentary means by which the treble notes could be played louder than those in the bass and vice versa. In 1900 J.W. Crooks of the Aeolian Co. invented the 'Themodist' expression system, whereby individual notes could be made to sound out over or within an accompaniment; this idea was taken up by virtually every other major maker of piano players and player pianos, and given a variety of names such as Accenter, Solotheme, Automelle, Solodant and others. It was then found that by varying the vacuum tension of the air between the separate halves of the valve chest or stack, combining this with a Themodist-type accenter, and applying the same technique to both halves of the keyboard, a much more realistic performance could be produced.

Pianos which used this type of artificially enhanced music-roll performance were called 'expression pianos' (sometimes also known as 'semi-reproducing pianos'). They were almost always electrically driven (the operating vacuum was produced by a suction bellows worked by a motor), and were produced, mainly in Germany and America, as instruments for use in public places such as restaurants and ballrooms. Percussion instruments and organ pipes were sometimes incorporated; from these instruments evolved the piano-orchestrion (*see* ORCHESTRION). Expression pianos offering up to seven or more degrees of artificial expression continued to be made into the 1930s. Cheaper than reproducing pianos, they were ideally suited to playing popular music in places of public entertainment.

The player piano reached its fullest development in the 'reproducing piano', in which devices were incorporated that could reproduce the performing nuances of an artist, including changes of tempo, crescendos, diminuendos, sforzandos etc. by careful adjustment of the suction levels in the expression mechanism. The first such instrument was the 'Welte-Mignon', devised by Edwin Welte in Freiburg in 1904 and offered first as a cabinet-style piano player, later as a built-in player mechanism (fig.1). To compete with this the German firm Hupfeld introduced the 'DEA' in 1905. The Philipps 'Ducanola' was produced in Frankfurt in 1909. By 1913 two American reproducing player mechanisms were developed which were to become by far the most successful of the genre – the 'Duo-Art', made by the Aeolian Co., and the 'Ampico', made by the American Piano Co. (which became the Ampico Corporation in 1915). Hupfeld introduced the 'Duophonola' and the 'Triphonola' (1905), both marketed primarily in Europe.

The method of reproducing a performance usually involved making two 'recordings' – one of the notes and pedalling, a separate one of the dynamics – as the artist played the piece on a recording piano. To record the dynamics the Duo-Art used a delicate mechanical device to register the rebound of the hammer from the string. The Ampico employed a spark chronograph to record the speed of the hammer during its last quarter inch of travel before it struck the string, with a trace on a revolving cylinder to record the power applied. Reproducing player mechanisms, which were usually powered by electricity, were installed in pianos of many makes, including Knabe, Chickering, Broadwood, Steinway, Weber and Steck. The Welte-Mignon, at one time, was available in pianos of 115 different makes. The heyday of the reproducing piano was between 1915 and 1930. As with other forms of MECHANICAL INSTRUMENT, the reproducing piano industry was wiped out in the 1930s by a combination of the economic Depression and the increasing popularity as sources of home entertainment of the radio and the gramophone.



2. RECORDING ARTISTS AND REPERTORY. At their best, and when properly adjusted, reproducing player pianos could recreate the style of the original artist to a remarkably fine degree (fig.2). Piano rolls recorded by many of the leading composers and pianists of the day have survived. The value of each roll as a document of performing practice is affected by the quality of the pianist, the repertory, the roll itself, and of the recording piano mechanism and the degree to which it could reproduce nuances such as dynamics, balance of the hands, and voicing of chords and pedals. Likewise the instrument used to replay the rolls must be in first-rate condition to give a fair reproduction. While recording artists were content to endorse the product by signing the master roll, the question also remains as to how much editorial intervention was made between its cut and its publication. Besides the removal of wrong notes and the insertion of missing ones, roll editors were also known to

1. Bechstein-Welte upright reproducing piano, c1924 (British Piano Museum, Brentford)

'adjust' dynamics and pedalling. At the very least the rolls are valuable as indicators of speed and rubato, and to a certain extent it is possible to generalize about the performances as indicators of practice from about 1905 and into the 1930s.

Many rolls have long been in the hands of private collectors, willing to invest time and money in their preservation, and the field has been only tentatively investigated. The number of surviving rolls is not known: a thorough catalogue of surviving rolls has yet to be

2. Comparison of two piano rolls of Chopin's Polonaise in A♭ op.53 (see CHOPIN, *fig.7, for autograph facsimile): ordinary piano roll (left) where perforations indicate the exact spacing of notes according to the composer's score; and reproducing Welte-Mignon roll where the pianist's (Busoni's) actual interpretation is reproduced by means of the additional perforations (British Piano Museum, Brentford)*

compiled, especially with regard to rolls from the smaller manufacturers. Rolls cut for one make of reproducing piano will not play on any other. In order to extend their respective catalogues of rolls quickly, several makers, notably Welte, Aeolian and Ampico, pooled their artists' recordings, licensing other makes to re-process the rolls to suit their own reproduction systems. Table 1 shows some of the pianists and composers whose recordings were issued by the main labels. The Artecho and Artrio-Angelus labels boast a similar roster of names, and the Duca catalogue adds Pfitzner and Toch to the list.

The fields of ragtime, jazz and popular music are also richly represented on piano rolls, including performances by Felix Arndt, Eubie Blake, Zez Confrey, Earl Hines, James P. Johnson, Scott Joplin, Jelly Roll Morton, James Scott, Art Tatum, Fats Waller and Teddy Wilson.

The repertory that has survived on music rolls is, to a great extent, music of the time, and may be viewed as an indication of what was popular in the concert halls (including the licence to perform separate movements of large works, something that came to be frowned upon in the later part of the 20th century). The great Romantic piano music was then either still being written or still fresh and this is reflected in the catalogues of music rolls of the day. In general, the older the music, the less it is represented: Beethoven is recorded more than Mozart, and of Haydn or earlier composers there is very little. All the pianists played flashy salon music and very difficult arrangements of light music, such as Strauss waltzes (almost all of them composed or arranged such showpieces for their own concerts). The music of Liszt, Chopin and Schumann is well represented, including Liszt's transcriptions of Bach and Schubert. There is much Russian and Polish music, reflecting the nationality of many of the pianists.

The essence of the performing styles shown on the rolls encapsulates great rhythmic freedom, a soaring sense of space in phrasing, great lyricism and unabashed emotionalism. The playing may be described as uninhibited and pianists were clearly unafraid to take artistic risks. Absent is slavish adherence to the printed text and the reticence to add or subtract. The pianists did not see themselves as self-effacing in deference to the composer; rather, their role was to merge their personality with that of the composer and to create a new, individual whole. That composers may also be heard treating their own scores with the same cavalier attitude is surely a demonstration of the aesthetic principle at work.

Since the 1960s a revival of interest in the performing styles of such artists has led to performances of their rolls, and some have been made available on gramophone record or CD. Under contract with the Aeolian Co., Stravinsky composed his Etude for the pianola op.7 no.1; other composers who have written for the player piano include Hindemith, Howells and Malipiero.

Requeno (y Vivès), Vicente [Vincenzo] (*b* Calatorao, nr Saragossa, 4 July 1743; *d* Tivoli, 17 Feb 1811). Spanish theorist. He joined the Society of Jesus in 1757, and with the expulsion of the Jesuits from Spain in 1769 he settled in Rome. In the late 1790s he returned to Zaragoza as numismatic curator of the Royal Aragonese Society, but on learning that the Jesuits were re-established in 1804 in the Two Sicilies he embarked again for Italy.

The first volume of his *Saggi sul ristabilimento dell'arte armonica de' greci e romani cantori* (Parma, 1798) professed to be a history of Greek music; the second is a critique of his contemporaries' 'mistaken' ideas on that subject. He argued that the whole step was not the Pythagorean ratio 9 : 8, but rather the difference between a 5th and a 4th. This equally divisible difference permitted the Greeks' knowing equal temperament. He further maintained that they knew the rudiments of counterpoint, Lysander having been its inventor (i, 100). Among the many authorities cited by Requeno, only one Spaniard is mentioned, Salinas, and he rarely (ii, 275, 311). He took Burney and Rousseau to task for their errors (ii, 120, 174) but praised among his contemporaries Vincenzo Capdagna, *maestro di cappella* at Bologna (ii, 133). In a smaller treatise, *Il tamburo stromento di prima necessità* (Rome, 1807), which drew liberally on F.A. Lampe's *De cymbalis veterum libri tres* (1703), he extolled tuned drums as a means of recapturing the splendours of Greek music. He also wrote a *Scoperta della chironomia ossia dell'arte di gestire con le mani* (Parma, 1797), discussing possible applications of this lost art to theatre and dance.

ROBERT STEVENSON

Requiem Mass (*Missa pro defunctis, Missa defunctorum*). In the Roman Catholic rite, a votive Mass on behalf of the dead. It may be sung on the day of burial and on succeeding anniversaries, as well as on the third, seventh and 30th days following interment. (In the 4th century commemorations occurred on the ninth and 40th days in certain places.) It is celebrated also in memory of the faithful departed on All Souls' Day, 2 November. The name derives from the first word of the best known of the introits for such occasions: *Requiem aeternam dona eis, Domine.*

1. Chant. 2. Polyphonic settings to 1600. 3. 1600 to 1900. 4. After 1900.

1. CHANT. The celebration of the Eucharist in honour of the dead is mentioned as early as the late 2nd century *Acta Johannis*, and in a Smyrnese document (*Martyrium Polycarpi*) of similar date; the roots of this practice are likely to be much older still. Yet no texts for the musical portions appear in surviving 8th- and 9th-century textual sources for the gradual. The earliest sources for the chants are *F-CHRm* 47 and *LA* 239, both from the 10th century. The repertory grew rapidly from the 10th to the 14th centuries with the result that not fewer than 16 introits, 14 graduals, 12 tracts, 20 offertories, 36 communions and even seven alleluias survive from the Middle Ages. Chants for the Requiem also survive from the Old Roman and Ambrosian (Milanese) rites.

Of the 105 known requiem chants in the Gregorian repertory, 58 are specific to the Mass for the Dead, while the remainder are borrowed from earlier masses, often on the basis of textual appropriateness. Approximately two-thirds of the 105 represent local practice, surviving in

three or fewer sources each. Only some of the remainder were known in both east and west Europe. The variety in the repertory is in part a reflection of regional differences; in part it is a result of some manuscripts presenting more than one formulary for Masses for the Dead and other sources giving alternative chants within the framework of a single formulary. Approximately 300 different formularies are known. While some medieval chants created for the Requiem use melodic formulae familiar from the standard repertory and others are clearly based on pre-existing chants, there is also a group that shows no obvious use of standard Gregorian turns of phrase.

After the proliferation of votive masses during the 13th and 14th centuries, church law gradually limited both the use of the Requiem and the number of chants appropriate to its celebration. The content was limited further by the Council of Trent (1545–63). The absence of indices of graduals from about 1600 to about 1880 renders it impossible to describe the extent of the repertory for the Requiem during this period. The normative formulary of about 1880 to about 1970 included the introit *Requiem aeternam*; a very simple, repetitive 6th-mode Kyrie; the gradual *Requiem aeternam*; tract *Absolve Domine*; sequence DIES IRAE; offertory *Domine Jesu Christe*; nearly syllabic settings of the Sanctus and Agnus Dei; the communion *Lux aeterna*; and *Requiescant in pace*. The responsory *Libera me* may follow the completion of the Requiem Mass. The Dominican order allowed for the use of the gradual *Si ambulem* and the tract *Sicut cervus* for specific circumstances and used an 8th-mode Kyrie, also of very restricted range. (The Cistercians and Carthusians also permitted limited alternatives.) Following the revisions of the 1970 Roman Missal, the 1974 *Graduale Sacrosanctae Romanae Ecclesiae* provided for considerable flexibility of choice. Alternative chants were selected for practical reasons from the current chant repertory. Thus only two of the seven introits sanctioned, three of the six graduals, none of the five alleluias, all four tracts, three of the seven offertories and two of the ten communions belong to the corpus of medieval chants associated with the Requiem. None of the chants allotted to Paschal time belongs to the medieval corpus. There is in addition a Requiem formulary for Baptized Children, with two alternatives for Paschal time; of the seven chants included, only the introit *Ego autem cum iustitia apparebo* was used in this function during the Middle Ages.

Among the surviving Old Roman sources, *I-Rvat* lat.5319 has a formulary for the Requiem. (Most of these chants are given also in *Rvat* S. Pietro F.11, which presents a second formulary for the third, seventh and 30th days.) *Rvat* lat.5319 uses the introit *Rogamus te*; the gradual *Qui Lazarum*; the tract *De profundis*; a choice of offertories, *Domine convertere* or *Domine Jesu Christe*; and a choice of communions, *Lux aeterna* (two settings), *Christus qui natus est* or *Pro quorum memoria*. No information is provided about the Ordinary chants. Unlike its Gregorian counterpart, a 7th-mode melody found in Italian and French sources, the Roman *Rogamus te* is a 3rd-mode melody closely similar to several others of this mode. *Qui Lazarum* is a member of the branch of the mode 2 graduals (notated at the upper 5th) that includes *Ab occultis* and *Exsultabunt sancti*; its Gregorian counterpart, also found in Italian and French sources, is a mode 1 melody of markedly different construction. The tract, an 8th-mode melody borrowed from Septuagesima Sunday, is related to its Gregorian counterpart. *Domine convertere* is another borrowed chant, used in fuller form (with verses) in both the Old Roman and Gregorian repertories on Feria II following the fifth Sunday in Lent. It and its Gregorian counterpart are in mode 6. Despite minor textual differences, the well-known *Domine Jesu Christe* is basically the same in both the Gregorian and Roman transmission. The setting of *Lux aeterna* in mode 8 is a slightly more florid version of the normative Gregorian melody, but the alternative version is unrelated to the Gregorian alternative with a much longer text, found only in four Spanish and French sources. The Roman melody ends on *c′* and may be regarded as a transposed version of either a mode 6 or a mode 8 melody; it is quite individual within the Roman repertory itself.

The Ambrosian *ingressa Requiem aeternam* is strikingly similar to its Gregorian counterpart. The customary psalmellus (the equivalent of the gradual) *Qui suscitasti Lazarus* is a fairly simple melody with a respond in parallel halves. *De profundis*, an alternative commemorating one or more priests, is somewhat more elaborate. The cantus *Domine exaudi orationem nostram* is borrowed from the formulary of Feria V following the First Sunday of Quadragesima; it is briefer (the entire text has been given here) and less florid than many others of its genre. The *post Evangelium Requiem sanctam* is very nearly syllabic, with a range of a fourth. Depending upon occasion there is a choice of two offertories, *Libera me* or *Domine Jesu Christe*. Each has a verse in its modern form and is in mode 2. *Domine Jesu Christe* corresponds closely to its Gregorian counterpart. The *confractorium Audivi vocem* is brief and nearly syllabic, with the range of a 5th. The *transitorium Agnus Dei* is simpler still, consisting of little more than a recitation. The alternative, *Ego sum resurrectio*, on the other hand, is reasonably varied.

2. POLYPHONIC SETTINGS TO 1600. Of the principal liturgical destinations, that of the Mass for the Dead appears to have been the last to resist the incorporation of composed polyphony, possibly because the burial service was deemed too solemn an occasion to warrant festal trappings (although there are indications that improvised polyphony may have been tolerated). Whatever the reason, the tradition of polyphonic requiem mass settings seems not to predate the second half of the 15th century. Isolated requiem mass movements survive, but the first extant cycle, by Ockeghem, dates from after 1450 and is probably incomplete in its sole surviving source (the Sanctus, Agnus Dei and Communion are missing). Liturgically, the choice of movements set to polyphony might be compared to a pared-down plenary mass cycle; insofar as the heterogeneous stylistic profile of the earliest requiem settings resembles that of the few plenary mass cycles that survive (most notably Du Fay's *Missa S Jacobi*), it is possible that the one tradition grew out of the other, in which case the lost setting by Du Fay may possibly have preceded Ockeghem's. Du Fay's work is described in a copying record of 1470–71 as 'de novo compilata', a phrase best translated as 'newly revised' or 'composed anew'; hence, it may have originated some time earlier. In any case, the question of precedence cannot be definitely settled. The next extant settings are thought to be those by Brumel, La Rue and Prioris; the last two in particular show signs of having been modelled on Ockeghem's work which, in turn, may have taken Du Fay's setting as its model.

In the first two decades of the 16th century, polyphonic requiem settings became increasingly common. Early settings include those by Richafort, Antoine de Févin (also ascribed to Divitis), Engarandus Juvenis and Escobar. The Requiem ascribed to Basurto is a composite work, incorporating movements from the settings by Ockeghem and Brumel; but it is unclear precisely which movements (if any) originate with Basurto himself.

These earliest requiem settings are remarkable for their extreme textural variety, and for a tendency to juxtapose music of the utmost simplicity with passages of considerable contrapuntal sophistication (the offertories of Ockeghem and La Rue being fine examples of the latter). As the 16th century progressed, sobriety gained the upper hand, a trend compensated in some cases by an increased propensity to rich scoring (Richafort's setting is for six voices). Further, the genre remained a haven for tenor cantus firmi and plainchant paraphrase, which were losing ground to parody technique in the domain of the Mass Ordinary. These are indications of an abiding conservatism, perhaps a survival of the apparent reluctance to admit polyphony into the Office for the Dead a few decades earlier. Indeed, Richafort's setting appears to stand alone in its incorporation of secular materials: its use of canon (itself exceptional) was probably inspired by Josquin's *Nymphes nappés*, which is quoted in several places; and the setting of *Faulte d'argent* attributed to Josquin is quoted at the words 'c'est douleur non pareille' alongside the plainchant *Circumdederunt me*.

From the earliest requiem settings onwards there is a marked absence of standardization as to which movements were set polyphonically. The movements surviving in any given source are not necessarily a reliable guide, since scribes may have copied only those movements appropriate to local practice. Only three integrated, *alternatim* settings of the sequence *Dies irae* are known to predate the second half of the 16th century. Interestingly, they all survive in Italian sources: Brumel's is incomplete, that by Engarandus Juvenis sets only the first stanzas and Morales's setting (printed in Rome in 1544) set only the last words. Lassus's two settings, printed in 1578 and 1580 and presumably composed for the same establishment, do not set the same movements. Moreover, the Bavarian Court did not accept the 1570 Missal imposed by the Council of Trent until 1581; the changes of movements cannot be attributed to the adoption of the Tridentine Use. Another interesting case is that of Guerrero, whose two versions (printed in 1566 and 1582 respectively) date from before and after the Tridentine reforms: the second version entailed the revision of some movements and the substitution of entirely new music for others.

This pre-Tridentine diversity extends to the texts appropriate to the gradual (*Si ambulem* or *Requiem aeternam*) and the tract, as well as encompassing minor variants for the offertory *Domine Jesu Christe* (e.g. 'de poenis inferni' or 'de manu inferni'). A bigger variant is 'ne cadant in obscurum' (Roman and Tridentine Use, 1570), which also appears as 'ne cadant in obscura tenebrarum loca' (Ockeghem's setting has 'obscura tenebrarum' in its only source). This variety extends to plainchants as well as texts. However, generalizations concerning the location of such variants along broad geopolitical lines are problematic. Chantbooks reflect a multitude of local variants from one diocese to the next. Furthermore, specific polyphonic settings could be sung irrespective of whether the borrowed chant coincided with that in local use. Even in the post-Tridentine period, the relationship between texts and their corresponding chants was quite flexible: in Spain, for example, certain dioceses preferred to adapt their old chants to the new texts set out by the Council, rather than to discard them altogether.

The polyphonic requiem flourished with a particular intensity on the Iberian peninsula. The first extant Iberian setting, by Pedro Escobar, existed by about 1520. Vásquez's setting (published in 1556) is remarkable for being part of a complete *Agenda defunctorum* that included Matins and Lauds in addition to the more usual Vespers and Mass. In the first publication, the original Sevillan chants appear alongside their polyphonic elaborations. It was in Spain and Portugal that the tradition of *stile antico* requiem settings had the greatest longevity, its ramifications extending well into the next century (as with Victoria's setting), and, through the colonial possessions of both countries, into new continents as well.

3. 1600 TO 1900. Early in the 17th century the Renaissance polyphonic style, in various modified forms, served for several decades as a principal medium for requiem composition. A fine example, in Palestrinian style, is G.F. Anerio's setting (published in 1614, and reprinted three times up to 1677), the introit of which reveals an elegant use of chant paraphrase. Similar in approach, but with more archaic cantus firmus treatment, are the expressive settings of two of Victoria's successors, Duarte Lobo (*Officium defunctorum*, 1603) and J.P. Pujol (requiem for four voices, before 1626). An important innovation, evident in a number of works, is the inclusion of an organ continuo part (with figured or unfigured bass), which allowed greater variations in texture and dynamics. Early examples include Aichinger's requiem (1615; *D-As*) and settings, from 1619, by Antonio Brunelli and Jean de Bournonville. In France, finely moulded part-writing, close in style to that of Lassus, is found in requiem settings by Eustache Du Caurroy (1606, ed. in Le pupitre, lxv, 1983) and Etienne Moulinié (1636, ed. D. Launay, Paris, 1952). Du Caurroy's work, which omits the sequence but includes settings of the gradual and its psalm verse (Psalm xxii.4), was sung at the funeral of Henri IV in 1610, and adopted thereafter for the obsequies of all French kings until 1774.

Documentary evidence only has survived for what was possibly the earliest use of a truly *moderno* style. In an account of a requiem performed in Venice in 1621 at a memorial service for the late Duke of Tuscany, Cosimo II de' Medici, Giulio Strozzi refers to music (now lost) by Monteverdi and his colleagues G.B. Grillo and Francesco Usper, including solo vocal items and an instrumental sinfonia at the start of the ceremonies and recurring during the introit (D. de' Paoli, *Claudio Monteverdi*, Milan, 1945, p.241).

Later in the 17th century numerous requiem settings, many in concertato style, were produced by composers including G.B. Bassani, G.A. Bernabei, Antonio Bertali (eight settings), Biber, Giovanni Cavaccio, Cavalli, Cazzati, Joan Cererols, G.P. Colonna, P.A. Fiocco (three settings), Santino Girelli, J.K. Heller, J.C. Kerll (two settings), A.V. Michna, Marcin Mielczewski, Alessandro Scarlatti, Johann Stadlmayer, Christoph Straus (two settings) and Viadana.

Christoph Straus's requiem of 1631 (ed. in DTÖ, lix, Jg.xxx/1, 1923/*R*) is scored for two choruses, one high and one low, with voices and instruments (strings) combined. Little distinction is made between vocal and instrumental idioms, but some variety of scoring is indicated by 'ta[cent]' and 'son[ant]' markings in the string parts. Text illustration includes vocal *trilli* for 'Quantus tremor est futurus'; and an optional *Symphonia ad imitatione campanae*, with tolling bell patterns in the bass supporting overlapping figuration above, provides a suitably sombre opening.

Further developments are seen in two other settings from the Austrian courts, Kerll's *Missa pro defunctis* (1689; *D-Mbs*) and Biber's requiem (F minor, *c*1690; both ed. in DTÖ, lix, Jg.xxx/1, 1923/*R*). In Kerll's multi-sectional sequence, solo vocal settings are provided for several of the central verses; and effective word-painting is achieved by means of string tremolandos for the 'Quantus tremor' section and fanfare-like arpeggios, vocal and instrumental, for 'Tuba mirum'. Biber wrote more idiomatically for both strings and solo voices, the latter most notably in a florid bass solo at the start of the offertory. Syllabic quavers are used for rapid absorption of the lengthy sequence text; but there are also moments of repose, such as the fine passage, for chorus, with violin decorations, from the 'Lacrimosa' to the end.

Many requiem settings of the period were the result of a wish or obligation to commemorate the high-born deceased of the courts and capitals of southern Europe, and can thus be dated with reasonable confidence. Following Kerll's requiem of 1689, which marked the death of the Emperor Leopold I, there are those of Jommelli (1756, for the Duchess of Württemberg), J.G. Schürer (1757, for the Electress Maria Josepha of Saxony), J.A. Hasse (1763, for the Elector August of Saxony), Jean Gilles (performed for Rameau in 1764 and for Louis XV in 1774, superseding the traditional royal setting by Du Caurroy), C.A. Campioni (1766, for the Emperor Franz I, and 1781, for the Empress Maria Theresa), Michael Haydn (1771, for Sigismund von Schrattenbach, Archbishop of Salzburg), and Salvador Pazzaglia (1781, also for the Empress Maria Theresa). Memorial works of a similar nature were produced also in Protestant areas, most importantly the *Musikalische Exequien* (swv279–81, 1636) of Heinrich Schütz. The work's dedicatee, Prince Heinrich Posthumus of Reuss, following a not unusual practice, chose the chorale and biblical texts on which it is based and had them inscribed on his coffin.

The *Messe des morts* by Jean Gilles (*c*1700, ed. in RRMBE, xlvii, 1984), gained widespread admiration in 18th-century France for its lively character. The vocal soloists and orchestra predominate, often with dance-like music, while the chorus contributes climactic endings to each main section in a largely homophonic style. At Rameau's funeral on 27 September 1764 the requiem is said to have been 'interlarded with passages from *Castor and Pollux* and other operas' by the deceased composer; and at the Concert Spirituel towards the end of the century to have been embellished by 'a carillon added at the end . . . by Michel Corrette'.

From the late 17th century onwards, mainly through the contributions of leading opera composers such as Feo, Galuppi, Hasse, Pergolesi, Jommelli, Gassmann, Cimarosa and Gossec, individual movements of the requiem became gradually larger, the orchestration richer and the solo vocal writing more elaborate. In some cases, single texts, usually the sequence and the responsory, were set separately, either as independent motets or as a means of providing vivid contrast within chanted forms of the funeral service. Examples include an impressive *Dies irae* for soloists, double chorus and orchestra by Lully (1684, ed. H. Prunières, *Les Motets*, ii, Paris, 1935); and one with similar scoring by J.C. Bach (1757, *I-Bc*; ed. J. Bastian, Mainz, 1972).

A mixture of styles, not unusual for the period, is evident in Jommelli's requiem in E♭ (1756, *A-LA*; vocal score ed. J. Stern, Leipzig, 1866). Operatic solos (for soprano in the Benedictus, and for bass, with 'heroic' descending octaves, in the 'Tuba mirum') are juxtaposed, somewhat uneasily, with stretches of pedestrian church counterpoint, one of them a double fugue for the 'Pie Jesu' which compares strangely with later songlike settings of that text. Less polished, but more committed emotionally, is the requiem in C minor by Georg Reutter (ii) (1753; *A-GÖ*, ed. in DTÖ, lxxxviii, 1952). Not primarily an opera composer, he is most effective in majestic choral passages such as the opening of the Sanctus. In the sequence (and sporadically elsewhere) the idea of 'judgment' is portrayed by clarino fanfares, and the 'Tuba mirum' is set as a reflective alto solo with an imitative countermelody (in an interesting anticipation of Mozart's setting) for solo trombone.

Preceding Mozart's Requiem more immediately, and possibly influential upon it, are the settings by Michael Haydn (1771; *D-Bsb*) and F.L. Gassmann (1774; introit and Kyrie only; ed. in DTÖ, lxxxiii, Jg.xlv, 1938), both of them links in a continuing Viennese tradition. One of the most striking features of Haydn's setting is the use in the 'Te decet hymnus' of a theme based on the appropriate plainchant melody; Mozart, in contrast, used the *tonus peregrinus* associated with Psalm cxiii. Another 'predecessor' work, in the French tradition, which points beyond Mozart to the early 19th century, is Gossec's Requiem (1760), in which the 'Tuba mirum' is startlingly portrayed by two orchestras, one, comprising 23 woodwind and brass instruments, concealed aloft in the church, and the other, of strings, playing *pianissimo* and *tremolando* outside the building.

Despite the complexity of its origins – its composition during the composer's final days and completion after his death by F.X. Süssmayr (with some input from J.L. Eybler and, possibly, F.J. Freystädtler) – Mozart's Requiem is the most important example from the 18th century. The exact extent of Mozart's contribution is still debated; but such stylistic unevenness as may have resulted from additions by others has hardly lessened the impact of the work as a whole. After Mozart's death in 1791, a memorial requiem for him (now lost) by Antonio Rosetti was performed in Prague; and in 1803, Eybler himself composed a grand Requiem in C minor (*A-Wn* 16.591), regarded generally as his most important work.

Further contributors during the 18th century include Albrechtsberger, Ignaz von Beecke, Giuseppe Bonno, Franz Bühler, Campra, Francesco Durante, Nicola Fago, J.F. Fasch, Fux (three settings), Pietro Gnocchi (six settings), J.D. Heinichen, J.A. Kobrich (six settings), Marianus Königsperger (four settings), Leopold Kozeluch, G.B. Martini, Giuseppe Moneta, Leopold Mozart, Perti,

Paisiello, Antoine Reicha, G.J. Vogler and Peter Winter (for the funeral of the Emperor Joseph II in 1790).

The two most important and still frequently performed requiem settings from the 19th century, Berlioz's *Grande messe des morts* (1837) and Verdi's *Messa da Requiem* (1874, in memory of Alessandro Manzoni), clearly overstep liturgical bounds, Berlioz's by the grand scale of its forces, Verdi's by its rearrangement of the text. In both works the sequence (no doubt more with theatrical than with theological intent) provides a *memento mori* of chilling intensity; solace is also evident in keenly felt music for the more meditative texts, notably the Sanctus in Berlioz's and the Agnus Dei in Verdi's.

In 1816 the Brazilian composer José Maurício Garcia completed his imposing fourth (and last) requiem; it is widely regarded as his finest work. In the following year, in France, two requiem settings were commissioned to mark the annual commemoration of Louis XVI's execution: Cherubini's Requiem in C minor, and a monumental setting by N.C. Bochsa, including wind band and percussion, and designed for an open-air reinterment ceremony. Cherubini's impressive work makes few concessions in the way of melodic charm or theatrical effect. Word-illustration is confined mainly to the offertory, where 'the pains of hell' and 'the deep lake' provoke shuddering demisemiquaver patterns on the orchestra, and 'the fall into darkness' is portrayed most movingly by broken phrases on male voices and strings descending to a solitary *A* in the bass. His equally fine, though more simple, Requiem in D minor, scored for male chorus and orchestra, is a purely liturgical work, intended for, and used at, his own funeral in 1842. Similar settings for male voices include one by Liszt, dated 1867–8, in which soloists and chorus are accompanied by organ and optional brass.

Bruckner's Requiem (1848–9) reveals, in its busy string figuration against slower-moving choral writing, persistent metrical patterns and organ figured bass, the influence of the Viennese masses of the late 18th century. Its modest length and faithful adherence to the Latin text make it entirely suitable for liturgical use. After the mid-century, however, many important settings, including those of Schumann (1851), Moniuszko (1862), Saint-Saëns (1878) and Dvořák (1891), were conceived more in terms of the concert hall, inclining, by their grand scale and, in some cases, textual liberties, towards the oratorio, the most favoured sacred genre of the 19th century. Dvořák's setting, with a duration of some 95 minutes, is one of the longest of the period, and requires numerous text repetitions and short orchestral interventions to fill its symphonic 'canvas'. Structural unity is enhanced by the use of a motto theme (drawn from the first notes of the plainchant introit), heard at the opening and recalled in several later movements.

Brahms's non-liturgical *German Requiem* (1857–68) is unified by the close relationship between its musical concept and its text, which the composer himself compiled from the Lutheran Bible. A source of inspiration may well have been the funeral music by Schütz, a composer Brahms is known to have admired, though, as his contemporaries remarked, his textual mosaic lacks the specifically Christian dimension of the earlier work. French contributions to the genre from the later part of the century include settings by L.T. Gouvy (*c*1880) and Alfred Bruneau (1896), both large-scale and technically accomplished, but insufficiently characterful to have survived in the repertory. In Bruneau's work, trumpets situated on either side of the auditorium present the *Dies irae* plainchant in alternate notes, as a curious type of instrumental hocket. Altogether more refined in style, Fauré's Requiem bears imprints of the composer's early training in plainchant and 16th-century polyphony. Originally the work had five movements only – Introit and Kyrie, Sanctus, Pie Jesu (for treble soloist), Agnus Dei and In Paradisum – with an orchestra of lower strings, harp, timpani and organ, and a solo violin in the Sanctus. In this form it was performed at a funeral in Ste Marie-Madeleine, Paris, in January 1888. Thereafter, in two stages up to 1900, it was augmented by the addition of an offertory and responsory, both with a baritone soloist, and an enlargement of the orchestra to include woodwind, brass and a full complement of strings.

Other notable requiem settings of the 19th century (with their dedicatees where known) include those by J.C. Aiblinger, J.D. Bomtempo (1819, 'in memoriam Luis de Camões') J.B. van Bree, Alfredo Catalani, Carlo Coccia, Donizetti (1835, for Bellini, and 1837, for Zingarelli), F.-J. Fétis (1850, for the Queen of Belgium), Friedrich Kiel, Mascagni (1900, for Umberto I), Neukomm, Giovanni Pacini, Carl Reinecke, Reissiger, Rheinberger and Sgambati (1896, also for Umberto I).

4. After 1900. Requiem settings from the 20th century are remarkable for their range and variety. Those that continue the 'symphonic' manner of the previous century include the settings by Maliszewski (1930), G.F. Malipiero (1938), Guido Guerrini (*Missa pro defunctis* 'alla memoria di G. Marconi', 1938–9), Sutermeister (1952), Virgil Thomson (1960) and Frank Martin (1971–2); others are of a specifically national or racial orientation, such as the Requiem (1963) by Wilfrid Josephs, a setting of the Hebrew Kaddish Prayer for the Dead, and Penderecki's *Polish Requiem* (1980–84).

Conceived within the bounds of liturgical worship are a number of *a cappella* requiem settings, which display a simplicity and sobriety that recall the aims of the 19th-century Cecilian movement. Principal among these are those of Pizzetti (1922–3), Georges Migot (1953), Priaulx Rainier (1955), Randall Thompson (1958) and Iain Hamilton (1979). Similarly restrained is the highly successful Requiem (1947, rev.1961) by Duruflé, dedicated to the memory of the composer's father. It derives grace and suppleness from its modal harmony and the plainchant melodies used in many of its movements, and shares several features of style and scoring with Fauré's Requiem.

Further dedications are found in Kabalevsky's Symphony no.3 in B♭ minor (1933), described as a 'Requiem with chorus for Lenin', Hanns Eisler's *Lenin-Requiem* (1970), Cesar Bresgen's *Requiem für Anton Webern* (1945–72) and a *Requiem à memória de Petro de Freitas Branco* (1964) by Joly Braga Santos. Among the settings commemorating the dead of the two world wars are John Foulds's *World Requiem* (1919–21) and Britten's *War Requiem* (1961), the latter providing graphic comment on the tragic futility of war by its juxtaposition of war poems by Wilfred Owen with *Missa pro defunctis* texts.

Some 20th-century settings treat the text in a fragmented or discontinuous manner and make use of extended vocal and instrumental techniques. Ligeti's Requiem consists of just four sections, 'Introitus', 'Kyrie',

'De Judicii Sequentia' and 'Lacrimosa': the third of these features violently disjunct vocal lines, with words and syllables split between different voice-parts. In the Kyrie, on the other hand, what Ligeti calls 'micropolyphony', fast-moving canonic patterns in the voices, is set against a slow-moving chromatic orchestral background. In Stravinsky's *Requiem Canticles* (1965–6), another partial setting of the liturgy, the words of the 'Libera me' are sung by a quartet of soloists and, at the same time, spoken by the chorus in a rapid, rhythmically free *parlando*. Geoffrey Burgon's Requiem (1976), which introduces 16th-century texts by St John of the Cross to comment on the Latin liturgy (the Kyrie and Sanctus are omitted), makes use, like Ligeti's, of 'splintered' text-setting, as well as chorus whispering and, for its mysterious ending, the 'silent' blowing of air through the brass instruments.

Among works that exist on the fringe of the genre are John Tavener's *Celtic Requiem* (1969), which links liturgy, Irish poetry and children's games in a manner suitable for stage performance. Others stretch the genre's boundaries away from the text altogether. Koechlin's incomplete *Requiem des pauvres bougres* (1937) uses only the words 'Requiem aeternam, dona eis requiem' as the basis of three short choral invocations, alternating with instrumental sections for piano or organ and orchestra. Henze's Requiem (1990–92), on the other hand, dispenses completely with voices. With the exception of the third, 'Ave verum corpus', each of its concertante movements, for trumpet or piano solo with large chamber orchestra, bears the title of a section of the Requiem Mass. Though its message is humanist and political rather than religious (the 'Dies irae' and 'Rex tremendae' movements were provoked by events of the 1991 Gulf War) it shares with liturgical settings a preoccupation with, as Henze puts its, 'the human fears and needs of our time, with illness and death, love and loneliness'.

THEODORE KARP (1), FABRICE FITCH (2), BASIL SMALLMAN (3–4)

Rescala, Tim (*b* Rio de Janeiro, 21 Nov 1961). Brazilian composer, pianist, arranger, actor and theatre author. He studied music theory and piano at the Federal University of Rio de Janeiro (1976–8), then at the Villa-Lobos School, where he also studied counterpoint, arranging and composition with Koellreutter (1979–83). He earned his bachelor's degree in music at the University of Rio de Janeiro (1983). In 1979 he won the first prize in the composition competition sponsored by the Villa-Lobos School and the School of the Brazil SO. Until then he had worked as an arranger and pianist of popular music, but he now turned his attention to theatre music, working as composer and musical director in more than 50 productions. In 1983 he received the Mambembe Prize for the music of the plays *Will* and *A porta*.

Rescala participated in various festivals of contemporary music in Brazil and other countries, including that of the American Composers' Orchestral Festival, Sonidos de

las Américas (1996), during which two works of his were presented at the Weill Recital Hall, New York. He was a founding member of the Estúdio da Glória (Rio de Janeiro), a composers' co-operative established in 1981 for the creation of electro-acoustic works. With Rodolfo Caesar he produced two CDs of electro-acoustic music by Brazilian composers.

In the mid to late 1990s Rescala worked in the fields of both popular and concert music, and has written incidental music for the theatre in collaboration with directors such as Aderbal Freire Filho, Amir Haddad and Alvaro Apocalypse, all from, and for television, mainly as music producer of TV Globo (1988–97). He has also written for the Orquestra Brasileira de Sapateado (Brazilian Tap Dance Orchestra) and for film. His music theatre piece for children *Pianíssimo* (1993, published as a book in 1995) earned him the Mambembe prize for a second time. In 1995 he was awarded a grant by Rio-Arte to write the children's opera *A Orquestra dos sonhos*, produced with great success in 1997. His second children's musical *Papagueno* was first performed in 1997. The Quinteto Tim Rescala, in which he appears as composer and pianist, specializes in an instrumental repertory fusing art and popular music.

GERARD BÉHAGUE

Rescigno, Nicola (*b* New York, 28 May 1916). American conductor. Born into a musical family (his father played the trumpet in the Metropolitan Opera orchestra), he studied with Pizzetti, Giannini and Polacco. His début was in 1943, conducting *La traviata* at the Brooklyn Academy of Music. He then toured the USA with the San Carlo Opera and served as music director for Connecticut Opera and Havana Opera. In 1953 he co-founded the Chicago Lyric Opera and that year presented the American début of Maria Callas, with whom he was closely associated and recorded extensively. In 1957 he co-founded the Dallas Opera, remaining as artistic director until 1990; there he introduced to US audiences many artists including Berganza, Caballé, Domingo, Olivero, Sutherland, Vickers and Zeffirelli, and presented the American premières of *Alcina* and *Orlando furioso* (Vivaldi). He also inducted the premières of Virgil Thomson's *Fantasy in Homage to an Earlier England* (1966) and Argento's *The Aspern Papers* (1988). He made his Metropolitan début in 1978, directing *Don Pasquale*, and also conducted at Glyndebourne, in Buenos Aires, London, Paris, San Francisco, Vienna, Zürich and most Italian major musical centres.

CORI ELLISON/R

Rescue opera. An inauthentic term of convenience applied to those French operas of the Revolution period (and before) in which, as a climax, a leading character is delivered by another, or by several others, from moral and/or physical danger.

1. The term. 2. Background. 3. Redefinition.

1. THE TERM. The term arose in late 19th- or early 20th-century German criticism, probably through interest in the close connection between Beethoven's *Fidelio* (1805) and Gaveaux's Parisian *opéra comique Léonore, ou L'amour conjugal* (1798). Modern criticism ought to seek more detailed alternatives (see §3 below), at a time when it is desirable to draw finer distinctions between operatic genres in general, and to understand the qualities intended by authentic genre designations (i.e. those of the late 18th century).

The unsatisfactory nature of the term is clear from the fact that no two published definitions in English will be found to agree (see Charlton, 1989). Furthermore, no single definition will satisfactorily cover the range of operas that are called as evidence of a 'rescue' tendency in the later 18th century. This is because to take the concept of 'rescue' as a main criterion does little more than relate such operas to that other familiar technique of 18th-century opera, the *deus ex machina*, or rescue through divine intervention. (Significantly, no-one has proposed a category of *deus ex machina* operas.)

Other factors regularly called as evidence of a distinct class of works are: 'devotion to the ideals of "humanity"' (D.J. Grout: *A Short History of Opera*, 1947); 'the closer involvement of opera with real-life situations' (H. Rosenthal and J. Warrack: *The Concise Oxford Dictionary of Opera*, 2/1979); and the assurance that 'freedom would always triumph over tyranny' (C. Headington, R. Westbrook and T. Barfoot: *Opera: a History*, 1987).

2. BACKGROUND. One particular librettist was responsible for developing *opéra comique* stressing the dimension of 'freedom': Michel-Jean Sedaine (1719–97). In *Le roi et le fermier* (1762) Jenny has escaped from her place of abduction; in *Le déserteur* (1769) Alexis is freed from the death cell through the exertions of his betrothed; in *Richard Coeur-de-lion* (1784) the king is rescued by force of arms from detention in an Austrian castle. In these and other cases Sedaine set up a moral dilemma in which the theme of 'unjust detention' provides the dramatic mainspring. The reasons for the detention are different in each opera, and there is no uniformity concerning those responsible for instigating the detention. The unjust detention remains a dramatic means, not an end in itself. Popular theatre (for example in melodrama) exploited similar themes, especially in the 1780s, but emphasized scenic effects, danger and the act of physical rescue. Thus 'rescue opera' of the 1790s took over these spectacular elements from popular theatre, but without making the physical rescue the purpose of the whole.

3. REDEFINITION. Three types of opera can be discerned (this division has no bearing on the style of music composed for them). 'Tyrant' operas personified injustice by portraying an evil character. Examples are Méhul's *Euphrosine* and H.-M. Berton's *Les rigueurs du cloître* (both 1790); the *Lodoïska* operas by Cherubini and Rodolphe Kreutzer (both 1791); Dalayrac's *Camille* (also 1791) and Le Sueur's *La caverne* (1793). 'Humanitarian' operas did not portray any tyrant, even if one was supposed to exist, but stressed the individual sacrifices necessary in righting a wrong and obtaining freedom. Examples are Dalayrac's *Raoul sire de Créqui* (1789) and

Cherubini's *Les deux journées* (1800). In the third type there is no connection with a place of detention, but a natural catastrophe (at some level equating with divine justice) suggests the existence of moral transgression. Examples are the *Paul et Virginie* operas by Kreutzer (1791) and Le Sueur (1794), Méhul's *Mélidore et Phrosine* (1794) and Cherubini's *Elisa* (also 1794).

DAVID CHARLTON

Reservoir (Ger. *Magazinbalg*). In an organ, a receiver for wind generated by feeder-bellows or a blower, which in turn delivers the wind to the trunks at a constant pressure that is regulated by springs or weights on the top. The reservoir is normally constructed with a horizontal top and 'inverted ribs' (*see* ORGAN, §II, 11(iii)).

Res facta (Lat.: 'a made thing'). A term first used by Tinctoris in his *Terminorum musicae diffinitorium* (*c*1472), where it is equated with *cantus compositus* and defined as 'a composition produced through the relation of the notes of one part to another in multiple ways, commonly called *res facta*'. The term next appeared in Tinctoris's counterpoint treatise (*Liber de arte contrapuncti*, 1477, II.xx): 'counterpoint, both simple and diminished, is made in two ways, in writing or in the mind' (xx.2); 'written counterpoint is commonly called *res facta*' (xx.3); and '*res facta* differs from counterpoint in that all the parts of a *res facta*, three, four or more, should be mutually related, so that the order and law of concords . . . should be observed between each and all [parts]' (i.e. not, as in counterpoint, just between each single voice and the tenor). The apparent contradiction between the second and third statements can be removed either by ignoring Tinctoris's distinction between counterpoint and composition (Sachs) or by allowing that Tinctoris did not wholly accept the common equation of *res facta* with written (rather than mental) counterpoint (Bent, 380; Blackburn, 1987, p.255).

Ferand, taking the 'written' qualification as primary, offered two conflicting meanings for the term: 'a written contrapuntal composition, plain or florid, as distinguished from improvised counterpoint, again either simple or florid; or it may mean florid, in contradistinction to simple counterpoint, whether written or improvised – depending on which Tinctoris we believe' (p.143). Neither meaning quite agrees with either of Tinctoris's definitions, although Sachs adopted the first, equating counterpoint with *res facta* (i.e. composition) and *mente* with improvisation. Bent, however, reaffirmed Tinctoris's distinction between counterpoint and composition (accepted by Blackburn, 1987) and suggested that the contradictions are most easily reconciled by recognizing *res facta* as an already common term, commonly but imprecisely used to mean written counterpoint, a usage that his reservation could not prevent. Ferand's rendering of *mente* as 'improvisation' (accepted by Blackburn 1987, p.250 and Sachs) introduced notations of unprepared performance which Bent cannot reconcile with Tinctoris's strict regulations for sung counterpoint (1983, p.378). For Tinctoris, counterpoint is a 'moderated and rational singing together', governed by the same rules whether devised in writing or in the mind, a note-against-note, fundamentally two-part process (*Liber de arte contrapuncti*, I.i.3). Counterpoint (noun) is a product of 'singing on the book' (*cantare super librum*, verb) according to these rules which, to observe cumulatively when adding two or more counterpoints to a tenor, required foreknowledge and preparation, not the spontaneous, uncontrolled improvisation (*sortisatio*, 'sodaine' music) envisaged by Ferand on the basis of later testimony which would fall outside Tinctoris's understanding of counterpoint, and further complicated by Ferand's confusion with *cantus fractus*. Tinctoris does not say that *res facta* is necessarily written, only that written counterpoint is commonly so called. *Res facta*, composition, could indeed be written and probably usually was, but Tinctoris does not make writing essential to its difference from counterpoint (Bent). Tinctoris not only distinguished written counterpoint from mental (*scripto vel mente*); the same counterpoint, with the same sounding results, subject to the same rules, could be mentally conceived and then written down. From asserting that the nature of its preparation required *res facta* to be written, Blackburn thence equated it with what Listenius (1549) called *opus perfectum et absolutum*, a composed work in written form, *musica poetica* as distinct from *musica practica* (1987, pp.250, 256; *MGG2*).

The regulated dyadic successions of counterpoint, whether simple or diminished, underlie (but are not the same as) multi-part composition. Composition can in turn be reduced to its underlying counterpoint as prose can be parsed down to its underlying grammar (Bent, 382). Counterpoints added to a tenor relate primarily to it; their relationship to each other was governed by different (and often unspecified) considerations of intervallic compatibility. Tinctoris commended those singers who go beyond the minimum requirements for successively constructed counterpoints and strive towards mutually controlled relationships between all parts in a

contrapuntal texture, avoiding 'similarity between each other in the choice and ordering of concords'; in so doing, they would approach the conditions that distinguish composition (*res facta*) from counterpoint (Bent, 375, 378; Blackburn, 252). The more a well-controlled multi-voice counterpoint 'sung on the book' by experienced singers aspires to the 'mutual obligation' (not elucidated) that characterizes *res facta*, the less easily might the two be distinguished.

If Tinctoris intended that strictly contrapuntal relationships should apply between any pair of parts, the results would have to be what has been called 'non-quartal' harmony, that is, avoiding 4ths between any pair within a three-part texture; since his five-part example does have 4ths between some pairs of parts it seems likely that he meant something less limited. In *Liber de arte contrapuncti* he discussed the 4th among the consonances (I.v), classifying it as a consonance because of the simple ratio of its acoustic (i.e. harmonic) perfection, while rejecting it as an 'intolerable discord' for purposes of counterpoint (II.x). He confined its use to upper parts, over 3rds and 5ths, thereby going beyond previous two-part counterpoint teaching to rationalize some relationships between non-contrapuntal parts that would earlier have been construed as resulting from two superimposed dyads, each upper part related primarily to the tenor but not, by the same or by the same or by any specified criteria, to each other. Conversely, a 5th and a 6th over the same tenor are incompatible even though each would be acceptable on its own with the tenor. It must be by such regulated use of intervals that are unacceptable when supported (the 4th) or that are acceptable only in combination (the 5th and 6th) that Tinctoris intended to extend control of the relationships beyond the primary contrapuntal pair. Such preparation presumably gave rise to the common usage that Tinctoris sought in vain to refine, which suggests that it was usually, but not necessarily, written; the fact of writing does not in itself turn counterpoint into *res facta*. The way in which Tinctoris negotiated these distinctions between counterpoint, sung, written and mental, and the difference in principle if not always in practice between counterpoint and composition (*res facta*), permit a hierarchical representation of his definitions (Bent, 383).

The cognate vernacular French term *chose faite* is first recorded in an inventory of Charles the Bold, also in 1477 (Staehelin, 201). It continued in common use into the 16th century, clearly referring to written compositions irrespective of their technical status, and distinguished by French theorists as a vernacular term. From at least the late 13th-century Montpellier manuscript (*F-MOf* 196) the noun *chose*, used alone, designated a composition, while the verbs *facere* and *faire* ('make') denoted what composers do.

Several further 16th-century usages depart from Tinctoris in distinguishing written *res facta* from part-music improvised in the more conventional sense (Ferand). Various 19th-century misunderstandings were followed by an (equally unfounded) early 20th-century revival of the term to distinguish a composition from its ornamented versions.

MARGARET BENT

Residents, the. American experimental rock group. Since the early 1970s they have given a series of idiosyncratic performances and issued a large number of enigmatic recordings while maintaining their anonymity. For concert appearances, the group has been veiled, masked or has played from behind screens. Their music has drawn on a range of genres from Beatles-style rock to electronics and jazz. Their early recordings took the form of parodies of mainstream popular music by the Beatles and others, although the album *Eskimo* (Ralph, 1979) was presented as a documentary about Arctic culture. In the early 1980s the albums *Mark of the Mole* (Ralph, 1981) and *The Tunes of Two Cities* (Ralph, 1982) and a stage show, *The Residents' Mole Show*, offered an allegorical tale of two contrasting civilizations. They next embarked on what they termed an American composers series in which they reinterpreted works by Gershwin, Sousa, Hank Williams and James Brown. This climaxed in the powerful and negative *The King and Eye* (Enigma, 1989), which focused on the decline of Elvis Presley and of American popular music. The group returned in 1999 with *The Wormwood Show*, an iconoclastic re-telling of episodes from the Old Testament. See also C. Cutler: *File under Popular: Theoretical and Critical Writings on Music* (London, 1985).

DAVE LAING

Residue tone. The lower-pitched tone that may be heard when a group of harmonically related pure tones is sounded quietly together. It can be distinguished from the difference tones because if all the components are raised in frequency by the same amount, the residue tone also rises, though not by the same amount. If a difference tone were present it would remain constant in frequency. *See also* SOUND, §9.

MURRAY CAMPBELL

Resin. *See* ROSIN.

Resinarius [Hartzer, Harzer], **Balthasar** (*b* Tetschen [now Děčín], Bohemia, *c*1485; *d* Leipa, 12 April 1544). German composer. As a boy he sang and received his musical training under Heinrich Isaac in the chapel of Maximilian I. In 1515 he entered Leipzig University; he returned to Tetschen in 1523 to become a Catholic priest. Despite earlier conflict with the local Lutheran preacher, Resinarius converted to the new faith, became a member of its clergy, and was made Bishop of Leipa.

His compositions, all of which appeared in the last two years of his life, are known from the publications of Georg

Rhau who was apparently directly responsible for their commissioning. Resinarius's *Responsorium ... libri duo* (1544) was the only collection of works by a single composer, other than those of Sixt Dietrich, to be published by Rhau. It comprises 80 responsory settings for the entire church year, including feast days, and a setting of the St John Passion. In addition, 30 hymn settings by Resinarius are included in the *Newe deudsche geistliche Gesenge* (RISM 1544[21]), more than that of any other composer represented, four hymns appear in the *Sacrorum hymnorum* (1542[12]) and an introit and three motets are included in the *Officiorum (ut vocant)* (1545[5]).

All Resinarius's compositions fill the immediate liturgical needs of the early Lutheran Church, and as such are highly representative of the concepts of the Wittenberg theologians, emphasizing the significance of the Word in musical composition. They are mainly cantus-firmus works, stylistically conservative and characterized by frequent archaisms; the cantus firmus, most often found in the tenor, is only sparingly ornamented. In his concern for careful presentation of the text, Resinarius set each phrase in concise, clear units; after initial imitation of the cantus firmus, most of the voices come to a melodic cadence when the cantus firmus ends its phrase. Only seldom does the writing approach the pervading imitation characteristic of a Josquin motet. Accented declamation of the text in humanistic manner, however, is frequently in evidence. Rhau particularly praised the suavity of Resinarius's style and the artfulness of his cadences, and in his preface to the *Responsorium* expressed the esteem in which the composer was widely held. Holtheuser in his *Encomion musicae* (1551) cited Resinarius as being one of the outstanding masters of his day. The popularity of his works is suggested by the number of responsories and chorale settings which appeared in manuscript copies after their publication by Rhau.

VICTOR H. MATTFELD

Resnik, Regina (*b* New York, 30 Aug 1922). American mezzo-soprano (formerly soprano) and director. She studied at Hunter College, New York, and sang Lady Macbeth with the New Opera Company, New York, in 1942. She sang with the Metropolitan (1944–74), making her dêbut as Leonora (*Il trovatore*); her roles there included Ellen Orford in the New York première of *Peter Grimes*, Alice Ford, Leonore, Donna Anna and Donna Elvira, and Sieglinde. At Bayreuth she sang Sieglinde in 1953 and Fricka in 1961. In 1955 she began to concentrate on the mezzo-soprano repertory, singing Azucena, Eboli and Herodias (*Salome*). She created the Baroness in Barber's *Vanessa* (1958) and also sang Lucretia in *The Rape of Lucretia* at Stratford, Ontario (she had sung the Female Chorus in the American première at Chicago in 1947). In 1972 she sang Claire in the American première of von Einem's *Der Besuch der alten Dame* at San Francisco.

Resnik made her Covent Garden début in 1957 as Carmen; her roles there included Marina (*Boris Godunov*), a brilliant Mistress Quickly and a decadent Clytemnestra. She also appeared in Vienna, Salzburg and in the leading American and German opera houses. In 1971 she directed *Carmen* at Hamburg and *Elektra* in Venice. She had a vibrant voice with a strong upper register. Her acting was full of subtle detail, and her fine musicianship and keen intelligence were apparent in all her work. Among her recordings are notable accounts of her Sieglinde (1953, Bayreuth), Carmen, Clytemnestra and Mistress Quickly.

Resolution. The point of emergence from musical uncertainty, such as incompleteness, dissonance or ambiguity, onto a point of comparative certainty, completeness, or of single implication. Resolution implies relaxation, as when consonance succeeds dissonance, or rhythmic regularity is restored following a syncopation. It may be implied in the musical syntax of any parameter which can signify degrees of lesser tension, but in practice, in Western music, it is mainly associated with pitch.

In counterpoint, resolution arises most typically when a dissonant suspension falls (or, more rarely, rises) to a consonance. In tonal harmony, dissonant verticals imply their own resolution: for instance, a dominant 7th chord will normally resolve to a tonic. Moreover, a consonant chord which the tonal context determines as a dominant may also be said to 'resolve' to a tonic even if both chords are simple triads. Resolution is a relative term, and is implied at every standard CADENCE except the interrupted, which tends to increase tension. In chromatic harmony, resolution is typically achieved by semitone movement, and may occur simultaneously with another intensifying factor. *See also* CONSONANCE and DISSONANCE.

JULIAN RUSHTON

Reson [Rezon], **Johannes** (*fl c*1425–35). Composer, probably of French origin. The name may be a pseudonym ('reson' means reason or ratio). His three settings of *Ave verum corpus*, including a setting in two equal voices,

suggest activities in Italian circles; all his music appears in manuscripts compiled in the Veneto. A 'Ser Giovanni Ragione, cantore' appeared at Siena Cathedral in April–May 1431.

His two compositions with French texts are in the third fascicle of *GB-Ob* Can.misc.213, one of the latest portions of the manuscript. If the text of his rondeau *Il est temps* is autobiographical, we may assume that Reson was not a court musician ('en court n'ay pas mon temps perdus'), although at some stage he travelled away from his native country ('Il est temp que je me retraye/au pais dont je suis venus'), and obviously met with little material success ('Je n'ai or, argent ne monnoye/de biens, d'avoir je suis tous nus'). The setting of this poem is typical of the polyphonic song type that gained prominence in northern France during the early decades of the 15th century. As in the rondeaux of Malbecque, the beginning of each line of text is set to a characteristic rhythmic motto, and untexted interludes alternate regularly with texted segments. In *Ce rondelet/Le dieu d'amours*, a miniature duo in celebration of spring, two matched voices engage in voice-exchange.

Reson's most significant composition is an early cyclic mass, all the movements of which are found uniquely in *I-Bu* 2216. Whereas the Kyrie alone is ascribed to the composer in the source, and although some of the movements are separated from each other by several folios, Charles Hamm has shown convincingly that they were conceived as a unit. The substantial melodic and tonal recurrences from one movement to the next, as well as the use of common clefs and mensurations, leave no doubt as to the authorship of the unattributed movements. The Sanctus includes the trope 'Deus Pater cuius praesentia' (AH, xlvii, no.306); the Agnus Dei has a more obscure interpolation beginning 'Alme Patrem rex iustificans'. Hamm's attribution to Reson of the *Ave verum corpus* adjacent to this Agnus Dei in the same manuscript is made on the basis of melodic structures that recur prominently in the mass. The *Salve regina* (in *I-Bc* Q15) shows Reson's characteristic use of melodic lines with overt sequences, and simplicity of formal design. He is seen at his best in the three-voice *Ave verum corpus* in which chains of suspensions create a relatively high level of dissonance, and where formulaic structures are less pronounced.

RICHARD LOYAN/ROBERT NOSOW

Resonance. A large amplitude of oscillation built up when a vibrating system is driven by an outside periodic force of frequency close to a natural frequency of the system. It plays an important part in the operation of almost all acoustic systems. In musical instruments, resonances are crucial in the generation or stabilisation of pitched sounds and are frequently employed to enhance sound radiation; on the other hand, a strong resonance can be a problem if a uniform response is required over a wide frequency range. *See also* FORMANT; RESONATOR; and SOUND, §5.

MURRAY CAMPBELL

Resonanzboden (Ger.). *See* SOUNDBOARD (i).

Resonanzsaiten (Ger.). *See* SYMPATHETIC STRINGS.

Resonator. A body showing the property of RESONANCE. An important example of a musical resonator is the hollow tube hung below each bar of the modern orchestral marimba or the vibraphone. The length of the tube is chosen so that the first vibrational mode of the enclosed air column has the same frequency as the first (transverse) vibrational mode of the bar; when the bar is struck, its motion exerts an oscillating force on the air column, driving it into resonance. The resulting large-amplitude standing wave in the resonator contributes greatly to the sound radiated by the instrument. The resonator does not itself generate sound energy; the increased loudness is obtained at the expense of a more rapid rate of decay of the bar's vibration.

An enclosed container connected to the outside air through a small aperture or neck is known as a Helmholtz resonator; its frequency of resonance is determined by the volume of enclosed air and the form and dimensions of the opening (*see* PHYSICS OF MUSIC). Helmholtz resonators were used by the 19th-century acoustician HERMAN VON HELMHOLTZ for qualitative sound analysis, and find applications in room acoustics (*see* ACOUSTICS, §I). The cup mouthpiece of a brass instrument has some of the features of a Helmholtz resonator (*see* ACOUSTICS, §IV).

The tube of a wind instrument is commonly described as a resonator, but this oversimplifies the complex nature of the coupling between the sound-generating mechanism and the air within the tube. The air column has a set of resonances, each corresponding to one of its natural modes of vibration; when a stable note is sounding, the generator is locked into a cooperative vibration partnership with the air column, involving the simultaneous excitation of several of these resonances. In a woodwind or brass instrument, or in an organ flue pipe, the sound generator (reed, lips or air jet) can adapt its vibration frequency to drive the air column resonances over the complete playing range of the instrument. In an organ reed pipe, on the other hand, the vibration frequency of the metal reed is little affected by the coupling to the air column; the pipe is tuned primarily by adjusting the reed frequency, and the air column acts as a passive resonator (*see* ORGAN, §III).

Although the body of a string instrument normally has many resonances, it is inappropriate to describe it as a resonator because it is designed to radiate sound over a wide frequency range rather than at specific resonance frequencies. Indeed, a particular body resonance which is

too strong can disrupt the transfer of energy from the string, giving rise to a WOLF note at the frequency of the resonance. Similar considerations apply to the soundboard of a keyboard stringed instrument. The sympathetic strings found on pianos with ALIQUOT scaling, on the other hand, are examples of true resonators, since each string responds only at its own tuned resonance frequencies.

MURRAY CAMPBELL

Resonator guitar. A guitar developed in the late 1920s with one or more resonator discs, usually metal, mounted inside the body and connected to the bridge. It was developed in the USA by John Dopyera (*b* June 1893), the son of a Czech violin maker, and first manufactured by the National String Instrument Corp. (formed by Dopyera and others) in Los Angeles from 1927. Dopyera left the company in about 1929 and set up the Dobro Corp. with two of his brothers, Emil ('Ed') and Rudolph ('Rudy'). The brand name 'Dobro', derived from the first syllables of 'Dopyera brothers', was devised at this time (it is also the word for 'good' in Slavonic languages). Besides resonator guitars, the company marketed resonator ukuleles, banjos, mandolins, four-string tenor guitars, and double basses, and in the early 1930s produced one of the first Spanish electric guitars, which had magnetic pickups designed by Victor Smith.

Around 1933 changes in the management of the National String Instrument Corp. left another Dopyera brother, Louis, as the major stockholder, and a merger with the Dobro Corp. followed in 1935. The National Dobro Corp. moved to Chicago in 1936, and in the late 1930s added Hawaiian steel guitars and electric violins to its range of string instruments. It produced variants of the resonator guitar for marketing under different names by distributors, and exchanged guitar bodies for metal and electrical parts with other companies. In 1937 the Chicago-based Regal company acquired rights to manufacture Dobro instruments. In the early 1940s National-Dobro became the Valco Manufacturing Co. (named after Victor Smith, Al Frost and Louis Dopyera), which, after the war, concentrated on the making of electric guitars primarily with National or Supro brands until its demise in 1968. Following a revival of interest in the resonator guitar in the late 1950s, Emil Dopyera began to manufacture the instrument again around 1959 in El Monte, Los Angeles (later in nearby Gardena). His company was sold to Mosrite around 1967, but the name 'Dobro' was regained by Emil jr and Ruby Dopyera when their Original Musical Instrument Co. (OMI) resumed the making of resonator guitars in Long Beach, California in 1971, moving to nearby Huntington Beach in 1972. In the 1990s OMI was bought by Gibson.

The resonator guitar was originally developed in response to the growing demand for a guitar that could produce a greater volume than the conventional instrument. It was superseded in many areas of popular music after World War II by the more efficient electric guitar. The resonator guitar was used at first in country blues and hillbilly music; it was often played Hawaiian-style across the knees and with a bottleneck (indeed some models specifically adapted for Hawaiian playing were marketed); it is now heard mainly in bluegrass and related country music, though it is also played by some rock musicians.

Respighi [née Olivieri-Sangiacomo], **Elsa** (*b* Rome, 24 March 1894; *d* Rome, 17 March 1996). Italian singer and composer. She studied in Rome with Sgambati (piano), Remigio Renzi (harmony and counterpoint), and Ottorino Respighi (composition), whom she married in 1919. A singer with a fine technique and an interpreter of considerable taste, she undertook many concert tours, accompanied at the piano by Respighi, some of whose compositions she first performed. After an initial period as a composer of mainly songs with piano accompaniment, she abandoned composition almost entirely to devote herself to her husband's career, and, after his death, to preserving his memory by publishing books and organizing conferences, performances, recordings and new editions of the music. As well as completing unfinished compositions, she also made some transcriptions of his work. In 1969 she established a Fondo Respighi in Venice, to promote music education in Italy. Her own output also includes a number of orchestral and vocal-orchestral pieces; a *lauda drammatica*, *Il pianto della Madonna*, first performed in Turin in 1939; and two operas, both unperformed: *Il dono di Alcesti*, with which she won the Concorso Nazionale held by the SIAE (Società Italiana Autori ed Editori) in 1942, and *Samuray* (1945).

WORKS
(*selective list*)

Stage: Fior di neve (fiaba musicale, 3, ?Verdini), 1918; Il dono di Alcesti (op, 1, C. Guastalla), 1941; Samuray (op, 3, Guastalla), 1945

Vocal: 3 Canzoni spagnole, S, orch, 1917; 4 liriche (O. Khayam), 1v, pf, 1918–9; Il pianto della Madonna (Jacopone da Todi), S, T, chorus, orch, 1939; 3 Canti corali (A. Poliziano), chorus, 1939; Preghiera di Santa Caterina, Mez, chbr orch, 1943–8

Inst: Serenata di maschere, sym. poem, orch, 1918; Suite di danze, orch, 1919–20; Intermezzo romantico, va, fl, hp, orch, 1942

ANTONIO TRUDU

Respighi, Ottorino (*b* Bologna, 9 July 1879; *d* Rome, 18 April 1936). Italian composer. Despite the eclecticism and uneven quality of his output as a whole, the colourful inventiveness of his most successful works has won them an international popularity unmatched by any other Italian composer since Puccini.

1. LIFE. The son of a piano teacher, Respighi began to learn the violin and the piano as a child, before becoming a student (1891–1901) at the Liceo Musicale, Bologna, where his violin (and viola) studies continued with Federico Sarti. He also studied composition there with Torchi who, being eminent especially as a pioneering musicologist, sowed the seeds of his lifelong interest in early music. The Liceo's director at that time was Martucci, whose achievements both as an enricher of Bologna's musical life and as the leading composer of non-operatic music in Italy at the turn of the century made a strong impact on the young Respighi: Martucci taught him composition in his last year as a regular student, and had a high opinion of his technical competence and promise.

In the winter of 1900–01, and again in 1902–3, Respighi was employed for several months as an orchestral viola player in Russia, where he had a few, 'but for me very important', lessons from Rimsky-Korsakov that crucially influenced his orchestration. His brief period of study with Bruch in Berlin in 1902 (not, as has often been stated, 1908) seems, on the other hand, to have helped him little. During 1903–8, back in Bologna, he continued to earn his living mainly as an orchestral player, while winning increasing (though still only local) recognition as a composer. From 1906 he also became active as a transcriber of music from the 17th and 18th centuries: his version for voice and orchestra of Monteverdi's *Lamento d'Arianna* gained him his first significant public success outside Italy, in 1908 during another visit to Berlin. That second stay in the German capital (which lasted nearly a year) widened his musical horizons considerably, with creative results that can already be discerned in his first full-scale opera, the initially successful but thereafter long-neglected *Semirâma*.

Although Respighi was seldom much attracted by the more self-consciously innovative musical trends of the time, he nevertheless became marginally involved (in 1910, the year of *Semirâma*'s première) in a short-lived anti-establishment pressure-group – the 'lega dei Cinque' whose other members were Pizzetti, Malipiero, Bastianelli and Renzo Bossi. Soon afterwards the first performance of his justly admired solo cantata *Aretusa* (1910–11) was given by the singer Chiarina Fino-Savio, for whom he subsequently wrote many songs and who for some years was his close friend and confidante. From then onwards Respighi became more active as a piano-accompanist than as a string player. Meanwhile he had had intermittent opportunities to teach at the Bologna Liceo Musicale without, however, gaining a permanent post there: frustration at this failure led him reluctantly to apply for posts elsewhere, and in January 1913 he settled in Rome, having been appointed professor of composition at the Liceo Musicale di S Cecilia.

Respighi held this post for over a decade, during which he revealed a notable flair for teaching, as several pupils have testified. In addition to Rieti and Amfitheatrof, his students included (from 1915) the young Elsa Olivieri Sangiacomo, a talented composer and singer, who married her teacher in January 1919 and was the inseparable mainstay of many aspects of his existence for the remainder of his relatively short life. (She was to survive him by nearly 60 years, becoming his principal biographer and a tireless fighter for fuller recognition of his achievement right on into the closing decades of the century.)

By 1913 Rome had become Italy's most vigorous centre of orchestral concert-giving, thus providing a stimulus that was soon to bear appropriate fruit in *Fontane di Roma* (1915–16). This vivid piece's huge and well-deserved success, though not quite immediate, was quickly to transform Respighi's reputation (and finances) beyond recognition. Meanwhile in 1915 an adventurous new colleague had joined him on the staff of the Liceo: after living in France for many years, Casella had returned to Italy bent on drastically modernizing the country's musical life in the light of his recent experiences abroad. Again Respighi became marginally caught up in the resultant ferment of new ideas; but he played only a limited part in the activities of Casella's controversial Società Italiana di Musica Moderna (1917–19), with whose aims he had little natural sympathy.

In 1923 Respighi was appointed director of the now state-funded Conservatorio di S Cecilia (as the former municipal Liceo had become from 1919); but his administrative duties proved uncongenial and time-consuming, and in 1926 he resigned so as to have more time to compose. Yet, although he no longer had any economic need to do so, he continued until 1935 to teach an advanced class in composition that had been specially created for him under the auspices of the much older Accademia di S Cecilia. (His successors in this prestigious new post were to include Pizzetti, Petrassi and Donatoni.) Meanwhile, although he continued to win his biggest successes with orchestral pieces, he again became involved in opera-composition, encouraged by his meeting in 1920 with the writer and journalist Claudio Guastalla (1880–1948) who is now remembered almost exclusively as the librettist of all Respighi's later operas. Guastalla seems also to have exerted a significant influence (for better or worse) on the conceptions and programmes of some of his non-operatic works.

During his later years Respighi's now worldwide fame encouraged him to travel extensively, conducting his music in many countries on both sides of the Atlantic, accompanying singers – especially (though not only) his wife, who increasingly replaced Fino-Savio as the leading interpreter of his songs – and occasionally even appearing as a piano soloist in his own compositions. Before long his international success brought him substantial rewards at home, including official favours from the fascist authorities: in 1932 he was honoured with membership of the Reale Accademia d'Italia. Mussolini's own admiration for Respighi's orchestral works seems to have been genuine and considerable, and it could be argued that parts of, for example, *Pini di Roma* (1923–4) and *Feste romane* (1928) evoke something of the atavistic pageantry that became associated with fascist propaganda. Yet Respighi himself remained uninvolved with politics: unlike some of his main Italian contemporaries he seldom wrote to the fascist leaders, and his few surviving letters to them are simple and relatively innocuous. It has been convincingly suggested that 'Respighi did not attempt to ingratiate himself with the regime because he was the one composer of his generation whom the regime backed without being asked' (Sachs).

In the field of 'musical politics', however, his essentially conservative position was confirmed when he became a signatory (with Pizzetti, Zandonai and various lesser figures) of the notorious, widely quoted manifesto which in December 1932 attacked the more adventurous musical

trends of the time and urged a return to established Italian tradition. Ironically, on this occasion the unpredictable Mussolini firmly took the side of the modernists. By then Respighi's health was declining: a heart murmur had been diagnosed in 1931, and by 1935 more serious heart problems had set in. He completed no new original compositions after 1933, and his last opera, *Lucrezia*, though seemingly almost finished at his death, is the work of a tired and weakened man.

2. WORKS. Since 1980 many of Respighi's hitherto little-known early works have belatedly become available in print or in recordings, some of them thus being heard for the very first time. Although the quality of these juvenilia is variable (some are notable more for technical fluency than for individuality or memorable ideas), there are striking pieces among them: for example, the previously unperformed cantata *Christus*, composed at the age of 19, is a moving and not unoriginal creative response to the sound world of Perosi's early oratorios, which were then just becoming fashionable. Also worthy of attention are the Piano Quintet and the A minor Piano Concerto, whose evident debt to Martucci does not preclude signs of fresh thinking in their structural outlines, as well as in evocative details which in the Concerto sometimes reflect Respighi's recent experiences in Russia. The orchestral resourcefulness that he had picked up from Rimsky-Korsakov – and also 'conspicuously' from the music of Tchaikovsky – can even more clearly be heard in parts of the Suite (originally Symphony) in E (1903), in which distinctive Respighian phraseology is often foreshadowed. Here, as in *Christus*, there are occasional signs that he was responsive to Gregorian chant long before he met his future wife, despite her oft-quoted claim that it was she who first induced him to study plainsong systematically.

Influences from other types of early music, too, are evident in some of his youthful pieces: the Suite in G pays free, rather romanticized tribute to late Baroque styles from Corelli to J.S. Bach, and pastiche of 18th-century music also pervades the long-winded *Concerto all'antica* (1908), written during Respighi's first major burst of activity as a transcriber of compositions from that period. Meanwhile he was winning his first really lasting successes mainly with songs, some of which have remained among the most popular he ever wrote. Although he never became as strongly individual a song composer as his Italian contemporaries Pizzetti and Malipiero at their best, the charm and expressive variety of his many works in this field – ranging, in these early years, from the disarming, child-like freshness of *Stornellatrice* (1906) to the concentrated, hypnotic turbulence of *In alto mare* from the *Sei melodie* (1906) – has proved attractive to singers and audiences in many countries.

More adventurously up-to-date elements began to enter Respighi's music in some of his works of the years immediately preceding World War I. Pre-eminent among them is *Semirâma* (1908–10), whose recent revival in the theatre and on disc (after over three quarters of a century of total neglect) has proved considerably more rewarding than had been generally expected. The style is, admittedly, still somewhat eclectic, with suggestions both of recent French music and – not least – of the Strauss of *Salome*, interacting with more tranditionally Italian operatic tendencies and with appropriate excursions into the exotic. The sumptuous orchestral palette of this shamelessly indulgent work prepared the way for the colouristic virtuosity of better-known pieces to follow.

Soon after the première of *Semirâma*, Respighi's solo vocal output entered a more ambitious phase, in three substantial settings of translations of Shelley. The vividly picturesque *Aretusa*, which the composer is said to have regarded as 'more *his* than anything he had previously written' (E. Respighi, 1954), directly foreshadows *Fontane di Roma* in some of its orchestral imagery. *Il tramonto* (1914) too – more than the rather prolix *La sensitiva* (1914–15) – combines lyricism and restrained dramatic expression in a hauntingly eloquent single-movement cantata. The accompaniment, though here for strings alone, contains plentiful signs of Respighi's flair for imaginative textures, fully justifying the work's place among his most widely performed vocal compositions.

However, Respighi's move to Rome led him, by and large, to devote more of his energies to purely orchestral music. His first extended orchestral piece of the Roman years, the huge, unconvincing *Sinfonia drammatica* (1914), paid turgid tribute to the more ponderous sides of both Strauss and the Franck tradition, and has understandably made little headway in the repertory. In *Fontane di Roma*, by extreme contrast, influences from, among others, Ravel and the Strauss of the 'silver rose' music in *Der Rosenkavalier* are totally assimilated into a highly personal, memorably pictorial soundscape: here Respighi showed both a perfect knowledge of his limitations and a superb command of his talents as an outstanding musical illustrator.

Fontane di Roma proved to be the most important creative turning-point in Respighi's career. Yet the initial delay of its big success prevented its significance from being recognized at first even by the composer. During 1917–19 he wavered between contradictory stylistic possibilities: the Violin Sonata in B minor again harks back to 19th-century forerunners (from Martucci to Franck), with a risk of academicism in the final passacaglia; whereas a more modern, even cautiously experimental approach is evident in the capricious superimposed fourths that pervade the song cycle *Deità silvane* (1917), and in the menacing orchestral dissonances that caused the *Ballata delle gnomidi* (1919) to be controversial when new, before sinking into near oblivion until quite recently. Such works show that Respighi did respond to some extent, however temporarily, to the innovative ideals of Casella and his Società Italiana di Musica Moderna, which was active in precisely those years.

Meanwhile his creative involvement with music from the past entered a particularly happy phase, when the first set of *Antiche danze ed arie* (1917) combined a typically Respighian colouristic variety with a crisp clarity of sound that suits the chosen lute pieces surprisingly well. The work soon became another of his major successes, as did the ballet *La boutique fantasque* (1918). Here the themes borrowed from Rossini must themselves take part of the credit for the sparkling result; but Respighi's skill in deploying and scoring this material is also notable, and may even have helped to prepare the way for Stravinsky's far more drastic reshaping of borrowed ideas in *Pulcinella*, which was likewise the result of a commission from Diaghilev.

Respighi's most famous works of the 1920s are the several symphonic poems that followed on, in various ways, from *Fontane di Roma*, whose international success

was by then going from strength to strength. *Pini di Roma* and *Feste romane* were consciously planned as sequels to *Fontane*, and became inseparably linked with it in the public mind and in due course in countless recordings. However, these two later 'Roman' poems (especially *Feste*), though in many ways imaginative, are inclined to let picturesque colourfulness spill over into a flamboyant garishness that seems aimed primarily at lovers of orchestral showpieces. One can understand why Mussolini was fond of these works; yet the unworldly Respighi was probably, in truth, more influenced here by a simple, child-like delight in the kaleidoscopic riches of a modern orchestra than by the pageantry of fascism.

Between *Pini di Roma* and *Feste romane*, he wrote some more restrained tone poems on non-Roman subjects, among which the *Trittico botticelliano* (1927) stands out as a radiantly evocative little masterpiece for small orchestra. Imaginative in a different way is the central, and best, movement of the *Impressioni brasiliane* (1928), which evokes the Butantan snake farm near São Paulo with appropriately unsettling squeaks and slithering sounds. *Vetrate di chiesa*, though it too is colourful and ostensibly pictorial, consists largely of orchestral amplifications of the abstract *Tre preludi sopra melodie gregoriane* for piano (1919–21).

The best known of the overtly abstract compositions whose use of plainsong-like material followed on from the *Tre preludi* is the *Concerto gregoriano* for violin and orchestra (1921), whose central movement features the familiar Easter sequence *Victimae paschali*. Elsewhere in the work the allusions to plainchant are more fleeting and disguised; the quasi-pastoral result parallels some of the more calmly modal music of Vaughan Williams. Likewise pervaded by freely plainsong-like themes are the long and rather diffuse *Concerto in modo misolidio* for piano and orchestra (1925), and the more impressive *Quartetto dorico* (1924), in which predominantly modal material is put to richly varied uses within a seemingly rhapsodic yet thematically unified single movement structure.

Meanwhile Respighi continued to make transcriptions of music by composers of various periods. The later sets of *Antiche danze ed arie* have won a success comparable to that of the first set, as, still more, has the winsome *Gli uccelli* (1928), freely based on Baroque keyboard pieces depicting birds. On the other hand few would now defend the outrageously inflated adaptation of Monteverdi's *Orfeo* (1934), in which both Respighi and his regular librettist Guastalla introduced drastic changes in the work's substance as well as in its scoring: their version, like Respighi's much earlier transcription of the *Lamento d'Arianna*, uses a large modern orchestra, and has justly been condemned as 'an opulent vulgarization of Monteverdi's original' (Fortune). Two overtly neo-Baroque concertante works from Respighi's last period, the Toccata for piano and orchestra (1928) and the *Concerto a cinque* (1933), tend too readily to lapse into academicism on the one hand and rather pallid Romantic indulgences on the other. By contrast, perhaps the most perfect embodiment of his freely 'archaizing' tendencies is the radiantly charming *Lauda per la natività del Signore* (1928–30) – in effect a large Christmas carol in cantata form, pervaded throughout by suggestions of 16th-century madrigals, Monteverdian arioso, and other pre-classical music.

During the inter-war period Respighi also became increasingly involved, after previous discouragements, with opera. *La bella dormente nel bosco* (1933) – still, in its small way, arguably his most perfect dramatic work – was launched as an opera for puppets, and was taken all over the world by Vittorio Podrecca's famous Teatro dei Piccoli before being adapted in a new version using child mimes. The work contains many gently parodistic touches; yet the total effect is surprisingly unified, so sincere and apt is the composer's responsiveness to the details of the story. The far more ambitious *Belfagor* (1920–22) is dramatically and musically uneven, despite some beautiful love music and considerable harmonic boldness, by Respighi's standards, in the portrayal of the protagonist and his infernal origins. In *La campana sommersa* (1924–7) the composer responded vividly to the fantasy elements in Hauptmann's symbolist drama, with results that are as imaginative as his very best symphonic poems. However, the music associated with human passions is less distinguished.

The two stage works completed in 1931 are strongly contrasted: the ballet score *Belkis, regina di Saba* ranges from picturesque exoticism to raucous banality and contains some of the most sumptuous instrumentation that Respighi ever conceived; whereas in *Maria egiziaca* – originally designed for small-scale, semi-staged presentation in the concert hall but thereafter performed quite often in Italian opera houses – he matched Guastalla's self-consciously archaic libretto with austerely evocative music in which Gregorian, Renaissance and Monteverdian influences are evident, alongside others of more recent origin. *La fiamma* (1931–3), Respighi's last and most frequently performed large-scale opera, reverts in some ways to quasi-Verdian methods, alongside archaic and exotic elements designed to evoke the Byzantine setting. Monteverdi-like archaisms reappear here and there in the unfinished *Lucrezia*, especially in the narrating part of 'La voce'. However, in this disappointing short opera the composer's lifelong eclecticism became a liability rather than the asset it could sometimes be. The work's orchestration was completed by his widow, assisted by his pupil Ennio Porrino.

JANET WATERHOUSE/JOHN C.G. WATERHOUSE (work-list with POTITO PEDARRA)

Respond (Lat. *responsa*). In literature on the music of Western Christian rites the term is sometimes used synonymously with RESPONSORY. A clearer practice (e.g. as found in W. Apel: *Gregorian Chant*, 1958, 2/1990) uses 'respond' for the first part of a chant in responsorial form (e.g. the gradual at Mass and the responsory of Matins) as distinct from the verse that follows. 'Respond'

Short responsory, Terce on Passion Sunday and Palm Sunday, from 'Liber usualis', p.239

and 'verse' are often abbreviated to ℟ and ℣ (see illustration; the same abbreviations are commonly used for versicles and responses). For the brief 'responsae' associated with early responsorial psalmody, *see* ANTIPHON, §1.

See also VERSICLE.

Responsa (Lat.). A response, originally sung by the congregation, in the *preces* of the Gallican rite. *See* GALLICAN CHANT, §13.

Response. In Christian liturgies the short text spoken or sung by the congregation or choir in reply to the VERSICLE.

Responsorium ad lectiones. A responsory sung between readings during the evening Office in the Ambrosian rite. *See* AMBROSIAN CHANT, §6(iv).

Responsorium graduale. *See* GRADUAL (i).

Responsorium in baptisterio. A responsory sung when the Ambrosian evening Office concludes in the baptistry. *See* AMBROSIAN CHANT, §6(iv).

Responsorium in choro. A responsory sung at the evening Office in the Ambrosian rite. *See* AMBROSIAN CHANT, §6(iv).

Responsory [Great responsory of Matins and Vespers; responsorium prolixum]. A category of Western chant serving at Matins and monastic Vespers as musical postludes to the reading of lessons, as the gradual and alleluia do at the Mass. Indeed, responsories make up the greater part of Matins, and in the total repertory of Roman chant are surpassed in quantity only by Office antiphons. From about 600 in their earliest musical source, the Hartker manuscript dating from about 1000 (PalMus, 2nd ser., i, 1900, 2/1970), the number of responsories increased to nearly 1000 in the 13th-century Worcester Antiphoner (PalMus, 1st ser., xii, 1922/*R*).

1. History of the form. 2. Texts. 3. Melodies: (i) Modality (ii) Structural principles. 4. Polyphonic settings.

1. HISTORY OF THE FORM. The responsories of the Office (like the gradual and alleluia of the Mass) are termed responsorial chants because in them choir responds with a refrain to verses sung by a cantor. In method of delivery they are clearly related to responsorial psalmody, although it is important that a distinction be maintained between the more ancient practice of responsorial psalm singing and the specific liturgical genre that bears its name.

Beginning in the late 4th century, patristic references to responsorial psalmody are fairly abundant. Basil describes the practice as 'entrusting the lead of the chant to one person, while the rest sing in response'. Athanasius tells of calming a frightened crowd by enjoining a deacon to read a psalm, while the people interject the refrain from Psalm cxxxv ('for his mercy endures for ever'). Elsewhere Ambrose compares the people's response to the 'roaring of waves', and Augustine mentions a 'short and highly beneficial psalm' being sung and 'responded to'.

The majority of these patristic references specifically mention psalmic texts delivered by a soloist in a cathedral setting, with responses sung by a lay choir. Moreover, most suggest that the selected psalm was sung in its entirety; when the source of the respond text is mentioned, the latter is nearly always said to be derived from the same psalm entrusted to the soloist. The responsories preserved in the medieval sources, however, rarely take their respond texts from the psalms: only two sets, of approximately 14 chants apiece, are exclusively psalmic (presumably these are the oldest layers of the repertory). Moreover, with rare exceptions, they are provided with only a single verse. Except in their use of similar performance forces, there is, therefore, little apparent connection between the responsorial singing mentioned in the early references and the medieval responsories of the night Office.

The first description of the responsory as an independent genre of liturgical chant does not appear until the 6th-century Rule of St Benedict (Hucke, 1980). In contrast to the congregational psalm singing described by the Church Fathers, Benedict makes particular reference to responsories as chants with an intimate connection to the night Office lectionary, their texts being selected specifically for relevance to the readings they accompany ('lectiones cum responsoriis suis'). This accords well with the repertory contained in the earliest musical sources, for many responsory texts are taken directly from the Old Testament readings they frame.

In the medieval chant tradition the responsory usually consisted of a choral respond, a single solo psalm verse and the *repetendum* (the last part of the respond repeated), yielding a ternary structure. It is likely that the responsory originally included the entire psalm, with the verses – sung by a soloist – separated by a brief congregational refrain. Its abbreviation from the complete psalm to a single verse must have come about through a change in its melodic nature. When the congregation relinquished its singing role to the trained choir, the respond section probably became more elaborate in style (and therefore longer) and required fewer verses in order to avoid excessive overall length. Isidore of Seville indicated that only one verse was sung in his time, and Peter Wagner suggested that analogous changes occurred in the graduals of the Mass as early as the 5th century.

An approximation to the original practice was nevertheless maintained at Rome in the 9th century. Amalarius of Metz gives the following account of responsory performance in Rome at that time:

> First a soloist sings the respond, which the choir repeats; the soloist next sings the verse, followed by choral repetition of the respond; then the soloist sings the doxology, with the choir now repeating only the second part of the respond; and finally soloist and choir, in turn, each sing the complete respond.

Amalarius also reports that the doxology, which had long been part of the responsory in France, had only recently been added to responsories in Rome.

In France, evidently, the repeat had become only partial after the verses as well as the doxology. Moreover, the original twofold initial statement of the respond had been reduced to a single statement, intoned by the soloist and continued by the choir. Thus the Frankish responsory in the early 9th century must have been performed as follows: respond (solo–chorus), verse (solo), latter half of respond (chorus); or, with doxology: respond (solo–chorus), verse (solo), latter half of respond (chorus), doxology (solo), latter half of respond (chorus).

Rome maintained the earlier form of fuller performance well into the 12th century, at least for major feasts; rubrics in the Roman antiphoner (*I-Rvat* S Pietro B79, *c*1175) call for the complete respond after the doxology in the first three responsories for the first Sunday of Advent, and

after the verse in all the responsories of Epiphany, Easter, Ascension, and St Peter and St Paul. This manuscript reveals, however, that considerable abbreviation had occurred even in Rome. The soloist now only intoned the respond, although a full choral statement still followed; moreover, for the bulk of the responsories the *repetendum* was indicated after the verse(s). Evidently, by the 12th century, Roman practice had come to conform almost entirely to Frankish. How far it conformed is well illustrated by the responsory *Aspiciens a longe*, which, doubtless by virtue of its position as first responsory of the liturgical year, had three verses and doxology. The text of the respond reads: 'Aspiciens a longe, ecce video Dei potentiam venientem, et nebulam totam terram tegentem. Ite obviam ei, et dicite: Nuntia nobis si tu es ipse qui regnaturus es in populo Israel'. Both the Roman and Frankish versions have successively shorter *repetenda*. The *repetendum* after verse 1 begins with 'Ite obviam'; that after verse 2 with 'Nuntia'; that after verse 3 with 'qui regnaturus'. But there is a divergence in practice at the fourth *repetendum*; in the Frankish version, the *repetendum* after the doxology consists only of 'in populo Israel', whereas in the Roman version – as a vestige of an earlier practice – the respond is repeated in full.

2. Texts. Table 1 gives the Matins readings as they are prescribed in the early 8th-century *Ordo romanus XIIIA* (see the two right-hand columns; in this source the liturgical year begins in March), together with the responsory texts accompanying those readings, as found in the much later notated sources for the Office (see the two left-hand columns). For much of the year, responsories are transmitted in distinct groups called *historiae*, named according to the particular biblical source of their texts ('historia de Job', 'historia de Judith' etc.). This is especially true for the weeks after Pentecost and during Lent, and in a more indirect manner for the Advent and Christmas seasons. As these texts are interspersed between the readings at Matins, which are taken from the same book of scripture as the responsories, each *historia* cycle is designed to exemplify and sometimes summarize the lections it accompanies. The number of responsories in a cycle can vary in number from as few as five to as many as 15. The interconnection between chant texts and lectionary determines the most common deployment of the responsories, but it would appear to be a comparatively late phenomenon. One of two small sets of exclusively psalmic responsories, found in the antiphoners for the weeks following the Epiphany, is unrelated to readings, and in fact is arranged in ascending numerical order based upon the psalm from which each responsory is derived. In spite of their placement in the liturgical books, they were apparently sung throughout the year on any feast without Proper responsories of its own. These 'de psalmis' responsories, along with a related psalmic set for the third and fourth weeks after Easter, are probable remnants of an earlier liturgical ordering than the *historiae* cycles that make up the bulk of the repertory (they are shown in bold type in Table 1; see Hucke, 1980). Indeed, a revision of the night Office lectionary seems to have occurred some time in the first half of the 8th century, resulting in the reading list preserved in *Ordo XIIIA*. It has been suggested that this revision, in an effort to accommodate the expanded schedule of readings, led to additions to the responsory repertory (Maiani, 1998).

3. Melodies.

(i) Modality. The Roman chant exists in two versions: Gregorian, found particularly in music manuscripts

copied in Carolingian domains from the 10th century, and Old Roman, found in a small group of manuscripts (including the S Pietro antiphoner mentioned above) produced in Rome from the mid-11th to the mid-13th centuries.

Old Roman and Gregorian are liturgically nearly identical but reveal two distinct yet cognate melodic traditions. The similarities, often approaching identity, bespeak a common origin; the differences, which are on occasion quite striking, show the stylistic independence of the two repertories (*see* OLD ROMAN CHANT). The following analysis takes into account both versions of Roman chant.

Responsories possess two distinct parts, respond and verse. For the latter, each repertory has a set of eight recitation formulae or 'tones', one for each mode. All Old Roman and all but a few freely composed, late examples of Gregorian verses, and the doxologies, were sung to these tones (ex.1: Gregorian, after *AS*, 4; Old Roman, from *I-Rvat* S Pietro B79). Neither melodic tradition is entirely stable; moreover, the Old Roman tones are based on a transcription of only part of the repertory and are thus no more than tentative as yet.

The Old Roman chant manuscripts contain 617 Old Roman responsories together with 15 borrowings from the Gregorian repertory. The distribution of the verses among the eight tones is shown in Table 2. The corresponding figures from the Hartker manuscript, the earliest known Gregorian antiphoner with modal indications, are shown in Table 3.

Essentially, both repertories have the same modal distribution, and the picture is not affected significantly by the great increase in the number of responsories in later Gregorian sources. The Roman responsories show a predilection for the *tetrardus* modes with a corresponding neglect of the *tritus* modes.

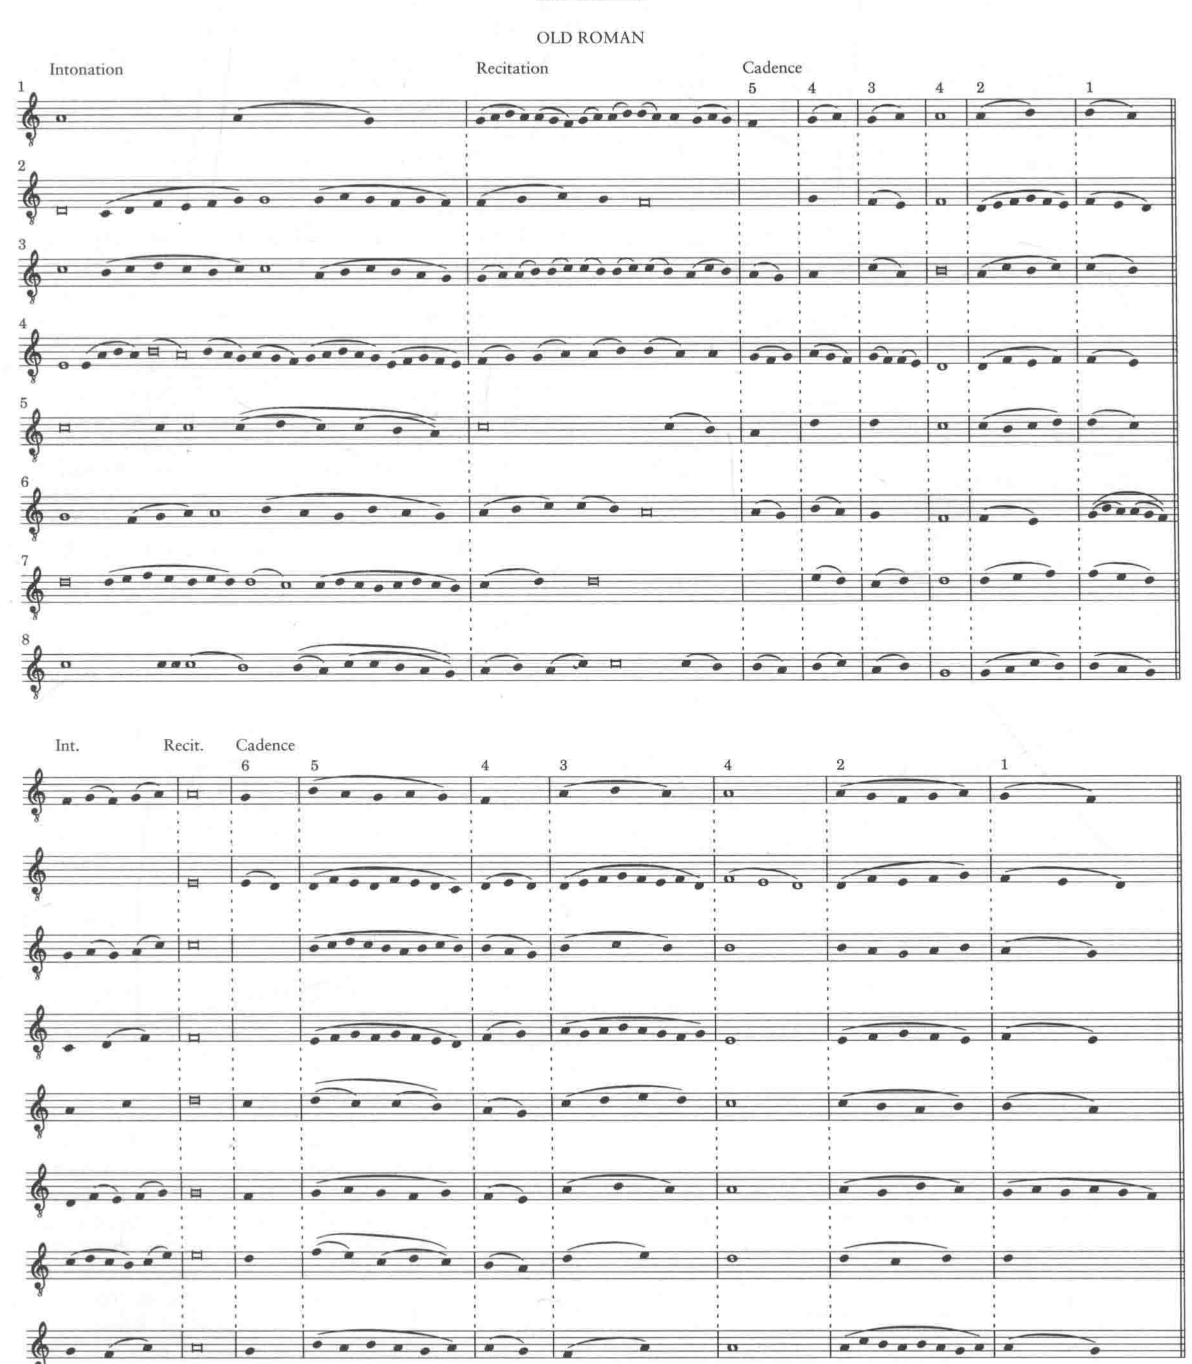
(ii) Structural principles. Melodically, the responds can be grouped in three categories: (1) standard adaptations to many different texts, (2) centos composed of stock phrases or patterns arranged in varying order from piece to piece (*see* CENTONIZATION), or (3) freely composed. Since examples of the latter are rare, 'the art of responsorial composition is, to a very large extent, the art of adapting the different clauses of a liturgical text to different well-defined but plastic and adaptable musical phrases' (Frere, 5). The following general remarks can be made about these basic formal units. In both the Gregorian and the Old Roman repertories the pattern is essentially a recitation whose foundation is the reciting note. The text dominates and straightforward declamation is the rule. The recitation is framed by an introduction and a conclusion which permit greater musical development. Although the introduction normally carries only the first two or three syllables of the text phrase, the cadence commonly takes the last five or six syllables, and both range in style from neumatic to melismatic.

The single standard melody of the 2nd mode, used for more than 50 responsories in each of the two repertories, appears in ex.2. The melody ranges from a neumatic to a melismatic style. (Late compositions frequently had more extended melismas, sometimes borrowed from other chants, but generally Office responsories were not as melismatic as responsorial Mass chants.) The structure consists of units that are themselves made up of an intonation, a recitation and a cadence. There are fundamental principles of textual adaptation identical in both repertories. A very close relation between text and music is achieved by placing the first and the last accented syllable of the text always in the same position (marked 'x' in ex.2) in the intonation and cadence of each pattern. The other syllables at the beginning and end of the phrase are adapted to the rest of the musical elements, some of which may be added, divided or omitted if necessary. In patterns 2 and 6 of ex.2, an element (marked '+') is added in the cadence when the antepenultimate syllable is accented; in patterns 1 and 3, a cadential melisma is divided when there is such an accented syllable. Patterns 4 and 5 of ex.2, however, have musically autonomous cadences: the text is set to them without regard for the accent. The responsories using the standard melody of the 2nd mode, then, were essentially the same in both repertories. They agree in structure, text adaptation and melodic contour; moreover, their patterns are similarly ordered.

Some points of difference also emerge from ex.2. First, pattern 4 of ex.2 and the second part of the 2nd tone (see ex.1) are identical in their Gregorian versions. Since the *repetendum* usually begins at pattern 5, this identity must represent a conscious attempt to make a smooth return from verse to respond. No such relationship is found in the Old Roman version. This fact supports the theory of the Frankish invention of the *repetendum*. In the Old Roman versions, however, the end of verse and the end of respond are similar and probably point to an ancient relationship between the two. Second, the Old Roman version tends to be diffuse at the cadence; most patterns end with a melisma as a transition to the subsequent phrase. The Gregorian version is more direct at the termination, the final element usually being a *clivis*. Third, in recitation practice, the Gregorian version prefers the third or final modal degree, and the Old Roman the fourth

Ex.1

GREGORIAN



Intonation Recitation Cadence 5 4 3 4 2 1

Intonation Recit. Cadence 5 4 3 2 1

or second. The Old Roman recitation, nevertheless, normally resolves to the third or final at the start of the cadence. As ex.2 shows, the first or preparatory element in Old Roman cadences (absent from Gregorian) releases the tension built up on the reciting note and at the same time introduces the cadence. Thus both chants emphasize the third and the final: the Gregorian directly, and the Old Roman, with more dramatic effect, by a recitation one tone higher.

Ex.1 shows that this latter difference applies also to the responsory tones. The Old Roman recitation occurs on the fifth and sixth in the authentic modes, and on the fourth and second in the plagal; the Gregorian chooses the fourth and the fifth in the authentic, the third and the final in the plagal. In both repertories recitation on *b* is avoided; the Old Roman 3rd tone, however, may be exceptional.

A comparison of all the Old Roman and Gregorian responsories of the 2nd mode, moreover, reveals that the former are built up from fewer patterns that are much more stable than the Gregorian patterns, admitting far fewer variants. Furthermore, they show that the Old Roman gives more attention to melodic continuity by adjusting the beginnings and endings of patterns for

smooth transition between phrases. Hence, for the responsories of the 2nd mode Gregorian yields to Old Roman in matters of economy, stability and melodic development. Further investigation will reveal how far this is true also of responsories of the other seven modes.

4. POLYPHONIC SETTINGS. Settings of responsory texts survive from the earliest periods of polyphonic music. The Winchester Troper contains 59 responsories which cannot be transcribed accurately. Leoninus and Perotinus set many responsories in the *Magnus liber*, providing polyphony for the intonation of the respond and for the verse; the remaining music of the respond was to be sung in plainchant when it occurred both after the intonation and in shortened form (the *repetendum*) after the verse. This practice of setting soloist music to polyphony and leaving the choral music in plainchant obtained until the 16th century. The anonymous *Descendit ... Tamquam sponsus* (possibly by Perotinus or a contemporary) is an example of a responsory set as *organum triplum*. Similar styles were employed in setting the responsorial chants of

the Mass (gradual and alleluia); and portions of both Mass and Office responsories frequently serve as the tenors of motets in the 13th and 14th centuries.

From the time these early examples appeared until the 16th century very few responsories were set polyphonically. In England during the late 15th century, however, there developed in the Sarum Office a distinct place for polyphonic responsories, and they became a major feature of English music in the first half of the 16th century. Various responsories survive in *GB-Lbl* Eg.3307 (*c*1450), including two settings of *Audivi vocem*, a text set by most important English composers over the next 100 years. Numerous late 15th-century responsories also survive in *GB-Cmc* Pepys 1236. The Sarum responsories most frequently set are *Audivi vocem* (All Saints); the verse *Gloria in excelsis* (from *Hodie nobis*, a Christmas responsory); *Dum transisset Sabbatum* (Easter); and the two Compline responsories for Lent, *In pace* and *In manus tuas*. Apart from the latter two Compline responsories, the great majority are settings of Matins texts.

Responsories by Taverner are the first to show a reversal of the traditional roles of soloist and chorus, in that the intonation of the respond and the verse are monophonic while the remainder of the respond and the *repetendum* were set polyphonically, as in his *Dum transisset Sabbatum*. This practice became the norm for later 16th-century English settings. Not only did it in effect reintroduce a formal parallel to the plainchant responsory (the progression from solo plainchant to polyphony paralleling that from solo to choral plainchant), but it also represented a change in the nature of polyphonic singing. During the 15th century most English polyphony had been soloists' polyphony, designed to be sung by one singer to a line. The development of choral polyphony, with more than one singer to a line, occurred later in England than on the Continent, and its effects can be seen in this change of responsorial procedure, and in the style of choral polyphony, which is noticeably different from that of soloists' polyphony. Nevertheless, smaller responsories, notably the two Compline texts, continued to be set in the old manner: of Sheppard's three settings of *In manus tuas*, one uses only the intonation and verse.

The most magnificent responsory from this period is Sheppard's *Gaude gaude gaude Maria virgo* (second Vespers of the Purification). It includes the long *prosa Inviolata et integra* set in *alternatim* style; it is the only surviving example of such a *prosa* set in its responsorial context, although Frye and Taverner had previously set the *prosa Sospitati dedit egros* for performance within the plainchant responsory *Ex eius tumba* for St Nicholas. The manner in which Sheppard devised alternative cadences for the repeated sections of the responsory itself, and the clear tonal structure of the whole, help make this an unsurpassed example of tonal and thematic architecture in music of this period. Sheppard's work may have been composed during the Sarum revival of Queen Mary's reign (1553–8). Many of the responsories of Tallis and Sheppard (which seem to fit together into a more or less complete liturgical cycle) probably date from this revival (but Doe argued against this, 1970).

Although it was normal for the plainchant to be laid out in equal note values in the tenor, one exception is Byrd's *Libera me*, the last of his contributions to his and Tallis's *Cantiones sacrae* of 1575. By this date the Sarum rite had been finally abolished (in 1559), and it is not surprising to find that his few responsories show little liturgical propriety. Although *Libera me* maintains the internal cadences typical of earlier settings (necessary before the point where the *repetendum* begins), the intonation is nevertheless incorporated into the main body of the polyphony. The independent responsory motet was thereby created in a different manner from its already current continental counterpart. This responsory motet form was commonly adopted by English composers in the remainder of Elizabeth's reign, the most notable example being Tallis's great 40-voice *Spem in alium*, probably dating from the 1570s.

On the Continent the history of polyphonic responsories was quite distinct, more complex and less liturgically orientated. Interestingly, one of the earliest full settings was by the Englishman Walter Frye, although this work is unrelated to English liturgical practice. Frye's *Ave*

regina celorum, mater Regis angelorum (one of the most famous pieces of the late 15th century) sets the complete text of the antiphon (*LU*, 1864), but includes a repetition of lines 3 and 4 at the end. The result is in fact not an antiphon, but a responsory formerly sung in continental liturgies at Compline (from Candlemas to Maundy Thursday). His music sets the whole text in polyphony (intonation, respond, verse and *repetendum*) without recourse to a plainchant cantus firmus, a practice that became standard on the Continent from that time onwards. The resulting *aBcB* motet form also became a prototype for longer motets in general, especially in the later 16th century, regardless of whether the texts were in fact responsories.

Ockeghem's *Gaude Maria* is an *aBcB* responsory with cantus firmus in the tenor. Obrecht's *Ave regina* is based on Frye's tenor, transposed from F (major) to D (minor), and consequently preserves its plan. During the Reformation and the Council of Trent, numerous examples of *aBcB* motets are found among the works of most major composers, notably Clemens non Papa. Not all of these pieces can be identified as having normal liturgical responsory texts. The structural repetition inherent in the form seems to have been attractive for purely musical reasons, and many of the 'manufactured' motet texts of these years are shaped into responsory form without any liturgical necessity. In such instances, as well as in many later compositions, the *cB* element of the form is identified as the *secunda pars* of the work.

Perhaps the most important set of responsories in the 16th century was Kerle's *Preces speciales*, sung at the Council of Trent in 1562 (the year when the future of complex polyphonic Catholic church music was under strong debate). These extraordinary pieces are all based on newly written non-liturgical texts in the form of large responsories. This shows that Kerle, at least, was well aware of the structural value of responsory form in longer movements; he treated the basic repetition formulae with great freedom and imagination. Many of Palestrina's and Victoria's larger motets in two *partes* are based on liturgical responsory texts: these include Palestrina's famous six-part *Tu es Petrus*, *Tribulationes civitatum*, *Sancta et immaculata* and *Dum complerentur*. The *aBcB* form is found also in many shorter motets in one section, notably by Palestrina and Monte.

The period 1550–1650 saw the publication of many complete sets of responsories in Italy, either for Christmas or, much more frequently, for the 27 responsories of Holy Week's TENEBRAE services (Matins of the Thursday, Friday and Saturday, which were at that time sung in the increasing darkness and 'shadows' of the previous evenings; thus many sets are described as being for Wednesday, Thursday and Friday, although liturgically they are indeed for the *triduum sacrum*). The earliest published set of Tenebrae responsories is that of Paolo Animuccia, probably published around 1555. Over the next 100 years, nearly 100 sets of Holy Week responsories were published, almost entirely by very minor Italian figures: Giovanni Alcarotto, Ruggerio Argilliano, Michele Falusi, Manuel Cardoso, Girolamo Bartei and many others. The three most famous sets are those of Ingegneri (1588), which were assumed for centuries to be by Palestrina (who seems not to have set the texts), Gesualdo (1611), set in a considerably more restrained and refined style than his madrigals, and Victoria's justly admired set (1585), which has never been equalled for concision, liturgical propriety and sombre intensity. Victoria was one of the few composers to set only 18 of the complete 27 Tenebrae responsories, those for the second and third Nocturns of each day; in this way he achieved a balance of polyphonic activity in each Nocturn, since in the first Nocturn it was the LAMENTATIONS that were set. Other composers occasionally set only the first Nocturn, but most set all three. Most settings are in the unaccompanied manner associated with the Cappella Sistina, although several were published with organ part. Some even state on their title-page that they are 'alla Palestrina'. Short responsories were also frequently included in polyphonic Compline publications in the second half of the 16th century and throughout the 17th.

Among 18th-century sets of Tenebrae responsories are those by Alessandro Scarlatti (1708), Pompeo Cannicciari (1709), Giovanni Bononcini (*c*1730), Nicolò Jommelli (*c*1740), Leonardo Leo (*c*1740) and Michael Haydn (*c*1774–1796). Some survive only in manuscript and were virtually the exclusive property of the Capella Sistina choir.

Other responsories frequently set include those following the Mass for the Dead. These have a polyphonic history as old as polyphony itself, and such responsories (especially the *Libera me* for the Absolution) continued to be set during the 18th and 19th centuries in complete settings of the Requiem Mass. Neither responsories nor indeed liturgical Office music in general have exerted much attraction over leading composers of the last 100 years. Furthermore, the gradual abolition of Tenebrae during the 1950s, and the final restructuring of the whole Catholic liturgy from 1970 onwards, have left little place for such music and little incentive for its composition.

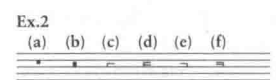
PAUL FREDERICK CUTTER (1 with BRAD MAIANI, 3), BRAD MAIANI (2), DAVITT MORONEY/JOHN CALDWELL (4)

Rest (Lat. *pausa*, *suspirium*; Fr. *pause*; Ger. *Pause*; It. *pausa*). A notational sign that indicates the absence of a sounding note or notes; in traditional Western notation every note value has an equivalent form of rest. A rest may, but need not, imply a silence; nor need silence in music be indicated by rests. In some cases rests may convey technical or physical information about sound production to the performer (e.g. the movement of hands over the keyboard or articulation) but need not result in any audible break in the music. On the other hand certain techniques of sound production (e.g. staccato or breathing for singers and wind players) will result in silence that is not indicated by rests.

Plainchant notation in the Middle Ages contained no sign for the rest, though in 12th-century square notation a vertical line drawn through the staff indicated a phrase ending and thus articulatory silence. This vertical line was taken over into the notation of RHYTHMIC MODES in the same century (*see* NOTATION, §III, 2). As a small stroke intersecting only one or two lines of the staff, it signified the cessation of a reiterated modal pattern and thus usually a rest of some unspecified length. Rests specifying duration became necessary only when durations could not be deduced from the modal context; they first occur in the mensural notation of the 13th century. Franco of Cologne referred to the rest as *vox amissa* (i.e. 'lost' note, as distinct from *vox prolata*, 'sung' note), and he presented the six signs shown in ex.1 as the *pausa perfecta* (equal in



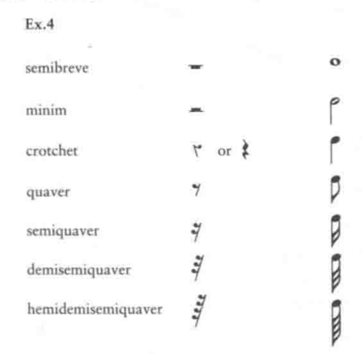
Ex.1

duration to the perfect *longa*), the *pausa imperfecta* (equal to the imperfect *longa* and to the altered *brevis*), the *pausa brevis* (equal to the *recta brevis*), the *pausa maior semibrevis* (equal to the major *semibrevis*, i.e. two thirds of the *brevis*), the *pausa minor semibrevis* (equal to the minor *semibrevis*, i.e. one third of the *brevis*), and the *finis punctorum* (which was unmeasured and indicated the end of a section or composition). The rest signs of mensural notation, therefore, expressed absolute durations; by contrast, the durations of pitches were decided not only by the written note values but by the metrical context that might dictate the application of the processes of imperfection and alteration.

When in the 14th century the *minima* became a note value in its own right, the *semibrevis* rest became a vertical line of half a space depth hanging down from a staff line, while the *minima* rest became a line of the same depth placed on a staff line (exx.2*a* and 2*b*). Thereafter the rests

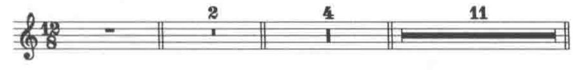
Ex.2

for the *semiminima* or *fusa* and for the *semifusa* took the form of *minima* rests with, respectively, a single and a double flag to the right (exx.2*c* and 2*d*). By the 15th century the name 'fusa' was given to a note of half the value of a *semiminima*; the new *fusa* and *semifusa* rests took the form of *minima* rests with, respectively, a single and a double flag to the left (exx.2*e* and 2*f*).



Although the duration of a rest was not conditional on context, its temporal position within a metrical unit was. Two devices were used to clarify this: the location of a rest on a particular staff line and the dot of division. Thus in ex.3*a* the two *minima* rests are placed on the staff line of the following note and have no effect of imperfection on the preceding note. In ex.3*b* one of the two rests is placed on the staff line closest to the preceding note and has the effect of shortening that note; at the same time

Ex.3



there is now only one *minima* rest in the following perfection, and so the note *c′* has to be altered (doubled in length) to fill out the perfection. In ex.3*c* the dot of division indicates where the end of one perfection and the beginning of the other falls, and thus achieves the same effect as ex.3*b* but by different means.

Thus there existed by the 15th century a set of signs in which, for the smaller values, the number of flags to the left of a rest corresponded with the number of flags to the right of the same note form. The only subsequent changes to the set of rest signs was the addition of still shorter values by addition of further flags, and the horizontal elongation of the vertical lines for semibreve and minim rests for clarity. The resulting forms that arose in the 17th century are shown in ex.4 together with their note forms.

The only significant changes since that time have been the conventional use of the semibreve rest to represent a full bar's rest in whatever time signature; the use of the breve rest to represent two such bars and the long rest to represent four, usually with the number of bars indicated above the staff as well; and the notating of still longer rests as a horizontal bar on the middle staff line with the number of bars given above (ex.5). When an instrumental

Ex.5

part is silent for a whole movement of a work, this is usually indicated by the word *tacet* and no staff is provided. A rest of long duration (conventionally of one bar or more) in all parts of a work for large forces, especially orchestra, is often called a 'general pause' and marked 'G.P.' above the staff.

For further information and bibliography *see* NOTATION, §III.

RICHARD RASTALL

Resta, Agostino (*b* San Severo, Foggia, *c*1550; *d* after 1586). Italian composer. He was an Augustinian friar who served in the 1580s as *maestro di cappella* of S Marco, Milan (not Venice, as erroneously stated in *LaMusicaD*). He published one volume of madrigals, for five and six voices (Venice, 1580, inc.). His only other surviving music consists of nine pieces included in Vincenzo Ruffo's *Soavissimi responsorii della Settimana Santa* (Milan, 1586[5]). He wrote the preface to this publication, which makes clear that Ruffo composed responds for S Marco, Milan. A book of motets for five and six voices was listed in a catalogue of the Giunta firm in 1604.

LEWIS LOCKWOOD

Resta, Natale (*fl* ?Milan, 1748). Italian composer. The only known evidence of his existence is one comic opera, *Li tre cicisbei ridicoli* (text, C.A. Vasini; Bologna, Teatro Formagliari, carn. 1747–8), the libretto of which names him as 'maestro di cappella Milanese'. The work, which enjoyed some popularity (with further performances in Venice, Bologna and London) and earned contemporary praise (Burney said it 'had great comic merit' among the works introduced in London's first season of Italian comic opera in 1748–9; La Borde called it 'charming'), is one of the few north Italian comic operas to survive before Galuppi pre-empted the field.

Although the surviving score (*I-MOe*; catalogued under Galuppi's name) represents a later version, it retains approximately half the original musical numbers, including all the finales. These show Resta to have been an able composer. The arias are written in short-breathed, often irregular phrases, with a sharp ear for expressive rhythms; some are in da capo form and some, which repeat the entire text, are in a shape resembling binary sonata form. In the finales Resta departs from the 'chain' arrangement of musically independent segments which was usual for this time and makes some attempt at internal formal organization. (*BurneyH*; *LaBordeE*)

Restz, Jakub de. *See* REYS, JAKUB.

Resupinus (Lat.: 'bent backwards'). In Western chant notations an adjective that describes a neume of more than two notes in which notes in descending order are followed by a final turn upwards. Therefore a TORCULUS *resupinus* has four notes forming the following steps: up, down, up.

Retardation. A SUSPENSION whose dissonance is resolved by one of the parts moving upwards by step. In the 17th and 18th centuries it was called *retardatio* (Lat.).

Retford, William Charles (*b* Milton, Hants., 20 June 1875; *d* London, 17 Sept 1970). English bowmaker. He joined W.E. Hill, London, in 1892. Working in the bow department, he gave almost a lifetime of faithful service, learning, improving, influencing and teaching. In origin Hill bows reflected the knowledge and taste of the Hill brothers themselves; Retford was one of the perfectionist craftsmen who carried out their suggestions, applying practical knowledge of the specialized skills of bowmaking, and the day-to-day experience of, as he put it, 'one whose homeland is the workshop, his appliances the plane, the knife and the lathe; [his] material Brazil wood and ebony, gold and silver'. He retired in 1956, but

continued the craft he loved at his home in Hanwell, at the same time preparing his book *Bows and Bow Makers*, published in 1964. This is a valuable account of bowmaking, with interesting notes on the work of many excellent makers.

CHARLES BEARE

Rethberg, Elisabeth [Sättler, Lisbeth] (*b* Schwarzenberg, nr Zwickau, 22 Sept 1894; *d* Yorktown Heights, NY, 6 June 1976). German soprano. She studied at Dresden, made her début in 1915 with the Dresden Opera, and remained with the company for seven years, singing a wide variety of roles. She made her Metropolitan début in 1922 as Aida, remaining as leading soprano for 21 consecutive seasons. During those years she returned regularly to Dresden, sang at Covent Garden in five seasons, and frequently appeared at the Salzburg Festivals. On one return trip to Europe she sang the title role at the Dresden première of Strauss's *Die ägyptische Helena* in 1928. Her other Verdi roles were Desdemona, Amelia (*Un ballo in maschera* and *Simon Boccanegra*), and the Leonoras of both *Il trovatore* and *La forza del destino*. In Wagner she excelled in the 'youthful-dramatic' parts of Elisabeth, Elsa, Eva and Sieglinde; she was also an accomplished Mozart singer.

Rethberg's beautiful *lirico spinto* soprano was perfectly equalized between the registers, and a combination of natural musicianship and sound training enabled her to maintain an unusually even legato in the most difficult passages. Rethberg made a large number of recordings, many of which reveal her rare beauty of tone and purity of style.

DESMOND SHAWE-TAYLOR/R

Réti, Rudolph [Rudolf] (*b* Uzice, 27 Nov 1885; *d* Montclair, NJ, 7 Feb 1957). American writer on music, pianist and composer of Serbian birth. In Vienna he studied the piano and music theory at the Academy of Music and musicology at the university. As a concert pianist he gave the first performance of Schoenberg's op.11 piano pieces (1911). He was an initiator of the Salzburg Music Festival (1922), which led to the founding of the International Society for Contemporary Music. Later he became chief music critic of the Vienna newspaper *Das Echo* (1930–38), and after emigrating to the USA he was a contributing editor to the *Musical Digest*.

Réti's theory of composition was based on his analyses of Beethoven's sonatas; some of these analyses were published posthumously as *Thematic Patterns in Sonatas of Beethoven* (1967). In *The Thematic Process in Music* (1951) he suggested that composers since the 18th century have based musical works not on a structural design but on the conscious evolution of motivic cells of melody into a thematic pattern. This recurs with transformation throughout the work, determining modulations, chords, bridges, 'emotional strength' and form; composition is viewed as a linear process and the motifs are identified without regard for rhythm. In his book *Tonality-Atonality-Pantonality* (1958), a partly prescriptive and partly analytic work, Réti considered early atonal music and its potential unity of form.

PAULA MORGAN

Retirada (It.: 'withdrawal'). A title sometimes used in the 17th and 18th centuries, particularly in eastern Europe, for the closing dance of a suite. Examples may be found in Radolt's lutebook *Die aller treueste, verschwigneste und nach so wohl fröhlichen als traurigen Humor* (Vienna, 1701) and in some 18th-century lute manuscripts.

TIM CRAWFORD

Retransition (Ger. *Rückleitung*). In any work or movement said to be in SONATA FORM, the last part of the development section, which prepares for the return of the opening idea (recapitulation). In tonal works the retransition normally consists of a passage leading to the dominant of the key of the movement and then a passage that emphasizes the dominant just before the recapitulation begins.

JAMES WEBSTER

Retro (Lat.: 'backwards'). *See* RECTE ET RETRO. *See also* CANON (i) and RETROGRADE.

Retrograde (Ger. *Krebsgang*, from Lat. *cancrizans*: 'crab-like'). A succession of notes played backwards, either retaining or abandoning the rhythm of the original. It has always been regarded as among the more esoteric ways of extending musical structures, one that does not necessarily invite the listener's appreciation. In the Middle Ages and Renaissance it was applied to cantus firmi, sometimes with elaborate indications of rhythmic organization given in cryptic Latin inscriptions in the musical manuscripts; rarely was it intended to be detected from performance.

Even the most famous secular example of retrograde, Machaut's *Ma fin est mon commencement*, whose text

gives away its design, has been admired more for the finesse with which the technique is used than for the chanson's other artistic merits. There is only one well-known example of retrograde in tonal music, apart from its use in puzzle canons: this is in the last movement of Beethoven's Hammerklavier Sonata, where an entire fugal exposition is based on the retrograde form of the original subject, retaining its 'backward' rhythm but being converted to the minor mode. In the 20th century retrograde has played an important part in the theory of TWELVE-NOTE COMPOSITION, being one of three basic operations that can be performed on a 12-note set; retrograde is often used in conjunction with the other two, inversion and transposition.

WILLIAM DRABKIN

Retroncha. *See* ROTROUENGE.

Rettich, Wilhelm (*b* Leipzig, 3 July 1892; *d* Sinzheim bei Baden-Baden, 27 Dec 1988). German composer. He studied with Reger at the Leipzig Conservatory and also with Didom, Hoyer, Grabner, Davido and La Capria. He was a répétiteur at the Leipzig Opera (1912–13), then served in World War I and was taken prisoner by the Russians in Siberia. He returned to Leipzig in 1921 by way of Shanghai and Tianjin, taking with him Russian and Chinese soldiers' songs which he used in the opera *König Tod*. After a further period at the Leipzig Opera he worked in Plauen, Königsberg, Bremerhaven and Stettin, and then went back to Leipzig to join Central German Radio. In 1931 he was appointed accompanist, composer and conductor to Berlin Radio, and conductor to the Schillertheater. His first major choral work, *Fluch des Krieges* (after Chinese verse), made a deep impression, but its rejection of the soldier as hero found little favour with the Nazis, and he was forced to flee to Amsterdam, where he taught music, conducted for Hilversum Radio and accompanied Else Barther, the finest performer of his lieder and later his wife. He moved to Haarlem in 1945 and returned to Germany in 1964. His works include symphonies and concertante pieces, many choral compositions, orchestral songs and lieder, some of them published by Schott.

Retz, Jakub de [du]. *See* REYS, JAKUB.

Reubke. German family of musicians.

(1) **Adolf Reubke** (*b* Halberstadt, 6 Dec 1805; *d* Hausneindorf, nr Quedlinburg, 3 March 1875). Organ builder. Together with E.F. Walcker, F. Ladegast and W. Sauer, he was one of the most important 19th-century German organ builders. His business was based in Hausneindorf, and his son Emil (1836–84) was in partnership with him from 1860. Their most notable instruments include those of the Jakobikirche, Magdeburg (1855–8; three manuals, 53 stops), Magdeburg Cathedral (1856–61; four manuals, 81 stops; *see* ORGAN, §VI, 3, especially Table 32), the Gewandhaus, Leipzig (1860), Quedlinburg (1870) and Kyritz (1873), the only Reubke organ remaining largely intact. The early instruments were built with slider-chests, but the tubular-pneumatic action of the Sanders type was employed later, and Emil developed a sliderless chest ('Hahnenlade'; the 'Hahnen' (cocks) are anglepieces for opening the valves under the pipes). The firm was sold in 1885 to Ernst Röver.

(2) **(Friedrich) Julius Reubke** (*b* Hausneindorf, nr Quedlinburg, 23 March 1834; *d* Pillnitz, nr Dresden, 3 June 1858). Composer, pianist and organist, son of (1) Adolf Reubke. He received his early musical training from Hermann Bönicke in Quedlinburg, and his Trio in E♭ for two manuals and pedal dates from this period. In 1851, already proficient as an organist, he entered the newly founded Berlin Conservatory, where he studied the piano with Theodor Kullak and composition with Adolf Bernhard Marx. He was awarded high honours and Hans von Bülow considered him the school's most gifted student. Two compositions of this period, a mazurka and a scherzo, are fluently written for the keyboard in the style of Chopin. After teaching the piano at the conservatory, in 1856 he moved to Weimar where he became one of Liszt's favourite pupils. Close acquaintance with works of the new German school transformed his own style. In the spring of 1857 he completed his two most important works, the piano sonata in B♭ minor and the organ sonata in C minor; the latter was first performed by him on the Ladegast organ in Merseburg Cathedral in June that year. Both works were highly esteemed by members of the Weimar circle; Liszt was particularly fond of the piano sonata and regarded Reubke as a composer of unusual promise. Reubke moved to Dresden at the end of the year; he joined the Dresdner Tonkünstlerverein and participated as pianist in its concerts. His failing health forced him to retire in the spring to Pillnitz, where he died in June. Peter Cornelius, a close friend, dedicated a poem to his memory.

The two sonatas are masterpieces of the German Romantic style. While they are directly influenced by Liszt in both thematic and formal structure, they are distinguished by formal development of a very personal kind. Each work shows an individual approach to one-movement sonata form: the organ sonata with strict monothematicism, the piano sonata with the technique of thematic metamorphosis. Although the latter is somewhat more adventurous, both works share a harmonic language comparable to the most advanced contemporary works of Liszt and make virtuoso demands on the performer. The organ sonata is based on nine verses from Psalm xciv, though no indication is given as to the precise connection between text and music. As an organ composition with extra-musical content, it belongs to the tradition of instrumental settings of psalm texts and, in a general sense, is heir to the Baroque *Affektenlehre*; for its period it is perhaps the finest example of a programmatic work for organ. Its single movement is divided into three sections – fantasia, adagio and an impressive, broadly planned fugue – all based on the same theme. While Liszt's influence is apparent not only in the thematic development but also in the keyboard figuration, the

work is nevertheless genuinely original and effective, revealing a maturity and imaginative power remarkable for so young a composer. It has been described as one of the truest manifestations of Romantic aesthetic thought, following the principles of Wackenroder and Ludwig Tieck, and it certainly represents a peak in 19th-century organ literature.

Reubke's two sonatas display a musical conviction and promise that was left regrettably unfulfilled at the composer's early death. Both works were published posthumously by Schuberth in Leipzig and other works have been reissued in various editions.

(3) **Otto Reubke** (*b* Hausneindorf, 2 Nov 1842; *d* Halle, 18 May 1913). Organist, pianist, conductor and composer, son of (1) Adolf Reubke. He studied the organ with A.G. Ritter in Magdeburg and then attended the Berlin Conservatory, where he studied the piano with Bülow and composition with Marx and Weitzmann. From 1864 to 1867 he studied composition with Moritz Hauptmann in Leipzig. He then settled in Halle as a performer and teacher, and in 1877 was made assistant to Robert Franz, music director of the university, where Reubke lectured in musicology, harmony and composition. In 1876 he founded his own choral society and from 1881 to 1911 was conductor of the Robert Franz Singakademie. He was officially appointed university music director in 1892 and professor in 1895. He was renowned for his organ improvisations and admired as a conductor; his compositions, all published in Leipzig, consist mainly of piano music and songs and show the influence of Schumann.

Reulx [Reux, Rieu], **Anselmo** [Anselme] **de** (*b* ?Reulx, Hainaut; *fl* *c*1524–57). South Netherlandish composer, active in Italy. He served in about 1524 at the Spanish court chapel of Charles V. His output consists solely of madrigals. His second book for four voices concludes with a 'bataglia moresca' in two *partes*; this work not only falls into the battaglia tradition but also, according to *EinsteinIM*, constitutes 'one of the intermediary links between the *canzone villanesca* and the freer and more fully developed *moresca*'. On the evidence of this piece Einstein assumed that the composer spent a period in Naples in the mid-1540s.

DON HARRÁN

Reuner, Felix. *See* RHEINER, FELIX.

Reusch, Johannes [Johann] (*b* Rodach bei Coburg, *c*1525; *d* Wurzen, nr Leipzig, 27 Feb 1582). German composer. The preface to his *Elementa musicae* states that as a boy (about 1538) he was a pupil of Heinrich Faber at Naumburg. He matriculated at the University of Wittenberg in April 1543. He then worked at the Stadtschule, Meissen, as Kantor from that year until 1547 and as headmaster from 1548 to 1555; in 1547–8 he was Kantor at the Fürstenschule there. From 1555 until his death he was chancellor to the Bishop of Meissen, whose residence was at Wurzen. His principal work is *Zehen deudscher Psalm Davids* (1551), which has a preface by Philipp Melanchthon. Apart from some similar pieces by Thomas Stoltzer and one by Johannes Heugel, its contents are the earliest examples of German-language psalm settings, a genre that was to become particularly popular in the Lutheran heartlands. They broke new ground in being published in an individual print, which was followed in 1554 by David Köler's *Zehen Psalmen Davids*, whose title was certainly modelled on it. It is known that Reusch's collection dates back to 1546 and that to some extent it is closely linked with the political situation of the Protestants immediately after the death of Luther in that year. Reusch sent an informative letter (reproduced in Dehnhard) to Prince Georg of Anhalt with a copy of his volume in 1551. His motets exhibit considerable compositional skill; in accordance with the Netherlandish style of the time of Josquin, their characteristically linear flow is interrupted by expressive homophonic interludes closely related to the sense of the words. All of Reusch's works, which also include odes, occasional pieces and an elementary manual of *musica practica*, date from his years at Meissen; he seems to have abruptly given up composing after he settled at Wurzen.

WORKS

Epitaphia Rhauorum (Wittenberg, 1550)
Zehen deudscher Psalm Davids, 4vv (Wittenberg, 1551)
Carminum nuptialium liber I (Leipzig, 1553)
Melodiae odarum Georgii Fabricii (Leipzig, 1554)
Grates nunc omnes, motet, 1545[5]
Christus ist um unserer Sünde willen gestorben, *D-Dl*; ed. in *Handbuch der deutschen evangelischen Kirchenmusik*, ii/1 (Göttingen, 1935)

THEORETICAL WORKS

Elementa musicae practicae pro incipientibus (Leipzig, 1553)

WALTER BLANKENBURG

Reuschel, Johann Georg (*fl* 2nd half of the 17th century). German composer. He is first heard of working in Annaberg, Upper Silesia, probably as Kantor and schoolmaster; about 1667 he held similar posts at nearby Markersbach. Only the titles are known of his collections *Erfüllendes Chor-Gethön* for six to 18 voices and the five- and nine-part *Teutsche Kirchen-Lieder … Complementen sampt ihren Fundament*, which apparently were never printed. They nevertheless indicate that he cultivated the large-scale concerted style in Protestant church music, as is confirmed by his only surviving collection, *Decas missarum sacra … in usum ecclesiae … evangelicae prelo subiecta* (Freiberg, 1666–7), which consists of masses typical of the Protestant *missa brevis* (i.e. Kyrie and Gloria

only); his brother Gabriel appended to it a poem in praise of Heinrich Schütz.

OTHMAR WESSELY

Reusner [Reussner], **Esaias (i)** (*d* ?Silesia, 1660–80). German composer and lutenist, father of ESAIAS REUSNER (ii). His only known work is *Musicalischer Lust-Garten, das ist Herren D. Martini Lutheri, wie auch anderer gottseliger (der Reinen Augspurgischen Confession zugethaner) Männer geistliche Kirchen- und Hauss-Lieder* (Breslau, 1645), a collection of 98 Protestant chorales transcribed for lute in a simple chordal style. This publication contains the only known biographical information about him, a reference to his employment as lutenist at the court of the Duke of 'Buestat in Silesia'. He was presumably living at Löwenberg, Silesia, when his son was born there on 29 April 1636.

For bibliography *see* REUSNER, ESAIAS (ii).

GEORGE J. BUELOW

Reusner [Reussner], **Esaias (ii)** (*b* Löwenberg, Silesia [now Lwówek Śląski, Poland], 29 April 1636; *d* Cölln, Berlin, 1 May 1679). German composer and lutenist, son of ESAIAS REUSNER (i). He was taught the lute by his father and became a child prodigy. About 1645, after the death of his mother, the family moved to Breslau, where at about the age of 12 he entered the service of the Swedish general Count Wittenberg as a page. He spent the next year in the household of the royal war commissioner, Müller. In 1651 he was employed in Poland as a valet at the court of Princess Radziwiłł, where he became a pupil of an unidentified French lutenist. He returned to Breslau in 1654 and in the following year became lutenist to Georg III, Duke of Silesia, an appointment he retained until 1672. He then moved to Leipzig, where he taught the lute for a year at the university. From 5 February 1674 until his death he was a chamber musician at the court of the Elector Friedrich Wilhelm of Brandenburg in Berlin. His two collections of suites for the lute, *Delitiae testudinis* and *Neue Lauten-früchte*, are important as showing the first application of French lute style by a German composer and also as early documents in the development of the instrumental suite. They contain a total of 28 suites, varying in number of movements from four to nine. Each suite is unified by a major or minor tonality. They all include the basic structure of later dance suites, allemande–courante–sarabande–gigue. Most of the longer suites begin with another dance, such as a paduana or ballo, or the characteristically French improvisatory prelude, and many conclude with a dance other than the gigue. Reusner's influence was widely felt in Germany in the 17th century, and the style of his music established a precedent evident in the works of subsequent lutenists such as Silvius Weiss.

WORKS

Delitiae testudinis, praeludiis, paduanis, allemandis, courantis, sarabandis, giguis, et gavottis (n.p., 1667; Breslau, 2/1667 as Delitiae testudinis, oder Erfreuliche Lauten-Lust; Leipzig, 3/1697 as Erfreuliche Lauten-Lust); suite ed. in Der Lauten-Kreis, ii/2 (Berlin, 1933); 4 suites, 1 couranta ed. in EDM, 1st ser., xii (1939)

Musicalische Taffel-Erlustigung, bestehend in allerhand Paduanen, Allemanden, Couranten, Sarabanden, Gavotten, Balletten, und Giguen ... in 4 Stimmen gebracht, also das dieselben nach französischer Art auf Violen füglich können gebraucht werden, durch Johann Georg Stanley, vn, 2 viols, bc (Brieg, 1668) [arr. of 10 lute suites]; ed. F.J. Giesbert (Mainz, 1938)

Musicalische Gesellschaffts-Ergetzung bestehend in Sonaten, Allemanden, Couranten, Sarabanden, Gavotten, und Giguen, 3 str, bc (Brieg, 1670) [10 suites]; 1 suite ed. F.J. Giesbert (Neuwied, *c*1950)

Musicalischer Blumenstrauss (Bremen, 1673) [100 suite movts for various insts], lost

Neue Lauten-Früchte (Berlin, 1676) [copy in *D-Bsb* incl. new lute works written in by Reusner, perhaps for a 2nd edn]; 1 suite ed. in Alte Meister der Laute, iii (Berlin, 1927); suites 1–5 ed. W. Gerwig (Wolfenbüttel and Berlin, 1928); 4 suites ed. in EDM, 1st ser., xii (1939)

100 geistliche Melodien evangelischer Lieder, welche auf die Fest- und andere Tage, so wol in der christlichen Gemeine, als auch daheim gesungen werden (Berlin, 1676/8); 9 chorales, 1v, lute, ed. in EDM, 1st ser., xii (1939)

GEORGE J. BUELOW

Reuss, August (*b* Znaim, Moravia, 6 March 1871; *d* Munich, 18 June 1935). German composer. Devoting himself to music relatively late, he did not begin a regular course of study until he became a pupil of Thuille at the Munich Akademie der Tonkunst in 1899. After completing his studies, he served as Kapellmeister at the municipal theatre in Augsburg (1906) and held a similar post in Magdeburg (1907). He was appointed co-director of the Trappsches Konservatorium, Munich (now the Richard Strauss Conservatory) in 1927, and professor at the Munich Akademie in 1929.

Reuss's early symphonic poems convey the tonal and harmonic influence of Richard Strauss. Melancholy in tone, they sometimes stretch functional tonality to its limits. The considerable degree of fame he soon enjoyed derived especially from *Der Tor und der Tod* (1901), the *Ibsenphantasie* (1902), *Johannisnacht* (1903) and *Judith* (1903). Later, he developed a more individual style in his chamber music and songs. Although he no longer composed regularly for orchestral forces, the symphonic weight and ballade-like piano writing of the Piano Concerto (1924), frequently performed by Gieseking, reflect the tradition of Reger; increasingly clear textures also suggest the influence of Brahms. A reduction in lush late-Romantic harmonies in favour of greater simplicity is best observed in the *Sommeridylle* (1920). *Glasbläser und Dogaressa* (1926), written in a transparent polyphonic style, refers to dance forms of the 17th and 18th centuries.

WORKS

STAGE

Herzog Philipps Brautfahrt (Opernlustspiel, 3), 1909; Laterne und Mantel (pantomime), 1924; Glasbläser und Dogaressa (romantic ballet-pantomime, after R. Laurency), 1926, orch suite, 1931

VOCAL

Chorus: Gotenzug (F. Dahn), male chorus, c1900; Tag und Nachtgesänge (G. Keller), c1900; Waldlied, T, male chorus, orch, c1900; Weinachtslied, mixed chorus, c1900; Pilgerchor, male chorus, c1926; Singlade, boys' choir, c1930; Weihnachtslieder, boys' choir, pf, c1930; Ich Lieb'dich Herr, children's chorus, 3-pt female chorus; Spruch (W. vesper), chorus, vn, org

Lieder (1v, pf, unless otherwise stated): Liebesklänge, 1900; Lieder, c1900; 4 Lieder, 1900; In der Waldschenke, 1900; Ratbod der Friese, ballade, 1v, orch, 1902; 7 Gedichte (L. Jakobowski, F. Evers), 1v, pf/(vn, org), 1903; Junge Klänge, 1v, orch, 1903; Der Mond scheint auf mein Lager, 1903; 4 Duette, S, A, pf; 3 Gedichte (Evers, H. Probst, G. Falke), 1912; 4 Gedichte (Jakobowski, M. Itzerott), 1912; Lieder, high v, pf, 1916; 5 Gedichte, 1917; 8 Lieder, 1920; Trost der Nacht (Grimmelshausens), 1v, cl/org, pf, 1920; 4 Terzette, 3 female vv, pf, 1921; Geistergruss, 1926; 6 Lieder, c1926; Mehrstimmige Kinderlieder, 2vv, pf, 1926; Wanderschaft, c1928; Trauungslied, 1v, org, c1930

Other vocal: 2 Melodrama (H. Heine), spkr, orch, 1908; Veni sancte spiritus, S, org, 1932

INSTRUMENTAL

Orch: Juninacht, ballade, 1900; Heisser Frühling, ballade, 1901; Der Tor und der Tod, sym. prologue, 1901 [after H. von Hofmannsthal]; Ibsenphantasie, sym. fantasia, 1902 [rev. as Das Meer, 1927]; Johannisnacht, sym. poem, 1903; Judith, sym. poem, 1903 [after Hebbel]; Serenade, A♭, vn, small orch, 1920; Sommeridylle, chbr orch, 1920; Pf Conc., g, 1924

Chbr: Barcarole, vc, pf, 1901; Pf Qnt, f, 1901; Str Qt no.1, d, 1905–6; Sonata, vn, pf, 1909; Pf Trio, 1913; Str Qt no.2 'Frühlingsquartett', 1913–14; Octet, 2 ob, cl, bn, hn, 1918; Romantische Sonata, vn, pf, 1918; Str Trio, 1926; Suite, vn, pf, 1928; Trio, fl, vn, va, c1930

Pf: 3 Stimmungen, 1902–3; Landsommertage (7 Pastoralvariationen über ein eigenes Thema aus der Oper Herzog Philipps Brautfahrt), 2/4 hands, 1925; Stimmungsbilder, 1927; Kleine Sonate, 1931

Principal publishers: Brockhaus, Eulenberg, Hieber, Kahnt, Kistner & Siegel, Ries & Erler, Schott, Tischer & Jagenberg, Verlag Musikalische Kunst und Wissenschaft

Reussner, Esaias. *See* REUSNER, ESAIAS (i) or REUSNER, ESAIAS (ii).

Reuter. American firm of organ builders. Founded in Trenton, Illinois, in 1917 by Adolph C. Reuter (*b* Pomeroy, OH, 3 Dec 1880; *d* Lawrence, KS, 5 Jan 1971), Earl E. Schwarz and A.G. Ruegger, the firm moved to Lawrence in 1919. Reuter had previously worked for Barckhoff, Wicks and Casavant. Albert G. Sabol, Reuter's nephew, joined the firm in 1917 as a designer and engineer; Sabol's son, Albert Sabol jr, became president in 1964. The firm has always built electropneumatic-action organs, of which it had produced more than 2000 by the 1980s. In 1969 Reuter entered into a shortlived agreement to import tracker-action organs from Emil Hammer of Germany, but this was not particularly successful. R. Franklin Mitchell became a consultant to the Reuter Organ Co. in 1951, was named a vice-president in 1964, and became president in 1980 with Albert Neutel as vice-president; in 1983 Neutel became president and Mitchell chairman of the board. Mitchell favoured an 'American classic' approach to tonal design. The firm's important organs include those for St Paul's Methodist Church, Fort Worth, Texas (1924), Trinity Presbyterian Church, Clearwater, Florida (1961), First Baptist Church of Worcester, Massachusetts (1962), University of Denver, Colorado Women's College Campus (1962, enlarged 1968), Holy Name of Jesus Church, San Francisco (1982), Northwestern State University, Natchitoches, Louisiana (1983) and Heinz Memorial Chapel, Pittsburgh (1995).

BARBARA OWEN

Reuter, Fritz (*b* Dresden, 9 Sept 1896; *d* Dresden, 4 July 1963). German musicologist, educationist and composer. He studied with Teichmüller and Krehl at the Leipzig Conservatory and at the same time with Riemann and Schering at Leipzig University, where he took the doctorate under Abert in 1922 with a dissertation on early German opera in Leipzig. After conducting a theatre orchestra in Allenstein (1917–18), he taught music theory, composition, music education and music history at Leipzig Conservatory and Leipzig University (1921–33). In 1933 he lost these positions and became a schoolmaster, at first in Leipzig, and from 1937 in Dresden. After serving as conductor and Dramaturg at the Dresden Volksoper (1945–8) he became professor and director of the music education institute at Halle University (1949–55) and then director of the music education institute at the Humboldt University, Berlin (1955–62). His achievements in German music education were recognized early in his career and he did much to establish the scholarly basis of this field. As a theorist he relied chiefly on Karg-Elert's system of functional harmony. Although some of his early compositions show expressionist influence, he belonged as a composer to the polyphonic school based in Leipzig and was essentially a Romantic. His many works include oratorios, stage works, cantatas, choruses and songs, as well as orchestral and chamber music.

DIETER HÄRTWIG

Reutter, Georg (von) (i) (bap. Vienna, 3 Nov 1656; *d* Vienna, 29 Aug 1738). Austrian organist, theorbo player and composer, father of GEORG REUTTER (ii). He may have been a pupil of Kerll, whom he succeeded as organist at St Stephen's Cathedral, Vienna, in 1686. In 1695 he spent some time in Italy. According to the patent of nobility for his son, he was ennobled in Rome on 8 January 1695 by Prince Sforza; unlike his son, he did not use his title. Between 1696 and 1703 Reutter was employed in the Viennese court chapel as continuo player on the theorbo. The principal Kapellmeister, Antonio Draghi, recommended him to the emperor as 'a virtuoso player able to play many instruments'. Draghi's successor as court Kapellmeister, Fux, also noted Reutter's virtuoso abilities and mentioned that he was an experienced opera accompanist. He was married three times and was the father of 15 children, of whom two became musicians (Karl and the younger Georg). In 1700 Reutter was formally appointed court organist at a yearly salary of 900 florins, supplemented by about 300 florins as theorbo player. In 1712 he succeeded Fux as vice-Kapellmeister and in 1715 as first Kapellmeister of the cathedral; he retained that position until 1728. For housing and instruction of six choirboys at St Stephen's he received 1200 florins and his salary as Kapellmeister was 550 florins. When he relinquished one of the two Kapellmeister positions of the cathedral in 1728 his income remained relatively high as he kept the six choirboys. He passed on the position of cathedral organist to his son Georg in 1720. A kind and affable man, according to Mattheson (*Grundlage einer Ehren-Pforte*, 1740), he remained active up to his last years, though his son Georg substituted for him increasingly often.

As a composer Reutter is best known for his collection of toccatas (*D-Bsb* P 407; one ed. in DTÖ, xxvii, Jg.xiii/2, 1959). They show that he was a capable organ composer who combined technical brilliance with skill in the use of counterpoint and florid melodic invention. He also composed a large number of so-called *Versetteln* or short organ preludes. Some of the larger sacred works ascribed to him by Eitner may have been composed by his son Georg, and of the compositions published by Botstiber (in DTÖ, xxvii, Jg.xiii/2, 1959) two capriccios, one ricercare and probably the canzona on *Christ ist erstanden* are by N.A. Strungk. Hofer may have gone too far in attributing most of the compositions extant under the name Reutter to his son, particularly as regards those sacred works in a traditional polyphonic style. Draghi mentioned in his recommendation that Reutter had composed ballet music: no traces of such pieces are known.

EVA BADURA-SKODA

Reutter, (Johann Adam Joseph Karl) Georg (von) (ii) (*b* Vienna, bap. 6 April 1708; *d* Vienna, 11 March 1772). Austrian composer, son of GEORG REUTTER (i). He was the 11th of 14 children born to Georg Reutter (i) and received his early musical training from his father, assisting him as court organist. A period of more formal instruction from Antonio Caldara ensued, leading to the composition of an oratorio and, in 1727, his first opera for the imperial court, *Archidamia*. On three separate occasions during this period Reutter applied for a position as court organist and was each time rejected by Fux. At his own expense he travelled to Italy in 1730 (possibly in 1729); in February 1730 he was in Venice and in April 1730 in Rome. He returned to Vienna in autumn 1730, and early in the following year he successfully applied for a post as court composer, the formal beginning of a lifetime of service at the Habsburg court.

His training with Caldara and his journey to Italy had laid the foundations of a secure understanding of modern operatic style, and over the next decade Reutter established himself as a leading theatre composer in Vienna with over a dozen works, performed in private in various rooms and halls in the Hofburg and at the imperial summer palace in Laxenburg. In 1731 he married one of the court singers, Ursula Theresia Holzhauser. Two children were born in the 1730s, Karl and Elisabeth Christina, named in obvious deference to Emperor Charles and his wife.

When his father died, in 1738, Reutter succeeded him as first Kapellmeister at the Stephansdom, initiating a decisive move away from a career as an opera composer to that of a composer and administrator of church music. As Kapellmeister he was in charge of the choir school and Joseph Haydn, Michael Haydn and Ignaz Holzbauer were three of his charges during the next few years. He was ennobled in 1740 and in the following year began the diplomatically skilful (but not always financially rewarding) process of accruing ever increasing influence and authority in the imperial court: from 1741, following the death of Fux, he regularly assisted the first Kapellmeister, Luca Antonio Predieri, with church music; in 1747 he was officially named second Kapellmeister; in 1751 he became acting first Kapellmeister; in 1756 he assumed the duties of second as well as first Kapellmeister at the Stephansdom; and in 1769 he formally became court Kapellmeister. For nearly 30 years in the middle of the century, therefore, Reutter was the single most influential church musician in Vienna. His duties at court also included the supervision of instrumental performances.

The quantity of sacred music produced by Reutter is ample testimony of his contemporary status, but it was his misfortune to preside over a period when standards of performance and, possibly, musical ambition were in steady decline. In the years immediately after Fux's death Reutter rejuvenated the musical tastes of the court, but the accession of Maria Theresa to the throne in 1740 and the consequent financial burden of fighting the Silesian wars and the War of the Austrian Succession led to a fundamental overhall of musical expenditure at court. From being the largest single musical establishment in Europe it gradually became one of the least endowed. It was Reutter's misfortune that he had to manage this change. In the area of church music the number of performers was reduced and Reutter's annual budget was severely curtailed. The situation reached a low point in

the mid-1750s when, taking advantage of the papal encyclical *Annus qui* (1749) that sought to restrict the role of instruments in church services, Maria Theresa proposed that sacred music be regularly performed 'alla romana', that is with no instrumental support whatsoever, as in the Cappella Sistina. Reutter managed to mitigate the worst effects of the situation and, in the process, may be said to have saved the whole tradition of Viennese church music accompanied by instruments.

Reutter's influence in court circles was shown again in 1760 when the new director of court and chamber music, Count Giacomo Durazzo, attempted to increase Gluck's role in the musical life of the court. A protracted dispute was resolved largely in Reutter's favour. The last decade of Reutter's service was less eventful, as court, church and musicians alike acclimatized themselves to the changing status of sacred music. Reutter was buried in a tomb in the Stephansdom. His son Karl had become a monk (eventually abbot) at the abbey of Heiligenkreuz outside Vienna, where the largest single collection of Reutter's autographs is to be found, together with a pastel portrait of the composer.

Reutter's operas continued in the tradition of those of Fux and Caldara, lavishly scored (often with two choirs of trumpets and timpani) and designed to mirror and promote the splendour of the Habsburg court at the most extravagant period in its history. His oratorios, usually performed at court during Holy Week, include the first setting of Metastasio's *Betulia liberata*, a work notable for its use of the chorus. Although his instrumental music is diverse in type, one particular kind of work played a crucial part in the early development of the symphony. As court composer Reutter provided several orchestral works for performance as *Tafelmusik* in the imperial palace; some of these works carry the title 'Servizio di tavola'. In them are heard the brilliant sonorities of C major music, coloured with trumpets and timpani, that featured in his operas and oratorios – an association of key and sonority that was to inform the Viennese Classical symphony from Wagenseil, through Haydn, Hofmann, Mozart, Ordonez, Vanhal and others, to Beethoven.

It was as a composer of church music that Reutter was most widely regarded in the 18th century. Over 500 works cover a wide spectrum of contemporary sacred composition: masses with elaborate orchestral accompaniment, *a cappella* masses designed for Advent and Lent, six requiem settings, shorter 'alla romana' works composed during the mid-1750s, and about 300 motets, offertories and psalm settings. The balance of choral and solo writing, the choice of texture and style, and the characteristics of word-painting and instrumental colouring to be found in the larger works were to recur in equivalent works by later composers, including Haydn, Mozart and Beethoven. In this repertory, however, the brilliant sound of clarino trumpets was heard for the last time in 18th-century Viennese music. Perhaps because of Burney's remark after his visit to Vienna in 1772, a few months after Reutter's death, that a *Te Deum* was 'without taste or invention' (the work was probably by Reutter senior) and Haydn's comment that he remembered receiving only two lessons from him, modern assessment of Reutter as a church composer has often been too dismissive. Performance dates on extant manuscript material, together with other evidence, show that his music was regularly heard in Vienna and elsewhere well into the 19th century; in particular, his church music became strongly identified with imperial taste. During the politically sensitive visit of Pope Pius VI to Vienna in 1782, the Kyrie and Gloria from Reutter's Mass in E♭ (Hofer 62) was played at a service in the Stephansdom. Later in the same decade Mozart, when he was contemplating the composition of church music, copied out two psalm settings and a Kyrie movement by Reutter. Similarly, in 1823 Beethoven, when he was hoping to apply for the vacant post of Kapellmeister at court, thought it prudent to borrow a copy of a mass by Reutter in order to study imperial taste in church music.

WORKS

DRAMATIC

first performed in Vienna unless otherwise stated

Archidamia (testa teatrale, i, G.C. Pasquini), 22 Nov 1727, *A-Wgm*, *Wn*

La forza dell'amicizia (dramma per musica, 3, Pasquini), Graz, 17 Aug 1728, collab. Caldara, *Wgm*, *Wn*

La magnanimità di Alessandro (Pasquini), 1 Oct 1729, *Wn*

Alcide trasformato in dio (dramma per musica), 1729, *Wn*

Plotina (festa teatrale, 1, Pasquini), 19 Nov 1730, *Wn*

La pazienza di Socrate con due moglie (scherzo drammatico, 3, N. Minato), Hof (Teatrino), 17 Jan 1731, collab. Caldara, *Wn*

La generosità di Artaserse con Temistocle [Act 1] (dramma per musica, 3, Pasquini), 1 Oct 1731, *Wn*

Il Tempo e la Verità (Pasquini), 15 Oct 1731, *Wn*

Pastorale a 2 voci (Pasquini), 30 Aug 1732

Alessandro il Grande (festa di musica, Pasquini), 1 Oct 1732, *Wgm*, *Wn*

Zenobia (festa teatrale, 1, Pasquini), Neu-Wartenburg, 28 Oct 1732, *Wgm*, *Wn*

Ciro in Armenia (festa teatrale, 1, Pasquini), 1 Oct 1733, *Wgm*, *Wn*

La gratitudine di Mitridate (1, Pasquini), 1 Oct 1734, *Wn*

Dafne (festa teatrale, 1, Pasquini), 19 Nov 1734, *Wgm*, *Wn*

Il Palladio conservato (azione teatrale, 1, P. Metastasio), 1 Oct 1735, *Wn*

Il sacrifizio in Aulide (festa teatrale, 1, P. Pariati), 19 Nov 1735, *Wn*

Diana vendicata (festa teatrale, 1, Pasquini), 19/21 Nov 1736, *Wgm*, *Wn*

Statira (3, A. Zeno and Pariati), 1736

Il Parnasso accusato e difeso (festa teatrale, 1, Metastasio), 28 Aug 1738, *Wn*

L'alloro illustrato (festa teatrale, 1, Pasquini), 19 Nov 1738, *Wgm*, *Wn*

L'eroina d'Argo (Pasquini), 15 Oct 1739, *Wgm*, *Wn*

L'amor prigioniero (dialogo, 1, Metastasio), aut. 1741, *Wn*

La gara (componimento drammatico, 1, Metastasio), 13 May 1755, *Wn*

Other stage works, libs by Metastasio: La rispettosa tenerezza, 1750; Il tributo di Rispetto e d'Amore, 1754; Il sogno, 1756, *Wgm*, *Wn*; La grazie vendicate, 1758

Serenatas etc.: Dialogo tra Minerva ed Apollo (C. Pasquini), 25 Oct 1728, *A-Wn*; Dialogo tra l'Inclinazione ed il Bene (Pasquini), 26 June 1731; Dialogo tra Aurora ed il Sole (festa di camera), 1731; Pastorale a 2 voci, Neu-Wartenburg, 30 Aug 1732; La speranza assicurata (Pasquini), 13 May 1736, *Wgm*, *Wn*; Complimento (Metastasio), 1748; Augurio di felicità (Metastasio), Schönbrunn, 1749; La virtuosa emulazione (Metastasio), 1751; Primo omaggio di canto (Metastasio), 1753; Complimento (Metastasio), 1754; La corona (Metastasio), 1754, *Wn*; Complimento (Metastasio), 1759; Complimento (Metastasio), 1760

Works to Ger. texts (inc.): Wasser, Feuer, Luft und Erde, 1730; David, 1735; Verlöbnis, Segen, Freude, Ehre, 1738; Die drei Grazien; Judith; Die wahre Huldigung

Oratorios (principal source *A-HE*): Die Grablegung Christi [Oratorium Germanicum], 1726, *KR*; La morte d'Abele (G. Salio Padovano), 13 March 1727, *Wn*; Elia (L. de Villati), 24 Feb 1728, *Wgm*; Bersabea, ovvero Il pentimento di David (Catena), 12 March 1729; Il martirio di S Giovanni Nepomuceno (C. Pasquini), 17 June 1731; La divina provvidenza in Ismael (A.M. Lucchini), 6 March 1732 (Ger. version of lib with different music, **HE* (inc.)); La Betulia liberata (Metastasio), 8 April 1734, *Wgm*, *Wn* (facs. in IO, xiv, 1986), *D-Rp*; Gioas, re di Giuda (Metastasio), 1735; La Maria lebbrosa, 1739; Ger. oratorio, *A-HE* (frag.)

OTHER WORKS

for further details and sources, see DTÖ, lxxxviii, 1952

Sacred: 81 masses, incl. Missa S Caroli, 1734, *A-HE* (autograph), *Gd, GÖ, KN, KR, Wn, D-Bsb*, ed. in DTÖ, lxxxviii (1952), Ky, formerly attrib. Mozart; 6 Requiem, *A-GÖ, HE, KN, Wn*, 1 ed. in DTÖ, lxxxviii (1952); 7 It. cants. *HE*; 17 grads, *KN*; 31 offs, *Gd, KN*; 126 motets, *GÖ, KN, Wn*, 1 ed. in DTÖ, lxxxviii (1952); 151 pss, canticles, *GÖ, KN*; 63 hymns, sequences; 48 ants, *HE, KN*, 1 ed. in DTÖ, lxxxviii (1952); 7 resps; 20 lits, *GÖ, KN*; other sacred works, *Gd, KN, D-Bsb, Dl*

Chamber: 6 syms., partitas, str, wind insts, *A-Wgm*, incl. Servizio di tavola, 1757, ed. in DTÖ, xxxi, Jg.xv/2 (1908/*R*); 5 syms., single works, str, *Wgm*; 2 hpd concs. (1 inc.); 2 clarino concs.; wind qnt; 14 hpd suites, *D-Bsb*; 15 single hpd works; other single orch works

DAVID WYN JONES

Reutter, Hermann (*b* Stuttgart, 17 June 1900; *d* Heidenheim an der Brenz, 1 Jan 1985). German composer and pianist. He studied composition with Walter Courvoisier at the Akademie der Tonkunst, Munich (from 1920) and his works were performed at the Donaueschingen and Baden-Baden Festivals. He performed as the accompanist for Sigrid Onegin (touring the USA seven times in the early 1930s) as well as for other singers, including Erb, Schwarzkopf and Fischer-Dieskau. From 1932 to 1936 he taught composition at the Württembergische Musikhochschule, Stuttgart.

Reutter stabilized his career during the Third Reich by becoming a Nazi party member in April 1933. The oratorio *Der grosse Kalender*, heralded by B. Schott's Söhne as 'the new oratorio of the German people', was first performed in Dortmund in June 1933; the Reichskulturwalter, Hans Hinkel, regarded the opera *Doktor Johannes Faust* (staged in Frankfurt in 1936) as the opera for which the Reich had been waiting. On 1 October 1936 Reutter was appointed director of the Hoch Conservatory in Frankfurt. He was responsible for transforming the Conservatory into the Staatliche Hochschule für Musik (1937) and he remained its director until the end of the war. Theodor Heuss, the first President of postwar West Germany, wanted Reutter's *Hymne an Deutschland* (1950), based on a poem by R.A. Schröder, to become the new national anthem, as 'Deutschland, Deutschland über alles' was associated with the Nazi regime. Chancellor Konrad Adenauer, however, insisted on retaining the former hymn.

Reutter became professor of composition at the Musikhochschule in Stuttgart and was its director from 1956 to 1966. After his retirement he also gave master classes in lied interpretation in Munich. In his later years he enjoyed an increasingly international reputation and had his works performed abroad for the first time.

Reutter's compositions for solo instrument and orchestra are notable. Predominant, however, are his vocal compositions, which include over 200 songs based on poems, plays and other literary sources drawn from different cultures and ranging in date from antiquity to the 20th century. Stage works form the core of his oeuvre, from the one-act opera *Saul* (Baden-Baden, 1928) to the five-act opera *Hamlet* (Stuttgart, 1980). His publisher, Ludwig Strecker, who used the pseudonym Ludwig Andersen, was among his favoured librettists. Reutter's music is generally more lyrical than Hindemith's or Orff's; musically he felt akin to Schubert, Brahms, Wolf and Mahler.

WORKS

(*selective list*)

STAGE

Saul (op, 1, after A. Lernet-Holenia), Baden-Baden, 1928; rev., Hamburg, 1947

Der verlorene Sohn (op, 5 scenes, after A. Gide, trans. R.M. Rilke), Stuttgart, 1929; rev. as Die Rückkehr des verlorenen Sohnes (chbr orat), Munich, 1952 (concert perf.), Dortmund, 1952 (staged)

Doktor Johannes Faustus (op, 3, L. Andersen), Frankfurt, 1936; rev., Stuttgart, 1955

Die Kirmes von Delft (ballet), Baden-Baden, 1937

Die Prinzessin und der Schweinehirt (Märchenspiel, 10 scenes, E. Hellmund, after L. Andersen), Mainz, 1938

Odysseus (op, 3, R. Bach), Frankfurt, 1942

Der Lübecker Totentanz (Ein altes Mysterienspiel), Göttingen, 1948

Der Weg nach Freudenstadt (Ballade der Landstrasse, 5 scenes, S. Korty), Göttingen, 1948

Don Juan und Faust (op, 7 scenes, L. Andersen, after C.D. Grabbe), Stuttgart, 1950

Topsy (ballet, S. Korty), Wiesbaden, 1950

Notturno Montmartre (ballet, R. Mayer), 1951, Stuttgart, 1952

Die Witwe von Ephesus (op, 1, Andersen, after Petronius), 1953; Cologne, 1954

Die Brücke von San Luis Ray (op, G. Reutter, after T. Wilder), 1954, Frankfurt, 1954 (concert perf.), Essen, 1954 (staged)

Der Tod des Empedokles (conc. scenico, 2, F. Hölderlin), 1965, Schwetzingen, 1966

Hamlet (5, after W. Shakespeare, trans. A.W. Schlegel), Stuttgart, 1980

INSTRUMENTAL

Orch: Pf Conc. no.1, op.19, 1925, Chemnitz, 1926; Pf Conc. no.2, op.36, Frankfurt, 1929; Vn Conc., op.39, Stuttgart, 1933; Sinfonische Fantasie, op.50 (Pf Conc. no.3), Frankfurt, 1938; Concertino, op.69, pf, str, Hanover, 1947; Pf conc. no.4, g, op.62, 1 movt, Hanover, 1948; Conc., E♭, op.63, 1 movt, 2 pf, orch, Munich, 1951; Tanz-Variationen, orch, Mainz, 1951; Konzertvariationen, pf, orch, Stuttgart, 1952; Prozession, vc, orch, Wiesbaden/Mainz, 1957; Sym., str, Konstanz, 1960; Capriccio, Aria und Finale, pf, orch, Koblenz, 1964; Figurinen zu Hofmannsthals Jedermann, orch, Brunswick, 1972; Epitaph für Ophelia, vn, chbr orch/pf, Brunswick, 1979

Chbr and solo inst: Fantasia apocalyptica, op.7, pf; Variations, op.15, pf; Vn Sonata, op.20, *c*1925; Die Passion in 9 Inventionen,

op.25, pf, *c*1927; Pfingstmusik, op.41 no.2, 2 vn, *c*1931; Musik, va, pf, 1951; Bläserstücke, wind insts, pf, 1957–69; 5 caprichos sobre Cervantes, va, 1968; Pièce concertante, a sax, pf, 1968; Sonata monotematica, vc, pf, 1970

VOCAL

Choral: Der neue Hiob (R. Seitz), op.37, Lehrstück, solo vv, chorus, str, 2 pf, Berlin, 1930; Der glückliche Bauer (cant, M. Claudius), chorus, orch, Stuttgart, 1932; Der grosse Kalender (orat, L. Andersen), S, Bar, chorus, orch, org, Dortmund, 1930–2, perf. 1933, rev., Stuttgart, 1970; Gesang der Deutschen (cant, Hölderlin), S, Bar, chorus, orch, Frankfurt, 1938; Chor-Fantasie (J.W. Goethe), S, Bar, chorus, orch, Mainz, 1939; Hochzeitslieder (J.G. Herder), chorus, pf, Stuttgart, 1941, rev. as Bauernhochzeit, chorus, orch, Mainz, 1967; Pandora (cant, Goethe), S, Bar, chorus, orch, Cologne, 1949; Hymne an Deutschland (R.A. Schröder), various settings, 1950; Triptychon (F. Schiller), T, chorus, orch, Stuttgart, 1959

SOLO VOCAL

With orch: Lyrisches Konzert, op.70, S, fl, pf, str, timp, 1949; Monolog der Iphigenie, op.74, *c*1950; Spanischer Totentanz (F.G. Lorca), 2vv, orch, 1953; Aus dem Hohelied Salomonis, conc. grosso, A, va, pf, orch, 1956; Kleine Ballade von den drei Flüssen (Lorca), S, orch, 1960; Andalusiana (Lorca), S, orch, 1962; Szene und Monolog der Marfa aus Schillers 'Demetrius', S, orch, 1968; Der Liebe will ich singen, S, Bar, orch/pf, 1976; Hamlet-Sym., S, Mez, 2 T, 2 Bar, 2 vv, spkr, orch, 1979

With insts: 3 Gesänge, op.3; Missa brevis, op.22, *c*1926; 5 antike Oden, op.57, *c*1940; Weltlicht, B, insts, 1959; Ein kleines Requiem (Lorca), B, vc, pf, 1961; Gesänge aus Prediger Salomo XII:1–9, A/B, fl, pf, 1973; Der himmlische Vagant (Klabund), A, Bar, insts; 3 notturni (Nietzsche), B, fl, ob, cl, hn, bn, pf, 1975

With pf: opp.21, 23, 31, 54, 56, 58–61, 64–5, 67–8, 73; 3 Zigeunerromanzen (Lorca), 1956; Die Jahreszeiten (Hölderlin), 1957; Meine dunklen Hände (L. Hughes, A. Bontemps), 1957; 6 späte Gedichte (R. Huch), 1957; 3 altägyptische Gedichte, 1962; Ein Füllen ward geboren (St J. Perse), 1962; Epitaph für einen Dichter (W. Faulkner), 1962; 5 Fragmente (Hölderlin), 1965; Sankt Sebastian (E.F. Sommer), triptych, 1968; 9 Lieder (Huch), 1971; 4 Lieder (N. Sachs), 1972; Chbr Music (J. Joyce), 1972; 4 Liederzyklen (N. Sachs, Joyce, Huch, M.-L. Kaschnitz), 1973; 3 Lieder der Ophelia (W. Shakespeare), 1980; Borgenschützen (Lorca)

Also edn. of anthology *Das zeitgenössische Lied*, 4 vols. (Mainz, 1969)

Principal publisher: Schott

ALBRECHT RIETHMÜLLER

Reux, Anselme de. *See* REULX, ANSELMO DE.

Reval (Ger.). *See* TALLINN.

Revel, Harry (*b* London, 21 Dec 1905; *d* New York, 3 Nov 1958). American songwriter and pianist of English birth. He toured Europe in dance orchestras and composed music for shows in Paris, Copenhagen, Vienna, Berlin and London, before moving in 1929 to New York. There he became an accompanist for the vaudevillian Mack Gordon (*b* Warsaw, Poland, 21 June 1904; *d* New York, 1 March 1959), with whom he formed a songwriting partnership. They contributed items to several Broadway revues, notably the *Ziegfeld Follies of 1931*, and then became a highly successful team in Hollywood, first for Paramount (1933–6) and then for 20th Century-Fox (1936–8). During this period they wrote songs for several popular films, including all those starring Shirley Temple, producing such standards as *Did you ever see a dream walking?* (1934), *Paris in the Spring* (1935), *You hit the spot* (1936) and *I've got a date with a dream* (1938). After parting from Gordon, Revel organized shows for the armed forces and edited a magazine for hospitalized veterans. After the war he returned to Broadway once again with *Are You With It?* (1945), produced recordings of therapeutic music, and wrote an orchestral suite (*Perfume Set to Music*, 1954) and further film songs, but did not achieve the same success.

WORKS
(*selective list*)

songs, mostly associated with films, films in parentheses; lyrics by M. Gordon unless otherwise stated

Help yourself to happiness (Ziegfeld Follies of 1931); Underneath the Harlem Moon (1932); Did you ever see a dream walking? (Sitting Pretty, 1934); Love thy neighbor (We're not Dressing, 1934); Stay as sweet as you are (College Rhythm, 1934); With my eyes open I'm dreaming (Shoot the Works, 1934); From the top of your head to the tip of your toes (Two for Tonight, 1935); Paris in the Spring (Paris in the Spring, 1935); Goodnight my love (Stowaway, 1936); When I'm with you (Poor Little Rich Girl, 1936); You hit the spot (Collegiate, 1936); Never in a million years (Wake up and Live, 1937); I've got a date with a dream (My Lucky Star, 1938); I never knew heaven could speak (Rose of Washington Square, 1939); Here I go again (A.B. Horwitt; Are You With It?, 1945)

ANDREW LAMB

Reverb. A sound processing device that simulates natural acoustic reverberation by mechanical or electronic means. *See* ELECTRIC GUITAR, §2.

Reverberatio (Lat.). A type of appoggiatura. *See* ORNAMENTS, §1.

Reverberation time. The time taken for a loud sound to decay to an inaudible level (strictly, for the sound pressure level to decay by 60 dB). When a sound is created within a room, the initial waves are reflected back and forth between the walls and so the sound continues after the source has ceased to produce sound energy. If the walls are highly absorbent the persistence may be short and the room is then said to have a short reverberation time or a 'dry' acoustic quality. If the walls are highly reflecting (e.g. of glazed tiles and glass as in an indoor swimming pool) the reverberation may be long (up to four or five seconds) and the room is said to be 'lively' or 'reverberant'. Good acoustic design demands (among other things) a balance between these extremes to suit the use for which the room is intended. The variation of reverberation time with frequency must also be considered. For example, if the wall covering is an efficient absorber at high frequency but reflects more sound at low frequency, the reverberation time will be longer for low than for high frequency giving the hall a 'booming' acoustic. *See also* ACOUSTICS, §I, 3.

MURRAY CAMPBELL

Reverdy, Michèle (*b* Alexandria, Egypt, 12 Dec 1943). French composer and musicologist. She studied at the Paris Conservatoire with Claude Ballif (analysis), Olivier Messiaen (composition) and Alain Weber (counterpoint), gaining first prize in counterpoint and analysis and winning the composition prize. She also holds a degree in

literature from the Sorbonne. She has been resident at the Casa de Velasquez, Madrid (1979–81) and has taught analysis at the Paris Conservatoire. Hallmarks of her style include slow transformations of sound material, as in *Météores* (1978) and *Les jeux de Protée* (1984), and the use of repetition, as in *Le cercle du vent* (1988). Her sophisticated technique always serves the emotional content of the music, the substance of which is inspired by visual art and literature. Reverdy's writings include two books on the music of Olivier Messiaen: *L'oeuvre pour piano d'Olivier Messiaen* (Paris, 1978) and *L'oeuvre pour orchestre d'Olivier Messiaen* (Paris, 1988). Among her honours are numerous commissions and the SACEM grand prize (1995).

WORKS
(*selective list*)

Stage: Le chateau (op, 10 tableaux, after F. Kafka), 1980–86; Mimodrame (ballet), 3 dancers, 2 trbn, 8 perc, 1981; La nuit qui suivit notre dernier dîner (opéra de poche, J.-C. Buchard), 1984, Saint-Brieuc, 30 May 1985; Vincent (7 paroles de la vie et de la mort de Vincent Van Gogh) (op, M.S. Gille), 1984–9, Alessandria, 18 Sept 1990; Le precepteur (op, 21 scenes, H.U. Treichel, after J. Lenz), 1990, Munich, 14 May 1990; Un signe dans l'espace (mimodrame, after I. Calvino: *Cosmicomics*), 1990, Paris, Aulnay-sous-Bois, L'espace Jacques Prévert, 18 March 1991

DANIEL KAWKA

Reveré [Revertz]. Composer, possibly identifiable with NICOLE REGNES.

Révész, Géza (*b* Siófok, 9 Dec 1878; *d* Amsterdam, 19 Aug 1955). Hungarian psychologist. He studied law in Budapest and then (1901–5) psychology in Göttingen and with Stumpf in Berlin, taking the doctorate in psychology at the University of Göttingen. Subsequently he was assistant lecturer (1906), lecturer (1908), assistant professor (1917) and full professor (1918) of psychology at Budapest University. He left Hungary after the Revolution and in 1921 settled in Amsterdam, where he was in charge of a psychological laboratory. From 1932 he held the post of assistant professor and, later, the post of full professor of psychology.

Révész was an important exponent of experimental psychology and worked on touch, sight and hearing. His early work concerned pathological disturbances in hearing, the conditions known as amusia (the inability to comprehend or produce musical sounds) and parakusia (disturbances in the perception of individual notes). These investigations stimulated his interest in more general aspects of the psychology of music, and from about 1914 he began studying the problem of musical talent, which he considered extensively in his major work, *Inleiding tot de muziekpsychologie*. He developed a test for gauging musical ability by means of exercises based on the perception of rhythm, the ability to analyse two or more notes played simultaneously, and the capacity to reproduce tunes. He also evolved the important 'dual component theory of pitch', which states that the perception of tonal pitch is characterized by two phenomena: a sound impression which alters with the change in frequency, and a feeling for tonal quality (*chroma*) which derives in particular from the recognition of octave similarity. In contrast to Helmholtz, who took common partials as a starting-point, Révész regarded the 'quality' of notes as a basic musico-acoustic characteristic. He became known for his work in general aspects of psychology, but his importance rests primarily on his research into the psychology of music, and some of his writings on that subject are still standard works.

Revival spiritual. A simplified folk hymn used for group singing. It became popular in the early 19th century in American revival and frontier camp meetings. *See* GOSPEL MUSIC, §I and SPIRITUAL, §I, 1–2.

Revolutionary hymn. A term of convenience for a body of works for voices and instruments composed for the public festivals of the French Revolution. The term *hymne* was used by François-Joseph Gossec, the most prolific single contributor to the repertory, from 1791 (*Hymne à Voltaire*, three known settings). However, analogous terms were also employed, such as *chant* or simply *choeur*, between 1791 and the cessation of the festivals in 1799. The choice of *hymne* as a term presumably related to Rousseau's published observation that 'the first songs of all nations [of antiquity] were *cantiques* or *hymnes*', that is, the first musical compositions known to the ancient world, and addressed to heroes or to deities. Because important early Revolution festivals were costumed and designed as an evocation of antiquity, there was a strong sense in which the music composed for them was intentionally 'neo-classical' too. However, the term *cantique* was almost never used, being too close to biblical references.

Revolutionary 'hymns' existed alongside popular Revolutionary songs or chansons, an extremely rich repertory whose purpose was different, and which grew out of the long tradition of parody and vaudeville. While chansons had no necessary accompaniment and generally used a common stock of melodies, the 'hymns' had the status of works in which poem and music were specially designed the one for the other, forming a unique artefact, albeit destined originally for performance on one occasion only.

The programmes of 86 festivals from 1790 to 1800 are listed by Pierre (1904); these were often held as annual celebrations, of, for example, Bastille Day (14 July), the uprising of 10 August 1792, the founding of the Republic (1 vendémiaire I [22 September 1792]), the downfall of Robespierre (9 thermidor) and the execution of Louis XVI (21 January). Later there were annual moral festivals dedicated to Agriculture, Youth, Old Age, Spouses and Thanksgiving (*Reconnaissance*). (These details represent a notable simplification of what was a frequently debated and changing area of policy.) Over and above these were the funerary and triumphal festivals which occurred once only: the interment of Mirabeau in the Panthéon (4 April 1791), the reburial of Voltaire in the Panthéon (11 July 1791), Robespierre's Festival of the Supreme Being (8 June 1794) and the funeral of General Hoche (1 October 1797), for example. Since the publication of Pierre's research, which has not been superseded as a whole, a number of new sources have been pointed out, all of which await musicological attention: those in the German journal *Frankreich* from 1795, those of the Théophilanthropes, and compositions originating in the French provinces.

AUX MÂNES de la GIRONDE

Hymne Elégiaque.

Pour l'anniversaire du 3 Octobre.

Paroles de COUPYGNY. Musique de GOSSEC.

1re Strophe.

Récitatif.

une voix seule.

Parmi ces funèbres apprêts,
Queis chants, quelle voix attendrie
Forment au ciel, pour la patrie
Ces vœux touchants, et ces regrêts.

une autre voix.

Amis, que pour la France entière
Ce jour soit marqué par le deuil;
Son espérance la plus chère
Bientôt va descendre au cerceuil.

CHŒUR.

Partez, partez troupe immortelle,
Méritez des destins si beaux:
La Liberté, de vos tombeaux
Doit s'élever plus brillante et plus belle.

2e Strophe.

3e Strophe.

Venez nous prêter votre appui;
Planez sur nous ombres sacrées
Du haut des voûtes éthérées
Que vous habitez aujourd'hui!
Avec nous, confondez l'audace
Des lâches partisans des rois,
Et faites regner à leur place
Les mœurs, la raison, et les loix.

le CHŒUR.

Partez &c.

Part of Gossec's Revolutionary hymn 'Aux mânes de la Gironde' (Paris: Magasin de Musique (i), 1795)

The best-known poet of Revolutionary hymns was Marie-Joseph Chénier, brother of the ill-fated André Chénier, and the story of his initial involvement with both Revolutionary hymns and the composer Gossec is told in Jam (1989, 'Marie-Joseph Chénier'), who adds 'in 1791 and 1792 half of [all] the patriotic hymns were written by Chénier and three-quarters of them were composed by Gossec . This near-monopoly eventually gave rise to protests'. Later poets included Théodore Désorgues, Flins, Marie-François Baour-Lormian and Ponce-Denis Ecouchard Lebrun. Most composers who remained in Paris wrote at least one hymn during the relevant decade, with Cherubini, Catel and Méhul all providing distinguished examples. Other composers were Henri-Montan Berton, François Devienne, François Giroust, the brothers Jadin, Jean-Paul-Gilles Martini and Pleyel.

Didier (1989) stressed the importance of understanding this repertory in its context as something heard, participated in and seen. One can only guess at the impact made on sections of people who had previously been excluded from large-scale musical events, especially in the open air. Copyists' records show that accompanying ensembles could vary between 30 and 70 in number, sometimes with large extra detachments of drummers. No reliable figures exist to show how many voices may have participated. The Festival of the Supreme Being, largest of them all, may have included over 1000 singers, but the facts cannot be ascertained.

From the start, the poetry and music of the hymns were conceived to be accessible on a number of levels. The accompaniments were for wind instruments, lending audibility and popular tone, with the recently developed clarinet (grouped in sections of ten or 20 strong) invariably chosen to carry the leading melodic lines. A number of hymns included the newly reconstructed TUBA CURVA and buccin (*see* BUCCIN (i)), which were probably the loudest Western wind instruments to date. The textures were varied and expressive, and fugato writing was not excluded; but the melodic style was usually bold, emphasizing the first, third and fifth degrees of the scale (ex.1). Though it became one of the most popular of songs, *La Marseillaise* (words and music by Rouget de Lisle) was also referred to as a hymn, being equally or more effective with orchestrated accompaniment, and heard in various ceremonial and theatrical contexts. The melodic contour of Rouget de Lisle's piece shows the same tendency. In form, most hymns employed a basic verse-and-refrain structure, allowing for some variety – if desired – in the melody and orchestration of the intermediate verses, which were sung by one or more soloists. This was subordinated to the primacy of the main refrain, sung by the whole choir. Perhaps as a residual masonic element (see below) exclusively male-voice choirs were regularly specified in the early years.

Ex.1 Gossec: *Le chant du 14 juillet*, 1790

Ex.2 Gossec: *Aux mânes de la Gironde*, 1795

Allegro moderato

Par - tez, par - tez trou - pe im-mor - tel - - le mé-ri - tez des des - tins, des des - tins si [ww] beaux! etc

With the end of official Catholicism in 1791, a special burden was given to the Revolutionary hymn: 'The newborn Republic expected ... a widespread and clear diffusion of its ideological message among large crowds assembled in the open air' (Jam, 1989, 'Marie-Joseph Chénier'). To this end, its theorists expressed their preference for poets to write all their stanzas with exactly matching scansion and accent, using a minimum of poetic figures; and for musicians to respect these accents precisely in setting words to music (Framery, 1795; Leclerc, 1796). Jam showed that Gossec met these conditions with limited success, perhaps partly by reason of his mature years (55 in 1789), and partly because he founded the style of his earlier hymns on that of masonic compositions such as masonic cantatas and the wind-instrument 'column' consisting of clarinets, horns and bassoons. It has been claimed by Roger Cotte (cited in Ozouf, 1988, p.346) that almost all composers of Revolutionary hymns used by the authorities had been initiated as masons before 1789, as had many singers and instrumentalists. Gossec also re-used at least two earlier compositions in Revolutionary hymns (Jam, op. cit., 230).

Although a number of hymns were disseminated by the special publishing initiative, the Magasin de Musique à l'Usage des Fêtes Nationales (1794–5), only Cherubini's *Hymne du Panthéon* was issued in full score. Moreover, because Pierre published only two hymns in full score (1894), the remainder being in piano arrangements (1899), there is a pressing need to establish modern full-score editions of this repertory, before further generalizations can be made. Although Méhul's substantial *Chant national du 25 messidor* (14 July 1800) for three choirs and three ensembles can be regarded as growing out of the Revolutionary hymn tradition, it more properly stands as the first of his Napoleonic cantatas.

Work also remains to be done on establishing the degree to which Beethoven and others in Austria could have been familiar with this repertory. The last movement of his Fifth Symphony comes extremely close to the style of some hymns by virtue of its essential spirit, expressed through elemental rhythm, melody and harmony. A piece by Gossec may be quoted for comparison (ex.2).

DAVID CHARLTON

Revue (from Fr.; It. *rivista*; Sp. *revista*). A topical, satirical show consisting of a series of scenes and episodes, usually having a central theme but not a dramatic plot, with spoken verse and prose, sketches, songs, dances, ballet and speciality acts. Revue developed in France during the 19th century, was taken up by other countries including Britain and the USA, and enjoyed its greatest acclaim and significance between the world wars. In revue there are elements of other stage forms such as cabaret, variety show, vaudeville, pantomime, burlesque and musical comedy.

1. France, Germany, Spain. 2. Britain. 3. The USA.

1. France, Germany, Spain. Revue evolved as a distinct genre in France in the early 19th century, consisting of satirical scenes 'passing in review' of recent events. During the reign of Louis Philippe (1830–48) it gained favour as an annual production, satirizing the theatrical productions of the previous season, and particularly the salient features and chief performers of the larger genres presented at the Opéra and Opéra-Comique. In *Le carnaval des revues* (Bouffes Parisiens, 1860) Offenbach incurred the wrath of Wagner with his satire of 'the musician of the future'. During the Second Empire (to 1870) theatres increasingly presented revues emphasizing visual spectacle, with expensive costumes, scenery and stage machinery helping to create a more lavish and variegated entertainment. These works stimulated the rapid development of stage technology and set design, one element of the visual splendour being the *tableau vivant*, an allegorical still-life that helped to introduce nudity to the stage.

The typical revue of the 1880s was still a relatively inexpensive and simple entertainment, appealing to audiences mainly by the wit of the dialogue and the vivacity of those who played in it. Apart from the final tableau the scenery was often primitive and the music often a rehash of well-worn tunes. A compère or commère was an essential of the entertainment, interpolating explanatory or cynical remarks throughout – though the commère often had little to do except appear in practically no clothes. In 1886, however, the Folies-Bergère staged the first successful 'outfit revue', which abandoned the satirical bite of earlier shows and replaced it with suave cosmopolitanism, lavish visual effects, extravagant costumes and elaborately staged dances and songs. It prompted many imitations, and during the 20th century the main Parisian revues followed this model – particularly at the Folies-Bergère and the Casino de Paris. The entertainment revolved round popular entertainers such as Mistinguett (Jeanne Bourgeois) (1873–1956) – famous for her *valse chaloupée* (Apache dance) – Maurice Chevalier (1888–1972), and the black American Josephine Baker (1906–75), who in 1925 first scandalized Paris with her erotic dances in the *Revue nègre*. The revues' texts and scores were compiled from many collaborators, with new material frequently inserted, the wider musical impact deriving from the songs of such composers as Maurice Yvain (*Mon homme* and *J'en ai marre* for Mistinguett), José Padilla (*Ça … c'est Paris* and *Valencia* for Mistinguett), Henri Christiné (*Valentine* for Chevalier) and Vincent Scotto (*J'ai deux amours* for Josephine Baker).

After World War II, the Parisian theatres such as the Folies-Bergère and the Lido continued the tradition of revue. In the early 1970s, with music by Serge Gainsbourg and others, Roland Petit revived the genre with two shows at the Casino de Paris, starring his wife, the dancer and singer Zizi Jeanmaire (*Zizi je t'aime*, 1972), and Josephine Baker made her farewell in 1975, a few days before her death, in a revue at the Bobino. A final attempt to revive the style at the Folies-Bergère, in 1994, directed by the Argentine Alfredo Arias, proved a failure.

By the 1920s revue had also become well established in other countries. During the last decade of the 19th century Berlin had the first of the annual revues at the Metropoltheater. They featured such star performers as Fritzi Massary and Josef Giampietro, who parodied the aristocrats and officials of the empire in songs filled with references to current events; the music was provided by the house conductor-composers including Victor Hollaender (1901–13) and Paul Lincke (1908–10). After World

War I the Berlin revue took on more of the lavishness of Parisian spectacle revues, parading semi-nude women, sumptuous and massive sets, and elaborately choreographed production numbers. The music by Mischa Spoliansky for *Es liegt in der Luft* (1928) and Rudolf Nelson for *Lichter von Berlin* (1927) and *Das spricht Bände* (1929) drew on influences from American jazz and Argentine tango to make that particular sound which is always associated with Berlin in the 1920s, and which was revived in many Berlin revues after the fall of the wall in 1989. Similar trends were discernible in other continental countries, notably in Spain, from which emerged the singer Racquel Meller and the composer José Padilla, both of whom consolidated their personal success in Paris during the 1920s.

2. Britain. In Britain burlesque and satire had long been staples of the theatre, and one-man entertainments by Charles Dibdin (from the 1780s to 1804), Charles Mathews (from 1808 to 1835) and others embraced dramatic monologues, songs, topical sketches and a wide variety of themes during an evening's performance. Perhaps the first unified revue in London was *Success, or A Hit If You Like It* (1825), a one-act allegorical afterpiece written by J.R. Planché, who was also responsible for various successors. By the 1890s, however, the form was still scarcely known in Britain, and *Under the Clock* (1893; music by Edward Jones) and *Pot-pourri* (1899; music by Napoleon Lambelet) were both pioneering efforts, modelled on the French form and satirizing recent theatrical productions. During the early 1900s revues began to appear as part of an evening's entertainment at variety theatres such as the Coliseum, but it was the advent of ragtime that finally established the genre in London. In particular, shows like *Hullo, Ragtime* (1912) and *Hullo, Tango* (1913), produced by Albert de Courville as part of the entertainment at the Alhambra Theatre, captured the popular imagination with their fast-moving presentation and as the means whereby new American song and dance styles and performers were introduced to Britain.

A more intimate style of revue had been introduced to London by the Follies, a company led by H.G. Pelissier from 1897 to 1913 and featuring a small cast and sparse sets. More significant shows on a smaller scale were those introduced to London by C.B. Cochran, who based his style on pieces still performed at small Parisian theatres and dependent on more subtle, satirical humour and on the talents of individual, versatile performers. For his one-act prototype *Odds and Ends* (1914) he imported various French performers, including Alice Delysia, and the show's success prompted a full-length successor simply called *More* (1915) (as with many revues the titles reflected their piecemeal nature). Cochran's example was followed by André Charlot, and their productions during the 1920s represented the peak of the genre's success in London, attracting the talents of leading performers, writers, composers, designers and choreographers.

Although the topicality and localized satire of revues made them unsuitable for export, there was considerable interchange of artists and material between London and New York. *Charlot's London Revue of 1924*, using successful material from various London revues, first introduced to New York Gertrude Lawrence (singing Philip Braham's *Limehouse Blues*), Beatrice Lillie and Jack Buchanan. Since the music for revues usually came from various sources the scores were traditionally the responsibility of the theatre's conductor, but specialist songwriters were increasingly used. Among composers of World War I revues were Herman Finck, James W. Tate, Herman Darewski and Nat D. Ayer, whose score for *The Bing Boys are Here* (1916) included 'If you were the only girl in the world'. Later composers included Ivor Novello, whose songs for Charlot's *A to Z* (1921) included 'And her mother came too', and Noël Coward, whose talents as songwriter as well as performer were first highlighted in Charlot's *London Calling* (1923). Coward went on to produce some of his best songs for *On with the Dance* (1925) and *This Year of Grace* (1928) for Cochran, who was also quick to give opportunities to the young Rodgers and Hart (*One Dam Thing after Another*, 1927, with Jessie Matthews singing 'My heart stood still'; see illustration) and Cole Porter (*Wake Up and Dream*, 1929). Cochran's revues also featured ballets; it was *Cochran's 1930 Revue*, for example, that introduced Lord Berners's score *Luna Park*.

Cochran and Charlot continued their series of revues into the 1930s. But the arrival of the talking picture seriously affected the vogue for witty, tuneful, spectacular stage shows, and the name 'revue' survived more securely in the non-stop nudist shows of the Windmill Theatre. The 1930s and 40s saw some successful productions by George Black – during World War II the most successful London revues were at the Ambassadors Theatre (*Sweet and Low*, *Sweeter and Lower*, etc.), starring Hermione Gingold, Hermione Baddeley and Henry Kendall, a series that continued into the late 1940s with *À la carte* at the Savoy Theatre with music by Charles Zwar. In the late 1940s and early 50s a new generation of composers, among them Sandy Wilson, Richard Addinsell and Donald Swann, contributed to the new style of London revue, especially those devised by Laurier Lister such as *Penny Plain*, with performers including Elisabeth Welch, Joyce Grenfell and Fenella Fielding. Swann teamed up with

Richard Dolman and Jessie Matthews singing 'My heart stood still' in 'One Dam Thing after Another' (Cochran's London Pavilion revue, 1927) by Ronald Jeans; lyrics by Lorenz Hart and music by Richard Rodgers

Michael Flanders to perform a hugely successful series of two-men shows, including *At the Drop of a Hat*. Although each decade of the late 20th century saw attempts to revive large-scale revues, the most successful shows were those with one group of performers (Fascinating Aida, Kit and the Widow) or compilations of songs by one composer (*Side by Side by Sondheim*, *Cowardy Custard*). The composer Martyn Jacques and his group the Tiger Lillies staged the brilliant 'junk opera' *Shock-Headed Peter*, based on *Struwwelpeter*, by Heinrich Hoffmann, which with its integration of puppets, mime, singing and dancing had the feel of a new start for the revue format.

3. The USA. In the USA revue developed mostly from extravagant burlesques and vaudeville in New York during the late 19th century. John Brougham wrote one of the first, *The Dramatic Review for 1868* (1869), an afterpiece burlesquing the previous year's popular theatre, but the show was unsuccessful and prompted no imitations. The first popular revue came in 1894 with *The Passing Show* (music by Ludwig Englander), which, like Brougham's piece, was a satire on theatrical productions but which incorporated some topical songs in the style of Tin Pan Alley. Soon there were many revues on the New York stage. Those starring Joe Weber and Lew Fields (1896–1904) had vaudeville-like farce and pantomime, humorous songs, dances and more travesties of theatrical productions.

But the real establishment of American revue came with the *Follies of 1907*, 'a musical review of the New York sensations of the past season'. Produced by Florenz Ziegfeld junior, it appropriated the name and style of the Folies-Bergère, though the female chorus had to attract more by sheer beauty than mere nakedness. It became the first of an annual series of *Ziegfeld Follies* that became progressively more spectacular. Ziegfeld set the standard with very large casts, an emphasis on female glamour, grand costumes and sets (notably by Joseph Urban), fast-paced scenes and star performers like Fanny Brice, W.C. Fields, Eddie Cantor and Marilyn Miller. The shows remained a leading form of American stage entertainment into the 1920s and produced many imitations, notably the Shubert brothers' *The Passing Show* series from 1912, the *Greenwich Village Follies* from 1919, George White's *Scandals* from 1919, Irving Berlin's four *Music Box Revues* (1921–4) and the *Earl Carroll Vanities* from 1922.

The shows' songs and dances were part of the humour and variety element and were rarely satirical: the texts and scores were usually collaborations lacking a cohesive style and having new numbers interpolated as needed during the run of a show. Continental successes were sometimes featured (Fanny Brice first sang Yvain's 'My Man' in the *Ziegfeld Follies* of 1921); but over the years the revues gave opportunities to many up-and-coming American songwriters and introduced songs that have become established favourites. The *Ziegfeld Follies* introduced 'Shine on, Harvest Moon' (1908; Nora Bayes and Jack Norworth), 'Row, Row, Row' (1912; James V. Monaco), 'A pretty girl is like a melody' (1919; Irving Berlin), 'Second Hand Rose' (1921; James F. Hanley) and 'My Blue Heaven' (1927; Walter Donaldson); *The Passing Show* had 'I'm forever blowing bubbles' (1918; Jean Kenbrovin and John William Kellette) and Donaldson's 'Carolina in the Morning' (1922); and George White's *Scandals* introduced George Gershwin's 'I'll build a stairway to paradise' (1922) and 'Somebody loves me' (1924) and DaSylva, Brown and Henderson's 'The Birth of the Blues' and 'Black Bottom' (both 1926).

It was another series of shows, the *Garrick Gaieties*, that first brought attention to Rodgers and Hart with 'Manhattan' (1925) and 'Mountain Greenery' (1926); but these were shows in which simplicity and economy replaced elaborateness of setting and costume. Smaller-scale but still lavish revues were also given in rooftop theatres and night clubs, notably the Cotton Club in Harlem (music by Jimmy McHugh and later Harold Arlen). From the 1920s more serious, intimate revue came to the fore as lavish productions waned during the economic depression. *The Little Show* (1929) was one of a series that made the name of Arthur Schwartz, another being *The Band Wagon* (1931), which featured the Astaires and the song 'Dancing in the Dark'. *Three's a Crowd* (1930), in which Libby Holman sang Johnny Green's 'Body and Soul', and Irving Berlin's *As Thousands Cheer* (1933) were other noteworthy shows; but the departure of the leading composers for Hollywood hastened the decline of the genre, although giving opportunities to newer songwriters such as Burton Lane, Vernon Duke and Harold Rome (*Pins and Needles*, 1937). After World War II, revues were performed less frequently at large Broadway theatres; there was a final attempt at a Ziegfeld-type Follies in 1956, starring Tallulah Bankhead, but it closed out of town. The most influential revues of the postwar era were the series of *New Faces* presented by Leonard Sillman, which introduced such players as Eartha Kitt, Maggie Smith, Madeline Kahn and Robert Klein.

While the song-and-dance revue found new life on television, satirical intimate revue was fostered by repertory companies throughout the country, notably in San Francisco (The Committee) and Chicago (Second City) in the 1960s. The productions more often favoured improvised sketches and topical commentary on American society, abandoning complex choreography, elaborate sets and even clothes (in *Oh Calcutta*, 1969): the music increasingly used rock and electronic idioms. As in London, it was small-scale, one-performer or one-composer shows that seemed to attract the most success. The outstanding revue of the 1990s, though, was the history of black American dance, *Bring in 'da noise, bring in 'da funk*, with music by Daryl Waters, Zane Mark and Ann Duquesnay, which showed that the revue format had a new life.

ANDREW LAMB, DEANE L. ROOT/PATRICK O'CONNOR

Revueltas, Silvestre (*b* Santiago Papasquiaro, Durango, 31 Dec 1899; *d* Mexico City, 5 Oct 1940). Mexican composer and violinist. At the age of eight he began violin studies in Colima, and at 12 he entered the Juárez Institute,

Durango. He studied further under Tello (composition) and Rocabruna (violin) in Mexico City (1913–16), at St Edward College, Austin, Texas (1916–18), and at the Chicago Musical College under Sametini (violin) and Borowski (composition, 1918–20). After a hiatus in Mexico he returned to Chicago in 1922 to complete a four-year violin course under Kochanski and Ševčik. He was again in the USA in 1926 and 1928, playing the violin in a theatre orchestra in San Antonio, Texas, and conducting an orchestra in Mobile, Alabama. Chávez recalled him to Mexico City to take the post of assistant conductor of the Mexico SO (1929–35), and during the years 1931–4 he composed six sophisticated picture-postcard pieces for that orchestra. At the same time he taught the violin and chamber music at the conservatory and conducted a conservatory graduates' orchestra. In 1937 he toured Spain, there allying himself with the Republican cause, and on his return he continued to teach. His early death was due to alcoholism.

Without quoting Mexican folksong, Revueltas's mature works weave melodies of folk type into a gaudy instrumental fabric. In rhythm he not only favoured the hemiola endemic to all Hispanic American popular music (3/4 alternating with 6/8), but also liberally inserted passages in vigorous septuple and quintuple metres. The much played *Sensemayá* – a vocal and orchestral setting of the poem by the Afro-Cuban revolutionary Nicolás Guillén about the killing of a tropical snake, later transcribed for orchestra alone – illustrates his superb rhythmic drive in 7/8 (occasionally 7/16) to an orgiastic climax. Revueltas's principal melodies, no matter how encased in dissonant counterpoint, are always tuneful and repetitive in a manner comparable with that of the *Rite of Spring*. His works are concise, ending *fortissimo* after a hammering crescendo, and there is a play of sardonic humour even in his most wistful moments. Openly confessing his cynicism, he sometimes prescribed 'for the tourist trade' an indigenous instrument such as the *huehuetl*. But the street music of modern Mexico was his model, not Aztec art. His brother, the muralist Fermín Revueltas (1902–35), closely resembled him in painting bold simplistic designs limned in bright colours.

ROBERT STEVENSON

Revuts'ky, Levko Mykolayovych (*b* Irzhavets, Poltava province [now Chernihiv region], 8/20 Feb 1889; *d* Kiev, 30 March 1977). Ukrainian composer and teacher. He came from a distinguished family: his older brother Dmytro Revutsky was a musicologist and folklorist, while his nephew, Valeryan Revuts'ky became a theatre scholar and critic, and his son, Yevhen Revuts'ky, head of the internal medicine department at the Kiev Medical Institute. Levko Revuts'ky began studying the piano with Lysenko, first at the Kiev Tutkovsky School of Music (1903) and then at the newly founded Lysenko Music and Drama School (1903–05). In 1908 he had also begun to study law at Kiev University; from this time he continued his musical studies with H. Khodorovs'ky and S. Korotkevych at the Russian Society of Music School. In 1913 this institution was remamed the Kiev Conservatory which Revuts'ky entered to study composition with Glière; he graduated from both the university and the conservatory in 1916. After teaching music in the Pryluka area, he was appointed in 1924 to teach at the Lysenko Music and Drama Institute. During this period he undertook many administrative and educational activities for the Leontovych Association (1922–8). This period was undeniably his most productive. When the Lysenko Institute was closed in 1934, Revuts'ky began lecturing at the Kiev Conservatory (from 1935) on theory and composition. During World War II he headed the composition department at the Tashkent Conservatory. He served as president of the board of the Ukrainian Composers' Union (1944–8), as a member of the presidium of that union and as a board member of the Composers' Union of the USSR. He received a doctorate in musicology (1941), the USSR State Prize (1941), the title National Artist of the USSR (1944), the Shevchenko Prize (1966) and the title of Hero of Socialist Labour (1969). He also served on the editorial board of the Ukrainian Soviet Encyclopedia (1958–68). Revuts'ky's international reputation rests primarily on the Second Symphony (1926–7, revised in 1940 and again in 1969). But in his piano music and some of the folksong arrangements (which are essentially recompositions, following the manner of Leontovych) he reached an equally high level of inventiveness and originality. The only other major symphonic work that Revuts'ky wrote was the four-movement Piano Concerto (completed in 1934,

revised in 1964) which received severe official criticism; this affected him deeply and he turned his energies to teaching, editing, revising his earlier works and generating pieces for official occasions. Revuts'ky also edited many works of his first teacher, Mykola Lysenko, for the complete edition. The final major creative labour of his life was the drastic revision of Lysenko's opera *Taras Bul'ba*: he rewrote it thoroughly, adding new numbers and giving it a cogent shape. This version – reworked by Revuts'ky first in 1937 and finally in 1955, and orchestrated by Lyatoshyns'ky – has remained in the repertory of Ukrainian theatres.

Revuts'ky's Second Symphony is a wonderfully supple and gentle piece; its language, while profoundly Romantic, is run through with impressionist harmonies. Ukrainian folksongs constitute the thematic foundation of the whole symphony. The remarkable second movement – an evocative depiction of Ukrainian summer nights – employs a formal mirror sequence of three folk tunes in the order 1-2-3-2-1. The enchanting opening of the first melody *O Mykyta, Mykyta*, heard on the flute and bassoon two octaves apart over shimmering strings, suggests the spaciousness and nocturnal tranquility of the Ukrainian steppes. In 1927 the Khar'kiv Opera Orchestra performed the first movement, and on 10 August 1928 the whole symphony received its first performance in Kiev. The work – along with Lyatoshyns'ky's *Overture on Four Ukrainian Themes* – received joint first prize in a competition dedicated to the 10th anniversary of the October Revolution. Revuts'ky was a prolific composer of vocal works, mainly in miniature form. His three principal folksong anthologies – *Sonechko* ('Little Sun', 1925–6), *Kozats'ki pisni* ('Cossack Songs', 1926) and *Halyts'ki pisni* ('Galician Songs', 1926–28) – are replete with simple images that range from vivid visions to caustic epigrams that fully express the intellectual, moral and emotional experience of the particular Ukrainian folk world.

VIRKO BALEY

Rexroth-Berg, Natanael. *See* BERG, NATANAEL.

Rey. French family of musicians.

(1) Jean-Baptiste Rey (i) (*b* Lauzerte, 18 Dec 1734; *d* ?Paris, 15 July 1810). Conductor and composer. He was taught at the choir school of St Servin and had become *maître de chapelle* at Auch Cathedral by the age of 17. He resigned after three years and went as a conductor to the opera houses of Toulouse, Montpellier, Marseilles, Bordeaux and Nantes. In 1776 he was engaged as a conductor at the Paris Opéra, where he conducted works by, among others, Gluck and Piccinni. In 1781 he succeeded Louis-Joseph Francoeur as director of the Opéra orchestra. From 1779 he was master of the *musique de chambre* at the court of Louis XVI, and from 1781 to 1786 occasionally conducted at the Concert Spirituel. In 1792, during the Revolution, he joined the committee in charge of the Opéra. For a brief period in 1793 he conducted at the Théâtre de la République (the Comédie-Française), notably some incidental music by Méhul for André Chénier's *Timoléon*, in which Talma took the leading part. In 1799 he went to the Paris Conservatoire as professor of harmony; he stayed only three years because of a disagreement with the director, Sarrette. He had also antagonized his colleagues through his support of Rameau's theories, which they thought outdated. In 1804 he was appointed *maître de chapelle* to Napoleon, but in 1810, just before his death, he resigned from all his positions.

Rey is best remembered as a conductor. After the revival of one of Gluck's operas in 1786, the *Mercure de France* (4 March 1786) called him 'the foremost conductor in all Europe'. As a composer he mostly limited himself

to arrangements of works he was about to conduct. His most important work was his completion of Sacchini's *Arvire et Evelina* (1788); he also made additions to works by J.J. Mouret and his brother (2) Louis-Charles-Joseph Rey, and wrote one opera, *Diane et Endymion* (Opéra, 1791), two motets, masses (now lost) and solfège exercises for the Conservatoire.

(2) Louis-Charles-Joseph Rey (*b* Lauzerte, 26 Oct 1738; *d* Paris, 12 May 1811). Cellist and composer, brother of (1) Jean-Baptiste Rey (i). At the age of 16 he joined the orchestra of the Montpellier opera, probably using his older brother's influence. About 1755 he went to Paris, where he studied the cello with Berteau and had some of his ballets performed in various small theatres. From 1757 to 1766 he was a cellist at the Bordeaux theatre. He then returned to Paris and was a member of the Opéra orchestra from 1767 to 1806 and the orchestra of the royal chapel from 1772. He composed for the stage and for the cello.

WORKS

all printed works published in Paris

Stage: Le forgeron (ballet-pantomime), Paris, Comédie-Italienne, 1756; Le suisse dupé (ballet-pantomime), Paris, Opéra-Comique, 1757; Apollon et Coronis (op, 1, Fuzelier, after J.J. Mouret: Les amours de dieux), Paris, Opéra, 3 May 1781, collab. J.-B. Rey (i)

Vocal: 4 ariettes, 1v, insts (1770)

Chbr: 6 sonates, vc/vn, b (1768); 6 duos, 2 vn/(vn, vc) (1769); Trios, 2 vn, vc (n.d.)

(3) Jean-Baptiste Rey (ii) (*b* Tarascon, *c*1760; *d* Paris, *c*1822). Theorist and instrumentalist, possibly a son of (2) Louis-Charles-Joseph Rey. According to Fétis he was self-taught; he was active as a cellist, violinist, harpsichordist, organist and composer, but is best known as a theorist who followed Rameau's ideas, adapting them to 19th-century musical idioms. He was the organist and *maître de chapelle* at the cathedrals of Viviers and Auch before going in 1795 to Paris, where he was a cellist in the Opéra orchestra from 1796 to 1822. His most important works comprise theoretical studies, a piano method and some piano music.

There were several other musicians in the Rey family. V.F.S. Rey (*b* ?Lyons, *c*1760; *d* ?Paris, after 1816), whose relationship to the family is unknown, was a theorist who popularized Rameau's ideas, and published a *Tablature générale de la musique … d'après les principes du célèbre Rameau* (Paris, 1795) as well as several other practical books on music. A certain Mlle Rey was a dancer at the Paris Opéra in the early 18th century. Another Mlle Rey, sister of (1) Jean-Baptiste Rey (i) and (2) Louis-Charles-Joseph Rey, married a composer named Pitrot and was a dancer at the Opéra from 1755. A third 'Mlle' Rey, wife of (2) Louis-Charles-Joseph Rey, was a dancer and possibly a singer at the Comédie-Italienne. Louise Rey, probably a daughter of (1) Jean-Baptiste Rey (i), taught solfège at the Paris Conservatoire from 1795 to 1797. Another Louise Rey and Mion Rey, probably daughters of (2) Louis-Charles-Joseph Rey, were well-known dancers at the Comédie-Italienne and later at the Opéra. A certain Rey (first names unknown) was a baritone at the Opéra and a member of the orchestra of the Masonic Lodge 'Le Contrat Social' in 1786.

ROGER COTTE

Rey, Cemal Reşit (*b* Jerusalem, 5 Oct 1904; *d* Istanbul, 7 Oct 1985). Turkish composer, conductor and pianist. A child prodigy, he went to Paris at the age of nine as a pupil of Marguerite Long. After a period in Switzerland at the Geneva Conservatory, he continued his studies in Paris with Raoul Laparra, Fauré and Henri Derosse (conducting). Returning to Turkey in 1923, he began teaching at the Istanbul Conservatory, where in 1934 he founded the conservatory orchestra. In 1938 he became the music programme director of Radio Ankara, in 1945 conductor of the Istanbul City Orchestra and from 1949 to 1950 music programme director of Radio Istanbul. Between 1949 and 1960 he also undertook concert tours abroad. After retiring from official positions, he continued to teach privately and to compose. Rey's style and expression show the influence both of Impressionism and traditional Turkish music. One of the most productive members of the Turkish Five, he has produced works of almost every type, including musicals (mostly to librettos by his brother, Ekrem Reşit Rey) and music for plays and films.

FARUK YENER

Reyck, Dieudonné [Deodatus]. *See* RAICK, DIEUDONNÉ (DE).

Rey de la Torre, José (*b* Cibara, nr Havana, 9 Dec 1917; *d* San José, CA, 21 July 1994). Cuban guitarist. At eight he moved with his family to Havana, where he began studying the guitar with Severino López in 1928. At 14 he went to Barcelona to study with Miguel Llobet, and his recital there at the age of 16 established him as a performer. His American début was at New York Town Hall in 1940. He subsequently made many appearances in the USA, Canada and elsewhere. He gave radio broadcasts and played in two television plays. Rey de la Torre gave the US première of Rodrigo's *Concierto de Aranjuez* (1959), Villa-Lobos's *Introduction to the Chôros* (1962) and Chávez's Three Pieces for Guitar. He made a number of recordings, and works were written for him by various composers, among them Julián Orbón.

RONALD C. PURCELL

Scene from Reyer's 'Sigurd', Paris Opéra, 1885; engraving from 'L'illustration' (20 June 1885)

Reyer [Rey], **(Louis-Etienne-)Ernest** (*b* Marseilles, 1 Dec 1823; *d* Le Lavandou, Var, 15 Jan 1909). French composer and critic. His real name was Rey. Having attended a music school in Marseilles from the age of six, he was sent in 1839 to Algiers to work with an uncle, Louis Farrenc, in a government department. There he composed, without the benefit of tuition, a number of minor works, including a mass for the visit of the Duke of Aumale in 1847. In 1848 he defied his parents' and uncle's objections to a musical career and went to Paris, where his kinship with Aristide and Louise Farrenc was an invaluable introduction to a wide musical circle; Louise Farrenc took charge of his musical studies on an informal basis. Equally important was his early association with a number of literary figures, especially Gautier, Méry and de Cormenin, whose tastes were similar to his own. Reyer had thus had little formal musical training when *Le sélam*, an 'oriental symphony' in four parts to a text by Gautier, was successfully performed in Paris in 1850. Closely modelled on Félicien David's then popular *Le désert*, it won the praise of Berlioz and established Reyer's inclination towards exotic subject matter, repeated in *Sacountalâ*, a ballet by Gautier played at the Opéra in 1858, and in *La statue* (1861), an *opéra comique* based on the *1001 Nights*. *Maître Wolfram* (1854), an *opéra comique*, was a tacit homage to Weber; *Erostrate*, commissioned for the new theatre in Baden-Baden in 1862, tells the legend of how the Venus de Milo lost her arms.

Within 14 years Reyer had established himself as a minor celebrity and composed a substantial body of music, but though he lived another 46 years, only two more significant works appeared: the operas *Sigurd* and *Salammbô* together represent his highest achievement as a composer. Both were first produced at the Théâtre de la Monnaie, Brussels, whose management was at that time considerably more adventurous than that of the Paris Opéra. *Sigurd* was begun in the 1860s but had to wait until 1884 to be heard, when the fact that its subject was close to that of Wagner's *Ring* was still not the handicap it might have been a year or two later. Reyer had chosen his material independently of Wagner and from different sources (see illustration). The success of *Sigurd* was considerable and it put Reyer's name high in public esteem. *Salammbô* (1890), brought his friend Flaubert's highly coloured novel to the stage and enjoyed equal success, both in Brussels and in France – a success also due to the sumptuousness of its settings and the singing of Rose Caron. Both works survived in the repertory for 50 years.

Reyer's preferred music was that of Gluck, Weber, Schumann and Berlioz. He had been close to Berlioz in his last years and remained a staunch advocate of his music at a time when it was almost unheard in Paris. He also held Wagner's music in admiration (after early doubts) and made repeated efforts to obtain hearings of the operas in the 1870s. Yet he did not imitate Wagner's style; 'the only composer who can write Wagnerian music is Wagner', he once said, and although he used a clear leitmotif technique it is truly closer to Weber in origin than to Wagner. Nor did he consciously imitate Berlioz, for the same reason. Reyer's music draws on the French tradition of delicately coloured scoring, with its oriental flavour, to be seen also in David, Gounod, Delibes and Bizet; at the same time it has, especially in the last two

operas, a breadth and weight that relate more closely to Meyerbeer and Verdi. His fondness for triplets and static bass lines is almost a mannerism. He took particular pains over his orchestration, which is some compensation for his lack of true melodic distinction. Indeed all his work was painstaking and disciplined, despite being accused of amateurishness by his critics. He had a sternly independent spirit and a scorn for what he saw as debased styles. As a composer he was perhaps too conscious of what he did not want to be to establish a positive individuality.

In this respect one can see Reyer's work as a critic in fundamental opposition to his work as a composer, despite the sincerity and constancy of his ideas, for which he earned the widest respect. Undoubtedly, too, his activity as a critic accounts for the small output of his later years. His articles appeared over a span of 40 years, in *Revue française, La presse, Moniteur universel, Courrier de Paris* and especially *Journal des débats*, to which he contributed articles from 1866 to 1898. Some of his articles are in his compilation *Notes de musique* (Paris, 1875), which contains an account of his journeys to Germany in 1863 and to Cairo, for *Aida*, in 1871. (After 1870 he refused to visit Germany again and he never went to Bayreuth.) A posthumous collection, *Quarante ans de musique* (Paris, 1909), contains his essays on Wagner's and Berlioz's operas, and also, interestingly, on his own. Its editor, Emile Henriot, said of Reyer the critic: 'His writing is, like his music, very literary, more literary than musical, more poetic than technical. There lies, perhaps, the source of his genius. He was more a poet than a musician, perhaps even more a painter than a poet'. He distrusted progressive ideas, especially uncritical Wagnerism. He opposed, for example, the introduction of valved brass instruments. He was extremely shy of public appearance and earned a reputation for waspishness, which Adolphe Jullien insisted was false. He was elected to the Institute in 1876 and from 1866 until his death was librarian of the Opéra, a duty to which he seems to have paid scant attention.

WORKS

all printed works published in Paris

STAGE

Maître Wolfram (oc, 1, F.J. Méry and T. Gautier), Paris, Lyrique, 20 May 1854 (*c*1855)
Sacountalâ (ballet-pantomime, 2, Gautier), Paris, Opéra, 14 July 1858
La statue (oc, 3. M. Carré and J. Barbier), Paris, Lyrique, 11 April 1861, vs (*c*1861)
Erostrate (op, 2, Méry and E. Pacini), in Ger., Baden-Baden, 21 Aug 1862; in Fr., Paris, Opéra, 16 Oct 1871; vs (1864)
Sigurd (op, 4, C. du Locle and A. Blau), Brussels, Monnaie, 7 Jan 1884 (*c*1884)
Salammbô (opera, 5, du Locle, after G. Flaubert), Brussels, Monnaie, 10 Feb 1890, vs (*c*1890)

OTHER WORKS

Sacred: Messe pour l'arrivée du Duc d'Aumale à Alger, 1847
Other vocal: Le sélam, symphonie orientale (T. Gautier), solo vv, chorus, orch, 1850, vs (1852); L'hymne du Rhin (cant., F.J. Méry), S, chorus, 1865; La Madeleine au désert (E. Blau), scène, Bar, orch, 1874, unpubd; 40 vieilles chansons du XIIe au XVIIIe siècle (1885) [collected by Reyer]; 30 mélodies in 2 collections; choruses, male vv
Orch: Marche tzigane, 1865 (1882)

HUGH MACDONALD

Reyes, José Trinidad (*b* Tegucigalpa, 11 June 1797; *d* Tegucigalpa, 20 Sept 1855). Honduran composer. He studied philosophy, theology and civil and canon law in León, Nicaragua, and was ordained a priest in 1822. From 1824 to 1828 he was active in Guatemala, after which he returned to Tegucigalpa were he remained until his death. Here he devoted himself to advancing the cultural life of Honduras. In 1834 he established its first school of music; in 1845 he was a co-founder of a literary society, Del Genio Emprendedor y del Buen Gusto, which eventually evolved into the National University. His musical output consists mainly of short works, primarily of a didactic nature on biblical themes, in the form of motets, villancicos, pastorelas and religious songs for the liturgical calendar. His compositions show a lack of melodic originality, but reveal a musical and literary sensitivity and maturity. Most creative are his pastorelas, which though based on biblical topics reveal the genuine influence of Honduran folklore; of particular note are *Albano*, *Elisa*, *Ester*, *Micol*, *Neftalia*, *Olimpia*, *Rubenia* and *Zelfa*. Reyes employed satire in his pastorelas to draw attention to current political affairs, and in the case of *Zelfa* to the status of women in his native country.

ALFRED E. LEMMON

Reyes Católicos (Sp.). *See* CATHOLIC MONARCHS.

Reymann [Reimann, Reinmann], **Matthias** (*b* Thorn [now Toruń, Poland], *c*1565; *d* ?after 1625). German lutenist and composer. He issued a collection of music in French tablature for eight-course solo lute, *Noctes musicae* (Heidelberg, 1598/*R*) and a second book, *Cythara sacra* (Cologne, 1613). At least three galliards and two *choreae* by him are found in *D-LEm* MS II.6.15 (the Długoraj Lutebook).

Noctes musicae is dedicated to four Czeykys brothers, from Bohemia, in whose care Reymann spent part of his youth. He was in Leipzig by 1582 and evidently a student of law at the university there. He is mentioned as a lutenist

and holder of minor legal positions. He may have gone to Cologne in 1612 for the publication of his second book. He is sometimes confused with Matthias Reymann (1544–97), jurist and counsellor to Rudolf II.

Noctes musicae contains no vocal intabulations, unlike many contemporary lutebooks, but includes among its 74 pieces 23 preludes, 16 fantasias, 12 passamezzo suites, 5 pavans, 10 galliards and 8 *choreae* (the table of contents is faulty). The music is remarkable for the richness and persistence of its figuration, and for the idiomatic treatment of the lute. It is much influenced by Italian forms and instrumental techniques. A tendency towards modern tonality and a harmonic style of rich variety are conspicuous features. A part of the total effect is the frequent use of the lower ranges of the instrument, making use of the two lower strings, a practice discussed in the preface. Nine of the fantasias are more restrained, being motet-like and using (generally without decoration) the successive phrases of well-known Lutheran chorales. (One must assume the composer's Protestant persuasion, especially since his second book was devoted to 152 settings, each with a variation, of psalm melodies taken from Goudimel's Psalter.) The remaining fantasias are monothematic, some with central sections in triple metre. The passamezzo suites are extensive, each with seven sections, including duple and triple metre variations, and a *ripresa*, many of which are wholly unrelated to what has gone before. The eight *choreae* also have noteworthy triple variations. Reymann came close to the use of the terms 'major' and 'minor' in describing his pieces as having 'durum' and 'molle' tonalities. He even went so far as to make use of the key of E♭ minor ('Passemezae 9: ad notam E la mi, melos molle tono ficto').

KURT VON FISCHER

Reynaldus Tenorista. Composer, possibly identifiable with Ray. de Lantins. *See* LANTINS, DE.

Reyneau, Gacian (*b* Tours, ?*c*1370; *fl* before 1429). French composer. He entered the royal chapel at Barcelona in the 1390s. His rondeau *Va t'en* (ed. in PMFC, xix, 1982) foreshadows Cordier and Dufay in its conductus-like texture and synchronized dance rhythms (6/8 alternating with 3/4). Likewise, its apparently instrumental interludes and clear sense of tonality presage typical features of the early 15th-century chanson style.

NORS S. JOSEPHSON

Reynolds, Alfred (Charles) (*b* Liverpool, 15 Aug 1884; *d* Bognor Regis, 18 Oct 1969). English composer and conductor. He studied with Humperdinck in Berlin (1904–10) before returning to England to a career in the musical theatre, at that time being reckoned the youngest opera conductor in England. He soon began composing significant incidental music, and took up the post of musical director at Nigel Playfair's Lyric Theatre, Hammersmith (1923–32); he worked in other theatres and for the BBC both before and after World War II. Reynolds was primarily a composer for the theatre. However, he also wrote a handful of independent orchestral and instrumental pieces and some 40 separate songs, ranging from cabaret ditties to *Five Centuries of Love*. These show his talent for pastiche, something he put to good use in his refurbishments with music of his own of 18th-century stage works by Arne, Dibdin, Linley and others. *Derby Day* (with writer A.P. Herbert) was in the tradition of Gilbert and Sullivan, but updated; *1066 and All That*, based on a famous historical spoof, has remained one of his most popular works. His beautifully crafted, fresh invention, popular between the wars, displays an individuality occasionally outweighed by charm. Except in the cabaret songs the urbane Reynolds, unlike his contemporary Eric Coates, made little attempt to absorb the syncopated style of the 1920s.

WORKS
(*selective list*)

Stage: Love in Village (ballad op, after Arne etc.), 1923; Lionel and Clarissa (ballad op, after Dibdin etc.), 1924; The Duenna (ballad op, after Linley etc.), 1924; The Siege of Belgrade (ballad op, after Storace etc.), 1926; Riverside Nights (revue), 1926 [incl. The Policeman's Serenade (A.P. Herbert), later perf separately]; Midnight Follies (revue), 1927; The Fountain of Youth (comic op, 1, W. Graham Robertson), 1931; Derby Day (comic op, 3, Herbert), 1932; 1066 and All That (musical comedy, R. Arkell), 1934; The Bookies' Opera (A.J. Talbot)
Other ballad ops and short ops, some for radio
Incid music: The Toy Cart, 1918; Leatherface, 1922; The Beaux Stratagem, 1927; The Taming of the Shrew, 1927; Much Ado About Nothing, 1927; The Merchant of Venice, 1927; She Stoops to Conquer, 1929; Marriage à la Mode, 1930; The Lady of the Camellias, 1930; Swiss Family Robinson, 1938; Alice in Wonderland and Through the Looking Glass, 1947
Orch: A Fairy Tale Ov, 1922; Ov for a Comedy (Humoresque)
Inst: Hornpipe, db, pf, 1927; March for Inns of Court Regiment, 1954; Drink to me only (arr., trad.), 4 vc
*c*40 songs, incl. Progress (scena, H. Farjeon), 1909: She-Shanties (Herbert), 1927; Five Centuries of Love (C. Bax), 1946; Have You Seen but a White Lily Grow? (B. Jonson); March (W. Wordsworth)

PHILIP L. SCOWCROFT

Reynolds, Anna [Ann] (*b* Canterbury, 4 Oct 1931). English mezzo-soprano. She studied in Rome and made her operatic début in Parma (Suzuki, 1960). In Italy she subsequently sang a wide range of roles, including Purcell's Dido, Rossini's Tancredi, Elizabeth I (*Maria*

Stuarda) and Charlotte (*Werther*), indicating the versatility of her style and stage presence. Her first opera appearance in England was at Glyndebourne in 1962, as Geneviève in *Pelléas et Mélisande*; her other Glyndebourne roles included Ortensia in Rossini's *La pietra del paragone*. At Covent Garden she played Adelaide (*Arabella*, 1967) and Andromache (Tippett's *King Priam*, 1975). As a Wagnerian mezzo-soprano she took part in the Karajan *Ring* cycles, at Salzburg and the Metropolitan; from 1970 to 1975 she regularly appeared at Bayreuth. A concert singer of great distinction, she was a notable interpreter of the Angel in *The Dream of Gerontius* and the alto solos in *Das Lied von der Erde*. Her many recordings include a collection of Mahler's songs, Schumann's Eichendorff *Liederkreis*, and Bach cantatas, in which her exemplary line and expressive tone were at their most admirable.

ALAN BLYTH

Reynolds, Maria Hester. *See* PARK, MARIA HESTER.

Reynolds, Roger (Lee) (*b* Detroit, 18 July 1934). American composer. A student of science and music at the University of Michigan, he studied composition with Finney and Gerhard (BM 1960, MM 1961). He was a co-founder (with Ashley and Mumma) of the ONCE group in Ann Arbor, and was active in the organization of the first three festivals (1961–3). After living in Europe (1962–6) he accepted a fellowship from the Institute of Current World Affairs which took him to Japan for the next three years. There, as he had done in Europe, he organized highly successful contemporary music concerts, including the intermedia series Cross Talk. In 1969 Reynolds returned to the USA to become professor of music at the University of California, San Diego, where he founded the Center for Music Experiment in 1972. He also held visiting professorships at the University of Illinois, Yale University, Amherst College and at CUNY, and in 1989 was awarded the Pulitzer Prize in Music for *Whispers Out of Time*. His work has been featured at all major international festivals, and he has received commissions from, among others, Lincoln Center, the Library of Congress, Suntory Hall, Tokyo, the Koussevitzky, Fromm and Rockefeller foundations, the BBC, Radio France and IRCAM.

Reynolds's output encompasses not only traditional instrumental and vocal forces deployed in a wide variety of combinations, but also computer-processed sound (usually combined with performers) employed to augment his music's formal and colouristic aspects. His extensive use of electro-acoustic resources is not as much aimed at presenting new sounds as making architectonic use of physical space: multi-channel presentation and transferal of sounds create a multi-dimensional audio experience scarcely attainable with traditional forces. Reynolds's aesthetic takes its point of departure from sources as diverse as the American Experimental tradition (especially Cage, Ives and Varèse) and, through his teachers Finney and Gerhard, the Second Viennese School, while his long friendships with Takemitsu and Xenakis testify to his reaching beyond the boundaries of his West European and American patrimonies. Literature and the visual arts have long been stimulants to his imagination, whether as in the use of texts of Beckett, Borges, Ashbery and Kundera for vocal settings and as the inspiration for instrumental glosses (as in *Whispers Out of Time*, 1988) or Rembrandt's and Picasso's self-portraits as catalysts for his *Symphony* [*The Stages of Life*] written in 1991–2. Prominent in his thinking during the 1990s has been a concern with myth and cultural archetypes, as represented in his string quartet *Ariadne's Thread* (1994) and *The Red Act Arias* (1997) based on plays of Aeschylus and Euripides.

In its sweep and ambition Reynolds's music represents a continuation of the idealism and imaginative vitality of the 1960s carried forward to the present day. While planned, complex and demanding, its real accomplishment lies in its mode of addressing the connections that exist between works, people, things and ideas through a sonic art that is both generously scaled and infinitely nuanced.

Reynoso, Joseph María. *See* REINOSO, JOSEPH MARÍA.

Reyong [réong]. Gong-chime of Bali and Lombok, comprising 4 to 12 small gongs and used for melodic figurations. In an archaic form of the *gamelan angklung* a pair of *reyong* is still used, each consisting of two small bossed gongs loosely attached to either end of a wooden bar that rests across the player's lap. Thus four differently tuned small gongs are provided. This type of *reyong* is depicted on the 14th-century East Javanese Panataran Temple. More commonly, however, gongs are mounted horizontally in a frame. The contemporary *gamelan angklung* usually has a *reyong* of eight kettles, while the *reyong* of the *gamelan gong gede* has four to six kettles. The largest *reyong* (usually 12 kettles) is found in *gamelan gong kebyar* and is played by four musicians in an interlocking style. Kettles from *reyong* are used in the processional *balaganjur* ensemble, held individually and played in hocket (*see also* INDONESIA, §II, 1(ii)(d)).

RUBY ORNSTEIN/R

Reys [Reis, de Rais, de Reiz, de Restz, de Retz, du Retz, Polak], **Jakub** [Jacob] [Jacques le Polonois] (*b* Poland, *c*1550; *d* Paris, *c*1605). Polish lutenist and composer active in France. From archival documents and printed references it is now established that Jakub Reys and Jacques le Polonois were the same person. In 1574 he went to France in the retinue of Henri III, remaining there as lutenist and *valet de chambre ordinaire du roi* until his death. He was married in 1585 to the daughter of a merchant of Blois. In many contemporary references he is praised as one of the foremost lutenists of the period; his invention of a new style of playing is often alluded to, although precisely what this style was is not known.

Reys's skill as a performer is reflected in the many technical difficulties in his extant works. Some long passages and even whole compositions show the emergent major–minor tonal system. Even in largely imitative polyphonic compositions, the leading melodic line is clearly shaped by considerations of harmony and colour. In many of the preludes and fantasias the form is shaped by the division of the work along numerical-proportional lines; the resulting large-scale sections are marked off from each other by the use of distinctive cadences or conspicuous imitative procedures, or by changes in texture, tonality, and so on. The composer used a variety of techniques within the sections, ranging from strict imitation to purely chordal structures. The most interesting are techniques falling between these two poles, using elements of both homophonic and polyphonic writing, and also his use of rather short constructions, clearly foreshadowing the *style brisé* and *préludes non mesurés*. His dance music is generally closely linked to the choreography of the dances themselves, for example using hemiolas in such forms as the sarabande and courante, and reflecting the dance figure of the volte by an accumulation of melodic leaps. Most of the dances exhibit the tonal structure that was to be the principle of construction for the next two centuries: in the major keys, modulation to the dominant, and in the minor keys, modulation to the relative major. According to Praetorius, two types of courante were designated by the names of their composers, the 'Courante de Perrichon', and the 'duret'; the latter may have taken its name from a variant form of Reys's name, Du Ret. His galliards were especially admired by his contemporaries; his sarabande, consisting of a theme and seven variations, is particularly interesting, as it may be the earliest known example of this dance. (For further discussion see P. Poźniak: Introduction to *Jakub Polak (Jacob Polonois): Collected Works*, Kraków, 1993)

WORKS

all for lute

Editions: *Jakub Polak (Jacob Polonois): Collected Works*, ed. P. Poźniak (Kraków, 1993)

19 fantasias, 15 preludes, intabulation of Susanne un jour (not based on a known model), variations on Une jeune fillette, ballet, branle, 8 courantes, 4 galliards, sarabande, 8 voltes, 1603^{15}, 1610^{23}, 1612^{18}, 1615^{24}, 1617^{26}, *D-BAUk*, *Ngm*, *W*, *GB-Cfm*; anonymous versions or variants in 1603^{15}, 1615^{24}, E. Mertel: Hortus musicalis (Strasbourg, 1615), 1619^{17}, *CZ-Pnm*, *D-Hs*, *LEm*, *GB-Cfm*, *HAdolmetsch*, *I-COc*

DOUBTFUL WORKS

2 fantasias, 4 pieces based on Lutheran hymns, branle, volte, 1603^{15}, 1615^{24}, *D-W*

PIOTR POŹNIAK

Reyser, Georg (*fl* 1468–*c*1504). German printer. With his brother Michael he began printing at Strasbourg, where in 1471 he became a citizen and member of the printers' guild. When he moved to Würzburg in 1479 he was awarded a monopoly on liturgical books by Bishop Rudolph of Scherenberg (1446–99), renewed by Bishop Lorenz von Beba (1495–1519). His printed music books for the Würzburg diocese include at least eight missals, a giant three-volume gradual and antiphonal, an agenda and a vigil, besides a missal (1482) for the Mainz diocese. Printed in large folio books, black notes on red staves, his two gothic plainchant types reveal masterful design from the first of 1481 to the improved and more elaborate fount of the *Graduale* of 1496–9.

After working with Georg, Michael Reyser established a branch in 1483/4 at Eichstätt, where he used a new gothic plainchant type for the 1488 *Obsequiale eystettense*. His three editions of the *Missale eystettense* contain no printed music, but he printed a separate edition of the music of the prefaces for Eichstätt (*D-Nla* Ka 2).

Reyzen [Reisen; Reizen], **Mark (Osipovich)** (*b* Zaytsevo, Dnepropetrovsk province, 21 June/3 July 1895; *d* Moscow, 25 Nov 1992). Ukrainian bass. He studied at the Khar'kiv Conservatory and made his début with the Khar'kiv Opera as Pimen in *Boris Godunov* in 1921. In the following seasons he appeared in a wide variety of roles, including Méphistophélès in *Faust*, Saint-Bris in *Les Huguenots*, Ruslan and Farlaf in *Ruslan and Lyudmila* and Dosifey in *Khovanshchina*. From 1925 to 1930 he was a member of the Leningrad Opera, where in 1928 he sang his first Boris. He then became principal bass at the Bol'shoy, Moscow, remaining there for the rest of his long career. He also sang in Germany, Hungary and France, with appearances at the Paris Opéra and at Monte Carlo in *Mefistofele* and *Il barbiere di Siviglia*. One of the greatest of Russian singers, he had a voice of exceptional beauty, scrupulously used and so well preserved that he could sing at the Bol'shoy to celebrate his 90th birthday. He was also an imposing figure and an accomplished actor. His recordings, dating from 1929 to 1980, include complete performances of *Boris Godunov*, *Khovanshchina* and *Mozart and Salieri*, together with an impressively wide repertory of songs, mainly Russian.

J.B. STEANE

Rezende, Marisa (Barcellos) (*b* Rio de Janeiro, 8 Aug 1944). Brazilian composer and pianist. She attended the Federal University of Pernambuco, studying composition (bachelor's degree 1974), then piano with Erno Daniel (MA 1976), and continued her composition studies with Peter Racine Fricker at the University of California at Santa Barbara (PhD in composition, 1985). From 1978 to 1987 she taught at the Federal University of Pernambuco. Since 1987 she has been a full professor of theory and composition at the Federal University of Rio de Janeiro, where she also leads the Grupo Música Nova, dedicated to Brazilian contemporary music.

Rezende participates regularly in contemporary music events in Brazil and abroad. In 1998 her compositional output comprised 36 works for traditional instruments (chamber ensembles, orchestra, solo voices with instrumental accompaniment, a few choral works, piano pieces). In the mid-1990s she wrote music for multimedia collage environments. On occasions she has explored the rhythmic patterns of the Brazilian samba, as, for example in her chamber work *Ginga* (1994). Her orchestral works have been performed by Brazilian orchestras, the Da Capo Players (New York) and the Lontano Ensemble (London).

GERARD BÉHAGUE

Rezitativ (Ger.). *See* RECITATIVE.

Reznicek, Emil Nikolaus von (*b* Vienna, 4 May 1860; *d* Berlin, 2 Aug 1945). Austrian composer and conductor. He read law at the University of Graz from 1878, studying music meanwhile with W.A. Rémy. After abandoning law, he completed his studies at the Leipzig Conservatory with Reinecke and Jadassohn. In 1882 he became répétiteur at the Graz opera, and from 1884 worked as a theatre conductor in Zürich, Stettin, Jena, Bochum, Berlin and Mainz, before taking up the post of house composer at the Prague German Theatre in 1886. He then became military Kapellmeister with the 88th Infantry Regiment in Prague, a post he held until 1894. That year his best-known opera, *Donna Diana*, was produced in the same city; Mahler conducted the Viennese première in 1904. After working as a court Kapellmeister in both Weimar (1896) and Mannheim (1896–9), he settled in Berlin (1902), where he established the Philharmonic Chamber Concerts and taught briefly at the Klindworth-Scharwenka Conservatory. From 1906 to 1909 he was conductor of both the Warsaw Opera and the Warsaw Philharmonic Society. He was a popular conductor in Russia, and in 1907 conducted two concerts in London, introducing his Second Symphony in B♭.

From 1909 to 1911 Reznicek was conductor of the Komische Oper, Berlin. He was elected to the Berlin Academy of Arts in 1919 and the following year was appointed to the faculty of the Berlin Hochschule. His resignation from the Hochschule in 1926, though officially on the grounds of ill health, was due more to his weariness of teaching untalented students. In 1932 Strauss and Reznicek formed the Ständiger Rat für Internationale Zusammenarbeit der Komponisten to protect the interests of tonal composers. When the Nazis tried to take over the group in 1942, Reznicek severed his relationship with it. During the war, the Propaganda Ministry confiscated his musical manuscripts; only 14 of the original 80 were returned to the composer's daughter in 1946, and, while some have since appeared at auction, many remain missing.

Reznicek's music has both variety and originality of character. A hallmark of Reznicek's style was his use of unexpected and unusual transitional structures and instrumentation along with almost a school mastery of counterpoint. Examples of his best work are found in his *Vier Bet- und Bussgesänge* and his Fourth Symphony.

WORKS
(*selective list*)

STAGE

Op: Die Jungfrau von Orleans (3, Reznicek, after F. von Schiller), 1886; Satanella (2, Reznicek), 1887; Emerich Fortunat (Reznicek), 1888; Donna Diana (3, Reznicek, after A. Moreto y Cavana: *El desdén con el desdén*), 1894, rev. lib 1933, ov. rev. (1938); Till Eulenspiegel (2, Reznicek, after J. Fischart: *Eulenspiegel Reimensweiss*), 1900, rev. 1939; Ritter Blaubart (3, H. Eulenberg), 1917; Holofernes (2, Reznicek, after F. Hebbel: *Judith und Holofernes*), 1922; Satuala (4, R. Laukner), 1927; Benzin (2, after P. Calderón de la Barca), 1929; Spiel oder Ernst? (1, P. Knudsen), 1930; Der Gondoliere des Dogen (1, Knudsen), 1931; Das Opfer (P. Knudsen), 1932

Operetta: Die verlorene Braut, 1909–10; Die Angst vor der Ehe (L. Taufstein, E. Urban), 1913

Incid music: Ein Traumspiel (A. Strindberg), 1915; Nach Damaskus III (Strindberg), 1916; Die wunderlichen Geschichten des Kapellmeisters Kreisler (C. Meinhard, R. Bernauer), 1922; Polizei (Eulenberg), 1926

rGyal-mtshan, Mig-dmar (*b* Rin-spungs, 1883; *d* dGa'-ldan, 1933). Tibetan *lha-mo* (musical theatre) actor of 'old' (pre-communist) Tibet. He was trained from childhood by A-lce Dvangs-bzang and became the star of the newly reformed sKyor-mo-lung troupe and then its teacher. The power of his voice was apparently so amazing that people preferred not to be near him when he sang. He was an expert in all the repertory and modified the style by adding ornamental *mgrin-khug* at the beginning of the operatic songs. He also devised a teaching method for this art of singing. He is said to have lacked humility; his behaviour attracted both fame and trouble to the troupe, which was fined for his eccentricities. He married in southern Tibet and founded a famous local opera troupe there, in which the father of Nor-bu Tshe-ring was trained and identified as a future sKyor-mo-lung artist.

ISABELLE HENRION-DOURCY

R.H. Right hand (also Ger. *rechte Hand*).

Rhabanus Maurus. *See* HRABANUS MAURUS.

Rhapsody (Fr. *rhapsodie*; Ger. *Rhapsodie*; It. *rapsodia*). A historically rich term deriving from the Greek *rhapsōdos*, a reciter of epic (usually Homeric) poetry whose performances were declaimed without instrumental accompaniment. The term had been assimilated into European parlance by the 16th century, denoting not only an epic poem or an excerpt from one, but also a miscellaneous collection of writings and, later, an extravagant effusion of sentiment or feeling. In 18th-century Germany and England, literary rhapsodies (often fragmentary or open-ended in construction, by such authors as Klopstock, Gerstenberg and Herder) became linked with music, as in C.F.D. Schubart's *Musicalische Rhapsodien* (1786), a collection of songs for voice(s) and keyboard accompaniment, interspersed with a few solo keyboard pieces. Some contemporary songs with this title are lighthearted, for example William Reeve's *The Huntsman's Rhapsody, or The Delights of the Field* (1794), while J.F. Reichardt's *Rhapsodie* (1792) is poignant and harmonically daring, setting an extract from Goethe's *Harzreise im Winter* and later serving as a model for Brahms's Alto Rhapsody op.53 (1869).

Among the first rhapsodies for solo piano was Gallenberg's op.5 (1802), but Tomášek's opp.40 and 41 (both 1810) were more influential, inspiring a whole generation of keyboard rhapsodies during the first half of the 19th century. Ternary in form, with contrasting middle parts, Tomášek's rhapsodies conveyed the impassioned, agitated character usually associated with the genre, as well as more elegiac or aspirational moods, an improvisatory spirit often shaping the music.

In the hands of composers such as Voříšek, Dreyschock, Seyfried, Moscheles, Merkel, Grillparzer and others, the rhapsody became a mainstay of amateur *Hausmusik*, a watered-down version of the technically more ambitious 'effusions' churned out by contemporary keyboard virtuosos. Just like the many odes, novelettes, romances, idylls, sonnets, dithyrambs and eclogues written for solo piano at the time, the rhapsody offered an instrumental counterpart to its eponymous literary genre, in a typically early Romantic attempt to capture poetic sentiment in sound alone.

Not until late in the century did the rhapsody develop its more enduring identity as a large-scale nationalistic 'epic' for orchestra, a change instigated principally by Liszt. From his *Magyar dallok/Ungarische National-Melodien* and their successors, six *Magyar rhapsodiák/Rhapsodies hongroises*, emerged the 19 Hungarian Rhapsodies for piano (nos.1–15, 1846–7; nos.16–19, 1882–5) that catapulted the genre from amateur to virtuoso status. Attempting nothing less than an 'épopée fantasque, semi-ossianique et semi-bohémienne', these works cemented the genre's longstanding nationalistic and epic associations, their orchestral settings wielding particular influence on later rhapsodies (Brahms's 'retrospective' op.79 and op.119 no.4 for piano are notable exceptions). Composers of orchestral rhapsodies include Dvořák, Lalo, Mackenzie, Chabrier, Albéniz, Glazunov, Saint-Saëns, Humperdinck, Stanford, Enescu, Bartók, Vaughan Williams, Delius, Ravel, Casella, Janáček, Ireland, Rachmaninoff, Martinů, Panufnik and Sessions, as well as dozens of lesser figures. Among rhapsodies for smaller ensembles are those of Debussy (alto saxophone and piano), Bliss (chamber and voices), Rachmaninoff (two pianos) and Gershwin (jazz band and piano), while more recently the genre title has again been employed for 'popular' purposes (e.g. rhapsodies for brass band, and Freddie Mercury's *Bohemian Rhapsody*). To try to find features common to all these rhapsodies would be futile, although many do possess an inspired, rapturous character often expressed in an idiosyncratic, even improvisatory form.

JOHN RINK

Rhau [Rhaw], **Georg** (*b* Eisfeld an der Werre, Suhl, 1488; *d* Wittenberg, 6 Aug 1548). German publisher. Working in Wittenberg, removed from the main centres of music publication, he became one of the most important music publishers, particularly for the Reformation church. He studied at the University of Wittenberg (1512–14), and then worked for four years in the publishing house of Johann Rhau-Grunenberg (presumably his uncle). In 1518 he left Wittenberg to become Kantor of the Thomasschule and Thomaskirche in Leipzig, a position he held until at least 1 May 1520. On 18 September 1518 he also joined the faculty of the University of Leipzig, lecturing in music theory.

Rhau may have been associated with the circle of theologians surrounding Luther in Wittenberg; as a resident of that city at the time of the nailing of the 95 theses, he was certainly aware of Luther's position. In June 1519 he wrote the *Missa de Sancto Spirito* for the service at the Thomaskirche which marked the opening of the disputations between Luther and Eck. This implied no particular sympathy towards Luther's position, since such activity would have been normal to his duties as Kantor of the cathedral church. However, the growing enmity towards the Wittenbergers and Rhau's apparent sympathies jeopardized his position at the Thomaskirche, and he had to leave Leipzig in 1520. He moved to Eisleben, where he accepted the post of *Ludimagister* of one of the Winkelschulen of the city. In 1521 or 1522 he became a teacher at Hildburghausen and in 1523 returned to publishing in Wittenberg, where he remained until his death.

Rhau's publishing activities reflected his close relationship to the new church. Publications to meet the literary and musical needs of the church appeared in large quantities, including many books on theology, biblical exegeses written by Luther, Melanchthon and Bugenhagen, editions of Luther's Catechism, his sermons, the Augsburg Confession and doctrinal treatises. The degree and extent to which Rhau's publications served the needs of early Protestantism is also reflected in the esteem accorded him by his contemporaries.

No compositions of Rhau are known, but his appointment as Kantor at the Thomaskirche implies that he was a composer as well as performer. Even as late as 1548, he assumed direction of the electoral choir in Torgau, succeeding Johann Walter (i), which suggests his continuing ability and interest in performance.

Rhau's first publications were directed towards theory. In 1517 he published the first part of his own treatise, *Enchiridion utriusque musicae practicae*, devoted to plainchant (*musica choralis*). The second part, *Enchiridion musicae mensuralis*, appeared in 1520, when Rhau was in Leipzig. Although neither portion of the treatise was innovatory, the work enjoyed considerable success, appearing in successive editions until 1553. Beginning in 1517, he also brought out publications or new editions of

Georg Rhau: woodcut from 'Postremum vespertini officii opus' (Wittenberg, 1544)

theoretical works by Martin Agricola, Nicolaus Listenius, Venceslaus Philomathes, Johann Galliculus and Johann Spangenberg.

In 1538 Rhau's interest turned chiefly to the publication of polyphonic music: he issued 15 major collections between 1538 and 1545, ranging from very simple works to those representative of the most highly developed Franco-Flemish polyphony, providing an extensive repertory of music for both Mass and Vespers. The *Opus decem missarum* furnished settings of the Ordinary of the Mass in general, while the *Officia paschalia, de resurrectione et ascensione Domini* and the *Officiorum . . . de nativitate, circumcisione, epiphania Domini, et purificationis, etc.* supplied settings of both Ordinary and Proper, as complete services, for the Mass on the high feasts from Christmas to Purification and from Easter to Ascension respectively. The *Selectae harmoniae quatuor vocum de passione Domini* provided similar works, as well as appropriate motets, for Lent.

Three of the collections were for Vespers. The *Vesperarum precum officia* included complete settings of the choral portions for each day of the week; the *Sacrorum hymnorum* contained 134 settings of vesper hymns; and the *Postremum vespertini officii opus* had 25 *Magnificat* settings. Three other collections provided settings by single composers of specific portions of Vespers: the *Novum ac insigne opus musicum* with settings of antiphons by Sixt Dietrich; the *Responsorum numero octoginta* with two volumes of responsories by Balthasar Resinarius; and the *Novum opus musicum* with three volumes of hymns by Sixt Dietrich.

Of the remaining volumes published by Rhau, four comprised materials for more general use within the school. The *Symphoniae iucundae* contained 52 motets, many of which were appropriate for use in the service. The *Tricinia* and *Bicinia*, however, contained secular materials only, selected for their artistic merit. The final volume, the *Wittembergisch deudsch geistlich Gesangbüchlein*, constituted a new and enlarged edition of Johann Walter's *Geystliches gesangk Buchleyn* which had appeared in earlier editions (1524, 1525 and 1535) from other presses, but which now, because of its continuing usefulness, was issued by the press which had come to represent the very centre of publishing activities for the new church.

Rhau's musical publications as a whole present compositions which reflect procedures traditionally associated with settings of liturgical texts at the beginning of and just before the period of the Reformation, as seen in the works of the generation of Obrecht and Josquin. This generation is rather well represented in the publications. However, there is also a fairly extensive literature representative of a younger generation of German composers who were associated directly with the new church. The publications are important, not only for the general quality and accuracy of the musical printing, but also for the preservation of a repertory useful for the study of the early Reformation worship service, its music, and the conservative attitudes towards musical style held by its composers.

WRITINGS

Enchiridion utriusque musicae practicae (Wittenberg, 1517, 2/1518 as *Enchiridion musices ex variis musicorum libris depromptu*, 9/1538/*R*1951 in DM, 1st ser., i, 13/n.d., after 1553)

Enchiridion musicae mensuralis (Leipzig, 1520, 10/1553)

PUBLICATIONS

all published in Wittenberg unless otherwise stated

VICTOR H. MATTFELD

Rheims (Ger.). *See* Reims.

Rheinberger, Joseph (Gabriel) (*b* Vaduz, Liechtenstein, 17 March 1839; *d* Munich, 25 Nov 1901). German composer, organist, conductor and teacher. He was the son of the Prince of Liechtenstein's treasurer Johann Peter Rheinberger and Elisabeth Carigiet, who came from the Rhaeto-Romanic canton of Grisons. The first to discover his talent was the organist and teacher Sebastian Pöhli, from whom he had his first lessons at the age of five. He made such startling progress that at seven he was organist in Vaduz; he also began to write music, including a three-part mass with organ accompaniment. In 1848 he was taught harmony, the piano and the organ by the choir director of Feldkirch, Philipp Schmutzer, who also introduced him to the works of Bach and the Viennese Classical composers. Although by this time he was making frequent public appearances as a pianist, it was only through pressure and persuasion from the composer Nagiller that the boy's father decided to send him for further study to Munich, where he moved in 1851, making it his permanent home.

At the Munich Conservatory, where Franz Hauser was director, Rheinberger studied theory with J.H. Maier, the organ with J.G. Herzog and the piano with J.E. Leonhard; later he also had occasional private instruction from Franz Lachner. Even in his student days (up to 1854) his rapidly developing talent, as an organist and in such techniques as counterpoint, fugue and score-reading, won much admiration. K.F.E. von Schafhäutl in particular had an important and beneficial influence on the intellectual and spiritual growth of the young artist. As early as 1853 Rheinberger was employed as an organist at a number of churches and also earned his living as a private music teacher. Above all, he devoted himself with great zeal to composition, and in the next few years he wrote well over 100 works of the widest variety; but he was critical of all these early works and did not release them: his op.1, four piano pieces, appeared only in 1859. That year he was taken on to the staff of the conservatory, first as a piano teacher and then in theory subjects as well; in addition he became organist at St Michael and soon achieved some notable early successes as a composer with a *Stabat mater* and incidental music to Calderón's *El mágico prodigioso*. In 1864 he succeeded Perfall as conductor of the Munich Oratorienverein, a post he held until 1877; during this period he proved himself an able choral conductor, especially of works by Handel. He also worked for a time as a coach at the court opera and thus witnessed at close quarters the events and feuds surrounding Richard Wagner's stay in Munich, which culminated in the première of *Tristan und Isolde*. In 1867 he became a professor at the conservatory, where he remained until his death a highly revered, much sought-after and increasingly renowned teacher. Bülow, who was a friend of his and also did much to promote his compositions, said 'Rheinberger is a truly ideal teacher of composition, unrivalled in the whole of Germany and beyond in skill, refinement and devotion to his subject; in short, one of the worthiest musicians and human beings in the world'.

In 1867 Rheinberger married his former pupil Franziska von Hoffnaass (1832–92), a socially influential and widely cultured woman who was also a gifted poet (Rheinberger set much of her poetry). Her (unpublished) diary is of biographical as well as contemporary historical interest (*D-Mbs* Cgm 6338). Rheinberger was now frequently plagued by ill-health; he nevertheless continued to compose indefatigably, enjoying the company of a few valued friends, as befitted his retiring, somewhat melancholy nature. His career was accompanied by many, if not all spectacular, successes which brought him numerous honours and marks of recognition. In 1877 he was appointed Hofkapellmeister and thereby acquired considerable influence on the cultivation of sacred music. In 1894 he was ennobled and awarded the title of privy

councillor; in 1899 the University of Munich awarded him an honorary doctorate. He was also a member of the Berlin Royal Academy (1887) and a corresponding member of the Paris and Florence academies. He died a few weeks after his retirement. His grave in Munich was destroyed during World War II and since 1950 he has lain buried in his birthplace. His entire artistic legacy went to the Bayerische Staatsbibliothek.

Rheinberger's lasting fame resulted primarily from his teaching. Many important musicians and musical scholars were the product of his rigorous schooling, including Humperdinck, Wolf-Ferrari, Thuille, Sandberger, Kroyer, Trunk, the Pembaurs, Schmid-Lindner, Buonamici, Horatio Parker, G.S. Chadwick and Furtwängler. At a time when young people were pressing towards new goals with a thirst for freedom and a belief in progress, he imparted to his students a sound and extensive knowledge based on the Classical tradition. It was typical of his generous nature that, although he himself disliked the work of Wagner and Liszt and was no partisan of the New German School, he never tried to influence the young artists in his care through his personal views. Bonds with tradition are also characteristic of Rheinberger's work as a composer, which derives from Bach, Mozart and the middle-period Beethoven as well as other early Romantics; he consciously remained aloof from the new currents that developed in the mid-19th century. The strength of his works, in every sphere, lies in the indisputable mastery and the planned coherence of his compositional style, which is imbued with the spirit of polyphonic thinking rather than compelling inventiveness or vivid conception. The survival of his work is thus prejudiced not so much by an absence of links with the musical development of his time as by a certain academic approach and want of lively intensity of expression. Nevertheless, even his best works are only rarely heard: his work remains valued chiefly by organists and Catholic choirmasters. Certainly he produced his most outstanding and highly individual work in the 20 organ sonatas, which are rich in artistry and ideas, but he also made a significant contribution to sacred music, especially in the works written after 1877, in which he went his own way in contrast to the stylistic inflexibility of followers of the Cecilian movement. The wide range of his compositions offers many worthwhile opportunities for the rediscovery of his work.

WORKS

MS collections in D-DO, HEms, Mbs, Mk, Mm, OEB, Rp, BG

printed works first published in Leipzig

Edition: *Joseph Gabriel Rheinberger: Sämtliche Werke*, ed. Josef-Rheinberger-Archiv (Stuttgart, 1988–)

INSTRUMENTAL

Orch: Wallenstein, sym. poem, op.10; Der Widerspenstigen Zähmung, ov., after W. Shakespeare, op.18; Sym. no.2, F, op.87; Pf Conc., A♭, op.94; Demetrius, ov., after F. von Schiller, op.110; 2 org concs., F, op.137, g, op.177; Akademische Festouvertüre in Form einer Fuge mit sechs Themen, op.195

Chbr without pf: Nonet, fl, ob, cl, bn, hn, vn, va, vc, db, op.139; Str Qnt, a, op.82; 3 str qts, c, op.89, g, op.93, F, op.147

Chbr with pf: Qnt, C, op.114; Qt, E♭, op.38; 4 trios, d, op.34, A, op.112, B♭, op.121, F, op.191a; 2 vn sonatas, E♭, op.77, e, op.105; Cello Sonata, C, op.92

Pf: 4 sonatas, 'Symphonic', C, op.47, D♭, op.99, E♭, op.135, 'Romantic', f♯, op.184; numerous other pf pieces, incl. Studien über ein Thema von Händel, op.45

Pf 4 hands: Tarantella, op.13; Aus den Ferientagen, op.72; Fantasia, op.79; Sonata, c, op.122

2 pf: Duo, op.15; arr., Bach: Goldberg Variations, ed. M. Reger (1915)

Org: 20 sonatas, c, op.27, 'Fantasie-Sonate', A♭, op.65, 'Pastoral-Sonate', G, op.88, a, op.98, f♯, op.111, e♭, op.119, f, op.127, e, op.132, b♭, op.142, b, op.146, d, op.148, D♭, op.154, E♭, op.161, C, op.165, D, op.168, g♯, op.175, 'Fantasie-Sonate', B, op.181, A, op.188, g, op.193, 'Zur Friedensfeier', F, op.196; other works, org solo; Suite, org, vn, vc, op.149; 2 suites, vn, org, opp.150 and 166

VOCAL

Stage: Scherz, Liszt und Rache (komische Oper, 4, J.W. von Goethe), 1854, ?unperf.; Die Wette (ob, 1), 1856, ?unperf.; Die sieben Raben (dramatisiertes Märchen, 3, F. Bonn), op.20, 1860–63, rev. 1868, Munich, Hof, 23 May 1869, vs (Leipzig, 1869); Der arme Heinrich (komisches Spl for children, Bonn), op.37, 1863, unperf., vs (Nuremberg and Munich, 1870); Türmers Töchterlein (komische Oper, 4, M. Stahl), op.70, Munich, Hof, 23 April 1873, vs (Bremen, 1874); Das Zauberwort (Spl for children, 2, F. von Hoffnaass), op.153, 1889, vs (Leipzig, 1888); Lucius Aula (grosse Oper, G.A. Hemmerich), inc., autograph lost, lib of Act 1 in *D-Mbs*

Masses: 1v, org, op.62; d, 4vv, op.83; E♭, 8vv, op.109; SS Trinitatis, F, 4vv, op.117; In nativitate Domini, A, 3 female vv, org, op.126; SS Crucis, G, 4vv, op.151; SS Reginae Rosarii, E♭, 3 female vv, org, op.155; f, 4vv, org, op.159; C, solo vv, chorus, orch, op.169; B♭, male vv, org/wind insts, op.172; Sincere in memoriam, g, 3 female vv, org, op.187; F, 4 male vv, org, op.190; Misericordias Domini, E, chorus, orch, op.192; a, chorus, orch, frag., completed by L.A. Coerne as op.197

Other sacred: 3 Requiem, b♭, op.60, E♭, op.84, d, op.194; 2 Stabat mater, solo vv, chorus, orch, op.16, chorus, str orch, org, op.138; Das Töchterlein das Jairus, (children's cant.), op.32; Christophorus (legend, F. von Hoffnaass) solo vv, chorus, orch, op.120; Der Stern von Bethlehem (Christmas cant., Hoffnaass) solo vv, chorus, orch, org, op.164; hymns, motets, sacred songs

Secular: Das Tal des Espingo (P. Heyse), ballad, 4 solo vv, male chorus, orch, op.50; Toggenburg (cycle of romances, Hoffnaass), solo vv, chorus, orch, op.76; Klärchen auf Eberstein (Hoffnaass), ballad, solo vv, chorus, pf, op.97; Wittekind (F. Halm), ballad, male vv, orch, op.102; Die Rosen von Hildesheim (Hoffnaass), ballad, male vv, brass insts, op.143; Montfort, eine Rheinsaga (Hoffnaass), solo vv, chorus, orch, op.145; Vom goldenen Horn, Turkish Liederspiel, solo vv, chorus, pf, op.182; other choral songs, ballads; *c*70 songs, 1v, pf, various op. nos.; 30 Children's Songs, op.152

ANTON WÜRZ/SIEGFRIED GMEINWIESER

Rheineck, Christoph (*b* Memmingen, 1 Nov 1748; *d* Memmingen, 29 July 1797). German composer. He received musical training during his youth, but his father decided that he should become a merchant. After practising this trade in St Gallen (1768), he settled in Lyons (1769), where he composed and successfully presented two *opéras comiques*, *Le nouveau Pygmalion* and *Le fils reconnoissant* (1774–5); the latter attracted the attention of Turgot, the French minister of finance, who promised

to obtain for him a position in Paris. After a preliminary visit in 1775, however, Rheineck arrived in Paris to find Turgot in disgrace and unable to fulfil his promise. He returned to Memmingen, where he became proprietor of the inn Zum weissen Ochsen. There he frequently presented concerts in which he participated as singer, pianist and clarinettist, and which featured such eminent virtuosos as Clementi and Vanhal. In 1776, for his own marriage, he composed a wedding cantata to a text by his friend and admirer C.F.D. Schubart, who conducted the performance. Until 1790 he also served as music director of the Martinskirche.

Rheineck was a successful lied composer, and was particularly adept at setting humorous and folklike poetry. The keyboard accompaniment of these predominantly strophic works is frequently independent of the voice and the harmonic writing often imaginative, but there are occasional awkward progressions. Rheineck also wrote sacred music, now mostly lost, and a number of unpretentious instrumental pieces for amateurs.

WORKS

Ops, lost: Le nouveau Pygmalion (oc, B. Desgagniers), Lyons, 9 Aug 1774, lib pubd; Le fils reconnoissant (oc), Lyons, 1775; Rinaldo (Spl, C. Städele), Wolfegg, 12 Sept 1779

Choral: Trauungskantata (C.F.D. Schubart), Memmingen, 15 July 1776, lost; Der Todesgang Jesu (Städele), Augsburg, 8 April 1778, only lib extant; Missa solemnis, *D-Bsb*, *HR*

Lieder: Lieder mit Clavier Melodien, i (Nuremberg, 1779), ii–vi (Memmingen, 1780–92); 56 neue Melodien zu den zwoten vermehrten Ausgabe Schelhorns geistliche Liedersammlung (Memmingen, 1780) [incl. lieder by C.P.E. Bach, J.A. Hiller, J.H. Rolle, Heinsius, Wernhammer]; 19 in Blumenlese für Klavierliebhaber, ed. H.P. Bossler (Speyer, 1782–4); others in *Bsb*

Inst: 3 kbd concs., 3 sonatas, kbd 4 hands, *Bsb*; kbd pieces in Blumenlese für Klavierliebhaber (Speyer, 1782–4), Sammlung vermischter Clavierstücke, ii (Nuremberg, 1784)

DAVID OSSENKOP

Rheiner [Reiner, Reinert, Renner, Reuner], **Felix** (*b* Eichstätt, 25 May 1732; *d* Munich, 28 March 1783). German bassoonist and composer. He studied the bassoon with his father and in 1750 entered the service of Duke Clemens of Bavaria, who sent him to Turin for further training with P.G. Besozzi and later gave him frequent leave to undertake concert tours. After the duke's death in 1770, Rheiner served until 1778 in the Munich court orchestra of Elector Maximilian III Joseph, who increased his already generous salary to 900 gulden. He continued to tour, notably in Poland with Bartolomeo Campagnoli (1778). Later he spent some time at the Freising court. He is mentioned in the Mozart family correspondence; in 1781 W.A. Mozart encountered him apparently seeking work in Vienna (letter of 22–6 December). His daughter Euphrosine (1768 – after 1811) and son Felix (1780–1808) both became singers; his pupils included F.A. Pfeiffer.

Rheiner's abilities as a bassoonist were widely praised, but his obstinate temperament 'somewhat eclipsed his fame' (Schubart). A portrait (1774) by Peter Jacob Horemans shows him holding a four-key bassoon with a pinhole in the crook, operated by an additional key, facilitating the performance of high notes (see BASSOON, fig.9); this is the earliest evidence of this important invention. All of Rheiner's compositions, which included concertos and sonatas (Schubart), are believed to be lost, though some unsigned works by him may be among the 'anonyma' in F.A. Pfeiffer's bassoon music collection (*D-SWl*).

Rheinische Philharmonie. Orchestra founded in 1945 in KOBLENZ.

Rhené-Baton [Baton, René (Emmanuel)] (*b* Courseulles sur Mer, 5 Sept 1879; *d* Le Mans, 23 Sept 1940). French conductor and composer. He studied piano with Charles de Bériot at the Conservatoire in Paris, and then composition with André Bloch and André Gédalge. His first compositions were performed in 1902 at the Société Nationale, and in 1907 he was appointed chorus master at the Opéra-Comique. His début as a conductor at the concerts of contemporary music organized by the publisher Jacques Durand in 1910 attracted considerable attention. After conducting symphony concerts in Bordeaux and Angers, and directing the first festival of French music to be held in Germany (in Munich in 1910), he was engaged by Diaghilev to conduct the orchestra of the Ballets Russes for the 1912–13 season. In 1916 the French government sent him on an artistic propaganda mission to the Netherlands where he conducted various different symphony orchestras until 1918. On returning to France he was asked by the film magnate Serge Sandberg to revive the orchestra of the Concerts Pasdeloup. He conducted this ensemble until 1932, giving the premières of many works (by Ravel, Roussel, Honegger and others), and gave performances of Wagner's operas sung in German, arousing protests from Parisian audiences. At the same time, and until the end of his life, he had a parallel career as a guest conductor which took him all over Europe and South America.

His activities as a conductor have unfortunately obscured his work as a composer, although his own music is very attractive. Tinged with a delicate Impressionism, it is in the tradition of the refined aesthetics of the pupils of Fauré, and often takes its inspiration from Brittany, his family's original home. Rhené-Baton was most successful in his *mélodies* and his piano works.

WORKS
(*selective list*)

all pubd in Paris

Orch: Variations en mode éolien, op.4, pf, orch (1908); Menuet pour Monsieur Frère du Roy (1909); Poème élégiaque, op.32, vc, orch (1924); Fantaisie orientale, op.34, vn, orch (1926)

Chbr: Sonata, G, op.24, vn, pf (1921); Sonate, C, op.28, vc, pf (1923); Pf Trio, op.31 (1924); Passacaille, op.35, fl, pf (1925); Sonata no.2, a, op.46, vn, pf (1928); Suite ancienne, op.55, vn, pf (1934); Aubade, op.53, fl, ob, 2 cl, 2 bn, hn (1940)

Pf: 6 préludes (1901); En Bretagne, op.13 (1909); Dans le style rococo, op.23 (1921); Au pardon de Rumengol, op.25, *c*1922, unpubd; Cortège funèbre d'un Samouraï, op.37 (1925); Marche des rois mages, op.39 (1925); Danse de la Saint-Jean en pays tregorrois, op.40 (1926); Valse romantique, op.45 (1927); numerous pieces for children

Songs (1v, pf): Chansons douces (G. Champenois), op.7 (1911); Les heures d'été (A. Samain), op.14 (1908); 5 mélodies (J. Lahor), op.16 (1911); Chansons bretonnes (L. Tiercelin), op.21 (1920); Au coin de l'âtre (G. Champenois), op.29 (1923); Chansons pour Marycinthe (M. Duhamel), op.50 (1929)

Principal publisher: Durand

Rhete, Jerzy. *See* RHETUS, GEORG.

Rhetoric and music. The connections between rhetoric and music have often been extremely close, notably in the Baroque period. The influence of the principles of rhetoric profoundly affected the basic elements of music. (*See also* ANALYSIS, §II.)

Interrelationships between music and the spoken arts – *artes dicendi* (grammar, rhetoric, dialectic) – are at once obvious and unclear. Until fairly late in the history of Western civilization, music was predominantly vocal and thus bound to words. Composers have therefore generally been influenced to some degree by rhetorical doctrines governing the setting of texts to music, and even after the growth of independent instrumental music, rhetorical principles continued for some time to be used not only for vocal music but for instrumental works too. What still remains to be fully explained is how these critical interrelationships often controlled the craft of composition. These developments are unclear partly because modern musicians and scholars are untrained in the rhetorical disciplines, which since the beginning of the 19th century have largely disappeared from most educational and philosophical system. It was only in the early 20th century that music historians rediscovered the importance of rhetoric as the basis of aesthetic and theoretical concepts in earlier music. An entire discipline that had once been the common property of every educated man has had to be rediscovered and reconstructed during the intervening decades, and only now is it beginning to be understood how much Western art music has depended on rhetorical concepts.

I. Up to 1750

1. MIDDLE AGES AND RENAISSANCE. All rhetorically related musical concepts originated in the extensive literature on oratory and rhetoric by ancient Greek and Roman writers, principally Aristotle, Cicero and Quintilian. Among the enduring and influential legacies of this tradition is a fivefold division of the art of verbal discourse into *inventio* (finding the argument), *dispositio* (ordering the argument), *elocutio* (style), *memoria* and *pronuntiatio*(delivery), with the aim of moving (*movere*), delighting (*delectare*) and instructing (*docere*). Quintilian's requirements for the well-trained orator included 'knowledge of the principles of music, which have power to excite or assuage the emotions of mankind'. The emphasis of ancient orators on the significant role of music in oratory supported a continuous tradition of musical-rhetorical relations throughout these early periods, but the manner in which music and rhetoric interacted varied according to a number of shifting conditions, among them the accessibility of the ancient rhetorical treatises, the nature of the material conveyed in those treatises, the prevailing goals and functions of music and rhetoric within a given culture, and the various arenas of theory, compositon, performance and notation where one looks for signs of this interaction.

Broadly speaking, medieval rhetoric tended to favour eloquence, which emphasized the technical and structural aspects of form (*dispositio*) and style (*elocutio*), whereas Renaissance rhetoric favoured persuasion, which emphasized the orator's strategies of *inventio* and delivery in affective speech that moved others to action. The former regards the structure of the argument *per se*, and reflects both the technical orientation of the Hellenistic courtroom manuals studied during the Middle Ages (Pseudo-Cicero *Rhetorica ad Herenium*, Cicero's early *De inventione*) and the deployment of rhetoric within the fields of grammer, logic and written discourse. The latter regards the affective content and meaning of speech in relation to an audience, and reflects the rediscovery of Quintilian's complete *Institutio oratoria* (1416), Cicero's mature *De oratore* (1422) and, eventually, Aristotle's *Rhetorica*, which advance rhetoric as an oral discourse within an integrated social system based on respect for civic life.

Having lost its oratorical moorings in ancient civic culture, rhetoric exercised an influence during the Middle Ages at once pervasive and diffuse, and points of direct contact between rhetoric and music are consequently difficult to identify. A shared vocabulary of such terms as trope (van Deusen, 1985), colores, clausula, *copula*, *diminutio* and *variatio*may testify less to a direct influence than to the fact that the topic of tropes and *figurae* (the rhetorical ornaments of style, or *elocutio*) were universal and elementary aspects of a medieval education. Similarly, one could argue convincingly, but not conclusively, that the rhetorical practice of argument based on authoritative *exempla* (*auctoritas*) is manifested in the musical quotation, allusion and paraphrase found in, for example, plainchant-based polyphony, certain Ars Subtilior works and 15th-century imitation masses (Reynolds, 1995). The well-defined rhetorical techniques of memorization (*ars memorandi*, Enders, 1990) and delivery (the performance of 'pictorial scripts' stored in the memory) are latent in the development of such mnemonic aids as early notation and the 'Guidonian' hand (Berger, 1981), were certainly fundamental to the activities of medieval performers, and probably hold clues to the process by which standard

melodic, rhythmic and even harmonic *figurae* could be retained and variously 'composed' in the memory. And while medieval theorists dealing with chant repertory evince an ongoing concern with text-music relations such as text underlay, accentuation and syntactical alignment (Harrán, 1986), these were primarily grammatical concerns, and the obscure relationship between medieval grammar and rhetoric makes it difficult to identify a specifically rhetorical strategy in either the theory or the repertory of chant.

As rhetoric and poetry were conjoined in the *novae poetriae* of scholastic grammarians like Matthew of Vendôme, Geoffrey of Vinsauf and Johannes de Garlandia, rhetorical elements of style embedded in the poetic text were mirrored in the musical settings. The shared concern is a concept of stylistic elegance based not on semantic content and its expression, but on rhetorical figures of 'sound' (Stevens, 1992) such as repetition, alliteration, assonance, syllable count, rhyme, metrics and rhythmics. These constitute a kind of verbal music that could be reflected in analogous, though essentially different, gestures of the musical setting such as the alignment of cadence and rhyme, the coordination of tenor repetitions with significant words, and the alignment of matching vowels in polytextual works. It is within this musical-poetic tradition that Machaut was a *rhétoriqueur*, and the harmonious co-habitation of these two 'musics' as described by Machaut's 'pupil' Eustache Deschamps in his *Art de dictier* (1392) may be found, for example, in the repertories of the medieval lai (Stevens, 1992), Notre Dame organa (Flotzinger, 1975), and the early motet (Pesce, 1986).

The city-states of late 14th- and early 15th-century Italy provided the context for the humanist rediscovery of the practice and texts of ancient civic oratory, but circumstances favourable to the union of humanist rhetoric and music arose only at the turn of the 16th century. To be sure, signs of this union already may be seen in the declamatory passages in late Trecento works, the *varietas* and affective projection of text in Ciconia's *O rosa bella*, and the use of fermata-blocked chords on important words in the works of 15th-century composers like Du Fay. There are widespread instances of 'text-painting', musical *figurae* that project the semantic meaning of the text (Pesce, 1986; Elders, 1981; Reynolds, 1995), but these are all essentially isolated examples, and the written (if not the unwritten) musical culture of 15th-century Italy was shaped primarily by northern composers influenced by late medieval modes of discourse.

The first signs of a significant interaction between music and humanist rhetoric appear during the generation of Josquin, by which time the first published translations of Quintilian and Cicero had been disseminated, and the first humanist rhetoric treatises had begun to appear. With the abandonment of medieval pre-compositional structures, like the *formes fixes* in the secular chanson and cantus firmus techniques in the motet, composers were free to explore new text-music relationships within the more flexible medium of an entirely original and through-composed musical fabric. A work like Josquin's motet *Ave Maria, virgo serena* approaches the later 16th-century ideal of musical oratory, with its word-generated rhythms and melodic phrases, the careful pacing and sequential unfolding of its 'argument' through textural *varietas* and the manipulation of cadential closure and elision, and its overall mood of affective supplication. A heightened sense of rhetorical decorum, the matching of proper style (*verba*) to content (*res*), also led to the breakdown of medieval categories of genre and style at this time; surely the unusual *gravitas* of his chanson text led Josquin to apply motet texture in his setting of *Mille regretz*. The same rhetorical subjects of decorum and *varietas* surface in contemporary theoretical works. Tinctoris's eighth rule of counterpoint in his *Liber de arte contrapuncti* (1477) reflects both Cicero's precept and the increasing modal variety to be found in the works of Josquin and his contemporaries: 'Wherefore, according to the opinion of Tullius [Cicero], as variety in the art of speaking most delights the hearer, so also in music a diversity of harmonies vehemently provokes the souls of listeners into delight ...'. When discussing decorum in singing in his *Practica musice* (1496), Gaffurius urged that a 'composer of a song should take care that words are set in an appropriate way to music', and that the mode should be selected to that end. Gaffurius also adopted Quintilian's division of oratorical delivery (*pronuntiatio*) into matters of *vox*and *gestus* when he advised the singer to avoid bellowing or excessive vibrato, and to refrain from a gaping, distorted mouth and exaggerated movements of the head and hands. Josquin's pivotal role with respect to word-note relationship was acknowledged in the next generation by northern theorists like Glarean, Coclico and Hermann Finck. In Finck's view (*Practica musica*, 1556) Josquin was the composer who showed 'the true way' from the *veteres* to the *recentiores*, who were distinguished primarily according to their concern with a correct and affective setting of the words.

The decisive bond between music and rhetoric was forged in the decades after about 1525, and by 1560 the concepts and terminology of classical oratory had made strong inroads into the writings of music theorists on both sides of the Alps (Wilson, 1995). On the model of Melanchthon's adoption of rhetorical doctrines for Protestant scriptural exegesis and instruction in the new Lateinschulen, German theorists wrote music tutors that increasingly aligned rhetorical principles with the craft of musical composition within the new category of *musica poetica*. Listenius (1537) was the first to introduce this to the traditional Boethian duality of *musica theoretica* and *musica practica*, and subsequent works by Heyden (1540), Glarean (1547), Coclico (1552) and Finck (1556) established strong ties between Josquin-style polyphony and Ciceronian precepts of variety and decorum. Heyden and Glarean both invoked the rhetorical power of metaphor as described by Aristotle and Quintilian when they referred to the power of appropriate musical figures (*figurae, colores*) to place subjects before the mind's eye (*ob oculos ponere*), a conceit that was repeated by later northern writers like Quickelberg (1560) and Burmeister (1601) with respect to the music of Lassus, and which surely constituted the theoretical basis for Renaissance 'text-painting'. In the singing manuals of Coclico and Finck, Quintilian's division of eloquence into correct speech (*recte loquendum*) and elegant speech (*bene loquendum*) was reinterpreted as *recte cantandum* (observation of correct accentuation, pronunciation and text placement) and *bene cantandum* (florid singing, or *cantus ornatus* employing *coloraturae*). In Dressler's *Praecepta musicae poetica* (1563), compositional structure adopted the formal division of an oration into *exordium*, *medium*

and *finis*. A German tradition equating the expressive function of musical *colores* (ornaments) with rhetorical *colores* (tropes and figures) was extended in the writings of Burmeister, who developed a detailed list of musical-rhetorical figures (*Musica autoschediastikē*, 1601; *Musica poetica*, 1606; see Rivera, 1993) that both summarized the Renaissance tradition and laid the foundation of a German theoretical tradition of musical figures for the next two centuries.

Musical-rhetorical relations developed along more radical lines in Italy, where they unfolded in the more rarefied air of the humanist courts and academies, which sustained both a more probing view of the condition of ancient music and a subtle and sustained interaction between music and emerging theories of vernacular poetry. Of first importance was Venice during the second quarter of the 16th century, where Pietro Bembo linked Ciceronian precepts of decorum and *varietas* to Petrarchan poetics (see Mace, 1969), and composers and theorists in the circle of Willaert came under the direct influence of Bembo's Ciceronianism (Feldman, 1995). The Venetian context of text-underlay rules outlined by Lanfranco (1533), del Lago (1540), Vicentino (1555), Zarlino (1558) and Stoquerus (*c*1570) reflects an essentially rhetorical concern with *recte loquendum*. The composer Rore and the theorists Zarlino and Vicentino stand out as leading exponents of the application of Bembist thought to music as first demonstrated in the Petrarchan madrigals of Willaert's *Musica nova*. In his *Istitutioni harmoniche* (1558), Zarlino borrowed the Ciceronian vocabulary of *sonus* (euphony and smoothness of speech) and *numerus* (well-structured speech), and applied them to a Bembist concept of eloquence: stylistic purity and restraint (the avoidance of contrapuntal errors, excessive divisions, chromaticism as a destroyer of modal clarity, indiscreet use of *vox* and *gestus*, and harshness) were to temper *varietas* (such as diversity of melodic movement and consonances, and avoidance of undue repetition) in pursuit of an elevated style characterized by the beauty and *gravitas* found in Willaert's music and Petrarch's poetry. Zarlino's rapprochement between Franco-Flemish polyphony and the expressive ideals of oratory was particularly influential north of the Alps, where he replaced Gaffurius as the leading theorist of *stile antico* counterpoint. Drawing on the ancient Greek concepts of modal ethos and the genera, Vicentino proposed in his *L'antica musica ridotta alla moderna prattica*, (1555) a more radical notion of decorum latent in the sharp contrasts within Petrarchan language. In Vicentino's extended concept of *varietas*, the 'diverse passions' of vernacular poetry may require that purity and even beauty be sacrificed to modal mixture, chromaticism and 'every bad step' and 'bad consonance', and the relationship to ancient oratory is explicit: 'Now [the orator] speaks loudly, now softly, and more slowly, and more rapidly, and with this he moves the listeners very much .... The same ought to be in music'. Vicentino here framed the ideological (and essentially rhetorical) basis of the *seconda pratica* much as Rore manifested it in his madrigals. Among the next generation of musical humanists, Girolamo Mei had participated, as a disciple of Piero Vettori, in the revival of Cicero's works on oratory and rhetoric, and had 'read thirty times if once' the *Rhetorica* of Aristotle. In a letter of 1560 to Vettori, Mei proposed an Aristotelian system of communicative arts (*arti fattive*) that brought together the mimetic media of music, rhetoric, poetry and the visual arts, a prophetic confluence that was most aptly realized in opera.

2. BAROQUE. Not until the Baroque period did rhetoric and oratory furnish so many of the essential rational concepts that lie at the heart of most compositional theory and practice. Beginning in the 17th century, analogies between rhetoric and music permeated every level of musical thought, whether involving definitions of styles, forms, expression and compositional methods, or various questions of performing practice. Baroque music in general aimed for a musical expression of words comparable to impassioned rhetoric or a *musica pathetica*. The union of music with rhetorical principles is one of the most distinctive characteristics of Baroque musical rationalism and gave shape to the progressive elements in the music theory and aesthetics of the period. Since the preponderantly rhetorical orientation of Baroque music evolved out of the Renaissance preoccupation with the impact of musical styles on the meaning and intelligibility of words (as for example in the theoretical discussions of the Florentine Camerata), nearly all the elements of music that can be considered typically Baroque, whether the music be Italian, German, French or English, are tied, either directly or indirectly, to rhetorical concepts. In 1739, in *Der vollkommene Capellmeister*, Mattheson laid out a fully organized, rational plan of musical composition borrowed from those sections of rhetorical theory concerned with finding and presenting arguments: *inventio*, *dispositio*, *decoratio* – called *elaboratio* or *elocutio* by other writers – and *pronuntiatio* (see §I, above). Dressler's structure of *exordium, medium* and *finis* was only a simplified version of the more usual sixfold division of the *dispositio*, which in classical rhetoric as well as in Mattheson consisted of *exordium, narratio* (statement of facts), *divisio* or *propositio* (forecast of main points in a speaker's favour), *confirmatio* (affirmative proof), *confutatio* (refutation or rebuttal) and *peroratio* or *conclusio* (conclusion).

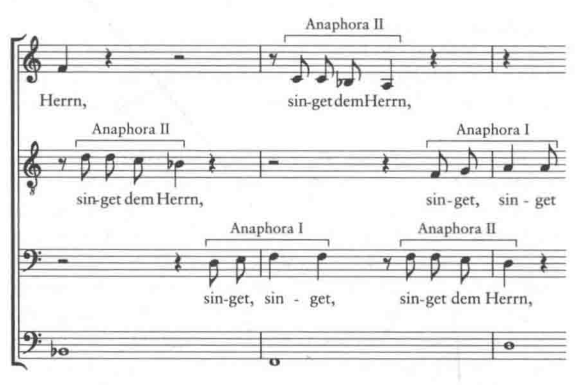
While neither Mattheson nor any other Baroque theorist would have applied these rhetorical prescriptions rigidly to every musical composition, it is clear that such concepts not only aided composers to a varying degree but were self-evident to them as routine techniques in the compositional process. Nor was rhetorical structure limited to German music theory. Mersenne, for example, in his *Harmonie universelle* (1636–7) emphasized that musicians were orators who must compose melodies as if they were orations, including all of the sections, divisions and periods appropriate to an oration. Kircher, writing in Rome, gave the title 'Musurgia rhetorica' to one section of his highly influential encyclopedia of the theory and practice of music, *Musurgia universalis* (1650); in it he also emphasized the analogy between rhetoric and music in the common divisions of the creative process into *inventio*, *dispositio* and *elocutio*.

The vitality of such concepts is evident throughout the Baroque period and later. Just as an orator had first to invent an idea (*inventio*) before he could develop his oration, so the Baroque composer had to invent a musical idea that was a suitable basis for construction and development. Since each musical idea must express an inherent or sometimes an imposed affective element of the text to which it was joined, composers often required aids to stimulate their musical imagination. Not every

poetic text possessed an affective idea suitable for musical invention, but again rhetoric provided the means to assist the *ars inveniendi*. In *Der General-Bass in der Composition* (1728), Heinichen extended the analogy with rhetoric to include the *loci topici*, the standard rhetorical devices available to help the orator uncover topics – that is, ideas – for a formal discourse. The *loci topici* are rationalized categories of topics from which suitable ideas for invention could be drawn. Quintilian described them as 'sedes argumentorum' – sources of argument. On the most elementary level they were symbolized by the well-known questions that he posed for any legal dispute: whether a thing is (*an sit*), what it is (*quid sit*) and of what kind it is (*quale sit*). Heinichen (see Buelow, 1966) employed the *locus circumstantiarum*, namely the use of a textual antecedent, concomitant or consequent – a preceding recitative, the first (*A*) section of an aria, and the second (*B*) section or a subsequent recitative – as sources of musical ideas for aria texts. In *Der vollkommene Capellmeister* Mattheson criticized Heinichen for limiting himself to only the *loci* of circumstance and urged the full employment of several other *loci*commonly used by rhetoricians, such as the *locus descriptionis*, *locus notationis* and *locus causae materialis*. It is not unimportant that both Heinichen and Mattheson were practical theorists with long and distinguished careers as composers, during which they wrote vocal music for the opera house as well as for the church.

3. Musical figures. The most complex and systematic transformation of rhetorical concepts into musical equivalents originates in the *decoratio* of rhetorical theory. In oratory every speaker relied on his command of the rules and techniques of the *decoratio* in order to embellish his ideas with rhetorical imagery and to infuse his speech with passionate language. The means to this end was the broad concept of figures of speech. As was shown above (see §2), as early as Renaissance music, both sacred and secular, there is ample evidence that composers employed various musical-rhetorical means to illustrate or emphasize words and ideas in the text. Indeed the whole musical literature of the madrigal unequivocally depends on this use of musical rhetoric. Some authors (e.g. Palisca) have connected the late 16th-century practice of musical rhetoric to the definition of a musical 'mannerism', suggesting that this particular approach to composing may well be the explanation of the obscure term 'musica reservata'. Of all the late Renaissance composers, Lassus was undoubtedly the greatest musical orator, as was frequently recognized by his contemporaries, and in the first Baroque treatise attempting to codify musical-rhetorical practices, by Burmeister, one of his motets, *In me transierunt*, was analysed according to its rhetorical structure and its employment of musical figures (*see* Analysis, fig.1). For more than a century a number of German writers, following Burmeister, also borrowed rhetorical terminology for musical figures, with both Greek and Latin names, but they also invented new musical figures by analogy with rhetoric but unknown to it. In this basically German theory of musical figures there are thus numerous conflicts in terminology and definition among the various writers, and there is clearly no one systematic Theory of musical Figures for Baroque and later music, notwithstanding frequent references to such a system by Schweitzer, Kretzschmar, Schering, Bukofzer and others. The most detailed catalogue of musical figures (in Bartel, 1997) lists the different forms, taken from definitions and descriptions of varying degrees of exactness in many 17th- and 18th-century treatises, among the most important of which are J. Burmeister: *Musica autoschediastikē* (Rostock, 1601), expanded as *Musica poetica* (Rostock, 1606); J. Lippius: *Synopsis musicae nova*(Strasbourg, 1612); J. Nucius: *Musices practicae* (Neisse, 1613); J. Thuringus: *Opusculum bipartitum* (Berlin, 1624); J.A. Herbst: *Musica moderna prattica* (Frankfurt, 2/1653) and *Musica poetica* (Nuremberg, 1643); A. Kircher: *Musurgia universalis* (Rome, 1650); C. Bernhard: *Tractatus compositionis augmentatus* (MS, *c*1657); J.G. Ahle: *Musikalisches Frühlings-, Sommer-, Herbst-, und Winter-Gespräche* (Mühlhausen, 1695–1701); T.B. Janovka: *Clavis ad thesaurum magnae artis musicae* (Prague, 1701); J.G. Walther: *Praecepta der musicalischen Composition* (MS, 1708) and *Musicalisches Lexicon* (Leipzig, 1732); M.J. Vogt: *Conclave thesauri magnae artis musicae* (Prague, 1719); J.A. Scheibe: *Der critische Musikus* (Leipzig, 2/1745); M. Spiess: *Tractatus musicus compositorio-practicus* (Augsburg, 1745); and J.N. Forkel: *Allgemeine Geschichte der Musik* (Leipzig, 1788–1801).

Attempts by writers such as Brandes, Unger and Schmitz to organize the multitude of musical figures into a few categories have not proved successful. The following list aims only to give the most frequently cited musical figures in an equally arbitrary but somewhat broader group of seven categories: (A) Figures of melodic repetition, (B) Figures based on fugal imitation, (C) Figures formed by dissonance structures, (D) Interval figures, (E) Hypotyposis figures, (F) Sound figures, (G) Figures formed by silence. No effort has been made to enumerate all of the many variant names under which some of these figures appear in the literature, and the indication of a theorist's name following the figure gives only one of often several sources in which the term is defined and discussed (see Bartel, 1997, for a more complete list of figures and sources).



Many of the musical figures, especially those from the earlier sources such as Burmeister and Bernhard, originated in attempts to explain or justify irregular, if not incorrect, contrapuntal writing. Although proceeding contrary to the rules of counterpoint, such passages were found to be suitable for dramatizing affective expression of the texts. Another large group of figures, the *Hypotyposis* class, have often been called madrigalisms (see under no.38 above) because they occur so frequently in Italian madrigals of the 16th century and later; word-painting occurs in music as early as medieval plainchant and continues unabated in the music of today. Finally, it should be stressed that while German theorists were almost solely responsible for the terminology of musical figures, this is not to say that similar figurative guidelines were not followed by composers in other countries in the 17th and 18th centuries (see, for example, the detailed analysis in Massenkeil, 1952, of musical figures in the oratorios of Carissimi). What German theorists rationalized was a natural and common element in the craft of every composer. Whether or not composers of other countries made such precise terminological associations between rhetorical figures and musical equivalents cannot be established, but that such musical-rhetorical emphases exist in their music cannot be questioned.

A. FIGURES OF MELODIC REPETITION

1. *Anadiplosis* (Vogt). The repetition of a closing melody at the beginning of a new section, but see also no.55.
2. *Anaphora* (Kircher) = *Repetitio* (Nucius). The repetition of a melodic statement on different notes in different parts (see ex.1). Thuringus, however, limited it in his definition to the repetition of a bass part only (see ex.5).
3. *Auxesis*. See no.4.
4. *Climax* (Nucius) = *Auxesis* (Burmeister). The repetition of a melody in the same part a 2nd higher (see ex.2), which is a special case of *Synonymia* (no.17). As *Gradatio* (no.9) (Burmeister), a continuing *Climax* in sequence (see ex.3).
5. *Complexio* (Nucius) = *Symploce* (Kircher) = *Epanalepsis* (Gottsched) = *Epanadiplosis* (Vogt). The repetition at the end of a melody or a whole musical section from the beginning.
6. *Epanadiplosis*. See no.5.
7. *Epanalepsis*. See no.5.
8. *Epistrophe*. See no.10.
9. *Gradatio*. See no.4.
10. *Homoioptoton* (Kircher) = *Epistrophe* (Scheibe). The repetition of a closing section at the end of other sections.
11. *Hyperbaton* (Scheibe). The removal of a note or musical idea from the expected order for underlining of the text.
12. *Paranomasia* (Scheibe). The repetition of a musical idea on the same notes but with new additions or alterations for emphasis (see exx.4–5).
13. *Palillogia* (Burmeister). The repetition of a melodic idea on the same notes and in the same part (see ex.5).
14. *Polyptoton* (Vogt). The repetition of a melodic idea in a different register or different part (see exx.5–6).
15. *Repetitio*. See no.2.
16. *Symploce*. See no.5.
17. *Synonymia* (Walther). The repetition of a melodic idea on different notes in the same part (see ex.7).

Ex.1 Schütz: *Freuet euch des Herren ihr Gerechten*; *Symphoniarum sacrarum 2a pars* (1647)

Ex.2 Carissimi: *Jonas*, 'Miserunt ergo sortem'

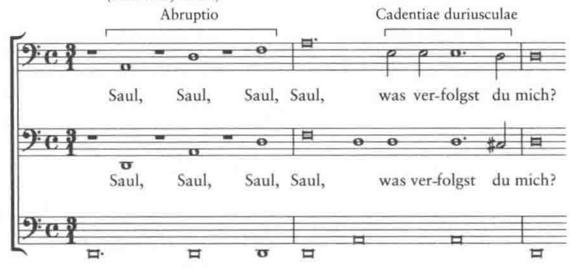
Ex.3 Bach: Cantata no.78, *Jesu der du meine Seele*, 'Wir eilen mit schwachen, doch emsigen Schritten'

Ex.4 Viadana: *Exaudi me, Domine; Cento concerti ecclesiastici* (Venice, 1602)

Ex.5 Schütz: *Nun komm, der Heiden Heiland*; *Kleine geistliche Concerte*, i (1636)

Ex.6 Bach: Cantata no.65, *Sie werden aus Saba alle kommen*, 'Gold aus Ophir ist zu schlecht'

Ex.7 Schütz: *Ich liege und schlafe*; *Kleine geistliche Concerte*, i (1636)

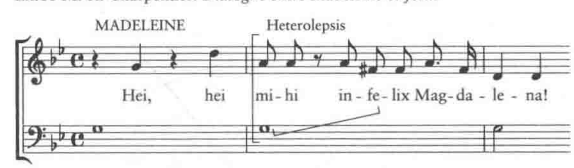


B. FIGURES BASED ON FUGAL IMITATION
(all from Burmeister)

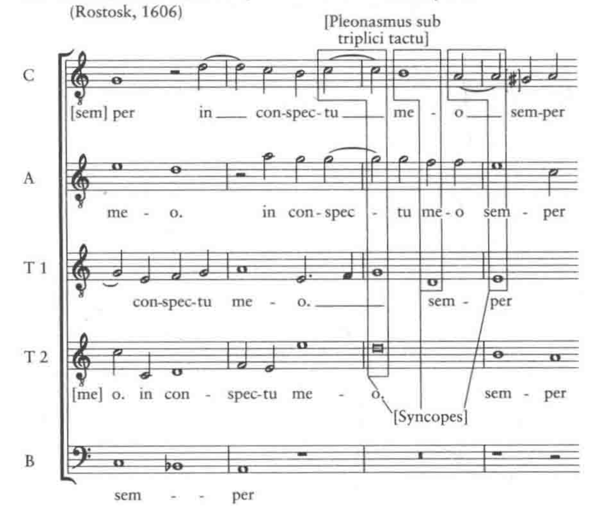
18. *Anaphora*. A form of fugue in which a subject is repeated in some but not all of the parts. See also no.2.
19. *Apocope*. Fugal imitation in which the repetition of the subject is incomplete in one part.
20. *Fuga imaginaria*. Canon.
21. *Fuga realis*. Regular fugal imitation.
22. *Hypallage*. Fugal imitation in contrary motion.
23. *Metalepsis*. Fugue with two subjects.

C. FIGURES FORMED BY DISSONANCE STRUCTURES

24. *Cadentiae duriusculae* (Bernhard). Unusual dissonances occurring before the final notes of a cadence (see ex.8).
25. *Ellipsis* (Bernhard). The omission of an otherwise essential consonance which alters the normal formation of a suspension or passing-note passage (see ex.9). More generally (Scheibe), an unexpected new direction taken by a passage that has led up to an expected conclusion.



Ex.8 Schütz: *Saul, was verfolgst du mich?*; *Symphoniarum sacrarum 3a pars* (Dresden, 1650)



Ex.9 Peri: *Euridice*, 'Funeste piaggi'

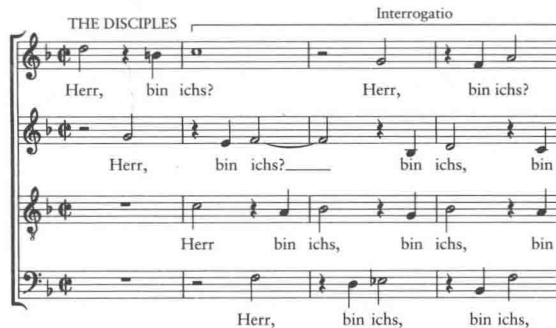
Ex.10 M.-A. Charpentier: *Dialogue entre Madeleine et Jésus*

Ex.11 Lassus: *In me transierunt*, from Burmeister: *Musica poetica* (Rostosk, 1606)

26. *Heterolepsis* (Bernhard). A leap or stepwise movement into a dissonance from a consonance; in effect the adoption of the note of a second voice part that would have arrived on the same note as a passing note (see ex.10).
27. *Pleonasmus* (Burmeister). An abundance or piling up of harmonies that in the formation of a cadence, between preparation and resolution, is made up of *Symblemas* (see no.34) and *Syncopes* (see no.29), over two, three or more half-bars (see ex.11).
28. *Prolongatio* (Bernhard). The extension of the normal value of a dissonance, whether a suspension or a passing note (see ex.12).
29. *Syncope* (Burmeister). An ordinary suspension.
30. *Syncopatio catachrestica* (Bernhard). This occurs when a suspension fails to resolve according to the rules (i.e. down a 2nd) but instead (*a*) resolves down a second but to another dissonance, (*b*) is prepared on a dissonance or (*c*) resolves by some other form of melodic movement (see ex.13).

Ex.12 from Bernhard: *Tractatus compositionis augmentatus* (MS, see Hilse)

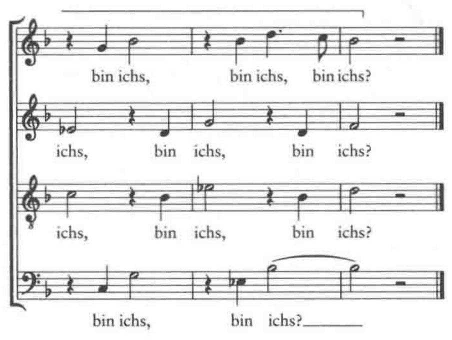
Ex.13 from Bernhard: *Tractatus compositionis augmentatus* (MS, see Hilse)



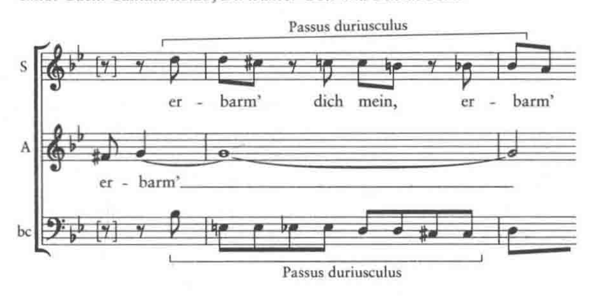
D. INTERVAL FIGURES

31. *Exclamatio* (Walther). A melodic leap up by a minor 6th. In general practice, however, any leap up or down by intervals larger than 3rds and either consonant or dissonant, depending on the character of the exclamation. As a dissonant leap sometimes called *Saltus duriusculus* (see exx.14–15).
32. *Inchoatio imperfecta* (Bernhard). An initial harmonic interval that is other than perfect.
33. *Interrogatio* (Scheibe). A musical question, a melodic ending or entire harmonic passage ending a 2nd or some other interval higher than the previous note or notes (see ex.16); also a Phrygian cadence.
34. *Parrhesia* (Kircher). A false relation, a stark dissonance, especially a tritone between parts (see ex.15). More specifically, according to Burmeister, a mixture among other consonances of a single dissonance half the value of a tactus. In this sense *Parrhesia* is a special case of *Maius symblema*, a dissonance on the second half of a half-bar to the value of a minim.
35. *Passus duriusculus* (Bernhard). This occurs (*a*) when a part ascends or descends by a minor 2nd and (*b*), more generally, when a part moves by an interval too large or too small for the scale (see ex.17).
36. *Pathopoeia* (Burmeister). Movement through semitone steps outside a harmony or scale to express affections such as sadness, fear and terror.
37. *Saltus duriusculus*. See no.31.

Ex.14 Bach: Cantata no.155, *Mein Gott, wie lang, ach lange*

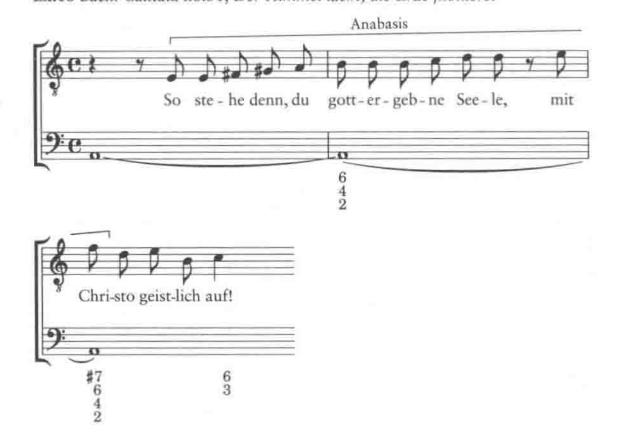


Ex.16 Schütz: *St Matthew Passion*



Ex.15 Bach: Cantata no.1, *Wie schön leuchtet der Morgenstern*

Ex.17 Bach: Cantata no.23, *Du wahrer Gott und Davids Sohn*



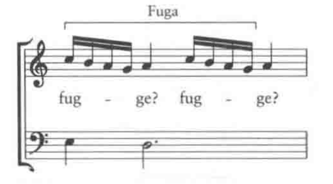
E. HYPOTYPOSIS FIGURES

38. *Hypotyposis* (Burmeister). A large class of musical-rhetorical figures, many without specific names, all serving to illustrate words or poetic ideas and frequently stressing the pictorial nature of the words. The rhetorical term is more accurate than the commoner expressions 'madrigalism' and 'word-painting'. All of the following figures in this section are in the *Hypotyposis* class.
39. *Anabasis* (Kircher). This occurs when a voice part or musical passage reflects the textual connotation of 'ascending' (see ex.18).
40. *Catabasis* (Kircher). The opposite of *Anabasis* (see ex.19).
41. *Circulatio* (Kircher). The musical description of circular or crossing-over motion (see ex.20).

42. *Fuga* (Kircher). In the sense of 'flight', not as fugal imitation, a melodic figure illustrating flight, escape etc. (see ex.21).
43. *Hyperbole*, *Hypobole* (Burmeister). A melodic passage that exceeds the normal ambitus of a mode either above or below.
44. *Metabasis* (Spiess) = *Transgressus* (Bernhard). The crossing of one part by another.
45. *Passaggio*. See no.47.
46. *Transgressus*. See no.44.
47. *Variatio* (Bernhard) = *Passaggio* (Walther). A passage of vocal embellishment emphasizing the text, it can include forms of melodic ornamentation such as *accento*, *cercar della nota*, *tremolo*, *trillo*, *bombo*, *groppo*, *circolo mezzo* and *tirata mezza*. Walther (*Praecepta*) referred to musical 'amplification' of a text.

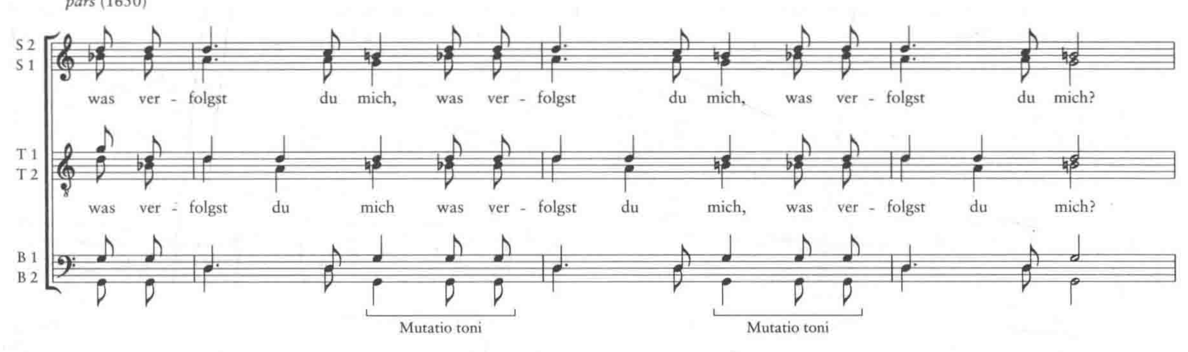
Ex.18 Bach: Cantata no.31, *Der Himmel lacht, die Erde jubilieret*

Ex.20 Bach: Cantata no.131, *Aus der Tiefe rufe ich, Herr, zu dir*



Ex.19 Carissimi: *Jonas*, 'Miserunt ergo sortem'

Ex.21 Cavalieri: *Rappresentatione di Anima, et di Corpo*



F. SOUND FIGURES

48. *Antitheton* (Kircher). A musical contrast, to express things contrary and opposite, occurring successively or simultaneously. It can be characterized by contrasting registers in a voice part, contrasting thematic ideas in a contrapuntal texture, contrasting musical textures etc.
49. *Congeries* (Burmeister). This occurs when a 5-3 chord moves to a 6-3 chord, which then moves back to a 5-3 chord, up and down. Burmeister defined the figure as 'an accumulation of perfect and imperfect consonances, the movement of which is permitted [by the rules of counterpoint]'.
50. *Fauxbourdon* (Burmeister). Parallel motion between parts in 3rds and 6ths.
51. *Mutatio toni* (Bernhard). The sudden shifting of mode for expressive reasons (see ex.22).
52. *Noema* (Burmeister). A purely homophonic section, usually consonant, within polyphony, for textual emphasis. Four special types can be distinguished:
53. *Analepsis*. Two immediately adjacent *Noemas* (see no.52).
54. *Mimesis*. Two successive *Noemas* (see no.52), the second of which is at a different pitch.
55. *Anadiplosis*. A double *Mimesis* (no. 54), but see also no.1.
56. *Anaploce*. A repetition of a *Noema* (no.52) heard in chorus A by chorus B while chorus A is silent.

G. FIGURES FORMED BY SILENCE (RESTS)

57. *Abruptio* (Bernhard) = *Aposiopesis* (Burmeister) = *Homoioteleuton* (Nucius) = *Tmesis* (Janovka). A general pause or silence within a musical texture where silence is not expected (see ex.8).
58. *Aposiopesis*. See no.57.
59. *Homoioteleuton*. See no.57.
60. *Suspiratio* (Kircher). Usually the breaking up of a melody by rests to illustrate the text (see ex.23); it is closely related to all the other musical-rhetorical figures in this class.
61. *Tmesis*. See no.57.

Ex.22 Schütz: *Saul, was verfolgst du mich?; Symphoniarum sacrarum 3a pars* (1650)

Ex.23 Monteverdi: *L'incoronazione di Poppea*, Act 3 scene vi

4. Affects. As a result of its intricate interrelationships with rhetorical doctrines, Baroque music assumed as its primary aesthetic goal the achieving of stylistic unity based on emotional abstractions called the Affects. An affect ('Affekt' in German, from the Greek 'pathos' and the Latin 'affectus') consists of a rationalized emotional state or passion. After 1600 the representation of the Affects became the aesthetic necessity of most Baroque composers, whatever their nationality, and the fundamental basis of numerous treatises. During the Baroque period the composer was obliged, like the orator, to arouse in the listener idealized emotional states – sadness, hate, love, joy, anger, doubt and so on – and every aspect of musical composition reflected this affective purpose. While it was easier to appreciate it in music associated with a text, the aim in instrumental music was the same. It needs to be stressed, however, that to compose music with a stylistic and expressive unity based on an affect was a rational, objective concept, not a compositional practice equatable with 19th-century concerns for spontaneous emotional creativity and equally spontaneous emotional responses on the part of an audience. The Baroque composer planned the affective content of each work, or section or movement of a work, with all the devices of his craft, and he expected the response of his audience to be based on an equally rational insight into the meaning of his music. All the elements of music – scales, rhythm, harmonic structure, tonality, melodic range, forms, instrumental colour and so on – were interpreted affectively. The styles, forms and compositional techniques of Baroque music were therefore always the result of this concept of the Affects.

Since the 19th century, writings on Baroque music have often referred to a so-called Theory of the Affects (or 'Affektenlehre' in its commoner German equivalent), though in fact no one comprehensive, organized theory of how the Affects were to be achieved in music was ever established in the Baroque period. It has been assumed incorrectly, especially by writers such as Pirro and Schweitzer and those influenced by them, that composers worked with stereotyped musical-rhetorical figures – analogous to Wagnerian leitmotifs – in order to create a predetermined form of tone-painting. Other writers, including Bukofzer, continued to believe that such a stereotyped set of musical figures was an essential aspect of a Baroque theory of Affects. More recent research has clearly shown that a concept of stereotyped musical figures with specific affective connotations never existed in the Baroque composer's mind or in theoretical explanations. Musical-rhetorical figures were devices meant only to decorate and elaborate on a basic affective representation and to add dramatic musical stress to words and poetic concepts. They functioned in music just as figures of speech function in oratory – as part of the *decoratio*.

The concept of the Affects was at least partly shaped by the writings of 17th-century philosophers of such diverse national backgrounds as Descartes, Francis Bacon and Leibniz. In an ever-growing stream of natural-philosophical studies in the 17th century, Descartes' *Les passions de l'âme* (1649) became perhaps the most decisive in its influence on the art of music. This resulted from the belief that he had discovered a rational, scientific explanation for the physiological nature of the passions and the objective nature of emotion. Nor was music unique, for a similar concern for the Affects dominated all the arts in the 17th century. The attempt to understand the passions lies deeply buried in the history of Western art long before Descartes, however. The connection with the ancient concept of the four temperaments or humours

should not be overlooked, and the ancient Greeks wrote at great length about the control of human emotions. They believed that music possessed an ethical force, or ethos, that was bound together with the modes. The Renaissance witnessed a convergence of the Attic philosophy of Ethos, the theory of the temperaments and a developing theory of the Affects, for example in the numerous definitions of the modes according to their affective nature. In later treatises these ideas ultimately became theories of Affects associated with keys, the best known of which was Mattheson's in his *Neu-eröffnete Orchestre* (1713).

The association of rhetoric with the concept of the Affects can be found almost continuously in the history of music from at least the end of the 15th century. It is explored in most of the major treatises on Baroque music (see Buelow, 1973–4, for a selective bibliography). By the turn of the 17th century, for example in Caccini's preface to his *Le nuove musiche* (1601/2), the musical goal of the singer became the moving of the affects of the soul ('di muovere l'affetto dell'animo'). The German theorist Michael Praetorius, in *Syntagma musicum*, iii (1618), warned that a singer must not simply sing but must perform in an artful and graceful manner so as to move the heart of the listener and to move the affects. An Italian theorist, Cesare Crivellati, in *Discorsi musicali* (1624), devoted a chapter to 'Come con la musica si possa movere diversi affetti' (chap.11), and the English writer Charles Butler, in *The Principles of Musik* (1636), gave the purpose of music as 'the art of modulating notes in voice or instrument. De wie [which], having a great power over de affections of de minde, by its various Modes produces in de hearers various effects'. Among the many works contributing definitions of the Affects in the 17th century is Kircher's *Musurgia universalis*, an encyclopedic work, full of valuable information, where a theory of intervals as related to the Affects was proposed for the first time (see Scharlau, 1969). Of equal value are the several treatises of Werckmeister, who attempted to combine the rationality of mathematics with the rhetorical concepts of the Affects, providing a definition of particular value to an understanding of German late Baroque music.

In 1706 the German writer Johann Neidhardt, in his work on the tuning of a monochord, *Beste und leichteste Temperatur des Monochordi*, asserted that 'the goal of music is to make felt all the affects through the simple tones and the rhythms of the notes, like the best orator', and this remained the aesthetic credo of writers on music for much of the 18th century. Perhaps the most succinct and effective statement regarding the role of the Affects in music was made by Mattheson (in *Der vollkommene Capellmeister*): 'everything that occurs without praiseworthy affects [in music] can be considered nothing, does nothing and means nothing'.

II. After 1750

During the Enlightenment, philosophy and science developed new ideals of expression that greatly reduced the role of formal eloquence in intellectual life. Descartes objected to the use 'des feintes et des déguisements de la rhétorique', and the statutes of the Royal Society of London (1663) specified that all scientific reports should

avoid 'prefaces, apologies, and rhetorical flourishes'. John Locke's *Essay Concerning Human Understanding* (1690) distinguished between the linguistic style suitable for 'pleasure and delight' and that appropriate for 'information and improvement'. In the following decades, conspicuous exhibitions of traditional eloquence became unacceptable in discursive situations demanding truthfulness, although this did not preclude an appreciation of virtuosic oratory as literature: in the mid-18th century Frederick the Great could both carry volumes of Cicero on his campaigns and, in his judicial reforms, abolish harangues and appeals to the emotions from concluding arguments in court. Mattheson, whose position in the English embassy in Hamburg permitted close contact with British culture, echoed Locke in distinguishing between the plain language required of the historian and the florid style permitted to the rhetorician (*Grundlage einer Ehren-Pforte*, 1740).

Rhetoric was further undermined in the early 18th century as aestheticians, emulating the accomplishments of scientists such as Newton, sought overarching principles that governed all the arts. Whereas the *ars oratoria* had traditionally been concerned primarily with spoken and persuasive discourse, it became associated increasingly with written (and even non-verbal) media as part of the broader domain of *belles-lettres*. Rhetoric, however, now assumed a somewhat peripheral position among the arts. In *Les beaux-arts réduits à un même principe* (1746), Charles Batteux placed it between the mechanical and the fine arts: unlike music, poetry, painting, sculpture and dance, which have pleasure as their object, rhetoric (along with architecture) both provided pleasure and served some pragmatic objective. Because its utilitarian component involved considerations outside the realm of art, oratory would later be further marginalized in the aesthetics of Kant and Hegel.

The re-evaluation of rhetoric permitted its principles to be employed selectively, which in turn made possible numerous new analogies. Mattheson could thus enlist rhetoric in his efforts to disassociate music from the mathematical tradition. His enormously influential writings, however, treat the precepts of oratory with considerable licence: whereas Dressler and Burmeister had only been willing to create three-part models of musical organization (using rhetorical concepts in dividing the work roughly into beginning, middle and end), Mattheson advanced a detailed comparison of the da capo aria to the six-part oration. This analogy required, among other liberties, that the opening ritornello appear as both the *exordium* and the *peroratio*, despite the very different functions these two components serve in traditional rhetorical theory. Mattheson justified this departure from the *ars oratoria* simply by referring to the repetition as a musical convention and by noting that several psalms are similar in design to the da capo aria.

Mattheson's writings represent an important new development in the relationship between music and rhetoric. Although music theorists of previous centuries had often invoked rhetorical terms and concepts idiosyncratically (see Vickers, 1984), their borrowings typically suggest a desire to appropriate rhetoric's prestige. The discrepancies that arise frequently reflect the difficulties of comparing dissimilar activities, and the theorists were generally no more idiosyncratic than the complex and contradictory taxonomic systems of the rhetoricians themselves. Mattheson, on the other hand, clearly regarded musical conventions as taking precedence over the precepts of his putative models; rhetoric no longer exerted priority over music.

Terminology and concepts drawn from the *ars oratoria* remained common in discussions of music, but by the middle of the 18th century new and often highly critical attitudes towards formal eloquence complicated the use of rhetoric as a source of imagery. In his *Saggio sopra l'opera in musica* (1755), Francesco Algarotti asserted that the overture of an opera should prepare the following drama, relating to it in the way that an exordium relates to the ensuing oration. Traditional rhetorical theory, however, did not require the exordium to refer to the subject of a speech (this function was assigned to the *narratio*), and the ancient orators left numerous independent *proemia*, or introductions, that could be prefixed to speeches on any topic. Algarotti therefore found that some composers did treat the overture as an exordium, but in precisely the way that he wished to oppose. He also complained of composers who resemble orators using 'big and pompous words' to display 'the loftiness of their subject and the lowness of their genius'. In drawing on the oration as a model for musical procedures, Algarotti was therefore obliged to reject aspects of the rhetorical tradition that did not conform to his aesthetics.

Similar complexities surround a passage in *Le neveu de Rameau* (*c*1760) in which Diderot stated that 'the aria is the peroration of the scene'. The metaphor implies that the aria, like the concluding section of a speech, endeavours to touch the passions. Although this clearly suggests a parallel between music and rhetoric, it appears in a paragraph portraying the rhetorical heritage as entirely unsuited to musical composition in the *nouveau style* of Italian comic opera. Within a decade of the Querelle des Bouffons, the orations of Demosthenes, Quinault's polished phrases and the declamation of classically trained actors could no longer provide a basis for music accompanying the exclamations, interruptions, shouting, groaning, weeping and laughing found in *opera buffa*. Such outbursts were not regarded as devices employed for specific persuasive purposes (as they would have been classified by traditional rhetoricians) but as spontaneous expressions of a character's passions.

A concern with the passions thus remained central to the later 18th century (and writers could thus still find rhetorical terminology useful), but the affections were no longer considered universal emotional states subject to codification according to rational principles. Instead, the passions were held to be highly changeable and uniquely individual, and the conventionalized representations of the affects found in earlier works began to seem stereotyped and unnaturally static.

These attitudes allowed a rhetorical manner of composition to be construed as a fault, as in C.F. Cramer's criticism (1783) of the procedures of Hasse and Graun. Yet in his *Treatise* published one year later, William Jones was still able to complain that Haydn and Boccherini lacked the rhetorician's demeanour. References to rhetoric are thus often rather general and tend to accompany remarks concerning the composer's need to cultivate a refined sensibility by familiarity with other arts. In *Der musikalische Dilettant* (i, 1770), for example, J.F. Daube suggested that composers employ the 'light and shade' of painting and 'consider carefully the rules of oratory'.

Rhetoric's changed status encouraged its treatment in such unspecific terms, and H.C. Koch (*Musikalisches Lexikon*, 1802), noting the unsystematic nature of writings on the subject, concluded that the composer should exercise 'a sensitive artistic feeling' in dealing with these fragmentary observations.

The writings of J.N. Forkel offer the final 18th-century attempt to develop a rhetoric of music. Although this founder of modern musicology is often characterized as a conservative, even reactionary, figure, his thoughts on rhetoric incorporated a progressive view of human psychology based on recent English philosophy. Forkel regarded the affections not as remaining constant until acted on but as inherently mobile and subject to an infinite number of modifications. Accordingly, the discussion of figures in the first volume of his *Allgemeine Geschichte der Musik* (1788) emphasizes concepts relating to the connection of musical ideas. Figures used to illustrate a text – a principal subject of previous musical rhetorics – are virtually ignored. Rather than being rationally quantifiable, as in Baroque music, affects are now considered entirely subjective and highly personal. Each piece reflects the inner character of its composer, and consequently Forkel considered superfluous the formulaic *loci topoi* that once aided the invention of both orators and musicians. Despite the importance of rhetoric in his thought, Forkel clearly regarded music as a true universal language superseding speech, which is merely conventional and therefore arbitrary. This accords with the views of authors such as Schiller, who regarded the arts as having 'an absolute immunity from human arbitrariness'. Forkel's faith in the pre-eminence of music became common in the Romantic period.

18th century aestheticians often cautioned composers to portray the passions, not individual words or the natural world (see Hosler, 1981 and Neubauer, 1986). As music achieved a more elevated status, depictions of birdcalls and battles, while popular with the public, began to be regarded as a debasement of the art. Critics objected strongly to certain 'madrigalisms' in Haydn's *The Seasons* (1801), and Beethoven was careful to explain the Pastoral Symphony as 'more an expression of feeling than painting'. As this phrase indicates, illustrative passages were often considered in relation to painting rather than to rhetoric; indeed, despite the proliferation of verbal programmes and descriptive titles in the 19th century, the programmatic works of the Romantic period owe little to the *ars oratoria* (*see* PROGRAMME MUSIC). In 1843 Schumann ridiculed the notion that 'a composer working with an idea sits down like a preacher on Saturday afternoon, schematizes his theme according to the usual three points, and works it out in the accepted way'. By the middle of the 19th century the conventions of pulpit oratory were almost the only models readily available for Schumann's satire.

The main focus of rhetoric during the 18th and 19th centuries was execution and delivery (the *pronuntiatio* of ancient theory), and by 1785 the majority of rhetorical textbooks concerned elocution. Rhetoricians retained their respectability in this restricted domain; Kant, for example, contrasted oratory, which persuades by exploiting human weaknesses and is 'unworthy of any esteem', with excellence of speech (*Wohlredenheit*), which belongs to the domain of art. The treatises of C.P.E. Bach, Quantz and Leopold Mozart encouraged performers to study the techniques of successful speakers, and concepts of 'proper declamation' continued to be invoked in debates on the execution of Beethoven's works (see Barth, 1992). As rhetoric became almost exclusively associated with matters of delivery and pronunciation, vocal coaches came to be accepted as instructors; in 1867 Peter Cornelius (Wagner's répétiteur and a composer and trained actor) was appointed teacher of music theory and rhetoric at the Königliche Musikschule in Munich.

Rhetoric reached its nadir as a scholarly discipline at the close of the 19th century: in 1872 Nietzsche's course on its history attracted only two students and in 1902 Benedetto Croce noted that 'rhetoric in the modern sense is above all a theory of elocution'. In such an environment the early 20th-century investigations of the musico-rhetorical tradition by Kretzschmar, Hugo Goldschmidt and Schering were important rediscoveries. The immediate cultural background supported the tendency (seen particularly in Schering) to regard the musical surface as saturated with rhetorical symbols, much as Wagner's operas were permeated with leitmotifs. In the mid-20th century H.-H. Unger compiled an extensive catalogue of musical figures, which he used to label the rhetorical devices presumed ubiquitous in Baroque compositions. The opening gesture of Schütz's *Saul, Saul, was verfolgst du mich?*, for example, was found to contain 15 such figures. In the late 20th century Krones extended this tradition to the analysis of works by Haydn, Mozart, Beethoven and even later composers. His account of the first three bars of Wagner's prelude to *Tristan und Isolde* proposes the use of *exclamatio* (the rising minor 6th), *passus duriusculus* (the rising and falling chromatic lines), *catachresis* (the 'Tristan chord') and *suspiratio* (the rest at the end of the phrase). Here figures no longer ornament the language, as in traditional rhetorical theory, but comprise the very stuff of the language itself.

The extent to which rhetoric impinged upon past compositional thought, however, remains a subject of much debate. Ursula Kirkendale's claim that Bach's *Musical Offering* was arranged according to Quintilian's *Institutio oratorica* met resistance from Bach scholars (see Wolff, Dreyfus, Walker and Williams), while Ratner's assertion that composers of the late 18th century used characteristic musical figures ('topics') associated with various moods, scenes and musical styles has been influential. Allanbrook has used this approach fruitfully to account for the dance types in Mozart's operas, where texts provide a basis for interpretation. Although Ratner's terminology recalls the *topoi* of rhetoric, the organization of melodic allusions in Haydn and Mozart cannot be shown to derive from the procedures of oratory; indeed, the *loci topoi* were being marginalized by contemporary aestheticians such as J.G. Sulzer and Hugh Blair. Moreover, as Diderot indicated, the idiom derived from Italian comic opera stood in opposition to the traditions of classical rhetoric. It may prove that semiotics, rather than rhetoric, provides the proper framework for the perspectives of Krones and Ratner.

Many recent analytical applications of rhetorical concepts are based on the presumption that during their study of Latin composers of the past were thoroughly indoctrinated in formal eloquence. Research into Bach's education, however, shows that much of his training in rhetoric involved rote memorization. Only on rare occasions was Leopold Mozart grateful for his knowledge of Latin (letter

of 5 November 1765), and in a letter of 5 February 1778 he advised his son to purchase a German translation of the psalms before attempting to set them in Latin. Much of Mozart's instruction was probably practical, concerned with proper pronunciation and issues of text-setting rather than delving into the precepts of oratory. Wolfgang himself disclaimed the ability to 'arrange the parts of a speech' effectively (letter of 9 November 1777), and was already an established musician before he began to study Latin in the late 1760s.

It is thus difficult to see classical rhetoric as part of a comprehensive *Weltanschauung* influencing the compositional choices of late 18th-century musicians. In fact, the ability of contemporaneous theorists to relate the six-part oration to both the da capo aria and sonata form (see Bonds, 1991) suggests that rhetoric did not provide models for composers; rather, writers on music seem to have adapted rhetorical concepts to conform – however tenuously – to musical practice. Despite this, the study of rhetoric remains invaluable to an understanding of certain terms, such as *inventio* and *Anlage*, and provides much insight into the creative process in general. Indeed, the trajectory of rhetoric in the 18th century reflects significant changes in the way creativity was conceptualized: instead of following rules and formulae (such as are set forth in rhetorical treatises), artists came to be seen as forming their style according to their own nature. Numerous developments, including the interest in the biographies of composers, and perhaps the foundations of musicology itself, may be related to the declining position of rhetoric in Enlightenment thought.

BLAKE WILSON (I, 1), GEORGE J. BUELOW (I, 2–4), PETER A. HOYT (II)

Rhetus [Rhete], **Georg** [Jerzy] (*b* Stettin [now Szczecin], 16 Jan 1600; *d* Stettin, 5 June ?1645). German printer. He came from a family of printers living in Stettin; in 1619 he purchased Georg Rhode's printing house, the most eminent in Danzig (now Gdańsk), and in 1629 he was appointed 'Reipublicae et gymnasii typographus'. After his death the firm was run by his widow and then by his sons until the end of the 17th century. His music publications included volumes by Eccard and Stobaeus (RISM 1634[3]), Opitz (1639), Stobaeus (1640), Siefert (1640) and Martin Spielenberger (1641). He used a high quality of type and his publications present an attractive appearance.

Rhiemann, Jacob. *See* RIEHMAN, JACOB.

Rhijck, Dieudonné [Deodatus]. *See* RAICK, DIEUDONNÉ (DE).

Rhodes, Harold (*b* Los Angeles, 1910). American piano teacher and designer of the Rhodes electric piano. The son of a baker, his grounding was in the sciences and he took an architectural degree at Los Angeles Polytechnic High School. Around 1930 he established the Harold Rhodes School of Popular Piano. During World War II he taught the piano to fellow servicemen, and then to hospital patients. For this he built his 29-note Air Corps Piano (1942), which could be played in bed and resembled a large toy piano; it used scrap parts from aeroplanes, including lengths of flattened aluminium tubing, mounted like xylophone bars, instead of strings. Thousands were built for Air Corps Hospitals. By 1947, working in California, Rhodes had developed the idea in the three-octave Pre-Piano, with electrostatic pickups, which was marketed for two years.

While in partnership with guitar builder Leo Fender, the only direct result of which was the Rhodes Piano Bass (marketed 1960–80), from about 1956 Rhodes developed the electric piano that bears his name; hammers strike electromagnetically amplified thin steel wire tines, individually linked to steel 'tone bars' that add resonance (*see* ELECTRIC PIANO, fig.2). Several models were manufactured by Rhodes Keyboard Instruments in Santa Ana and later in nearby Fullerton, California during 1965–86 (until 1974–5 as Fender-Rhodes), after CBS Musical Instruments took over Fender-Rhodes in 1965. An Electric Piano Classroom System was produced in the late 1960s. Although outdated, it is still popular with rock and jazz-rock musicians, and is recreated in sampled form on many digital pianos. The Chroma synthesizer and an electronic piano (1982) were taken over from the defunct ARP company. The company was bought by Roland in 1989, which marketed several sample-based digital pianos, synthesizers, and a drawbar organ in Los Angeles under the Rhodes name, before releasing the company to Harold Rhodes in the late 1990s for legal reasons. The innovative Rhodes Piano Method was initiated in 1990, and Rhodes received a Grammy award in 1997 in recognition of his achievements in music education, and also for the invention of his electric piano, which is set to be remarketed in 2001.

HUGH DAVIES

Rhodes, Helen. *See* HARDELOT, GUY D'.

Rhodes, Jane (Marie Andrée) (*b* Paris, 13 March 1929). French mezzo-soprano. She made her stage début in *La damnation de Faust* at Nancy in 1953, and took part in the première of Landowski's *Le fou* (1956). Her Opéra début was in 1958 as Berlioz's Marguerite; her incursions into the dramatic soprano repertory, notably as Strauss's Salome (Opéra, 1958) – perhaps invited by her lissom figure and attractively piquant stage presence – were not invariably successful; as an internationally admired Carmen, she developed an impressively 'French' portrayal,

aided by a voice not large or intrinsically beautiful, but capable of exquisitely seductive inflections. In addition to an operatic repertory that included *Bluebeard's Castle*, *L'incoronazione di Poppea*, Ravel's *L'heure espagnole* and Poulenc's *La voix humaine* (the last two played in a 1968 Opéra-Comique double bill), she appeared in much Offenbach. Rhodes took the role of Renata in the first recording of Prokofiev's *The Fiery Angel* (in French). She married the conductor Roberto Benzi in 1966.

MAX LOPPERT

Rhodes, Phillip (Carl) (*b* Forest City, NC, 6 June 1940). American composer. He attended Duke University (BA 1962), where he was a composition pupil of Iain Hamilton, and Yale University (MM 1966), where his teachers included Donald Martino, Mel Powell, Gunther Schuller and George Perle. In 1962 and 1965 Tanglewood orchestra prizes enabled him to study at the Berkshire Music Center. He served as composer-in-residence in the Cicero, Illinois public schools (1966–8) and for the Louisville SO (1969–72). In 1968–9 he taught at Amherst College and from 1972 to 1974 was composer-in-residence for the Kentucky Arts Commission. He joined the music department at Carleton College as Andrew W. Mellon Professor of Humanities and composer-in-residence in 1974. His many honours include stipends and commissions from the NEA and NEH and awards from the American Academy and Institute of Arts and Letters, the Fromm Foundation, the Martha Baird Rockefeller Fund for Music, and the Guggenheim, McKnight and Bush foundations. His opera, *The Gentle Boy* (1979–80), received the National Opera Association prize in 1986. He has served on the executive boards of the College Music Society (president 1985–7) and the Minnesota Composers Forum.

Rhodes's music combines Classical discipline, Romantic lushness and expressionist angularity in a contemporary context. His harmonic language treads a fine line between tonality and atonality. Colourful instrumentation and rich sonorities are characteristic of his chamber and orchestral writing. Recurrent motifs are important in *Autumn Setting* (1969), *The Lament of Michal* (1970) and *Visions of Remembrance* (1978–9). He is also fond of musical quotation, as is evident in *Reflections* (1976–7), *Fiddletunes* (1997) and the quartet of 1975, and injects humour into compositions such as *Witticisms and Lamentations from the Graveyard* (1972). His vocal works are dramatic and expressive, revealing a special sensitivity to text. Rhodes's active research interest in traditional Appalachian music is reflected in compositions such as *Reels and Reveries* (1991) and *Fiddletunes*. A particular affinity for bluegrass music led to his Concerto for Bluegrass Band and Orchestra (1974). Commissioned by the NEA for the McLain Family Band, it is likely his most-performed work.

WORKS

Stage: About Faces (ballet), 1970; The Gentle Boy (op, P. Rhodes, J. Rhodes, after N. Hawthorne), 1979–80; The Magic Pipe (op, P. Rhodes, J. Bryce, after Hawthorne), 1989–91

Large ens: 4 Movts, chbr orch, 1962; Remembrance, sym. wind ens, 1966–7; Madrigal I, orch, 1967, arr. SATB, orch/(2 pf, opt. perc) as Madrigal II (Johnson), 1967; 3 Pieces, band, 1967; 3 'B's', youth orch, 1971; Divertimento, small orch, 1971; Devil's Advocate, band, 1972; Conc. (Bluegrass Festival Suite), fiddle, banjo, mand, gui, db, orch, 1974; Ceremonial Fanfare and Chorale, 2 brass choirs, 1977; Adventure Fantasies for Young Players, wind ens, 1983; Reels and Reveries, orch, 1991; bluegrass band, orch arrs. of 9 McLain songs, 1974–80

BARBARA A. PETERSEN/JUSTIN LONDON

Rhodes, Willard (*b* Dashler, OH, 12 May 1901; *d* Sun City, AZ, 15 May 1992). American ethnomusicologist and educationist. He studied at Heidelberg College, Tiffin, Ohio (AB, BMus, 1922), the Mannes School of Music, New York (1923–5), and Columbia University (MA 1925). He then went to Paris (1925–7) where he was a pupil of Cortot and Boulanger. On his return he worked with opera companies, including the Rhodes Chamber Opera in Chicago in the early 1930s. He was director of music in the public schools of Bronxville, New York, 1935–7; then he joined the music department at Columbia University, where he remained until his retirement in 1969. Concurrently, from 1938, he was adviser to the Bureau of Indian Affairs in its project for recording Amerindian music; this resulted in the issue of a notable series of recordings by the Library of Congress and Folkways. He also undertook fieldwork in Africa (notably Nigeria) and India. Rhodes was a co-founder of the Society for Ethnomusicology (1953) and its president, 1956–8; he was also president of the Society for Asian Music in 1961 and the International Folk Music Council (now International Council for Traditional Music) in 1968, and served on the committees of other organizations such as the American Musicological Society, the American Folklore Society, the African Music Society and the International Institute for Comparative Musical Studies and Documentation.

Rhys, Philip ap [Aprys, Apprys, Apryce] (*fl* 1545–60). English composer. He was organist of St Mary-at-Hill in the city of London (as 'Philipp Ryse'), a post from which he resigned in 1547; 'Ryse William', presumably a relative, took over in 1548. In *GB-Lbl* Add.29996, f.28*v*, he is described as being 'Off Saynt poulls in london'. John Redford, almoner of St Paul's Cathedral, died in 1547, and it is reasonable to suppose that Philip ap Rhys took over his duties as organist there. He is last heard of on 17 July 1559, when 'Mr. Phillip of Poles' was paid 1s. 4d. for playing at Evensong at St Mary-at-Hill.

Rhys's surviving compositions consist entirely of liturgical organ music in the first section of *GB-Lbl* Add.29996 which, because of its wholly archaic repertory, appears to have been compiled before the Act of Uniformity of 1549. He was not an imaginative composer but he wrote an 'organ mass' which, because of the effect of the Reformation, has turned out to be the only Ordinary setting of its kind in the English repertory. It consists of a troped Kyrie, Gloria, offertory, Sanctus and Agnus Dei. Staves for the Credo were ruled in the MS, but the piece (if composed) was not entered. The offertory is, by continental standards, an unusual item in an organ mass, being from the Proper rather than the Ordinary. It consists of a setting of the plainchant *Benedictus sit*, the Offertory for Trinity Sunday. The setting omits the opening phrase, which was intoned by a cantor. The other movements consist of organ verses played in alternation with sections of the plainchant. Most of Rhys's organ music is in a simple three-part texture with the plainchant in the middle or lowest voice.

JOHN CALDWELL

Rhythm (from Gk. *rhythmos*; Lat. *rhythmus*; Fr. *rythme*; Ger. *Rhythmus*; 16th-, 17th-century Eng. *rithme*). Generically, a 'movement marked by the regulated succession of strong or weak elements' (*Oxford English Dictionary*). In etymological discussions of the term there is a tension between rhythm as continuously 'flowing' and rhythm as periodically punctuated movement. In musical contexts the term is even harder to pin down. Fassler remarks: 'There is no accurate simple definition of the term "rhythm" (or "rhythmics") and no consistent historical tradition to explain its significance' (B1987, p.166 n.10). Sachs is even more pessimistic: 'What is rhythm? The answer, I am afraid, is, so far, just – a word: a word without generally accepted meaning. Everybody believes himself entitled to usurp it for an arbitrary definition of his own. The confusion is terrifying indeed' (A1953, p.12). Etymology is thus of little assistance.

Rhythm and pitch are the two primary parameters of musical structure (Meyer, E1973). For in specifying the tonal and rhythmic organization of a work we believe we have captured its essential structure. Changes in instrumentation, orchestration or dynamics (i.e. changes to the secondary parameters) are understood as different arrangements of the same musical work, whereas alterations in pitch or rhythm may result in a new, different work. If pitch is concerned with the disposition of the frequencies of musical notes, then rhythm is concerned with the description and understanding of their duration and durational patternings. These durations may be more or less regular, may or may not give rise to a sense of beat or tempo, and may be more or less continuous, but as all music involves duration(s), all music necessarily has some manner of rhythm. Claims that a particular piece or performance 'lacks rhythm' may be taken to mean that the piece or performance lacks rhythmic regularity and/or a coherent sense of motion. In a similar vein, we use the adjective 'rhythmic' as an aesthetic positive in describing a piece; it would be strange, for example, to say that a piece was bad because it was very rhythmic.

If 'rhythm' refers to patterns of duration, and if 'rhythmic' characterizes such a pattern as more or less regular, then the question arises as to what determines regularity. The answer is in large part the subject of §I below, but the rhythm–rhythmic distinction gives a clue as to how our definition may be further circumscribed. For a temporal pattern to be a 'regular rhythm' its recurrent features have to be intelligible to the human ear, and this suggests that both 'rhythm' and 'rhythmic'

Ex.1 Butler (1636) on metric context and its perceptual effects; repr. in Houle (1987), 31

refer to the smaller-scale features of musical experience. There may be a deep-seated psychological reason for this, in that 'rhythm' may be a quality of musical figures and movement that is apprehended within the span of the perceptual present, whereas 'form' requires an understanding of structural relationships either wholly or partly outside the perceptual present (and thus engages one's long-term memory of the piece at hand as well as one's musical background and knowledge). While larger patterns and symmetries may occur over entire movements, days or weeks, we do not apprehend or understand these 'rhythms' in the way that we have a sensible, toe-tapping grasp of the periodicities present at the beginning of, for example, the finale of Haydn's 'London' Symphony or the Major-General's Song by Gilbert and Sullivan. The application of the terms 'rhythm' and 'rhythmic' to larger musical structures and temporal processes represents a metaphorical extension of rhythm's proper meaning.

This article is concerned primarily with musical rhythm and metre in Western music and the Western musicological tradition. Nonetheless, discussions of non-Western music and theories are noted where appropriate.

I. Fundamental concepts and terminology. II. Historical studies of rhythm. III. Current rhythm research.

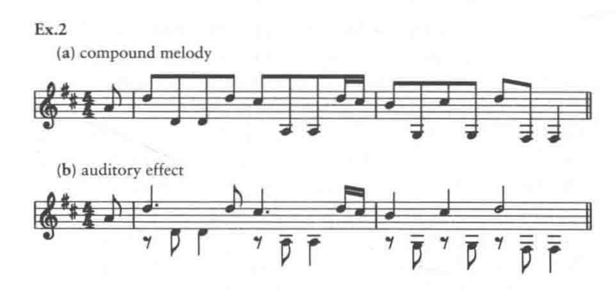
I. Fundamental concepts and terminology

The elements of rhythm are necessarily intertwined in their origin and effect. Thus, for example, while durations have certain essential properties, one's experience of duration will vary according to musical context (i.e. given the presence or absence of a regular metre). Nonetheless, this discussion begins with the duration of single notes, then proceeds to the organization of successive durations into coherent groups, the emergence of metre and metric listening, and so forth. In addition, since rhythm and metre are coherent phenomena only for a listener who can capture and remember the music as it unfolds, the following discussion engages psychological theory and research to a significant degree.

1. The distinction between rhythm and metre. 2. The perception of duration and succession. 3. Durational patterns and rhythmic groups. 4. Metre: beats, metric cycles and tempo. 5. Rhythmic and metric accent. 6. Interactions of rhythm and metre. 7. Complex rhythms and complex metres. 8. Additive versus divisive rhythm.

1. THE DISTINCTION BETWEEN RHYTHM AND METRE. A series of events (whether musical notes or the blows of a hammer) is commonly characterized as 'rhythmic' if some or all of those events occur at regular time intervals. But being 'rhythmic' is not the same thing as being 'a rhythm'. For a musician or musicologist 'rhythm' signifies a wide variety of possible patterns of musical duration, both regular and irregular. A musician is apt to observe that a regular rhythm exhibits metric properties – or, to put it directly, regular rhythms involve metre. While all music involves some type or rhythm, not all music involves metre. Thus in common usage the adjective 'rhythmic' often signifies what might more precisely be described as a 'metrically regular series of events'. However, irregular rhythms can occur in the context of a regular metre (e.g. syncopated figures and asymmetrical phrase structures), and not all metres require regular or even patterns of duration (e.g. Bartók's 'Bulgarian' rhythms). Thus there is more to the distinction between metre and rhythm than regularity versus non-regularity.

Broadly stated, rhythm involves the pattern of durations that is phenomenally present in the music, while metre involves our perception and anticipation of such patterns. In psychological terms, rhythm involves the structure of the 'temporal stimulus', while metre involves our perception and cognition of such stimuli. Perhaps the earliest recognition of this distinction was made by Butler (1636; see Houle, A1987). Butler's illustration is given as ex.1; he remarked that in the top staff the minims go 'jumping by threes' whereas in the bottom staff they go by twos, based on the metric context established in the previous bars. That is, even if the second and third bars are performed in the same way, we will hear them differently; different perceptual attitudes give rise to different metres. As Gjerdingen (I1989) has aptly put it, 'metre [is] a mode of attending', while rhythm is that to which we attend.



Many of the salient differences between rhythm and metre are summarized in Table 1.

While the majority of contemporary music theorists embrace a 'strong separation' of rhythm and metre into separate ontological and analytical domains, not all do

TABLE 1

Metre	*Rhythm*
A series of articulations or time-points which form measures.	A series of durations or time-spans which form groups.
Musical 'whens' – metre functions as a means of locating durations of time.	Musical 'whats' – objects formed by the concatenation of phenomena that have duration.
Usually regular, requiring isochronous spacing of beats and/or downbeats in a measure.	Usually not regular, as groups typically are comprised of varying durations within a group.
Metric accent stems from the listener's active engagement with the music, the fall-out from counting/foot-tapping behaviour.	Rhythmic accent stems from phenomenal aspects of the musical surface such as differences in loudness, duration, contour, etc.
Metric accent is always the first event in a measure.	Rhythmic accent may occur anywhere within a rhythmic group.
Measures are continuous: no gaps or breaks within a metric unit.	Rhythmic groups are continuous: no gaps within a group.
Measures are contiguous: no gaps between successive measures.	Rythmic groups are not necessarily contiguous: often there are gaps between successive groups.
Strongly predictive: metric patterns usually remain constant and are thus a reliable basis for anticipating when subsequent events will occur.	Weakly predictive: though durational patterns may be repeated, often they are not, and rhythm is not a reliable basis for anticipating subsequent events.

so. Schachter (G1987) and Rothstein (E1989) explicitly de-emphasize the rhythm–metre distinction, preferring instead to address a more general concept of 'phrase rhythm' (see §III, 3). Hasty (G1997) gives an especially thorough critique of this separation, drawing on the work of Friedrich Neumann (G1959). Hasty notes that the 'strong separation' between metre and rhythm can be traced to 19th-century theorists such as Lussy (D1885), and he also questions the basis on which rhythm and metre can interact if such a strong separation exists between them.

2. THE PERCEPTION OF DURATION AND SUCCESSION. Not all durations are perceived alike, as there are a number of psycho-physical limits on our ability to perceive durations and durational succession. Hirsh (I1959) demonstrated that two onsets must be separated by at least two milliseconds (ms) in order to be distinctly perceived, and that at least 15–20ms are required to determine which onset came first. There also seems to be about a 50ms perceptual decay time – a minimum interval needed to hear one element follow another without overlap. Hirsh and others (I1990) found that 100ms seems to be the threshold for reliable judgments of length, and Roederer (I1995) noted that 100ms seems to be a threshold for processing in the cerebral cortex, and is thus the minimum duration that engages a 'musical' (i.e. learnt) understanding of sound and constructs such as scale degrees and rhythmic archetypes. The maximum interval for reliable estimates of the length of single durations, as well as for the connection of successive articulations, is usually 1·5–2·0 seconds. This limit is related to the limitations of short-term memory and the perceptual present (Fraisse, I1978; Handel, I1989). Musicians and musicologists have long been aware of these upper and lower bounds, as they appear in the context of discussions of tempo and performance limits (see, for example, Westergaard, E1975).

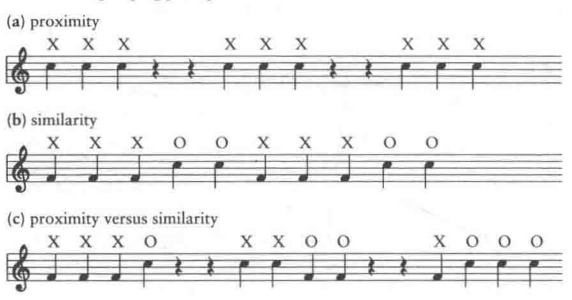
Just as there are perceptual and cognitive biases and constraints on our understanding of duration, there are also similar constraints on our apprehension of musical texture, some of which impinge on our understanding of rhythm. In perceptual psychology texture is investigated under the rubric of 'auditory streams' which are the 'perceptual grouping(s) of the parts of the neural spectrogram that go together' (Bregman, I1990). It is through the process of auditory streaming that we are able to pick out some sounds in our environment and hear them as connected and coherent, whether they are a single voice in a crowded room or a single part in a complex musical texture. Research in auditory streaming has shown that pitch, tempo, timbre and loudness are all factors that affect our ability to segregate sounds into separate streams. Some streaming effects interact with our perception of duration; for example, Van Noorden (I1975) has shown that when two isochronous streams cross, an uneven ('galloping') rhythm is nonetheless perceived. It is through streaming that we are able to hear compound melodies, and hence perceive a series of different durations within a musical surface consisting of even articulations, as in ex.2.

Along with streaming effects, other factors can influence our perception of duration. As summarized by Handel (I1989), intensity and/or pitch differences between evenly spaced notes tend to be heard as durational differences (with a longer duration perceived from the onset of the unstressed or lower note to stressed or higher note, and vice versa). Similarly, durational differences may be perceived as differences in intensity or loudness, and the durational and/or intensity difference(s) of one note may interfere with durational judgments of other notes. Repp (I1995–6) has reported that in metric contexts listeners expect slight variations in duration, such that actual durational differences may go unnoticed if they occur where they are expected, or may seem exaggerated if they occur in unexpected metric positions.

Musical durations (and hence rhythmic groups) are almost exclusively recognized from note onset to onset. Ex.3 contains three different musical figures: (*a*) a series of staccato notes; (*b*) a series of legato notes; and (*c*) an arpeggio. While 3*a* and 3*b* differ with respect to the absolute value of their component notes, and while 3*c* is texturally different from 3*a* and 3*b*, all three express the 'same' rhythmic pattern – a three-element series with a sense of accent on the first element (prosodically, a dactyl). While rests between sounds may be salient, most often they inform the perceived quality of articulation (i.e. staccato versus legato) rather than being heard as musical objects in themselves (except that in established metric contexts some rests can be heard as having definite duration: see London, G1993).

See also HEARING AND PSYCHOACOUSTICS and PSYCHOLOGY OF MUSIC, §II, 2.

3. DURATIONAL PATTERNS AND RHYTHMIC GROUPS. As James noted, 'To be conscious of a time interval at all is one thing; to tell whether it be shorter or longer than another interval is a different thing' (I1890, p.615). Metre obviously plays a crucial role in the determination of relative duration. Nonetheless, we are also aware of relative durations in non-metric contexts. The first judgment to be made regarding two successive durations is whether they are the same or different. This distinction is not as trivial as one might suppose. Within the range of rhythmic acuity described above, the perception of duration follows a modified form of Weber's law, in which the just-noticeable difference between two successive durations is proportional to their absolute length



(plus a constant of minimal discrimination: see Allan, I1979). There are also effects of ordering (whether the longer note comes first or last), pitch proximity and differences in loudness, all of which influence durational comparisons. If two successive durations are judged as different, then their difference can be conceived and represented in different ways. One may simply compare the first interval with the second, using the first as a sort of temporal yardstick. This strategy may be used when the two durations are close to each other in length. If the two durations differ to a greater degree, rather than comparing the second directly with the first, one may relate each to previously established perceptual categories of duration. These categories may simply be 'long' versus 'short', or they may be more nuanced (e.g. 'very long', 'long', 'medium', 'short', 'very short'). Such categorical perception of duration has been documented in psychological studies, and it does not require precise (i.e. proportional) definition of the respective categories (see Clarke, I1987).

Two or more musical durations may cohere into a larger unit, termed a 'rhythmic group'. The creation of coherent, well-articulated rhythmic groups is one of the principal tasks the performer faces in realizing a musical score: to project a sense that some notes go with other notes, and that these groups themselves form larger units. From this process the basic musical shapes of a piece may be discerned.

In the absence of phenomenal cues for group boundaries we will arbitrarily impose a sense of group structure on a series of events. 18th-century theorists such as Koch (1787) noted this propensity (see discussion in Hasty, G1997), and in 20th-century psychological studies this is known as 'subjective rhythmization' (Fraisse, in *Action and Perception*, I1985; Handel, I1989). The two principal factors that influence group boundaries are proximity and similarity (see Meyer, I1956; Lerdahl and Jackendoff, E1983; Handel, I1989; and Bregman, I1990). In ex.4*a* proximity (as well as placement on a common horizontal line or pitch plane) gives the sense that the series of Xs or notes is organized into three groups of three. Composers, copyists and engravers have long understood the importance of note-spacing in projecting a sense of group boundaries. It can be seen that this proximity is marked from note onset to note onset. In an analogous case which employed a continuous series of durations (e.g. two crotchets plus a semibreve) we would find the same grouping structure. Small variations in onset timing may have an impact on proximity judgments (and hence on grouping structure); the common performing practice of taking extra time for bowing or breathing following longer notes exploits (and underscores) our innate

Ex.4 Gestalt grouping principles

proclivity to hear a long note as the end of a group (see Gabrielsson, H1988).

Ex.4*b* illustrates the effect of similarity on the perception of group boundaries. Even though the pitches are equally spaced in this example, one again perceives a series of triplets. In ex.4*c* the effects of similarity and proximity are combined. As can be seen, proximity is of greater salience than similarity, for despite the sharp differentiation of pitch, the differentiation of note-onset proximities creates a series of four-element groups. Group boundaries can be marked by changes in any musical parameter, including dynamics, timbre and texture. However, grouping is primarily marked by patterns of duration and timing, with pitch playing an important, though secondary role (see §III, 6).

Once the boundaries of a group have been established one may describe its internal structure, though often these two issues are interdependent. Cooper and Meyer (E1960), whose prosodic approach to musical rhythm has its antecedents in 17th- and 18th-century discussions of *rhythmopoeia* such as those of Mersenne (*MersenneHU*) and Mattheson (C1739), begin with a list of two or three-element archetypes for musical groups; these involve the relationship between one accented and one or two unaccented elements in each group (iamb, trochee, dactyl, anapest and amphibrach). Cooper and Meyer then consider each archetype in various metric contexts. Lerdahl and Jackendoff (E1983) do not employ durational archetypes in their analysis of rhythmic grouping; rather, they focus on the determination of group boundaries and on the hierarchical nesting of subgroups. In Lerdahl and Jackendoff's theory the internal structure of each group is determined by the interaction of metrical and tonal components (see §III, 3).

The same pattern of pitches and/or durations may allow for more than one grouping interpretation (ex.5). These

Ex.5 Same pitch-durational pattern with different group boundaries

various groupings may be differentiated compositionally (for example, by the patterning of the accompaniment) or by articulative and dynamic cues in performance. The fact that the same pattern of pitches and durations may give rise to different grouping (as well as metric) structures has implications for the historical study of rhythmic notation and performance. Rhythmic notation must somehow inform the performer how to make rhythmic nuances in performance, either with explicit markings, with hints from spacing and orthography, or through shared conventions of score interpretation (e.g. metre as an indication of bowing and hence grouping, characteristic styles of rhythmic performance for various dance genres, and so forth).

Rhythmic groups may be nested hierarchically, and thus smaller groups may function as composite elements

Ex.6 Nested rhythmic groups

within a larger group. Ex.6*a* consists of a pair of simple dactylic groups, while in ex.6*b* the dactyls are themselves composed of trochaic subgroups. One reason we are able to hear ex.6*b* as a variant of ex.6*a* is that we treat the grouping structures as commensurate; the elaborations in ex.6*b*, while adding extra depth to the rhythmic hierarchy, do not alter the basic rhythmic pattern on the crotchet level.

4. METRE: BEATS, METRIC CYCLES AND TEMPO. Metre is a structured attending to time which allows the listener to have precise expectations as to when subsequent musical events are going to occur. Dowling, Lung and Herrbold (I1987) have studied and described such directed attention in terms of 'expectancy windows'; Jones and her colleagues (I1981, 1989, 1990, 1995, 1997) have given considerable attention to the process of entrainment, whereby one synchronizes one's attention to regular patterns of information present in the environment. Musical metre, then, would seem to be a particular utilization of our more general capacities for temporal perception. Thus, while knowing that waltzes are in triple metre tells us something (at least in broad terms) about their rhythmic structure, it also tells us even more about the way we listen to and/or perform them.

First and foremost, metre requires an awareness of a beat or pulse. A series of very rapid notes (such as a sustained tremolo) does not give rise to a sense of metre, nor does a series of very long or widely spaced notes. Only when we hear a series of regular articulations in a certain range (from 100ms to 2 seconds apart) does a sense of pulse arise. More familiarly, a 2-second duration is a semibreve at a tempo of crotchet = 120 (the upper limit), while a 100ms duration is a semiquaver at a tempo of crotchet = 150 (the lower limit). While these very short and rather long durations may constitute individual levels of a metric hierarchy, they are at the ends of the metric spectrum. Psychological research has validated what musicians have long known: we have a preference for tempos within a narrower subrange of these extremes (*see also* PSYCHOLOGY OF MUSIC, §II). Parncutt (I1993–4) has examined a range of 'maximal pulse salience' (from 60 to 150 beats per minute, anchored at approximately 100 beats per minute) wherein pulses tend to be most strongly felt. Our sense of tempo is not simply based on the shortest (or longest) durations present in the musical surface, though such durations contribute to the particular quality of motion present, such as a 'tense' adagio or a 'serene' allegro. As Epstein (H1995) notes, tempo is an aggregate effect of the total metric hierarchy – its relative depth, the continuity of its various levels and so on.

The perception of a beat or pulse is not only necessary for a sense of 'connectedness' among successive events; it may also be necessary for a sense of motion, a temporal/auditory analogue of the 'phi phenomenon' in visual perception (Wertheimer, I1912; Bregman, I1990). The special salience of the pulse level has been acknowledged in various theoretical models of metre, from Cooper and Meyer's 'primary rhythmic level' (E1960, p.2) to Lerdahl and Jackendoff's 'tactus' (E1983, p.71). If the beat level should drop out, we immediately feel suspended in time and await its restoration.

A sense of beat, while necessary, is not sufficient to engender a sense of metre. Another layer of organization is also required, giving rise to a metric hierarchy which contains two or more coordinated levels of motion. Koch (D1782–93, ii) recognized beats (*Taktteile*) as primary components of the measure (*Takt*), while various subdivisions (*Taktglieder* and *Taktnoten*) are produced by analogous partitions of the beat. Weber (D1817–21), with an emphasis on symmetry as an organizing principle, noted that

> Just as beats together form small groups, several groups can also appear bound together as beats of a larger group, of a larger or higher rhythm, a rhythm of a higher order. One can go even further and place such a rhythm of a higher order with a similar one, or a third, so that these two or three together form yet a higher rhythm. (1824, pp.102–3; trans. from Morgan, E1978, p.437)

Thus Weber extended metric relationships both upward and downward, as opposed to earlier theorists who had begun with the measure and then had proceeded by division. Similar descriptions can be found in Hauptmann (D1853), who spoke of 'metric construction inwards and outwards', as well as in Riemann (D1903–4), who articulated the principle of *Achttaktigkeit* to describe an eight-measure metric schema (see also Klages, E1934; Leichtentritt, E1951).

Given the emphasis on symmetry and the pervasiveness of the systole/diastole metaphor for musical motion, 19th-century accounts of metre were strongly biassed towards binary principles of metric organization. Present-day theorists continue the hierarchic approach to metric structure but have relaxed the strictures on its organization. Cooper and Meyer define metre as 'the measurement of the number of pulses between more or less regularly recurring accents' (E1960, p.4). Yeston describes metre as the interaction between two adjacent levels of motion (E1976, p.67).

Lerdahl and Jackendoff note that 'fundamental to the idea of meter is the notion of periodic alternation of strong and weak beats' and that 'for beats to be strong or weak there must exist a metrical hierarchy – two or more levels of beats' (E1983, p.19). They go on to specify how the metric hierarchy must be organized through a series of metric well-formedness rules. These rules work in a bottom-up fashion, prescribing that beats come in twos or threes and that beats and measures be isochronously spaced. Kramer (K1988) relaxes these constraints and allows for the non-isochronous spacing of beats and hyperbeats (though they still must occur in cycles of twos or threes).

While two levels of structure will give rise to a sense of metre, most metric hierarchies are more richly organized. Time signatures used in Western notation since the 17th century specify four basic metric types, based not only on the organization of each measure into two or three beats, but also on the organization of beat subdivisions into duplets or triplets (see Table 1). These time signatures specify three levels of structure and thus define the pacing of rapid, moderate and slower events in a coordinated fashion. Additional subordinate and superordinate levels of organization are possible. Subdivisions are constrained by our abilities to discriminate among rapid stimuli, as individual note onsets become a perceptual blur (as in rapid sweeps in Chopin). Limits on superordinate levels are more controversial. Clearly there may be a sense of attending above the measure (see Caplin, D1981, on 'notated versus expressed' metres), but the extent of such 'hypermetres' remains a topic of considerable debate (see §III, 1).

The beat level of the metric hierarchy serves as the temporal anchor for the other levels. Thus neither a 'top-down' approach (where one starts with the duration of an entire measure or larger unit and then proceeds to partition that span into beats, and those beats into subdivisions) nor a 'bottom-up' approach (where one starts with the shortest durations present on the musical surface, combines them into beats, and those beats into measures and so forth) is quite right. Rather, a sort of 'middle-out' perspective on metre seems most consonant with the way we attend to (as well as represent) rhythmic events. For higher and lower levels may come and go over the course of a piece without breaking its temporal thread; a layer of subdivision may be absent entirely, or freely change from duplets to triplets without perturbing our sense of temporal continuity. Ex.7 illustrates how the number of metric levels may fluctuate over the course of the piece, from two or three above and below the beat in the opening bars (ex.7*a*) to its distillation down to simple pairs of beats (ex.7*b*). (Here and elsewhere, layers of dots under the staff correspond to levels of the metric hierarchy. A metric event is more or less accented depending upon the number of levels on which it occurs, indicated by the greater number of vertically aligned dots under that event.) In a very real sense these fluctuations are changes of metre, as they represent changes in the degree and depth to which the listener is entrained to the music.

Finally, if metre is a complex mode of musical attending, in characterizing a piece or passage as 'metric' one usually means that composer, performer and listener all share the same temporal perception(s) of the music. If a performer maintains a complex counting framework in the execution of a musical work, but this framework is aurally inaccessible to the listener, then that musical work is not metric in the ordinary sense. If the performer maintains one sense of metre while the listener infers another (which may be possible in a wide variety of contexts), then the music is metric but in a multivalent sense. If on the other hand the performer maintains one sense of metre but the listener is unable to infer any sense of metric organization at all, then the music is in some sense non-metric. Thus the presence of metric notation (whether in Babbitt or Baude Cordier) does not guarantee the presence of a metre (see §II, 4).

5. Rhythmic and metric accent. Perhaps the thorniest problem in discussing rhythm and metre involves their respective accents. In its broadest sense, 'accent' is a means of differentiating events and thus giving them a sense of shape or organization. Many sources distinguish between 'qualitative' and 'quantitative' accent. These terms originated in discussions of poetry and linguistic accent, and were subsequently applied to music. Originally, qualitative accent referred to poetic rhythms whose elements were differentiated by dynamic or intonation stress, as distinct from those differentiated by length. This opposition in turn informs the distinction that has been made between stress-timed and syllable-timed languages. Yet, as Handel (I1989) notes, all languages employ both qualitative and quantitative accents. Moreover, from a perceptual point of view quantitative differences result in qualitative distinctions, and conversely qualitative distinctions are often perceived not simply as, for example, difference in dynamic emphasis, but also as differences in duration.

A metric accent marks one beat in a series as especially strong or salient, such that it functions as a downbeat, while a rhythmic accent makes one element in a series of durations the focal member of the rhythmic group. Cooper and Meyer, in recognizing the difficulty of pinning down rhythmic and metric accent, simply said that an accent event is 'marked for consciousness in some way' (E1960, p.8). They distinguished accent from stress, which is the 'dynamic intensification of a beat, whether

Ex.7 Fluctuation in metric depth over the course of Beethoven's Fifth Symphony, 1st movt.

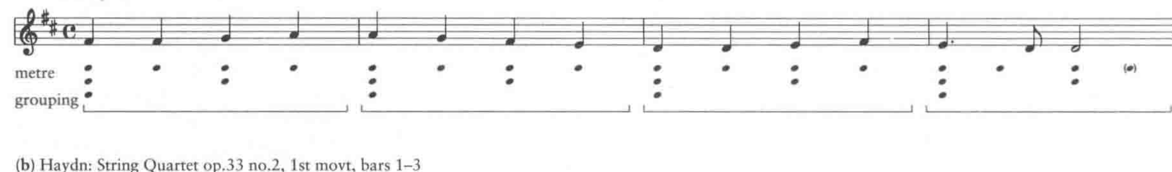
accented or unaccented'. Thus, for example, the dynamic and textural emphasis that occurs on the second beat of each bar in a mazurka does not displace the downbeat (and hence the sense of metric accent).

The relationship between tonal motion and rhythmic and metric accent(s) has generated a considerable amount of discussion, much of it focussing on the accentual status of cadences and other components of phrase structure (for a summary see Kramer, K1988). Analyses of rhythm and metre by Schenkerian theorists, most notably in the work of Schachter (E1976, E1980, G1987) and Rothstein (E1989), engage analogous concerns. Not surprisingly, from a Schenkerian perspective rhythmic accent is generated via top-down linear processes, as it derives from tonal motions which serve to articulate various structural levels. Schachter (G1987) also notes that metric accent accrues to the boundary points of various time spans, and that such spans may be articulated by both durational and tonal processes. Rothstein, drawing on the work of Koch (D1782–93) and Schachter, posits that middleground tonal motions are inherently regular, based on symmetrical archetypes which may be modified or transformed in the foreground. Rothstein also emphasizes the ways in which rhythmic groups and metric structures tend to be commingled, and so approaches questions of metre and accent through a consideration of 'phrase rhythm' which includes both metrical and rhythmic components (see also §III, 2).

Other theorists consider accent by focussing on musical motion and on those points which serve as crucial moments in its ebb and flow. This perspective naturally leads to considerations of metre and metric accent. Momigny (D1803–6) spoke of an upbeat-downbeat motion (from *levé* to *frappé*) which inheres at both foreground and higher levels. A similar account of arsis and thesis was given by Riemann (D1903–4), who integrated a recursively applied concept of upbeat-to-downbeat into an eight-bar metric/rhythmic schema. Zuckerkandl (G1956) developed a wave model of metre, linking successive upbeat and downbeat motions:

> With every measure we go through the succession of phases characteristic of wave motion: subsidence from the wave crest, reversal of motion in the wave trough, ascent toward a new crest, attainment of a summit, which immediately turns into a new subsidence.... Our sympathetic oscillation with the metre is a sympathetic oscillation with this wave. (p.168)

The crest of the metric wave is a point of metric accent, a moment of beginning. The correlation between a point of beginning and metric accent has been explored by Berry (G1976), who speaks of 'reactive' and 'anticipative' impulses and their corresponding accents; this parallels Zuckerkandl's account of motion from trough to crest (see also Brower, E1993). Kramer similarly defines metric accent as 'a point of initiation' (K1988, p.86). Benjamin (G1984), drawing on the work of Berry, attempts to quantify and tabulate various factors (harmonic change, relative stability, relative dissonance, contour, textural density and so forth) which mark such points of initiation and thus define accent algorithmically; Lester (E1986) espouses a similar approach.



Other theorists have refined Cooper and Meyer's distinction between accent and stress. Epstein distinguishes stress, rhythmic accent and metric accent. He places metre and rhythm into separate temporal domains, a 'chronometric time' consisting of beats and metric accents, and an 'integral time' which contains pulses and rhythmic groups (E1979, pp.58–62; see also Souvtchinsky, K1939). Lerdahl and Jackendoff distinguish three varieties of accent: phenomenal accents which 'give emphasis or stress to a moment in the musical flow ... such as sforzandi, sudden changes in dynamics or timbre, long notes, leaps ... and so forth', structural accents which are 'caused by melodic/harmonic points of gravity in a phrase or section', and metrical accents which accrue to a 'beat that is relatively strong in its metrical context' (E1983, p.17). Their metric accent is hierarchic in nature, in that a metrically accented event on one level is also present on higher levels; these relationships are indicated by their dot notation which marks the emergent metric grid. In Lerdahl and Jackendoff's approach metre is read in relation to grouping structure, though it is restricted to a few levels in the musical foreground (see §III, 2). This hierarchic approach to metric accent has its precursors in Komar (E1971) and Yeston (E1976) and is also adopted by Kramer (K1988).

6. Interactions of rhythm and metre. The first question to consider in discussions of rhythm-metre interaction is, 'Which comes first, rhythm or metre?'. Hauptmann (D1853), for example, viewed metre and metric processes as prior to rhythm, while Neumann (G1959) takes the opposite view. Metric priority implies that durational patterns are understood only within the context of a metric framework (and, on some views, are generated from that framework; see Johnson-Laird, I1991). The pulse train which is the substrate of metre may be internal to the listener, or it may be given in the music, but in either case rhythmic shapes gain their identity in relation to it. Conversely, from the point of view of rhythmic priority, the metric framework is inferred from the unfolding durations; Lerdahl and Jackendoff (E1983) give a formalized treatment of such a metric discovery process. On this view it also follows that metre is not inherently regular, given that it flows from the fluctuating stream of durations. Rather, metricity lies in the listener's sense of temporal comparison or measurement. At the root of the question of rhythmic or metric priority are fundamentally different conceptions of time and temporal consciousness (for a discussion of the historical and philosophical aspects of this issue, see Hasty, G1997). One may steer a middle course between these two perspectives. When a piece begins, its metre and tempo are usually not known to the listener, and so the listener must make metric inferences (usually quickly and without difficulty) from the pattern of durations and stresses that are given. Once the metre is established it takes on a life of its own; the listener may then project a sense of accent on to an event even if it is not otherwise marked by duration, dynamics, contour or harmonic change. Thus at some times a sense of accent flows from the musical surface to the emerging metre, and at other times from the metre to the unfolding musical surface. Metre is not constant over the course of a piece, and should the metre falter or collapse later on, the listener must again seek an appropriate metric framework.

We often speak of conflicts between rhythm and metre. As Hasty has rightly observed, 'to enter into conflict metre and rhythm must share some common ground' (G1997, p.17). In hearing metrically, a listener also generates a series of rhythmic groups, a pattern of durations and rhythmic accents. Thus two grouping patterns are usually present in the musical experience: that expressed by the musical surface, and that generated by the metrically entrained listener. While often these patterns are perfectly congruent (ex.8*a*), quite often they are not (ex.8*b*). In

Ex.8 Congruent and noncongruent metre grouping boundaries

(a) Beethoven: 'Ode to Joy'

(b) Haydn: String Quartet op.33 no.2, 1st movt, bars 1–3

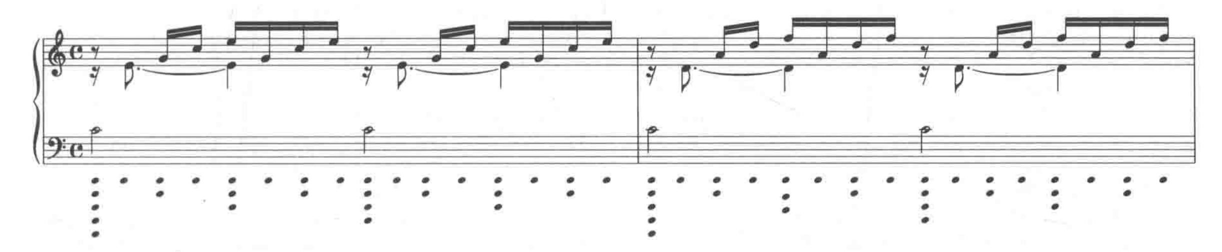
Beethoven's 'Ode to Joy' there is a one-to-one correspondence between rhythmic and metric events, and both measures and groups have their boundaries in the same locations. In the Haydn example, however (ex.8*b*), the rhythmic groups in the first violin part have a different number of elements from the metre (which is clearly expressed by the other members of the quartet, who play a foursquare accompaniment in quavers), and these groups are offset from the metric boundaries because of anacrustic figures. Nonetheless, in ex.8*b* these groups are coordinated in a number of important ways. Both the 'rhythmic group' and the 'metric group' express the same length. It may also be observed that in both examples the rhythmic and metric accents coincide – the downbeats of each bar are also the location for the note which functions as the focal note in each group. In other words, though groups and measures are non-congruent in ex.8*b*, the result is not a polyrhythm or polymetre.

More serious conflicts occur in the cases of syncopation and hemiola (ex.9). Yeston (E1976) and Krebs (G1987), building on the work of Sachs (A1953), have described these conflicts in terms of 'metric dissonance', and their approach has been taken up by theorists such as Rothstein (E1989), Cohn (G1992, G1992–3), Kamien (G1993) and Grave (G1995). Metric dissonances occur when secondary accents and/or group lengths undermine the established metre to the point that a secondary metric framework may emerge; in ex.9*a* Holst's melody refuses to settle into the 2/4 framework, but neither can it quite establish a new metre. In ex.9*b*, however, there is a local shift of metre, from compound duple to simple triple in the second and fourth bars. Note in this case that the quaver and dotted minim levels of metre remain the same; the shift occurs only on the beat level (from dotted crotchets to crotchets and vice versa).

Polyrhythms entail even greater complexity, as they involve the simultaneous (as opposed to successive) presence of two different rhythmic or metric streams. Thus, for example, if the bass line in ex.9*b* maintained the 6/8 metre while the upper part shifted to 3/4, the result would be a true polyrhythm. Polyrhythms are often described in terms of the presence of two (or more) concurrent metres (thus, more properly, polymetres); descriptions of metric dissonance often make similar assumptions. However, work in perception of polyrhythms (Lashley, I1951; Handel and Oshinsky, I1981; Handel, I1989; Klapp and others, I1985; Grieshaber, I1990; and Jones and others, I1995) suggests that we are unable to hear two metric frameworks at the same time, but either hear polyrhythms in terms of a dominant metre, or construct a composite metre to accommodate both rhythmic streams.

A number of theorists (Cone, E1968; Westergaard, E1975; Benjamin, G1984; Schachter, E1976; Berry, G1976; Komar, E1971; and Lerdahl and Jackendoff, E1983, summarized in Kramer, K1988) have concerned themselves with the relationship between phrase structure and metre or, more precisely, hypermetre. Here the chief concern is the alignment between the tonal structure of a phrase and the accentual organization of the hypermeasure, especially with respect to the interaction(s) between cadences and hypermetric accent. A related concern is whether the tonal structure of the phrase determines the higher-level metric accent or vice versa (see §III, 1).

7. Complex rhythms and complex metres. While complexities such as hemiola and syncopation may arise



Ex.9 Syncopation and Hemiola

(b) non-isochronous beats in Dave Brubeck: *Blue Rondo à la Turk*, bars 1–3

from the interactions between rhythm and metre, rhythmic and metric structures may also exhibit considerable complexity in their own right. In describing either a measure or a rhythmic group one may note (*a*) its overall size, in terms of both its absolute duration and the number of elements it contains; (*b*) the number of structural levels it comprises; (*c*) the variety of its elements (e.g. the range of durational values within it); and (*d*) the degree of redundancy in its organization. These factors must be considered together, for a large number or variety of elements does not in and of itself entail rhythmic or metric complexity. For instance, ex.10 contains many notes and many levels of metric structure, yet it is not rhythmically or metrically complex, given the high degree of redundancy in its grouping and metric structure.

More complex rhythms involve a variety of contrasting durational values. In ex.11 there is alternation between a series of short durations and then an extremely long inter-onset interval between groups. As the metric subdivisions (and indeed almost the beats themselves) lapse during the grand pauses, the result is both an indeterminacy with respect to the 'end' of each group and a sense of discontinuity between successive metric units. Ambiguity of group organization and/or boundaries adds to rhythmic complexity. In ex.12 the sense of closure and group articulation that occurs on the second beat of bar 4 is undermined by the sequential repetition of the motif in bars 5–6; the result is a sense that bars 3–6 form a group in their own right, blurring the cadence in bar 4.

Complex metres involve irregular relationships among elements on a single metric level as well as between adjacent levels (Jones and Boltz, I1989). The hallmark of complex metres is that some levels are non-isochronous. In ex.13*a*, showing a metre commonly referred to as mixed or alternating, the downbeats are unevenly spaced, but regularity occurs every five beats. In ex.13*b* the quavers are too rapid to be felt as beats, and the result is a series of uneven beats with a ratio of 2:2:2:3. Such 2:3 ratios for the duration of successive beats are characteristic of metres with complex beat patterns and give the music

its 'limping' quality (see Brăiloiu, J1951, on 'aksak' rhythm). Complex metres typically are indicated with a fractional time signature such as 2+2+2+3/8. Complex metres also tend to be more fragile, in that they readily devolve into metres with isochronous beat or measure periods, and in that only a limited range of durational patterns is possible in any given complex metre. Subdivision is also usually explicitly present to ensure the intelligibility of the metre.

On a larger scale, the use of constantly changing patterns of rhythm and/or shifting metres adds another level of structural complexity. Elliott Carter has developed and described the technique of 'metric modulation', which he uses in his percussion piece *Canaries* (ex.14). Of this excerpt Carter writes that 'to the listener, this passage should sound as if the left hand keeps up a steady beat throughout the passage . . . while the right-hand part, made up of F-natural and C-sharp, goes through a series of metric modulations, increasing its speed a little at each change' (F1977, p.349). *Canaries* has its antecedents in the use of a series of proportional changes in mensuration in pre-tonal music.

8. Additive versus divisive rhythm. In discussions of rhythmic notation, practice or style, few terms are as confusing or used as confusedly as 'additive' and 'divisive'. Additive rhythms are said to be produced by the concatenation of a series of units, such as a rhythm in 5/8 which is produced by the regular alternation of (2/8 + 3/8). Divisive (or, more often, multiplicative) rhythms are produced by multiplying some integer unit such that a measure of 2/4 is equal to 2 × 2/8. In addition, additive is associated with asymmetrical rhythms, while divisive rhythms are often assumed to be symmetrical. As a result, the first problems that often arise occur in the case of triple metres, which can be regarded as divisive (e.g. 3/4 = 3 × 1/4) but often involve the pairing of unequal durations (e.g. a minim plus a crotchet, creating a 2/4 + 1/4 figure, to put it in appropriately metric terms; see Rastall, A1982). While this problem stems from a conflation of metric beats with rhythmic durations, deeper confusions regarding additive versus divisive rhythm also occur.

These confusions stem from two misapprehensions. The first is a failure to distinguish between systems of notation (which may have both additive and divisive aspects) and the music notated under such a system. The second involves a failure to understand the divisive and additive aspects of metre itself. Few notational systems are wholly additive or wholly divisive, given the practical problems such systems create (see §II, 1). Any notational system that uses different orthographic forms (or patterns of forms, in the case of modal rhythm) for different durations will have to define their interrelationships in some way, and this is almost universally done in terms of proportional differences between different shapes. Therefore, on a note-to-note level successive durations will be expressed in terms of some multiplicative or divisive relationship (e.g. that a given note is half or twice as long as the note that preceded it). Yet 'additive' and 'divisive' mean more than simple note-to-note durational relationships, in that they imply the manner in which a series of durations coheres into a larger figure. Additive rhythms are constructed and understood from the 'bottom up', while divisive rhythms are constructed and understood from the 'top down'. Additive and divisive are therefore claims about the essential nature of the rhythmic hierarchy in a particular piece or style.

Notational systems that are metrically equivocal tend to give representations of durational sequences that are neither specifically additive nor divisive. For example, while there is a divisive aspect to modal rhythm, in that one must see the entire ordo in order to understand which mode is present, this is not the same as understanding shorter durations in terms of their generation from longer spans via some process of division. Later Franconian and Petronian refinements of modal practice, while giving greater precision and flexibility, essentially remain systems representing a linear series of durations. Such notational systems do not express any hierarchical structure of either an additive or a divisive nature. This is not to say that the music written in modal notation cannot contain hierarchical rhythm; one would be hard pressed to claim that pieces which employed primarily 3rd- or 4th-mode rhythms do not project a sense of metre akin to compound duple time. Conversely, just because a notational system is hierarchic (i.e. divisive), it does not follow that the musical rhythms notated under such a system are (see ex.14).

Metre itself contains additive and divisive components, and this suggests that our understanding of rhythm in general involves both additive and divisive aspects. Psychological studies of metre indicate that above the level of the beat all metres are additive: 2/4 (1+1), 3/4 (1+1+1) and so forth. On the other hand, below the level of the beat metric and rhythmic relationships are usually divisive, in that these shorter durations are given definition through the subdivision of the beat in simple metres (see Shaffer, H1982). Standard metric pedagogy and practice reveal this basic distinction between beats and subdivisions: one counts a basic frame additively ('1 2 3, 1 2 3 . . .') and then interpolates subdivisions within it ('1 and 2 and 3 e-and-uh, 1 2 and-uh 3 and . . .'). For this reason,

Ex.14 Metric modulation in Carter: *Canaries*

etc

basic duration:
basic rest:
ligature:

(b) the same piece in standard notation

metric subdivision can come and go over the course of a passage, and even shift from duple to triple without seriously disturbing the sense of metre. Complex metres differ from simple metres in that the units of addition, rather than simple isochronous beats, are nested 'packets' of shorter durations which themselves define long versus short beats. While this means that in complex metres the listener's sense of the subdivision cannot come and go (which may account in large part for the qualitative differences between simple and complex metres), the counting process in complex metres remains analogous to the counting of rapid subdivision in simple metres.

II. Historical studies of rhythm

A history of rhythmic practice in Western music is tantamount to the history of Western music itself. Therefore, this section will not attempt to present a historical survey of rhythm (Western or otherwise). Rather, the advent of modal rhythm at the end of the 12th century and the shift to 'modern' rhythmic and metric notation around the turn of the 17th century will serve as touchstones for discussing a number of issues relating to the historical evolution of rhythmic theory and practice. Every musical culture and style must define for its practitioners what patterns of duration are to be played, how fast they should go, how the various parts of an ensemble are to be coordinated and so forth. In so doing, every culture is constrained by its literacy, its language, its conceptions of time and motion, prior musical practice, and the basic capacities of human memory and rhythmic behaviour.

See also ANALYSIS; CONDUCTING; NOTATION; RHYTHMIC MODES; and TEMPO AND EXPRESSION MARKS.

1. Basic constraints on rhythmic notation. 2. Rhythm in language and rhythm in music. 3. Synchronization and coordination of multi-part textures. 4. The metric revolution, *c*1600. 5. Tempo and *tactus*.

1. BASIC CONSTRAINTS ON RHYTHMIC NOTATION. The history of rhythm in Western music is bound up with the history of Western musical notation, since it is principally through the evolution of notation that we may understand the constants and variables of changing rhythmic theory and practice. Musical notation may fulfil various functions (see Rastall, A1982): as an *aide-mémoire* for music whose structure and manner of performance are already known to the musician; as a representation, to a greater or lesser degree, of the musical structure that is to be performed; and as representations of actual performances (such as the transcription of a jazz solo or the MIDI files from a performance on a MIDI instrument). While the first type of notation usually leaves many details of rhythm unspecified (often to the frustration of the musicologist or performer), the last can be equally frustrating in its exactness. A rhythmic structure is an archetype that can be instantiated by different performers on various occasions. The rhythmic 'structure' that we seek to find and explain is thus always a set of relationships between various musical parameters, rather than a specific series of durations, intensity levels and so forth.

At first glance, many systems of rhythmic notation seem more complex than necessary. For all that a logically coherent and exhaustive system of rhythmic notation requires is three basic symbols: an atomic durational unit (i.e. a *chronos protos*), a rest of equal duration and a ligature to bind the notes or rests together into units of greater value. Such a system allows for the notation of any durational sequence or proportion, provided the atomic durational unit is the smallest common factor of the various durations present in the music. For pieces that use a limited range of durational values such a system is adequate, and indeed such systems have occasionally been in use (e.g. 'stroke' or 'strene' notation). But in passages of even moderate rhythmic complexity such a system of duration is unworkable for practical reasons. While exx.15*a* and 15*b* accurately express the same durational sequence, ex.15*a* is almost unintelligible, though perhaps the durational values of tied notes could be made clearer by altering their spacing. Also, while the stroke notation may be workable for monophonic music, in a polyphonic context it is difficult, if not impossible, to indicate the coordination of parts clearly. Thus as a rule the orthography of a notational system must be broad enough to capture the range of durational values in use in a particular style, yet specific enough to represent categorically distinct durational figures. Linking differences in duration to differences in note shape is therefore a practical necessity, as it allows for note-to-note relationships to be immediately understood, as well as for larger rhythmic patterns to be readily grasped. Western rhythmic notation since 1600 contains a large (and desirable) degree of redundancy, as note shapes, note spacing, layout, bar-lines and time signatures all facilitate the apprehension and performance of rhythmic patterns.

We are most familiar with representations of duration in terms of strict ratios such as 2:1, 3:1 and in some musics 3:2. Indeed, the history of Western rhythmic notation has to do in large part with the changing ways in which such durational proportions might be represented. It cannot be overemphasized, however, that the notational representations of these rhythmic relationships are not congruent with the durations as they are performed or perceived. A large and growing body of data on performance timing demonstrates that human performers never produce such ratios when they play, though they do produce highly nuanced timings in a consistent manner (see §III, 5). Nor do listeners expect such ratios in performance (see Repp, I1995–6). It is thus an open

question, although increasingly doubtful, whether these arithmetically regular ratios represent the 'underlying structure' of durational relationships (even though they are present only in the case of electronic or mechanical performance), or whether the irregular ratios (which are consistently reproduced in performance) represent the 'real' structure and the notated proportions are simply a convenient shorthand.

A notational system that employs a 1:2:3 set of proportional signifiers is capable of rendering a very complex set of relative durations by the concatenation of durational values through ties (or other ligatures, such as dots of addition), as well as through the nesting of concurrent durations. While rhythmic relationships involving other prime numbers (e.g. 5:3, 7:2) are logically possible, these do not appear as basic orthographic relationships in either Western or non-Western notational systems, even though such ratios may be a truer representation of durational relationships as they are performed. Instead, the same proportional signifiers tend to be used in a broad variety of actual practices. For example, the characteristic execution of the 'same' minim–crotchet figure in Viennese waltzes and ländler is quite different, and thus one could conceivably use different orthographic representations to indicate their respective durational nuances. Rather, we assume that the performer knows how to execute the rhythmic figures in the appropriate manner characteristic of a given genre, and/or we use various expressive descriptions (*con anima*, *dolce*, *langsam* etc.) which systematically vary the timing of the durations relative to their 'deadpan' values. The use of a few lower-order prime values in systems of rhythmic notation, supplemented by expressive terms or generic performance conventions, supports the hypothesis that successive durations are produced and perceived in terms of a limited number of cognitive categories. As a result, only a few basic durational values are required by any notational system.

The notations given in ex.15 are alike in one important respect in that they give no direct indication of tempo. Once the proportional relationship among successive durations has been established, the tempo may be indicated either by defining an integer unit of duration (which then defines other values in relation to it) or by giving a general indication of the sense of movement the passage is supposed to exemplify. Since the advent of the metronome, tempos have been indicated by correlating some durational unit (usually a crotchet) with a unit of clock time (expressed as beats per minute). The choice of an integer unit of tempo or *tactus* acts as a constraint on rhythmic notation, as it is sensible to keep the beat unit in the middle of the range of durational values. If relatively short values are used to indicate faster tempos, then still shorter durations will be required to indicate subdivisions. Conversely, if long values are used to indicate slower tempos, then even longer durations will be needed to indicate measure spans and other composite durations. While the use of long versus short durations (and, concomitantly, large versus small metres, such as 4/2 versus 4/8) to indicate different tempos has a long history, such usages skew the distribution of durational options on the composer's notational palette. It was therefore inevitable that as the integer unit of time shifted from the breve to the semibreve and then to minim over the 13th, 14th and 15th centuries, even shorter durational values (*semiminimae* and *fusae*) appeared at the same time (see Sachs, A1953).

Notational systems (and theories of rhythm) reflect not only contemporaneous musical practice but also the temporal sensibilities of their day. For example, Berger (B1993) has remarked that 14th-century rhythmic notation draws on the system of Roman fractions then in use, while the use of proportional signs in Renaissance music reflects the shift to Arabic numerals and the rise of commercial arithmetic. Indeed, without an understanding of contemporaneous concepts of time and counting, understanding a system of rhythmic notation or discussing it theoretically may be all but impossible.

2. Rhythm in language and rhythm in music. The history of the relationship between words and music is characterized by a tension between accommodation and domination. This tension is chiefly felt in the domain of rhythm. One should first note that music and speech are both made up of a time-dependent sequence of elements, in which pitch, duration and dynamics play a critical part. Language and music are similarly constrained by the limits of our ears, mind and memory. That there are structural parallels between the two is therefore not surprising. For example, Handel (I1989) notes that linguistic stresses and musical metre (and metric accents) operate under similar timing constraints, and Lerdahl and Jackendoff (E1983) argue that there are important parallels between the hierarchic structures of musical rhythm and prosodic timing in language. Yet there are also important differences. First and foremost is that speech is made up of phonological segments that have their own intrinsic durations and durational relationships, whereas music is made up of rhythms which have no absolute value. Speech consists of phonological segments and phrases separated by pauses of variable length. Normal speech is also only 'locally rhythmic,' in that it is only within the context of a breath group or subgroup that one finds patterns of stress or accent. By contrast, in music one normally fits successive motifs and phrases into a common, continuous metric framework. Many of the phonological elements of speech are extremely brief, such that timing differences of as little as 10ms can mark the difference between phonemes. Vowel sounds are much longer, and their timing more variable (though such variation is in general quite systematic, such that a given vowel in a given phonological and semantic context usually has determinate duration). Musical durations are even longer, 100ms being a typical threshold of sensitivity and 200ms a minimally significant duration (see Butler, I1992). When set to metred music, the normal rhythms of speech are seriously distorted, mainly by lengthening vowels but also by fitting the segmental pauses of speech within the constraints of the musical metre.

In Western culture the tension between words and music goes back to discussions of rhythmics and metrics by the ancient Greeks (see Mathiesen, B1985). Written poetry requires no exterior (i.e. musical) notation in order to mark its rhythmic organization and structure, as the layout of the poetic text into lines and stanzas is usually sufficient to make its rhythms clear. Agawu (J1987) notes that, rather than positing a simple dichotomy of poetry and prose, one can distinguish between normal speech, declamatory speech (in which the rhythms are exaggerated but still grounded in normal speech) and metred speech (in which normative rhythms and phrase structures

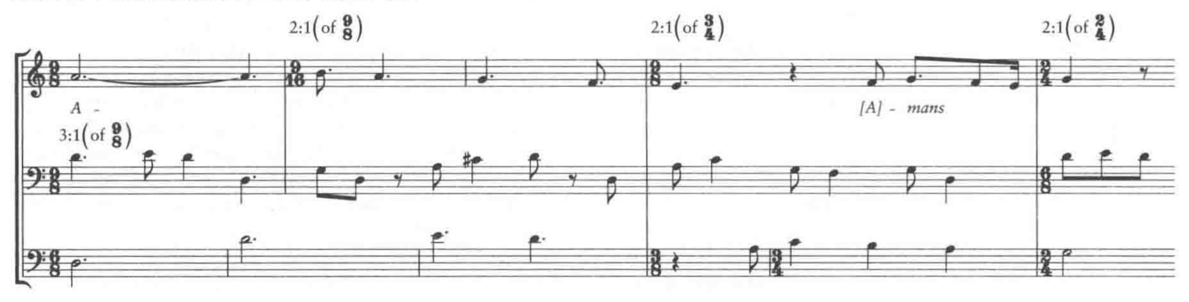
of language are subject to occasional distortions, enjambment and so forth). Even in metred speech, however, the rhythmic structure can be said to be linguistic rather than musical in origin, as the placement of syllables and syntax is not arbitrary but governed by the stress and timing rules of the language. Moving beyond metred speech to musically metred contexts, the morphophonemic aspects of the text may still have influence. Palmer and Kelly (I1992) show that the compound word rule and the nuclear stress rule – two cornerstones of English phonological structure – tend to coincide with musical rules of metrical accent in both composition (i.e. metric and rhythmic structure of a melody relative to the text underlay) and performance (i.e. the use of expressive agogic or dynamic accent). Thus the relation between speech rhythm and musical rhythm is not a simple opposition, but a complex and multivalent interchange.

Musical notation may not always clearly and accurately reflect the relationship between text and music, the evolution of the notation for recitative being a case in point. In the first decades of the 17th century Italian composers such as Peri, Caccini, Agazzari, Gagliano and Monteverdi who wished to indicate passages in *stile rappresentativo* wrote out musical approximations of the natural speech rhythms in a manner analogous to French settings of *vers mesurés*. Yet the representation of speech rhythms by a limited number and proportionally specific set of durational values hardly yielded accurate or natural results. Thus by the century's end this practice had been abandoned and most recitative was notated in rapid and even notes (crotchets or quavers), with the understanding that the rhythm would follow that of the speech declamation. Grounding the rhythms of recitative in speech also means that the singer need not worry about precise coordination of most syllables with the accompaniment, save at cadence points.

Over the course of Western music history shifting cycles of musical versus textual domination can be observed. The modal rhythm of Notre Dame polyphony was rooted in the predominantly iambic accentual declamation of its Latin poetic texts (see Gillingham, B1986). Yet modal rhythm opened the door to a written tradition of music where rhythm could be a wholly independent compositional element, and once such independence was possible it became a resource to be explored (and exploited) in its own right. Indeed, with the rise of the motet style in the 14th century the expression of the 'natural' rhythms of the poetic texts had been all but abandoned in composition of increasingly complex polyrhythmic textures. This excessively ornate rhythmic practice gave way to the rhythmically simpler textures of the 15th century, culminating in Josquin's crystalline settings of texts which, while thoroughly musical in conception, nonetheless complement and accommodate the accentual structure of the language. At the end of the 16th century and the beginning of the 17th the experiments with *vers mesurés* in France and the rise of monody in Italy were indicative of yet another attempt to restore rhythmic priority to the text. The new practices of text-setting did not involve only a rejection of textural complexities, since a homorhythmic disposition of the text in the 16th-century madrigal and chanson was already common. Rather, and once again, the battle between text and melody concerned their rhythmic particulars, not their tonal contours.

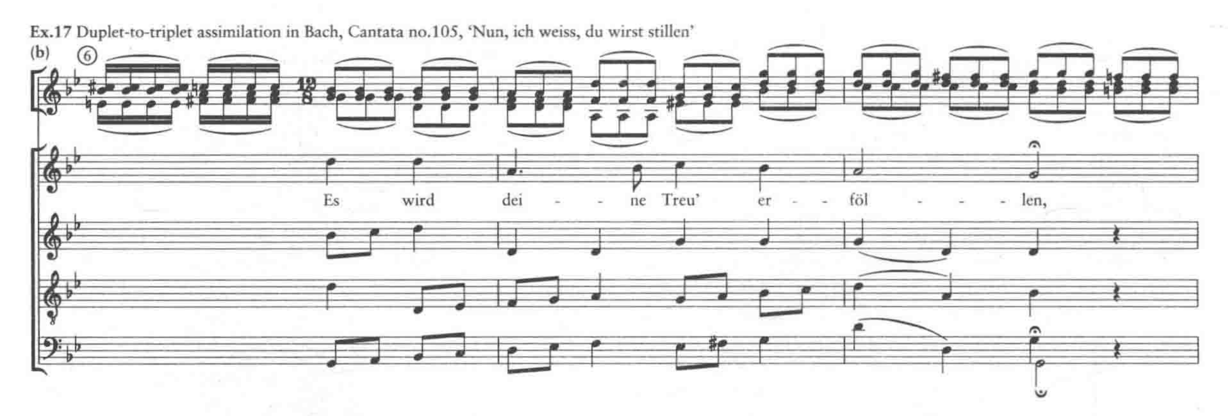
See also METRE.

3. SYNCHRONIZATION AND COORDINATION OF MULTI-PART TEXTURES. As Crocker (B1990) notes, while specifying durations entails the coordination of voices, specifying the coordination of voices need not entail precise specification of durations or proportions. Coordination must therefore be understood in its broadest sense – ensuring that various sections and pieces as a whole begin and end together – without necessarily requiring moment-to-moment coordination among individual parts. Not surprisingly, in early polyphony this first involved coordination of the added part(s) relative to the tenor, which in turn guaranteed a rough degree of coordination among the added parts themselves.



In polyphonic music before the invention of modal rhythm the question arises as to whether in performance one will have isochronous notes or isochronous syllables. This is roughly analogous to having regular beats but flexible subdivision (yielding evenly spaced syllables), as opposed to regular subdivision (yielding evenly spaced notes) but irregularly spaced syllables – in short, divisive versus additive approaches to musical time. In either case, the rhythmic breakthrough that occurred in Notre Dame polyphony marked the clear emergence of at least one level of isochronous time which then could serve as a scaffold for the others.

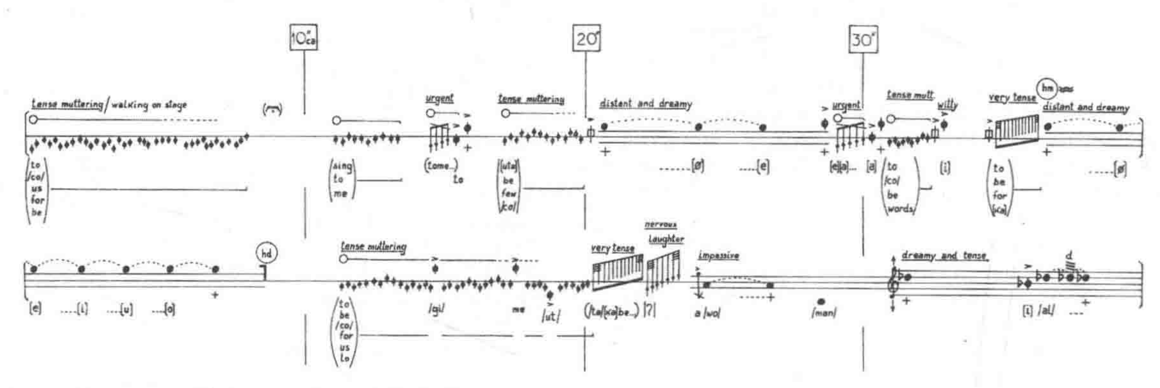
Moreover, this temporal scaffold was neither 'in the music' nor 'in the words'. It had a life of its own as a pre-compositional framework, which might or might not be audible in performance. Modal rhythm and its subsequent revisions opened manifold possibilities for temporal coordination, as it became possible to conceive of temporal coordination against an abstract series of perfections rather than in terms of one actual part against another. It is also possible to treat a series of such units as a larger span whose rhythmic contents can be determined by subsequent division and calculation, as in the case of isorhythmic forms. As the framework for temporal coordination grows larger (e.g. in cases of isorhythm) it usually cannot be understood 'in time' – that is, in performance – but can only be discerned 'out of time' when one has a global view of the musical whole. Such a perspective on musical rhythm is reminiscent of Boethian notions of divine time and temporality, in which the composer has complete possession, all at once, of the life of the composition.



The earliest Western polyphony was notated in score format. This generated an immediate sense of synchronization of its component voices. The shift from score notation to partbook or column notation (with the tenor at the bottom) presupposes the presence of an abstract series of durations which governs the rhythmic structure in each part. While in some instances this may have been the tenor part itself, as the rhythmic complexity of the tenor increased some abstract temporal measure would seem to be obligatory. Indeed, as the proportional relationships grew more arcane the absence of a score may in fact have been more of a help than a hindrance to the performer. As can be seen in ex.16, when all parts of *Amans, ames secretement* are laid out in score, the result is dizzying.

In the music of the common practice period the coordination of various parts relative to an externalized metre became such a deeply rooted aspect of Western musical culture that its presence has gone largely unnoticed. It is perhaps for that reason that the graphic notation used in works by composers such as Boulez and Cage still

Ex.16 Baude Cordier: *Amans, Ames secretement*, bars 1–4



Ex.17 Duplet-to-triplet assimilation in Bach, Cantata no.105, 'Nun, ich weiss, du wirst stillen'

strikes us as revolutionary, for not only do such scores lack pitch and durational specification among their parts, they also have loosened or even abandoned any pretence of coordination among them. Interestingly, many pieces in graphic notation, such as Berio's *Sequenza III* (fig.1), make use of stopwatch timings to determine structural articulations. As with the music of the Middle Ages, this mode of temporal reckoning is not intrinsic to the temporal activity of any part of the music itself, but must be imposed from without.

Coordination of parts is an issue on smaller as well as larger levels. In the performance of polyrhythms (duple or quadruple in one part versus triple in another) the question arises as to whether individual parts are to be performed as notated, or whether in some cases one rhythm should be 'assimilated' into another. In ex.17, should the parts on the bottom staves be even duplets, or should they be realized as long–short figures in coordination with the treble triplets? Neumann (A1987) argues that bona fide cases of polyrhythms did occur in 16th- and 17th-century musical practice, but he also proposes that under certain conditions assimilation ought to occur. Eibner (H1962) addresses similar issues in the music of Schubert. The 'assimilation question' presupposes two important points: that in cases of assimilation a particular metric framework is operative (and indeed that one framework is dominant), and that under certain conditions the rhythmic proportions as notated are not to be taken at face value.

4. THE METRIC REVOLUTION, *c*1600. Around 1600 a dramatic change took place in Western rhythmic notation: a shift from mensural practices which had been in place since the 14th century to modern, orthochronic notation in which the proportional relationship between any two symbols in the notational system remains constant. As Rastall (A1982) observes, this was not accomplished all at once, and indeed rests had been orthochronic since the

1. *Graphic notation with stopwatch timings in Berio, 'Sequenza III' (1 minute)*

2. Extremely complex rhythm in Henry Weinberg's String Quartet no. 2 (1964), bars 1–7

end of the 13th century. The emergence of modern rhythmic and metric notation involved more than the streamlining of proportional possibilities down to the binary logic now in use. Concomitant with the adoption of binary relationships for normative durations (itself a historically contingent reflection of the predominant rhythmic practices of the day) one also finds the use of bar-lines, ties and tempo terms. Many of these features appeared before 1600: bar-lines can be found in Ars Nova keyboard scores and in keyboard and lute tablatures; ties appear in Cavazzoni's print of 1523 (again, of keyboard scores), and tempo terms can be found as far back as the St Gallen manuscripts. Yet the appearance of this constellation of notational features at almost the same time is significant, for it indicates that a basic change in the rhythmic foundations of Western music was under way.

The phrase 'modern metre' denotes metre as defined in §I, 4: the presence of a hierarchic pattern of beats that are felt by both performer and listener, even if they are not articulated directly by the durations in the music. On this view, the history of metre in music is wonderfully heterogeneous. Before 1600 some music was metric, while other music was not; after 1600 most music was metric, though there were exceptions (e.g. unaccompanied recitative and the unmetred keyboard preludes of Louis Couperin and d'Anglebert). Moreover, Western notation as it evolved from the 12th century to the 17th was equivocal regarding metre, and so one must look not only at the notational system but also at its implementation in particular contexts and genres.

The *quatre prolacions* of Philippe de Vitry and their Italian analogues of Marchetto da Padova are strikingly similar to the duple versus triple metres with simple versus triple subdivisions of modern usage. Yet there are important differences. First, in the Italian system different degrees of subdivision give rise to different mensurations (e.g. *quarternaria* versus *octonaria* and *senaria perfecta* versus *duodenaria perfecta*). While we would consider these to be different varieties of simple duple and simple triple metre respectively, in the Italian system they are regarded as different metres. More important is the question whether these *prolacions* represent true metre signatures or are more like durational signatures (see Berger, B1993). While medieval and Renaissance systems

of notation provided a means of expressing complex durational relationships within and among the various parts, as in ex.16, such usage is no more metric than much 20th-century music ostensibly written in a particular metre (fig.2). In neither case can the presence of metric notation be equated with the presence of a metre. We may contrast these arithmetically clever uses of mensural notation with that found in the *formes fixes* of the same era – music with a far greater degree (or at least potential degree) of metricity. Typical practice involves a single mensuration in all voices, and often changes of prolation are used to mark different sections of the work, as in ex.18. Indeed, the presence of such metric shifts presupposes a metre that is to be shifted.

If the notational system of pre-tonal music is equivocal with respect to metre, other rhythmic features are nonetheless indicative of the degree of 'metricity' of a particular piece or genre. One such feature is the presence or absence of anacruses. As Sachs observed:

> We might look over hundreds and hundreds of polyphonic pieces from the Middle Ages and the Renaissance and never find an upbeat. . . . An actual upbeat – like winding up for a throw – prepares a stress; it is necessarily four-ONE. It was out of place in the polyphonic forms which depended, on the whole, upon an even, little-stressed flow. (A1953, p.261)

While bar-lines are an obvious way of marking an upbeat figure, the presence of initial rests also indicates a sense of arsis and thesis which underlies a true metre. For if there is no motional difference between beats, then there is no sense of metre, in which case no real anacrustic gestures are possible. Syncopations, or more precisely syncopations felt as suppressed beats, are also indicative of metre.

Topics in theoretical sources from the 17th century and the early 18th indicate a concern with metre and its relation to the rhythms of music and text, and in purely instrumental performance. Butler's commentary cited above (§I, 1) on the subjective differences between running subdivision in compound duple versus simple triple time signatures presupposed the kind of metric listening that would make such differences manifest. Subsequent theorists, such as Diruta (C1593–1609), Printz (C1689) and Heinichen (C1728), discussed the subjective nature of metre under the rubric of *quantitas intrinsica*. Walther's *Lexicon* of 1732 gave the following definition:

> *Quantitas notarum extrinsica*, and *intrinsica* [Lat.] is the apparent (or outward) and the inner value of the notes. According to the former, every note is performed equal to other notes of the same value, but according to the latter the notes are of unequal length: since, to be specific, the uneven-numbered parts of the beat are long and the even-numbered ones short. (cited in Houle, A1987, p.82)

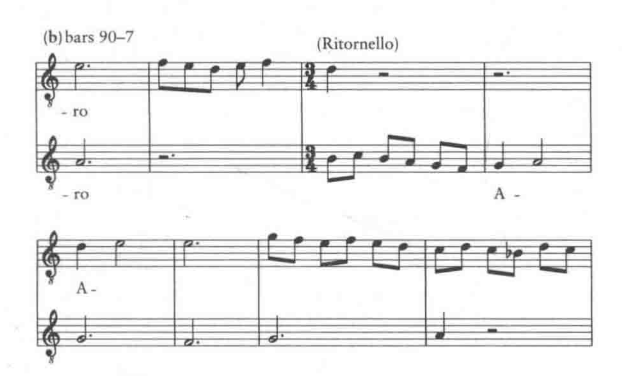
Houle gives a thorough discussion of *quantitas intrinsica* and the ways in which the distinctions between 'good' and 'bad' beats were made manifest in performing practice via *notes inégales*, keyboard fingerings, tonguing and bowing conventions. Houle also gives a survey of discussions on *rhythmopoeia*, or verse metrics, as they were applied in various metric contexts. He notes that 'the chief problem in theories of *rhythmopoeia* was the relationship of measures, with their time signatures and regular barlines, to the various and changing phrases made up of musical feet' (p.77) – that is, whether these rhythmic archetypes existed prior to metre or vice versa. The historical significance of such a question is that it could not even be formulated if the music of the Baroque and early Classical eras lacked metre in the modern sense.

Broadly speaking, the depth of metric organization seems to have increased since the Renaissance era. In ex.19*a* motoric rhythms are manifest in terms of a continuous pulse and a constant two-beat pattern, but no higher levels of metre emerge (see Botelho, E1993). In ex.19*b* one finds regularities of both metre and phrase on the two-bar and even four-bar levels. Indeed one finds such regularities in simple dance music from medieval *ductiae* and *estampies* to disco of the 1970s. It was in the Classical style that the periodic phrasing of dance music became pervasive in other genres, and so we find regular layers of metric organization above the notated bar. While musical forms grew more expansive in the 19th century, by and large metric structures did not; this may be a contingent aspect of the style, or a reflection of deeper syntactic and/or psychological constraints on metric structure. Ex.19*c* is a re-notation of Bruckner's Fourth Symphony (after Lester, E1986). Here each duration is one quarter of its original value, which allows one to see how each group of four bars functions like a beat in a measure, and these hypermeasures themselves are rhythmically paired and quadrupled. Bruckner's music contains rhythmic patterns and measures that are indeed of a 'higher order'.

5. TEMPO AND 'TACTUS'. As rhythm is not just a sense of durational organization, but also (and perhaps foremost) a sense of coordinated movement, a chief concern in understanding and performing musical rhythm involves the determination of tempo. The presence of a continuous series of brief durations need not entail a sense of rapid tempo, just as a series of longer durations need not entail a sense of slower motion. Nor does the subdivision of a duration into notes a half, third or even quarter of the original value necessarily give rise to a doubling, trebling or quadrupling of the perceived motion. Thus the first issue to be sorted out in discussions of tempo is whether a marking, descriptive term or theoretical discussion refers to particular durations (either phenomenally present in the music or in a more abstract, counted beat) or to the overall impression of motion. A metronome marking of crotchet = 120 and the Italian directive *allegro non troppo* may give rise to the same musical effect, but they are fundamentally different modes of description. As Epstein notes, tempo

> is a consequence of the sum of all factors within a piece – the overall sense of a work's themes, rhythms, articulations, 'breathing', motion, harmonic progressions, tonal movement, contrapuntal activity. Yet tempo . . . is a reduction of this complex Gestalt into the element of speed per se, a speed that allows the overall, integrated bundle of musical elements to flow with a rightful sense. (H1995, p.99)

A sense of tempo and motion is a hierarchically emergent property of the musical surface, and not simply a product of note-to-note transitions.



Given that tempo is a composite effect of the musical structure, and given the ways various parameters may interact in performance, tempo – or more precisely understanding and achieving the right tempo – will always be an elusive target, even in musical styles that are familiar and whose performing practices are well documented. 'Correct' tempos for any work or genre may cover a fairly wide range. Indeed, one of the principal ways a performer may distinguish his or her interpretation of a work is through choice of tempo. For earlier musics, a certain degree of historical opacity with respect to previous tempos is inevitable; as Planchart notes:

Ex.18 Mensural change as metric shift Niccolo da Perugia: *Cogliendo per un prato*

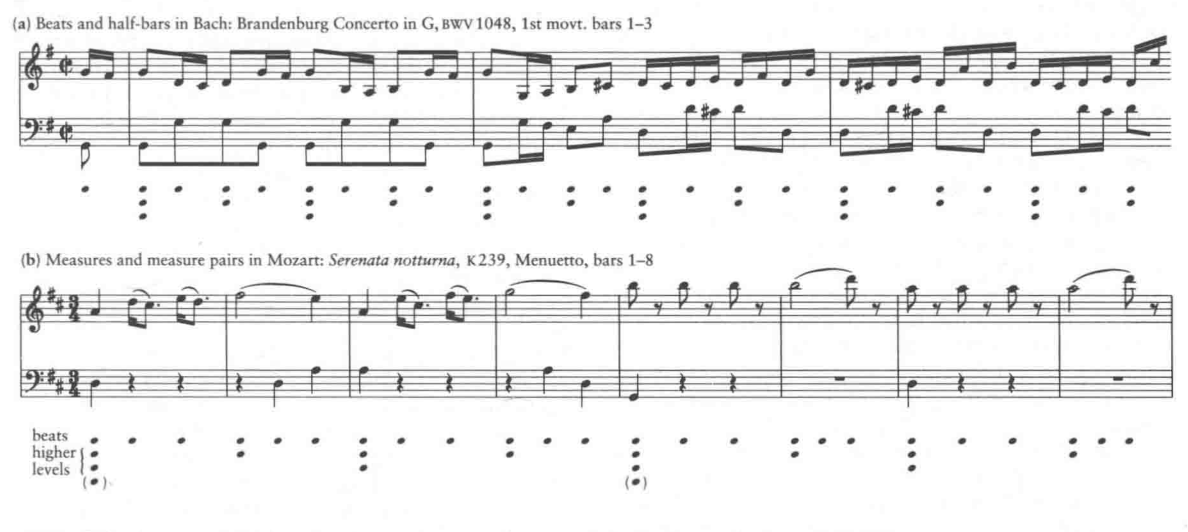
(a) bars 10–13

(b) bars 90–7

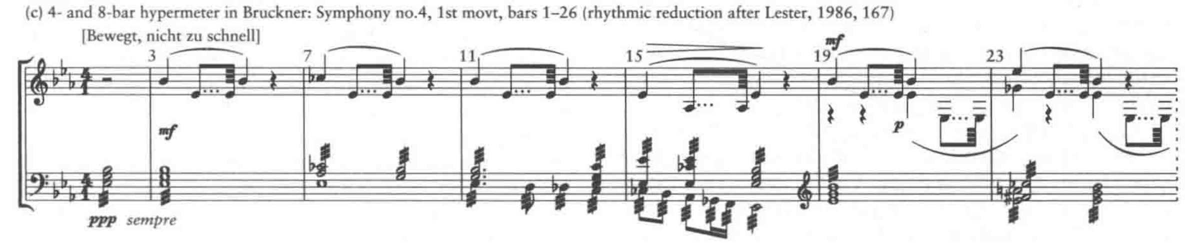
Actual tempo will always remain an educated guess at best. Any attempt to provide dogmatically exact tempos for any music written before 1600 is neither historically accurate nor ultimately satisfactory scholarship. To this extent, then, each performance is a mixture of hypothesis, special pleading, and an Augustinian leap of faith. (C1975, p.156)

Planchart's caveat can reasonably be extended to all musical styles, both before and after the rise of modern rhythmic notation.

Any temporal process may function as a clock or time-keeper if we believe that it is a reliable and accurate counter against which other, less regular processes and events may be measured. Since musical time inevitably involves the ebb and flow of longer and shorter durations, musicians have often sought extra-musical sources as a reference for musical durations and tempo. Thus heartbeat rate (from Ramos de Pareia, C1482, to Quantz, C1752), breathing rate (Gaffurius, C1496) and walking period (Buchner, C*c*1520) were used as temporal benchmarks. These descriptions of physiologically or physiognomically based *tactus* presage the discussions of natural pace and spontaneous tempo in modern psychology, which, while tending to discount the effect of heart and respiration rates, reaffirm the kinaesthetic aspect of *tempo giusto* and add a neurobiological component. From the Baroque period physiology was replaced by physics, from the use of pendulums as proposed by Mersenne (*MersenneHU*), Thiémé (D1801) and Mason (D1806) to the mechanical escapement metronome made famous by Maelzel (1815, actually stolen from Winkel; see Epstein, H1995).



Whether biological or mechanical, these sources of extra-musical periodicity could be used to establish the duration of a musical or motor behaviour, which in turn could define the durational values given in notation. From the Renaissance this fundamental period was known as the TACTUS, corresponding to what we call either the measure or the beat. While the terms 'tactus', 'beat' and 'tempo' are often used interchangeably, historically they have designated different aspects of musical time and time-keeping. *Tactus* refers to the keeping of time by beating with the hand, first described by Adam von Fulda (C1490). At its simplest 'the mensural system related to



Ex.19 Increasing metric depth in different historical eras

notes to a down-and-up gesture of moderate speed called the *tactus*' (Bank, A1972; Houle, A1987). As Sachs notes, 'the *tactus* was wholly unconcerned with the actual rhythm, with grouping or accent. It just maintained the even pulsation of units, and nothing else' (A1953, p.242). In this context, the *tactus* remains constant, and all tempo differences are expressed by the use of proportion and mensuration. Indeed, this becomes the raison d'être for the various proportions and their elaborate theoretical discussions: in order to express a moderately faster tempo one uses a particular proportion (e.g. 3:4 or 2:3) relative to the background *tactus*. The principal problem, given this assumption, is to determine which notational symbol corresponds to the *tactus*.

A number of factors complicate this approach to *tactus*. While at some times the *tactus* may have typically corresponded to a particular durational unit, at other times it may have corresponded to a multiplicity of note values. This implies that the choice of a beat-unit of notation was arbitrary. Yet time signatures do carry associations of tempo: 3/2 is slow, 3/4 is moderate, 3/8 is quick. Under these different metres the *tactus* inheres at the minim, crotchet and quaver respectively. Moreover, the tempo relationships are not twice as fast (3/4 to 3/2) and twice as fast again (3/8 to 3/4), but span a narrower range (see Rastall, A1982, pp.188–91). Complaints about the vagueness or unreliability of characterizations such as ₵ as 'little faster than C' and Ↄ̸ as 'quickest of all' fail to note that the descriptions of categorically different tempos (each of which spans a range of acceptable values) are inherently fuzzy. Such descriptions are also indicative of another complication: that the *tactus* was not constant but varied, and indeed that the different varieties of mensuration are indicative of the presence of a faster or slower *tactus*. Discussions of variable *tactus* may still make reference to heartbeat and respiration rate, but rather than using such physiological processes to specify the *tactus*, they are instead used to establish a moderate beat, from which faster or slower tempos can be determined.

A further complication is that there are several ways of beating the *tactus*. In both duple and triple time the *tactus* consisted of an upbeat and a downbeat, with the distinction that in triple time the downstroke was twice as long as the upstroke; these were referred to as equal and unequal *tactus* respectively. In the triple *tactus* what we would consider the second beat of the measure is unmarked; this practice is analogous to the 'empty' (i.e. non-articulated) beats in the counting of tāla in Indian music. Given that both duple and triple *tactus* occupy the same span of time from downstroke to downstroke, this means that the beats within duple and triple patterns move at different rates. Moreover, the duple *tactus* could be performed normally (*tactus major*) or twice as fast (*tactus minor*). Ornithoparchus (cited in Houle, A1987, p.4) remarked that *tactus minor* 'is allowed onely by the Unlearned', which implies that *tactus minor* was in fact the counting of subdivision, as would typically be involved in the instruction of a novice performer. Given that during the late 16th century and the 17th subdivision was almost exclusively duple, the absence of theoretical discussions of an unequal *tactus minor* (i.e. a beating of triple subdivision) is understandable. Yet this raises yet another question: whether the *tactus* pattern corresponds to the downbeat or to the individual beats within the measure, since a slow *tactus minor* could indicate entire measures in rapid tempo, for example. Ultimately, one must look to the particular piece of music and use a performer's common sense. Just as the crisp execution of a complex rhythmic unison may require a conductor's use of rapid subdivision, so too may the coordination of several rhythmically dissonant parts require the use of larger time units to mark points of coincidence among them.

Just when the connections between *tactus* and mensuration became most confusing, one begins to find the widespread use of tempo terms like 'adagio' and 'presto'. The increased use of tempo terms accompanied the rise of instrumental music, since in the absence of a text or liturgical context (which would, one assumes, give a sense of the mood and suitable tempo for the music) descriptions of expressive mood, including tempo, were of practical use. The earliest signs of such usage can be found in the tablatures of the vihuelists (starting with Milán in 1536), who used the terms *despacio* and *apriesa*. Tempo and expression markings appear in Italian musical sources around 1600 (e.g. Gabrieli, 1597; Caccini, 1601; and Frescobaldi, 1615). There is also what one might call a 'syntactic' reason for the common usage of tempo terms around the turn of the 17th century. With the shift to orthochronic notation, the durational relationships among various notes no longer had to be indicated by a mensural sign, and the layout of a score, particularly through beams and bar-lines, was sufficient to make the hierarchic relationships among the various rhythmic levels immediately apparent. What the orthography could not do was to indicate which level of the rhythmic hierarchy was to function as the beat. As noted above, the emergence of modern metre involved the enrichment of the metric hierarchy by the addition of levels of regularity below and (especially) above the beat. This being the case, even if orthography makes those levels distinct, the problem now arises as to how the various levels of rhythmic duration correspond to the different levels of the metric hierarchy. Time signatures and tempo terms work in tandem to specify the beat level and indicate a sense of pacing for both that level and the rhythm as a whole. The hierarchic nature of metre, and the challenges it presents regarding the determination of tempo, may also explain why the relationship between time signatures and tempo received so much attention from 17th- and 18th-century musicians and theorists.

III. Current rhythm research

A common complaint in the 1960s and 70s was the relative impoverishment of rhythmic theory and analysis. Since then there has been a great flowering of research in rhythmic theory, analysis, perception and performance. The following discussion serves as an introduction to those research areas that have received the most attention in recent decades. While research on musical form, tonality, styles, composers and particular compositions often touches on rhythmic issues, this survey is restricted to those theorists, musicologists, composers and psychologists whose work centrally addresses questions of rhythm, metre and musical time.

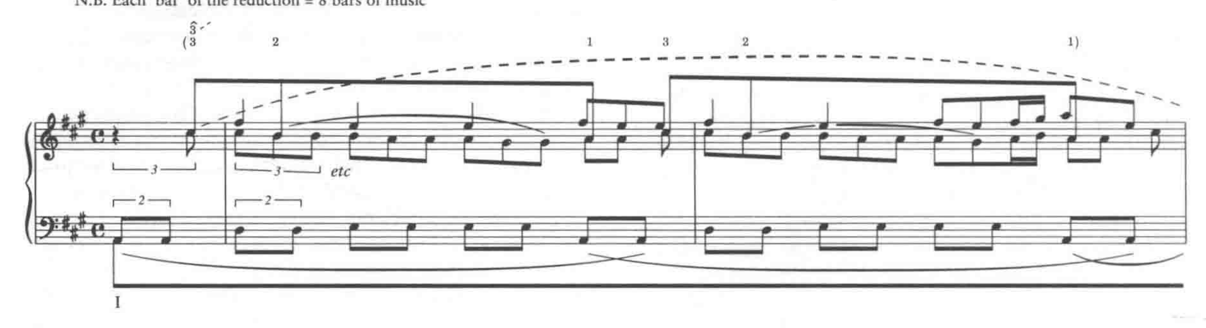
Music. 4. Post-tonal rhythm and metre. 5. Psychological studies of rhythm and metre. 6. Musical time and temporality. 7. Conclusion.

1. THE HIERARCHIC DEPTH OF RHYTHM AND METRE. Various authors have maintained that rhythm and form are one and the same, and that the different words are simply commonplace terms to describe the same processes on different structural levels. Cone, for example, claims that 'certain general principles underlie common formal units . . . and that the same principles, working on higher levels and more comprehensive formal sections, can ultimately be invoked to explain an entire composition as one all-embracing rhythmic impulse' (E1968, p.39). These principles may be quite concrete, as in Cooper and Meyer's (E1960) attempt to extend their basic archetypes for note-to-note patterning to the highest levels of rhythmic form, so that, for example, the first movement of Beethoven's Eighth Symphony could be regarded as one giant anapaest (Meyer subsequently recanted this position; see Meyer, E1991). They may also be more abstract; for example, Berry posited that musical structures large and small involve 'the punctuated shaping of time and space into lines of growth, decline, and stasis, hierarchically ordered' (G1976, p.5).



The investigation of proportional relationships is another way in which a principle of foreground rhythmic relationships, namely the relative duration of successive notes, is applied to larger musical units, including complete works. Various composers, from Machaut to Bartók, have used proportional relationships as part of their compositional technique (*see* NUMBERS AND MUSIC), and this compositional usage of proportion has been documented by various scholars (e.g. Howat, F1983, on Debussy; Lendvai, K1955, on Bartók; and Kramer, K1988). Other studies (e.g. Rogers, K1977; Perry-Camp, K1979; and Smyth, E1990) seek to find significant proportional relationships in other music (i.e. Mozart and Chopin) where it was not part of the composer's conscious compositional method. Of special interest in these studies are 'golden section' relationships (1:1·618) (*see* GOLDEN NUMBER) such as those based on the FIBONACCI SERIES (1, 2, 3, 5, 8, 13 . . .).

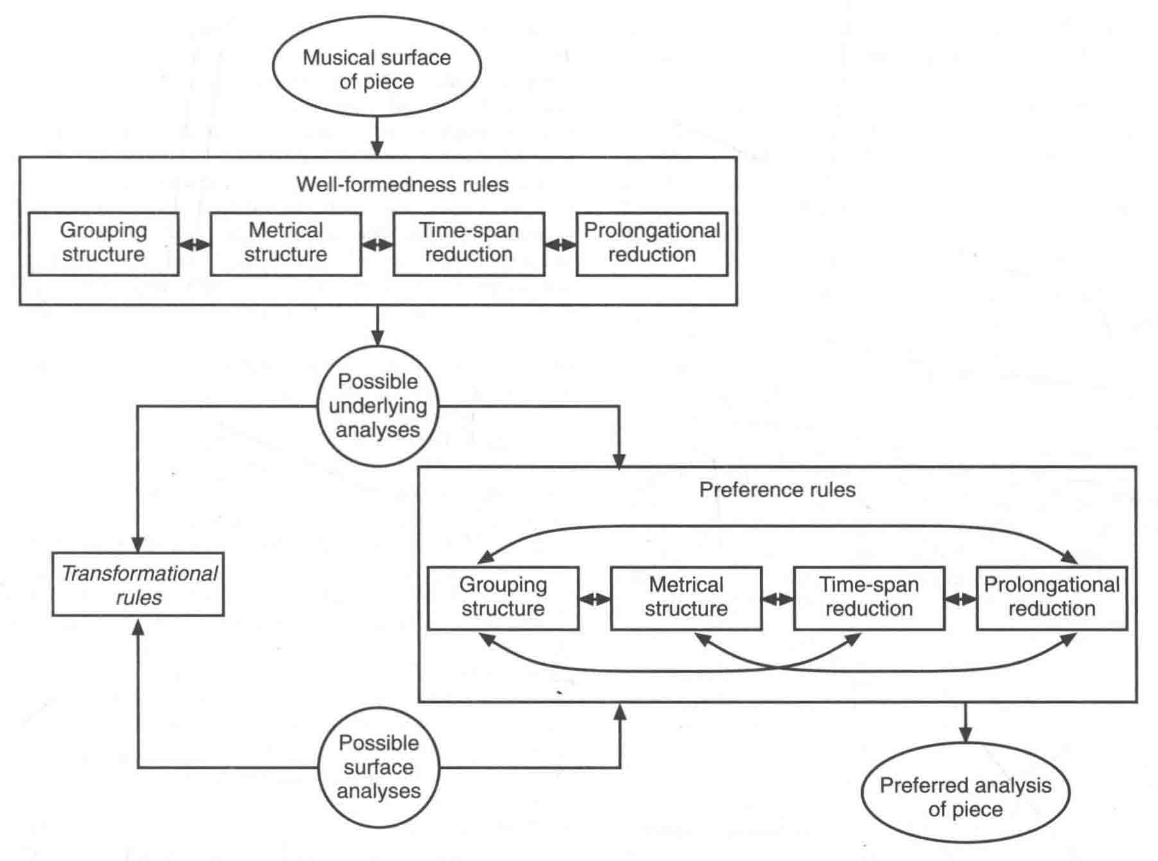
On the other hand, the terms 'rhythm' and 'form' may be used precisely because there are fundamental differences between the arrangement of notes and small note groups into motifs and phrases, and the arrangement of larger units into complete movements and pieces. It is not the fact that music is hierarchic which blurs the distinction between rhythm and form; rather, it is the degree to which one regards the musical hierarchy as recursively organized that leads to a blending of rhythm and form. A recursive hierarchy is one in which a single principle (or set of principles) controls the structure from top to bottom (or bottom to top). Arguing against recursion, Meyer notes that 'the way in which a particular parameter acts in articulating structure may be different on different levels' (E1973, p.89), and Brower (E1993) proposes a threefold division of rhythmic and musical structure as a reflection of different perceptual and cognitive processes.

Just as one may examine the limits of rhythmic structure, one may also examine the limits of metric, or more precisely hypermetric, structure. Although few would deny that the metric hierarchy may extend above the level of the downbeat, there are a variety of theoretical positions with respect to the possible depth of hypermetre and the particulars of hypermetric (as opposed to simple foreground metric) syntax. While some theoretical positions may be characterized as more or less sceptical with respect to hypermetre, the question of how 'hyper' hypermetre can be is actually a constellation of questions. First, is hypermetre commonplace or relatively rare? Lester (E1986) discusses the metric and hypermetric structure of Bruckner's Fourth Symphony (see ex.19*d*) and notes that this kind of large-scale metre is quite exceptional in comparison with other supposed cases of hypermetre (i.e. in the context of normative four-bar phrases). If a hypermetre is present, is it as robust as foreground metre? Cohn (G1992–3), in discussing the Scherzo of Beethoven's Ninth Symphony, notes how hypermetric analyses must often deal with conflicting sources of metric accent and organization that do not arise in determinations of foreground metre. Do hypermetres follow the same syntactic constraints as does metre in the foreground (i.e. do hypermetric units need to be isochronous)? Kramer (K1988) claims that hypermetric regularity can be based on the presence of an equal number of elements (hyperbeats) within each hypermeasure, even if those beats are not isochronously spaced. Does hypermetre extend to the deepest levels of structure? Kramer (K1988) and Komar (E1971) give hypermetric analyses that span entire movements, while Lerdahl and Jackendoff (E1983), Benjamin (G1984) and Lester (E1986) caution that metre is primarily a feature of the foreground. Rothstein (E1989) discusses the interaction between hypermetre and phrase structure and the extent to which their interaction obeys the same constraints as metre and grouping in the foreground.

Non-Western musics are sometimes said to exemplify the inherence of rhythmic and metric structures on higher levels of structure. For example, some 14- and 16-beat tāla in Indian music, which in slow tempos can last some 30–40 seconds, might be regarded as a class of hypermetre. In the case of Indian music, different levels within the cycle are recognized as comprising different elements – *āvarta* for the entire cycle, *vibhaga* for subsections (of varying length) and *mātrā* for the smallest counting units. Similarly, in the classical music of central Java rhythmic cycles may comprise as many as 128 or 256 beats, with subcycles marked by various colotomic divisions. In the gamelan there are certain instruments whose sole function is to mark off the larger temporal units. Most notable are those instruments whose function lies in marking the largest cycles, including the *kenong*, which marks intermediate cycles, and the *gong ageng*, which marks the largest cycle. Other instruments, such as the *saron*, repeat the basic melodic skeleton. Some caution in describing these tāla and gong patterns as species of metre is in order, however. While the terms for various tāla and colotomic patterns span a large range of temporal structures (which implies a fusion of rhythm and form), one should understand the social conditions of their usage. In Indian music there is a rich theory and practice of categorizing and performing rhythmic patterns ('counting tāla'), and so it makes sense that larger units may be described by adapting or analogizing a standard nomenclature. Similarly, in Javanese music, given the special religious and social significance of the *gong ageng* in the gamelan it is logical that musical form and organization are described relative to its activity. To consider an analogous case from a Western musical context, one could regard a 16-bar Classical minuet (which would be played continuously

Ex.20 Rhythmic reduction in Schubert: *Valse Sentimentale* op.50 no.13 (from Schachter, 1980, p.224)
N.B. Each 'bar' of the reduction = 8 bars of music

for a social dance) as a cycle of 96 beats when played with repeats. Indeed, in terms of the minuet-as-danced the global repeat of the form would represent a kind of *āvarta* (literally, 'turning back'). Perhaps if classical chamber orchestras contained instruments like the *gong ageng* a minuet might well be described as a large cycle of beats (or steps). The fact that it is not reflects both the different conditions under which Western music is produced and the fact that, in describing the organization of common practice music, Western musicians and theorists were able to co-opt terms from language and rhetoric (e.g. 'clause', 'sentence', 'period') and thus did not have to extend rhythmic and metric terminology beyond the musical foreground.



2. SCHENKERIAN APPROACHES. Rhythmic issues have received considerable attention from Schenkerian theorists and analysts in recent decades. While Schenker himself made clear ontological distinctions between background levels and the middleground, and between middleground and foreground, it is in distinguishing between middleground levels that Schenker's original work is most under-theorized (Cadwallader, E1990). In examining how tonal and rhythmic processes interact to define various middleground structures, the study of rhythm may be seen as an essential continuation of the Schenkerian theoretical project.

For most Schenkerian theorists pitch relationships remain analytically prior to duration and rhythm: 'all rhythmic patterns of middleground levels are determined exclusively by pitch criteria' (Yeston, E1976, p.84). This priority of pitch explains why the basic level of rhythmic analysis in Schenkerian contexts is usually the phrase, since the phrase is the smallest level where one may find a complete linear motion. Thus, for example, investigations into the nature of rhythmic accent typically begin with a consideration of accent on the phrase level, whether or not phrase beginnings (or endings) have metric or rhythmic accents, and so forth (see Kramer, K1988). While Cone (E1968) treated rhythm (among other topics) from a perspective informed by Schenkerian theory, the first important work to focus on rhythmic and metric issues from a Schenkerian standpoint was Komar (E1971). His discussions of metre, hypermetre, metric displacement and rhythmic reduction presaged the work of many subsequent theorists. However, Schachter's three articles in *The Music Forum* (E1976, E1980, G1987) remain the *locus classicus* for Schenkerian studies of rhythm. As Krebs notes, 'Schachter has two basic aims in his articles. First, he sets out to vindicate Schenker from allegations of having neglected rhythm' and then makes use of 'Schenker's cryptic though evocative remarks on rhythm as a springboard for his own ideas' (G1992, p.82). Schachter draws many parallels and analogies between surface rhythm and metre, so that extended anacruses, rhythmic motifs and metre itself may be writ large in the middleground. Schachter also develops the technique of 'durational reduction' as a rhythmic analogue to pitch reduction, whereby middleground pitches are given specific durations which relate to the foreground durations by some constant factor (ex.20). While this is not new, Schachter was the first to apply durational reduction to extensive portions of the middleground. Schachter differentiates between tonal rhythm and durational rhythm, the former stemming from the rhythmic properties of the tonal system itself, the latter from patterns of emphasis, duration and grouping which do not arise from the tonal grammar. Rothstein (E1981, E1989) gives greater rigour to Schachter's ideas of durational reduction, drawing equally on the work of Koch and Schenker. He proposes a normative archetype for phrase rhythm (itself a combination of tonal and durational rhythm) and then discusses some of the ways in which normative middleground archetypes may be transformed into less regular foreground structures.

Another aspect of rhythmic theory and analysis which has received attention from theorists who espouse a Schenkerian perspective involves discussions of rhythmic or metric 'dissonance' (Yeston, E1976; but see also Stockhausen, F1963). Such dissonances occur when there are two rhythmic levels or strata such that one cannot be expressed as a simple multiple of the other – in other words, a polyrhythm such as two against three (hemiola) or three against four. The result is a non-congruence of durational and/or accentual patterns between the two strata. This non-congruence may be local, as in an isolated hemiola, or it may extend over a larger period of time. Krebs (G1987) points out that if two rhythmic strata are offset they may also create a dissonance, even if one is a multiple of the other. Further refinements to the taxonomy of metric consonance and dissonance can be found in Cohn (G1992; G1992–3) and Grave (G1995). Metric dissonance in its most robust form involves the presence of two (or more) metres, as described by Schachter (G1987), Rothstein (E1989, G1995) and Kamien (G1993). In a somewhat less robust form one may speak of latent metric dissonances, what Willner (G1996, E1998) terms 'counterstress' and Samarotto (E1999) 'shadow metre'.

3. LERDAHL AND JACKENDOFF'S 'GENERATIVE THEORY OF TONAL MUSIC'. The publication of Lerdahl and Jackendoff's *Generative Theory of Tonal Music* in 1983 was both a response to previous work in rhythm and

3. *'Schematic' diagram from Lerdahl and Jackendoff, 'A Generative Theory of Tonal Music' (1983), p.10*

tonal structure and a ground-breaking volume which brought evidence and insights from linguistics and perceptual psychology to bear on problems of musical rhythm, tonality and form. The book has spawned a great deal of research in perception and cognition, as it makes claims that can be empirically tested (e.g. Deliège, I1986–7; Palmer and Krumhansl, H1987; and Bigand, I1990). It has also generated numerous responses in both psychology (Rosner, I1988; Clarke and Krumhansl, I1989–90) and music theory (Peel and Slawson, E1984; Hantz, E1985; and London, E1997).

Lerdahl and Jackendoff's psychological approach to questions of rhythm and tonal structure is apparent from the first sentence of the book: 'We take the goal of a theory of music to be a *formal description of the musical intuitions of a listener who is experienced in a musical idiom*'. Hence an understanding of the physiological and psychological process by which musical patterns are perceived, remembered and understood is essential to the authors' research project. From this perspective Lerdahl and Jackendoff can give a psychological rationale for reductive models of musical structure (and in particular Schenkerian models, on which their theory relies). This is stated in their 'Reductive Hypothesis': 'The listener attempts to organize all the pitch events of a piece into a single coherent structure, such that they are all heard in a hierarchy of relative importance'. The book's premise is that without such a reductive process the listener cannot manage the vast amount of sonic and musical information presented in a piece of even modest dimensions. Along with psychology, *A Generative Theory of Tonal Music* also draws on work in linguistic prosody to bolster and complement claims regarding the manner in which musical rhythm is structured, implying that some aspects of music and language may share common cognitive domain(s). The book also takes from linguistics the notion of a transformational grammar, so that certain structures (such as phrase overlaps) are accounted for in terms of a base structure that underlies more complex rhythmic phenomena on the musical surface. Lerdahl and Jackendoff distinguish between obligatory and optional structures by differentiating between 'well-formedness' and 'preference rules'. Thus, for example, a durational pattern may allow for several equally plausible metric interpretations (as circumscribed by the well-formedness rules), but the choice of one metre in particular involves the application of their preference rules. The distinction between well-formedness and preference rules is one of Lerdahl and Jackendoff's most important contributions to music theory and analysis.

Lerdahl and Jackendoff's model has four basic components: grouping structure, metrical structure, time-span reduction and prolongational reduction (fig.3). Rhythm and pitch are given equal consideration, though they have different degrees of salience on different structural levels. Grouping extends from the foreground to the largest levels of formal structure. Metre, by contrast, is a foreground phenomenon, while time-span and prolongational structures emerge in the middleground and then extend to more background levels. In this fashion their theory includes both bottom-up and top-down components. Grouping in the foreground is concerned with the

conjunction and articulation of successive sound-events based on Gestalt psychological principles (see §I, 3 above). Unlike groups that are defined in terms of relationships between strong and weak elements (as in Cooper and Meyer's approach), the generative theory does not specify the structural relationships between elements within a group. Rather, those relationships emerge from the interaction of grouping and metre (in the foreground) and grouping and time-span and prolongational structures at higher levels.

4. Post-tonal rhythm and metre. The subject of rhythm and metre in serial and other non-tonal musics has received special attention from a number of theorists. One may wonder why a separate theory of post-tonal rhythm or metre is needed, but if one assumes that pitch structures are ontologically prior to rhythmic and metric structures, then in the absence of traditional tonal syntax one must seek an alternative source for rhythmic and metric organization. It is not surprising that many of the same theorists who embrace a Schenkerian pitch-to-rhythm approach in tonal contexts seek analogous sources for rhythm and metre in post-tonal musics. Hyde (F1984, p.25) characterizes the situation in the following way:

> In tonal music, well-defined principles determine the equivalence or commensurability of pitch events and so regulate the articulation of rhythmic strata derived from them. These tonal principles – such as the rules of voice-leading and harmonic progression, or the role of triadic structure – can produce middleground pitch events that recur regularly, providing an important source of rhythmic accent. An analogous process operates in Schoenberg's twelve-tone music: structural principles determine analogous functions for various pitch events, recurrence of these analogous pitch events produces middleground rhythmic strata, and, as in tonal music, middleground strata make up a key source of rhythmic organization.

She goes on to say that the counterpart to those 'tonal principles' involves 'unordered pitch-class sets that are equivalent to linear segments of the basic set' and that these 'secondary harmonic structures' generate rhythmic and metric structures. Thus rhythmic and formal structures are determined by and/or seen as evidence of underlying pitch structures. Forte (F1983) has developed various techniques for uncovering rhythmic patterns, including a 'proportional graph' of the relative durations and an 'attack-release partition' of the composite rhythms of the musical surface. Using such techniques one may find structural correlations and moments of special structural import (such as durational symmetries) which in turn may guide the analyst's examination of pitch structures. Hasty (F1981, G1997) is also concerned with problems of segmentation, but approaches the question through a consideration of the essential aspects of motion and continuity as they occur in the music's unfolding, rather than those patterns which are the product of a final-state analysis.
